The present being the one hundredth year since the institution of mission work by the General Assembly, the annual appointment of a Committee of Missions having been first provided for by the General Assembly of 1802, the anniversary was commemorated with special services, supplemented by a public meeting which was addressed by the moderator, the Rev. Dr. Charles L. Thompson, and President Theodore Roosevelt. The report on temperance mentioned a growing demand for temperance literature, increased attention to the cause of temperance in the Young People's Societies, and continued interest in temperance teaching in the Sabbath-school. The Assembly's resolutions suggested a memorial to Congress in behalf of legislation to prohibit the sale of intoxicating liquors at old-soldiers' homes and in Government buildings. The report on the Sabbath called attention to the tactics of the friends of the secularization of the day and embodied resolutions, which were adopted, reprobating all games and sports on the Lord's Day; deprecated the use of that day for traveling, "either for business or pleasure, by private individuals or public officials, notably such as occurred during the recent entertainment of a foreign guest"; disapproved of political conferences on the Lord's Day; and urged the captains of industry and all corporate officials and employers of labor to safeguard the men under their employ in the right to their day of rest. In the matter of vacancy and supply, the committee on the subject were agreed in recommending a plan for bringing vacant churches and unemployed ministers together, but a proposition in the minority report for the appointment of a permanent advisory committee of 3 ministers and 3 elders was not accepted by the Assembly. A committee was appointed to confer with the committee of the Protestant Episcopal Church and committees that may be appointed by other churches, "with a view to securing some concerted opinion and action by the churches of America relative to divorce and remarriage, and so to affect public

opinion that uniform legislation may be enacted by the States that will conserve the family institution and preserve the sanctity of the marriage bond." Ministers were urged to instruct their congregations on the subject, and to "exercise due diligence before the celebration of a marriage to ascertain that there exist no impediments thereto, as defined in our Confession of Faith." A committee was appointed to report to the next General Assembly as to plans for encouraging Young People's Societies in the Church. As to theological seminaries, the Assembly resolved, "that in view of the restless spirit of the times in which we live and the dangerous influence exerted by some revolutionary theories, we do affectionately exhort the governing boards of all our seminaries to exercise the utmost caution in the election of professors. And in view of the assaults recently made on that which we regard as the vital truth as to the nature and inspiration of the Scriptures, and particularly in view of the assaults on the integrity and authority of the Old Testament, we do reaffirm the historic faith of the Church in the oracles of God as the veracious record of his dealings with men from the beginning of human history. It is our unshaken belief that these sacred books were written by holy men of old, who spoke as they were moved by the Holy Spirit, and that this fact has the solemn witness of the apostles and of the Lord Jesus Christ himself."

II. Presbyterian Church in the United States (Southern).—The following is the summary of the statistics of this Church as published with the minutes of the General Assembly for 1902: Number of synods, 13; of presbyteries, 79; of candidates, 291; of licentiates, 62; of ministers, 1,501; of churches, 3,017; of communicants, 239,642; of members added on examination during the year, 10,405; of baptisms during the year, 3,624 of adults and 4,868 of infants; of baptized non-communicants, 42,312; of teachers in Sabbath-schools, 20,784; of pupils in Sabbath-schools, 149,482; of ruling elders, 9,130; of deacons, 7,887; amount of contributions—for home missions (Assembly), \$31,145; for evangelistic work (local), \$130,469; for Ministers' Relief, \$19,401; for foreign missions, \$131,756; for education, \$132,521; for publication, \$9,087; for colored evangelization, \$12,743; for the Bible cause, \$4,767; presbyterial, \$16,932; for pastors' salaries, \$820,193; congregational, \$807,383; miscellaneous, \$111,252; total, according to the footing of the tables, \$2,227,649; average contribution per member, \$9.70. The figures show an increase for the year of 16 ministers, 26 churches, 1,651* communicants, and 1,693 teachers in Sabbath-schools; a decrease of 85 pupils in Sabbath-schools; and an increase of \$61,960 in total contributions. A comparison with the statistics of 1882 shows a gain in twenty years of 39 per cent. in the number of ministers, 50 per cent. in that of churches, 85 per cent. in communicant membership, and 97 per cent. in the total amount of contributions.

The Executive Committee of Ministerial Relief, instituted by the General Assembly of 1901, reported that it had completed its organization and had been incorporated under the laws of Virginia. The sum of \$4,475 had been contributed toward an endowment fund, and was bearing interest. A plan had been presented to the churches asking their cooperation for obtaining an adequate endowment through systematic contributions of an

average of 10 cents per member per month for five years; but the responses had not as yet been liberal. Toward the Annual Support fund of \$20,000 asked for by the General Assembly of 1901, \$14,897 had been contributed. The committee had made appropriations averaging \$100 each to 145 beneficiaries, but had been able to pay only 90 per cent. of the amounts.

Seventy-six out of the 77 white presbyteries, and a number of societies and individual friends were cooperating with the Executive Committee of Education for the Ministry. The total receipts of the committee had been \$13,509, as compared with \$11,579 in 1901. One hundred and sixty-two beneficiaries had been aided, as compared with 166 in the previous year. The maximum of aid given had been raised from \$75 to \$85. The report noted a continued decline in the number of beneficiaries.

The total receipts of the Executive Committee of Home Missions had been \$35,294. The previous year's deficiency of \$6,526 had been removed. Including six missionaries employed among the Mexicans, 132 ministers and teachers had been supported in whole or in part, and 325 churches aided. Circumstances had permitted but little to be appropriated for church erection, of which 6 cases had been aided, with \$1,545. The fund of \$5,000 known as the Moore fund, left by the testator for the aid of feeble churches in the erection of houses of worship by loans at 3 per cent., had been very helpful to at least 20 or more churches, 4 churches having taken advantage of it during the past year. There were now of it \$2,506 secured by mortgage and \$2,717 in cash. Of the 8 schools in the Indian Territory, aggregating 17 teachers and nearly 900 pupils, about half had developed into self-sustaining schools. Durant College returned 6 professors and nearly 300 students, and had erected a new brick building. Two evangelists and 3 native preachers were engaged in the Mexican work in Texas, which returned 11 churches and 10 Sabbath-schools. More native preachers were needed there.

The Executive Committee of Colored Evangelization had paid to colored ministers and churches \$4,231, and reported more than 2,000 communicants in 84 churches. Its work was "characterized by encouraging development in every part of it, rather than by the conspicuous growth of any one department." Five new churches had been organized, 8 church buildings erected or purchased, the committee aiding in the cases of 5 of the number, and 35 colored mission Sabbath-schools maintained, with 170 teachers and 2,270 pupils. In the case of the Sabbath-schools, the difficulty was said to be "not to gather the children, but to find Christians willing to teach them." The committee had decided to put the students of Stillman Institute upon a self-supporting basis, and to purchase the Ferguson-Williams College, at Abbeville, S. C. Besides these institutions 2 other schools for colored pupils were mentioned in the report.

The Executive Committee of Foreign Missions reported that although it had been very much embarrassed by the lack of sufficient funds, it had closed the year without debt. The receipts from all sources had been \$164,883, being \$1,827 more than the receipts of the previous year. Among the principal events in the foreign field noted were a larger number of professed conversions in Africa than in any previous year, although the force of workers had been reduced; the warm welcome given by the people to the returning missionaries in China; a spirit of self-help among the native Christians in Korea; revival in Japan; the organization of an independent synod

* After making up the tables an error in the addition was discovered by which the increase in membership was made to appear 1,013 less than it actually was. The true increase was 2,664.

in Mexico; and progress in independence in Brazil, where the secretary of the committee had visited the missions.

The Committee on the Twentieth Century Fund reported that ten of the synods had undertaken to raise \$1,720,000 for the fund, while no report had been received from the Synod of Kentucky; and that \$423,000 had been contributed and subscribed up to April 1. About 50 colleges, high schools, presbyterial schools, etc., were expecting to be aided by the fund. The report was hopeful of the ultimate success of the enterprise, and represented that the interest in it, while not universal, was "wide-spread and deepening wherever any means are used to awaken and foster it."

The General Assembly met at Jackson, Miss., May 15. The Rev. W. T. Hall, D. D., of Columbia Theological Seminary, was chosen moderator. Upon the presentation of the report of the Kentucky Theological Seminary, an institution formed by the consolidation of the Louisville Theological Seminary of this Church and the Danville Theological Seminary of the Northern Presbyterian Church, to be under the jurisdiction of the Northern Presbyterian and Southern Presbyterian Synods in Kentucky and the two General Assemblies jointly, the question was raised as to what should be the future relations of the General Assembly to the institution. Could the General Assembly with propriety sanction a division of its control? Upon the report and recommendation of the Committee on Theological Seminaries, the Assembly decided that the action of the previous General Assembly, assenting to the consolidation, be left undisturbed; that questions relative to the teaching of the Standards as they now are, or as they might be modified in the future, are not germane to the present matter, as it lies within the power of the controlling synods; and that the rights of the Assembly to grant authority to another denomination to pass upon the orthodoxy of its ministers and to receive reports from a seminary in whole or in part under the control of another denomination, which had been questioned, were involved in the constitutional right of the General Assembly to cooperate with other denominations in the prosecution of Christian work. It was shown in the debate on this subject that by the terms of the consolidation of the seminaries the General Assembly was vested with power to insist upon the teaching of its present Confession of Faith for all time. A number of overtures had been sent up expressing dissatisfaction over the action of the previous General Assembly on the subject of infant salvation, some of them asking the Assembly to rescind parts of it, and others desiring that some declaratory or explanatory statement be made that shall clear the Church of the imputation of teaching that some dying in infancy are eternally lost; while others sought the amendment of the Confession so that it shall teach in unmistakable terms the salvation of all who die in infancy. The Assembly of 1900, in view of the use of the words "elect infants" in it, had ordered a footnote appended to the section declaring that it could not, by any fair interpretation, be construed to teach that any of those who die in infancy are lost. The Assembly of 1901 rescinded this action, and gave five reasons why it should not act to modify the paragraph containing the words, the fifth of which was "because, while we have a well-grounded hope, founded on Scripture, that all infants dying in infancy are saved, yet the Confession of Faith goes as far as the Scriptures justify a positive creedal statement upon this subject." By the action of the present

Assembly this fifth reason was rescinded; a declaration was made that "this Assembly is fully persuaded that the language employed in chapter x, section 3, of our Confession of Faith, touching infants dying in infancy, does not teach that there are any infants dying in infancy who are damned, but is only meant to show that those who die in infancy are saved in a different manner from adult persons who are capable of being outwardly called by the ministry of the Word. Furthermore, we are persuaded that the Holy Scriptures, when fairly interpreted, amply warrant us in believing that all infants who die in infancy are included in the election of grace, and are regenerated and saved by Christ through the spirit." For the more efficient provision of ministerial relief, all the presbyteries and all the churches were requested to appoint committees on that cause; a secretary was appointed over this business, to devote his whole time to it; a collection was advised to be taken every year in July in every church for the cause; and the work of the home and school at Fredericksburg, Va., being regarded as virtually a branch of ministerial relief, its Board of Trustees and the Executive Committee on Ministerial Relief were directed to consider the wisdom and feasibility of consolidating those two branches of the domestic work of the Church under one management. Provision was made for the equitable apportionment of the debt of the home and school for its payment among the 79 presbyteries. The Permanent Committee on the Church and Christian Education reported concerning the collections and the organization and projection of schools under the Twentieth Century fund scheme, and that the day school had been made a part of the home mission work in some of the presbyteries; and the Assembly reaffirmed its belief that the synods and presbyteries and congregations "must bend every energy to maintain and extend the system of Christian education established by the founders of the Presbyterian Church. To this end the support and patronage of this Assembly will be given only to those academies and colleges in which Biblical and spiritual instruction is combined with the usual courses of study in classical, scientific, and literary subjects." A committee was appointed to prepare a catechism on the history of the Church. Ministers were urged to keep the subject of the sanctity of the Sabbath constantly before the people; members to keep the day holy "according to the teaching of God's Word," abstaining from all forms of Sabbath desecration, and to build up in every way a healthy public sentiment on the subject; sessions to take steps to bring the question home to the minds and hearts of the members; and each presbytery to hold a popular service for the consideration of the subject. An amendment to the Book of Church Order was approved, to be sent down to the presbyteries, omitting the requirement of a Latin thesis on the examination of candidates for ordination.

Afro-American Synod.—The Independent Afro-American Synod received a charter in 1901 from the State of South Carolina. At the meeting of the synod in that year, at Abbeville, S. C., a report on Narrative and Prospects was adopted, recognizing the great need of a separate and distinct negro Presbyterian Church and work, for the more effectual reaching of the colored people and the developing in them of "those higher principles of morality and religion and a more stalwart Christian manhood and womanhood"; they would therefore make the greatest efforts to establish, at the earliest time compatible with

good judgment, reason, and the demands of their growing work as an aggressive church, an Afro-American Presbyterian General Assembly. The fifth meeting of the Synod was held near Roulard, N. C., Nov. 20 to 23, 1902. Much interest was manifested in education and Sabbath-school work. The report of the treasurer showed a decided increase in revenues over all previous years. A fund for foreign missions was in hand, which would be augmented till the church had sufficient to put a missionary of its own in the foreign field. The mortgage on Ferguson and Williams College, Abbeville, had been paid, and the institution was free from debt.

The colored churches under the care of the Southern Presbyterian Assembly's Committee of Evangelistic Labor include churches in two presbyteries in organic relations to the Southern Church; churches in three presbyteries in connection with the Afro-American Synod; and 8 or 10 inchoate synods—all containing 53 colored ministers and 86 churches, with 2,204 communicants, 3,147 members of Sabbath-schools, and returning 212 additions on profession during the past year, with collections of \$1,046 for the maintenance of their pastors and \$1,965 for congregational and miscellaneous purposes. In four years these churches had added about 50 per cent. to their membership and doubled the amount of their contributions. Instruction was provided for their people at three institutions.

Independent Synod of Mexico.—The statistical report of the Independent Synod of Mexico shows that it has 4 presbyteries, 73 organized churches, 190 congregations, 63 Mexican preachers, and 5,508 communicants.

III. United Presbyterian Church in North America.—The following is the summary of the statistics of this Church for 1902, as published in May: Number of synods, 13; of presbyteries, 68; of ministers, 1,019; of pastoral charges, 843; of congregations, 989; of members, 132,476, of whom 117,874 were in America and the rest in the foreign mission synods; of Sabbath-schools, 1,226, with 13,498 officers and teachers and 120,133 pupils; of mission stations, 30 in America and 637 in the foreign field; of baptisms during the year, 4,048 of infants and 1,973 of adults, of which 3,030 of infants and 1,221 of adults were in America; of members received on profession, 7,332, of whom 5,846 were in America; of Young People's Societies, 1,036, with 39,715 members. Amount of contributions (in America): For salaries of ministers, \$626,780; for congregational purposes, \$652,710; for the boards, \$357,595; for general purposes, \$206,150; total for America, \$1,843,235; total for the Church (including the foreign stations), \$1,874,514. Average contribution per member in America, \$15.87; average salary of pastors in America, \$1,010. Of the ministers recorded in the tables, 730 were classed as pastors and stated supplies, and 289 as without charge; of the congregations, 820 as provided with pastors or stated supplies, and 169 as vacant.

The Board of Education reported to the General Assembly that it had been able during the year to pay the beneficiaries only two-thirds of the allowance authorized. To the college and seminaries the full amount was paid, \$10,000—a sum equal to the income of an endowment of \$200,000. The presbyteries were requested by the General Assembly to assist the board in every effort to obtain from ministers withdrawing from the Church a return of what they had received. The board was advised to enlarge as rapidly as possible the department of work in behalf of the Church's higher institutions of learning.

The Board of Ministerial Relief reported that the number of beneficiaries had increased to 80, of whom 33 were ministers and the others widows and orphans. Of these, 14 had been added during the year.

The Board of Home Missions had expended \$91,385, an increase of \$3,232 over the preceding year, and reported no debt to be provided for. It had 229 stations under its care, with an average attendance of 19,429 on preaching services and 23,120 on Sabbath-schools. The net gain in membership of the Church was 1,614, making a total enrolment of 18,285. The stations had contributed \$24,842 to the boards and \$95,112 to their own local work. Twelve congregations had become self-sustaining. The whole amount of grants of aid was \$103,000, \$15,450 of which were for 38 cases of new work. The Assembly recommended that the suggestion of "volunteer service" on the home field on the part of students just leaving the theological seminary be put in operation as far as practicable; and that the work among the mountain whites of the South be kept under advisement in the hope that means may be granted for engaging in it.

The Board of Freedmen's Missions closed the year with a debt increased to \$25,052. The average of contributions of the freedmen for church purposes had been \$4.82 per member.

The Board of Church Extension had expended \$52,857 in aid given to congregations, an increase of \$12,857 over the preceding year. The General Assembly directed that statistics of church indebtedness be collected and reported to the next Assembly. The assignment of the entire department of parsonage work to the Woman's Board was approved of.

The report of the Board of Foreign Missions showed that the Egyptian mission, urged by a necessity, had overdrawn its allowance \$5,848. The General Assembly, recognizing an exceptional case, authorized the payment of the amount, with a reservation against the action being taken as a warrant for the contraction of debts by a mission without the knowledge of the board. The projects of establishing a high school or college at Cairo and of erecting a house for the theological seminary in India were commended, provided funds are supplied from outside the regular channels of contribution.

The mission in India returned for 1901 56 foreign workers, 14 ordained native ministers, 346 native helpers of all sorts; 22 organized congregations, 4 of which were self-supporting and 10 had pastors; 60 unorganized circles; 1,036 members received on profession during the year, 468 baptisms of adults and 744 of infants—a total of 7,722 church-members, with 5,159 pupils in Sabbath-schools and 7,549 in other schools; and contributions for all purposes of \$10,300. The net year's increase of members was 851. Increase appeared also in most of the other items. The Gujranwala boys' high school had the largest attendance in its history, with more than 1,000 pupils on its rolls, and was practically self-supporting.

The report of the Woman's Board of Missions showed that during the year \$93,844 had been raised by the women of the Church, \$40,000 of which were denominated a thank-offering. It was represented that 100 per cent. of all money contributed for missionary purposes was expended on the objects designated. Twelve missionaries were employed in the home field and 21 industrial teachers and matrons had labored among the freedmen. In the parsonage work, with more than \$25,000 received and more than

\$24,000 expended, 18 congregations had been assisted—a larger number than ever in one year before. In the foreign missions the board supported 44 unmarried woman missionaries, besides providing for the entire maintenance of 2 boarding-schools, 3 hospitals, and 3 dispensaries. Special features mentioned in the report were the beginning of work on the new Martha J. McKown Hospital, at Tanta, Egypt; the girls' boarding-school at Seakote, India; a new school at Luxor, Egypt; and in America the Home for Aged People, the Orphan Home, the Memorial Hospital, and the Home for Missionaries' Children at New Wilmington, Pa.

The forty-fourth General Assembly met in Allegheny, Pa., May 28. The Rev. James C. Wilson, D. D., of Erie, Pa., was chosen moderator. The committee appointed by the previous General Assembly (see *Annual Cyclopædia* for 1901, p. 555) to prepare a revised and amended form of membership covenant for overture to the presbyteries, if it should prove acceptable to the Assembly, reported a form of covenant, and with it a new formula for the reception of members. The form embodied a declaration that the Scriptures are received as the revelation of the truth and the law of life; an expression of unqualified faith "in the one living and true God, the Father, the Son, and the Holy Spirit," and the personal acceptance of each person of the Godhead in his relation to us and our salvation; and a promise of submission in the Lord to the authorities of the Church, a willingness to receive with meekness instruction in the divine truth as set forth in the accepted Standards of the Church and a resolution to renounce the world, the flesh, and the devil, and to conform the life to the will of God; a promise of fidelity in attendance on public worship and in the observance of the sacraments, of personal service and financial support, a disposition to promote the peace, purity, and prosperity of the congregation, and a promise of daily prayer, Bible reading, and worship. These propositions were opposed in the debate by those who were satisfied with the present conditions of receiving members and desired no change, and the motion to overture the report to the presbyteries was lost by a vote of 103 to 118. A new committee was appointed to consider the subject further and report to the next Assembly. The General Assembly was asked by the Synod of the Punjab, India, in respect to the attitude to be taken and the course to be pursued regarding the proposed union of all the Presbyterian churches of India into one church, the "Church of Christ in India, Presbyterian." The answer of the Assembly was given in resolutions "that we approve of the principle of Presbyterian union in India, when in the providence of God the way is opened up and the time is ripe for such a movement; that reposing the utmost confidence in the wisdom and loyalty of our missionaries in India, we authorize them to take part in the work of preparation for the proposed union; and that when the whole scheme of doctrine and administration is completed, it be submitted in overture to the presbyteries in India, and reported, together with the vote on the same, to the General Assembly for approval or rejection." Relations were resumed with the General Synod of the Reformed Presbyterian Church after an interval of twenty years, and a fraternal delegate was appointed to the General Synod. The General Synod had withdrawn its mission from the Gujranwala district in India in favor of the United Presbyterian Church, and had sent its salutations by delegate

to the General Assembly. Progress was reported in the preparation of a uniform metrical version of the Psalms, which is in the hands of a joint committee of Psalm-singing churches, and the gratification of the Assembly was expressed. The overture on the limitation of appeals, having been approved by a majority of the votes cast in the churches, was declared adopted and ordered incorporated in the Book of Church Government.

The report of the Board of Publication noted an increased interest in Sabbath-schools. Their contributions had increased \$48,000 since 1890. In its resolutions on reform the Assembly advised that only such papers be admitted into home and school as would uplift and ennoble and tend to arouse to higher ideals; commended the curfew ordinances wherever enacted, and urged their enforcement; and asked the presbyteries to hold conferences and conventions on Sabbath observance. A committee was appointed in anticipation of the fiftieth year of the existence of the Church, six years hence, to prepare and report a plan for a suitable celebration of the event.

The Associate Reformed Synod of the South, at its ninety-ninth meeting in Pisgah Church, Gaston County, North Carolina, Nov. 6 to 10, appointed a committee on union to confer with a similar committee of the United Presbyterian Church for agreement on a basis of union of the two bodies, to be submitted to the next meeting of the synod and be handed down to the presbyteries in overture. This synod has 104 ministers, 151 churches, and 11,903 members, and sustains Erskine College, Due West, S. C., and a foreign mission in Mexico.

IV. Reformed Presbyterian Church in North America. Synod.—The following are the statistics of this body as reported at the meeting of the Synod in May, 1902: Number of congregations, 112; of mission stations, 9; of ministers, 126, 1 of whom is a native Syrian; of licentiates, 19, 5 of whom are Syrians; of theological students, 10, 1 of whom is a Syrian; of communicants, 9,722, showing a decrease of 77; of attendants at Sabbath-schools, 10,644; attendance upon Young People's Societies, 2,162; total amount of contributions, \$199,079.

The resources of the Board of Church Erection for the year had been \$2,896, and its disbursements \$1,900, leaving a balance of \$996. An appropriation of \$4,000 was asked for for the coming year. The applications on hand called for \$1,300, and steps were being taken toward making others.

The Board of Sustentation reported \$3,585 in its treasury, with 12 congregations asking for aid to the amount of \$3,785.

The Central Board of Missions reported the receipt of \$7,744 and the expenditure of \$8,049 on the account of the domestic mission and the receipt of \$4,668 and expenditure of \$4,574 for the Southern mission, with an enrolment of 543 in the school of the latter. The Indian mission in Oklahoma had received \$4,044, and returned 55 pupils in the schools. The accounts of the Chinese mission gave receipts \$1,229, and expenditures \$725; and of the Jewish mission, \$1,119 of receipts and \$1,080 of expenditures. The discontinuance of the Chinese mission was recommended.

A satisfactory report was made by the Board of Foreign Missions. Among the favorable features noted were the passing away of the hostile Russian influence, the increased attendance at the schools, the growth in the membership of the Church, and manifest blessing upon the labors

of the missionaries. The missions were in China, Asia Minor, Syria, and Cyprus.

The Synod met at Syracuse, N. Y., May 29. The Rev. W. W. Carrithers was chosen moderator. The reading of a letter from the Western section of the Presbyterian Alliance led to a discussion of the relations of the Synod and the alliance. The purpose of the alliance was held to be good, if it could be made sure that the principles of purity in worship would not be submerged. It was observed that the Western section had recently adopted papers advocating things to which the Church was opposed, and the question was raised whether comity required silence on those things or whether the Synod should protest. In the letter adopted to be sent to the alliance the Synod expressed itself as constrained to refer to certain passages in the reports of the Committee on Religious Liberty in the New Possessions and of the Committee on Moral Conditions in the New Territories. It disclaimed any responsibility for such expressions in those passages as might be quoted as favoring the divorce of religion and the commonwealth, and of religion and the schools, though they were acknowledged to be "mainly directed against the papal idea of the domination of the state by the Church. There is a failure herein to assert the true doctrine of the Reformed faith on these questions. As to a third report, that of the Committee on Cooperation in Foreign Missions, while this Synod favors the union in one native church of the missions in the foreign field that are one in doctrine, polity, and worship, yet we do not favor this step on the part of those missions which may differ in doctrine or worship, though they agree in polity. This subject of Church union, we believe, is in the province of the churches themselves, rather than of the alliance." In a paper on Peace and Arbitration, the Synod declared its belief in the wisdom and righteousness of the principle of peace between nations as among men, earnestly favoring the policy "that will draw nations nearer to each other and that will lead all peoples to cultivate a common friendship and a peaceful brotherhood. We urge arbitration as the proper method of settling difficulties between nations, and hold that the weakness of one party in a dispute should not work a forfeiture of its right to a fair hearing and an impartial judgment." The Synod pledged its support to all true temperance work; advised that the children be taught true temperance in the home and the Sabbath-school; approved of temperance institutions in Sabbath-schools; reaffirmed its former declarations against the use or sale of tobacco; and reiterated its protest against the Government protecting the evil of intemperance by law and receiving revenue therefrom. The work of the American Sabbath Union was commended, and the resolutions of the Synod required members of the Church to abstain from selling or delivering or receiving milk on the Sabbath Day, or from holding stock in Sabbath-breaking creameries and other Sabbath-breaking corporations; from working in any mill or factory and from any other unnecessary labor on that day; urged sessions to proceed with the enforcement of proper discipline upon those guilty of violating these rules; and enjoined presbyteries to see that sessions are faithful in the discharge of this duty. A letter was read from the Reformed Presbyterian Church, General Synod, in reference to closer cooperation.

V. Reformed Presbyterian Church, General Synod.—This body has 33 ministers, 37 churches, and 500 members. The meeting of the synod was

held in Philadelphia, Pa., in May. A resolution declaring that the General Synod "leaves to the wise discretion of the direction of the worship of their particular congregations" was discussed at some length, and defeated by a vote of 18 to 12.

VI. Cumberland Presbyterian Church.—Statistical reports are published in connection with the minutes of General Assembly of this church for 1902, of which the following is a summary: Number of synods, 16; of presbyteries, 118; of churches, 2,944; of ordained ministers in the presbyteries, 1,695; of licentiates, 187; of candidates, 219; of members, 184,493, of whom 145,473 are enrolled as resident members; of ruling elders, 10,481; of deacons, 4,140; of members enrolled in Sunday-schools, 111,722; of members of Christian Endeavor Societies (senior and junior), 22,001; of ministers ordained during the year, 67; of additions to the church by examination, 11,588; of baptisms, 7,837 of adults and 1,652 of infants. Total amount of contributions, \$923,660—including among others, \$62,524 for synodical and home missions, \$3,361 for church erection, \$20,620 for foreign missions, \$20,171 for the Woman's Board of Missions, \$10,068 for education, \$7,495 for ministerial relief, \$411,111 paid to pastors or for supplies, and \$278,211 for building and repairing churches; value of church property, \$5,025,873.

The contributions to the Educational Society of this Church were reported to the General Assembly to have been \$8,586, and its total available funds had been \$10,025. The sum of \$5,317 had been given, and \$2,113 loaned, to students. The whole number of probationers for the ministry was 468, not more than half of whom had been to school, having been kept away by lack of funds. Progress was reported in the movement for the endowment of institutions, and much had been accomplished toward raising the educational standards for ordination.

The Board of Ministerial Relief had received \$12,545. Fourteen persons had been added to the list of beneficiaries, which now included about 100 names. The endowment fund of Thornton Home was growing every year, and was now \$24,024.

The Board of Managers of the Orphanage and Industrial School, appointed by the previous General Assembly, recommended that the enterprise be abandoned. The recommendation was approved by the General Assembly.

The Board of Publication reported an increase in the volume of business to \$107,497; an increase in the volume of net profit to \$11,083; a reduction of \$13,843 in the debt of the house; a surplus of assets over liabilities of \$126,666; and other elements of improved condition.

The Board of Missions reported that the foreign mission receipts for the past year had been \$20,620, a gain of \$6,105 over the preceding year; and that the home mission receipts had been increased \$1,469, and amounted to \$10,026, besides special gifts of \$6,505. Material reduction had been made in the indebtedness of the board, which was now \$21,600. Two thousand dollars had been received through the will of the Rev. Jacob Gillespie, to be appropriated as a permanent endowment, the interest to be used for foreign missions. The total receipts of the board for current accounts had been \$46,984; but adding other funds which had passed through the office and the contributions to the Woman's Board and to church extension, the whole sum contributed to missions during the year was found to have been \$123,506. The expenditures included \$15,846 for home missions, \$4,758 for

church erection, and \$30,704 for the foreign missions in China and Japan.

The Missionary Convention of Cumberland Presbyterian Women had received \$26,284, being an increase of \$2,369 over the contributions of the preceding year. Reports were read at the twenty-second annual meeting, May 13, of missions in China, Japan, Mexico, 3 Chinese missions in California, and the mountain mission, where 344 pupils were enrolled in 3 schools, 200 of them in the Industrial Home.

The seventy-second General Assembly met at Springfield, Mo., May 15. The Rev. S. M. Templeton, of Texas, was chosen moderator. A council composed of one member from each of the synods, nominated by the commissioners of the several synods, was constituted, for the present Assembly only, to assist the moderator in appointing the committees. An important item in the business of the meeting related to the question of the control of the teachings of the Theological Seminary by the General Assembly. A Committee of Seven had been appointed by the previous General Assembly to confer with the trustees of Cumberland University, who had also jurisdiction over the Theological Seminary, with a view to making some arrangement under which control should be permanently assured to the Assembly. A proposition made by the Board of Trustees to the Assembly had been found to afford no satisfactory solution of the problem; and a plan of settlement submitted by the Committee of Seven to the Board of Trustees had not been accepted by them. Majority and minority reports were presented by the Committee on the Theological Seminary. Both agreed in commending the management of the institution, but they advised different methods of settling the questions that had arisen. The Assembly directed the appointment of another committee which should request the Board of Trustees of Cumberland University to reconsider their action in declining to accept the plan of settlement proposed by the Committee of Seven, and to accept and adopt it with such changes as may be agreed upon; provided the changes do not conflict with the terms of the constitution of 1852, and do not surrender any of the rights of the General Assembly to the direct and absolute control of the Theological Seminary; and in the event that the committee and the Board of Trustees "are unable to arrive at an agreement in accordance with said plan, then that the said committee be authorized and directed to ask the said Board of Trustees to secure such changes in the charter of Cumberland University as will preserve all the rights of the General Assembly, and among these changes such a change in said charter as will secure and reserve to the General Assembly of the Cumberland Presbyterian Church, through the members of the Board of Trustees, whose terms of office shall be limited, or the Board of Visitors, or both, a majority vote on all matters pertaining to the Theological Seminary." The question of forming a separate Board of Home Missions was considered. Two reports of different tenor were presented. A substitute measure was adopted providing for a conference of the Board of Missions and its corresponding members for the preparation of a plan for the organization of the mission work, upon which report shall be made to the next General Assembly. The presbyteries were instructed to cooperate with the Cumberland Presbyterian Historical Society. The society was advised to print in book form the minutes of the Assembly from 1829 to 1875, and to incorporate in separate or combined book

form any historical data it might have or obtain during the Assembly year bearing upon the origin and distinctive doctrines of the Church; providing those things could be done without embarrassing the publishing interests. The report on the centennial endowment of the colleges advised the institutions interested to push the work of endowments vigorously in their respective bounds, so as to secure the stipulated amounts within the allotted time. "While the burden of endowing our institutions of learning would fall largely on the wealthier people of the Church, yet the question should be presented to every member and a subscription solicited." A permanent Committee on Temperance was appointed, of 17 members representing all the synods, and charged with the duty of promoting temperance agitation, education, and legislation; and provision was made for synodal committees. The report on Sabbath observance urged an uncompromising stand for a sacred Sunday and recommended the institution of Sabbath observance meetings or institutes in the General Assembly, the synods, and the presbyteries; preaching, ministerial practise, precept, and example in its favor; and cooperation with the National Sabbath Observance Movement. The Choctaw Presbytery was authorized to publish the Confession of Faith in the Choctaw language, a translation being already in course of preparation. The action of the General Assembly of 1899 requiring the boards to wait for nominations by the Assembly before electing members to fill vacancies was approved. This measure permits the boards and permanent committees to fill vacancies subject to veto by the Assembly.

The Colored Cumberland Presbyterian Church, with 450 ministers, 400 churches, and 39,000 members, has a Board of Publication publishing a weekly journal at Fayetteville, Tenn., and Boards of Education, Ministerial Relief, and Missions; and a Woman's Board of Missions; and is interested in synodal schools at Newbern, Tenn., and Huntsville, Ala. The twenty-sixth General Assembly was held in May.

VII. Presbyterian Church in Canada.—

The following is a summary of the statistics of this Church as shown in the reports made to the General Assembly in June: Number of presbyteries, 58; of ordained ministers, 1,368; of communicants, 219,470; of church sittings, 601,885; of families, 118,114; of elders, 7,559; of additions by profession of faith, 11,259; of Sabbath-schools, 3,196, with 21,717 teachers and officers and 182,335 pupils; of members of Christian Endeavor and other Young People's Societies, 26,319; amount of contributions for the schemes of the Church, \$394,203; of contributions for salaries of ministers, \$1,052,691; income of the Church for all purposes, \$2,857,689. Value of church property, more than \$10,000,000, less indebtedness of about \$1,500,000. An increase of 5,799 communicants was shown, and the increase in the total amount of contributions was \$394,203. The statistics of Sabbath-schools showed an increase of 147 in the number of schools reporting, of 517 officers and teachers, and of 2,968 pupils (including the home department). The Sabbath-schools had raised during 1901, for all purposes, \$112,110. The statistics of Young People's Societies showed a decrease in the number of societies, but slight as compared with the decrease in a few previous years. The rapid decline in the number of societies was apparently arrested.

The Aged and Retired Ministers' fund (for the provision of annuities to ministers honorably retired from active service) in the Western sec-

tion had an endowment of \$192,000, and that of the Eastern section one of \$40,000. One hundred and one ministers had received annuities averaging \$200 each from these two funds. The 3 widows' and orphans' funds—those of the Eastern and Western sections and that of the branch of the Church formerly connected with the Church of Scotland—had a combined endowment of \$403,530, and had paid annuities averaging \$150 a year to 179 widows.

The capital of the Church and Manse fund was \$107,520. By its help 27 churches, 8 manses, and 3 schoolhouses had been built during the year, and since its inception it had aided in the erection of 419 churches, 90 manses, and 4 school-buildings, the present value of which was \$603,835.

The revenue of the Augmentation fund in the Eastern and Western sections together had been \$32,121. The list of aided congregations included 143 in the Western section and 60 in the Eastern section, representing 11,143 families and 19,501 communicants. An average grant of \$150 was made to these congregations to aid them in the support of their ministers, the object aimed at being a minimum salary of \$750 a year and a manse, which, however, was not yet reached in all cases.

The Board of French Evangelization returned 40 fields of work, with 85 stations at which the Gospel was preached by its missionaries in French. Connected with these missions were 865 families and 1,108 communicants, 144 of whom had been added during the year. A mission to Italians in Montreal, with a mission day-school, was also under the care of the board. At many places in the province of Quebec its minister was the only representative of the Protestant Church, and in some he served, in addition to his labors in the French-speaking community, as minister to the scattered English-speaking families of the district. Seventeen mission day-schools were supported by the Church. The central schools at Pointe-aux-Trembles had been attended during the year by 167 pupils, of whom 30 had during the past winter made profession of faith. More than 5,000 young men and women had obtained a liberal education at these schools, and most of the missionaries employed by the board had received their early training there. A French professor was connected with the Presbyterian College, Montreal, for the training of French missionaries. The contributions of the year to this work had been \$26,928.

The contributions to the work of home missions had been \$122,731, an amount greatly in excess of the contributions of any former year. Seventy-eight home fields were returned in the Eastern section of the Church, with 231 preaching stations; and 428 fields in the Western section, with 1,230 preaching stations. Connected with these missions were 16,474 families and 18,477 communicants, and 1,986 members had been received during the year on confession of faith. The Students' Missionary Societies had contributed \$9,000 to the funds of the board, and had worked 41 fields. A service of nurses at Atlin, British Columbia, was supported by a committee of ladies in Toronto. The missionaries of the board had labored among Icelanders, Scandinavians, Germans, Bohemians, Galicians, and Doukhobors. The committee of the Western section had made a special effort during the year to secure 100 congregations or persons who would contribute \$250 each toward the support of a missionary, and had obtained such aid from 150 congregations and individuals. By this means they had been able to respond to every application for a mis-

sionary, and so far as the committee knew, there was not in the entire field committed to their care a single district containing a dozen Presbyterian families where the ordinances of the Church were not regularly maintained.

The contributions for foreign missions had amounted to \$158,561. The work of the boards was carried on in the New Hebrides, Trinidad, Demerara, Formosa, Korea, Honan (China), and India; and a missionary had been recently appointed to Macao, China. The missionary force included 99 Canadian missionaries, with 268 native pastors, teachers, and other workers. The Indians of the Dominion were under the care of this board, as also the Chinese, of whom about 1,000 were under religious instruction at 30 schools. The Woman's Missionary Society, at Montreal, had contributed \$65,000 for home, French, and foreign missionary work.

The twenty-eighth General Assembly met in Toronto, June 11. The Rev. George Bryce, LL. D., was chosen moderator. One of the longest debates of the meeting was on the subject of the use of individual communion cups in the sacrament of the Lord's Supper. It arose upon the presentation of a protest against the action of the session of a church in Charlottetown, Prince Edward Island, in introducing the innovation. The presbytery of Prince Edward Island had decided that the matter should be left to the judgment of the individual congregation. An appeal had been taken to the synod, and it had referred the question to the General Assembly. A committee was appointed by the Assembly to consider whether any, and if so, what changes should be made or permitted in the mode of observing the Lord's Supper. The Assembly, recording its appreciation of the work done among the young people of the Church through the Society of Christian Endeavor, suggested the adoption of "Presbyterian Guild" as the distinctive name for the Young People's Societies; and advised that where no pledge is adopted and the Christian Endeavor type of society is departed from, pastors urge that the organizations be so shaped as to be distinctively religious and missionary in their aims, and to imply responsibility and the sense of obligation in their membership. The committee that had been appointed to confer with the trustees of Queen's University regarding proposed changes in its constitution reported that certain changes in the charter of the institution had been agreed to the effect of which would be to separate the university legally and nominally, as it had long been practically separate, from the Church; while at the same time the Theological College was brought into closer relationship with it, and was placed more directly under the authority of the General Assembly. The report was accepted, and the committee was reappointed to continue the conferences. The institution of a school for training catechists was authorized, the school to be held in the city of Winnipeg, and its course of study to embrace 3 terms of three months each, in July, August, and September of each year. A new class of laborers was instituted, to be known as minister-evangelists, the step being designed as a temporary expedient to meet the exceptional demand for men during the next seven years. A proposal to institute a standing committee to exercise a general supervision over all theological colleges at which ministers are being trained for the Presbyterian Church was laid on the table, to be taken up in the next year. A report on precedence adopted by the Assembly contemplated measures for representing to the proper authorities the desirability of abolishing the present rules of

precedence as wanting in courtesy and foreign to the genius of the country, and of taking steps toward a fair and adequate recognition of all the churches in Canada. The Assembly advised that every legitimate effort be made for the retention of the Lord's Day as a day of rest, and for the right use of it by members and adherents of the Church. It further invited "all to whom its words come with authority to help in defending the day. It commends simplicity of family life, free from pleasure gatherings and such like, the abstaining from late Saturday trading, and in general such prayerful emphasis upon the purpose of the day as will secure by precept and example its wise fulfilment." Total abstinence was held up as a Christian privilege and every effort was advised to be put forth to educate the people, and especially the young, in temperance practise and principles; with advantage to be taken of every opportunity by which the use of intoxicating liquors may be lessened and sobriety advanced. Another recommendation by the Assembly was that the duty of exercising the powers and opportunities of citizenship conscientiously be urged upon all the people.

VIII. Church of Scotland.—The accounts of the committees for 1901 showed a satisfactory increase of income over the previous year, which in turn had shown an increase over 1899. The total income had been £220,492, as against £208,228 in 1900. A decrease of £480 in legacies was returned. Increase was shown of £490 in the foreign mission income; £1,883 in that for the colonies; £520 in that for the Highlands and islands; £87 in the Aged and Infirm Ministers' fund; and £699 in the fund for Christian Life and Work. The Woman's Associations had also contributed to the increase. The reports concerning the Christian liberality of the Church during 1901 showed an increase from £515,432 in 1900 to £545,789 in 1901.

The Committee on Small and Diminished Livings reported that £9,863 had been allocated among 321 parishes, an increase of £901, as compared with the previous year. There were still 261 livings under the unit aimed at—£200 a year. During 1901 10 home mission grants had been made toward the cost of building, enlarging, or acquiring places of worship.

The report of the Foreign Mission Committee showed that the Church had 130 Europeans in the mission field, more than 11,000 baptized natives, 3,000 communicants, about 15,000 pupils in mission schools, and 14 zenana pupils. The number of baptisms during the year, 1,281, was 435 above the average. The native Christian assistants were estimated to number 624, 10 of whom were ordained, while 135 catechists or preachers and nearly 300 teachers were included. The combined income had been £49,136, or £1,400 short of the required amount. The income at home had steadily decreased for three years.

The General Assembly met in Edinburgh, May 20. The Rev. Dr. J. C. Russell, of Campbelltown, was chosen moderator. In the King's letter, communicated as usual to the Assembly, his Majesty affirmed his determination to maintain the Presbyterian form of religion as represented by the Church, and to safeguard the Church in the possession of its rights and privileges. The customary royal gift of £2,000 for the propagation of religious truth in the Highlands and islands was intimated. A motion by the Colonial Committee to appoint a delegate to proceed to South Africa after peace was proclaimed and consult with the authorities of the Dutch Reformed

Church and of the Presbyterian Church as to the best means of furthering the interests of religion in South Africa and of promoting the union of the two churches was remitted to the favorable consideration of the committee. An appeal was presented charging Principal Story, of Glasgow University, with heterodoxy and unsoundness of doctrine in signing, in his official capacity, a letter to the Pope on the occasion of the four hundred and fiftieth anniversary of the foundation of the university. It was dismissed on the ground that no relevant case requiring further procedure had been stated. The report of the Church Interests Committee represented that the Church was wishful for the continuance of the present state of quiescence on the subject of disestablishment. The churches were growing together, and the spirit of conciliation affected both clergy and laymen. In the case against the Rev. T. N. Adamson, of Barnhill, Broughton Ferry, who had admitted to his presbytery that he had introduced into his church certain objects and forms of service which were usually associated with ritualistic practises, the Assembly found that the documents disclosed very serious innovations, and enjoined the Presbytery of Dundee to visit the parish with a view of bringing the internal equipment of the church, the forms of worship, and the arrangements for administering the Lord's Supper into conformity with the general usage and practise of the Church. The Foreign Missions Committee was empowered to bring up a report to the next Assembly as to the prevention of increase of debt. During the consideration of the report of the Committee on the Highlands and Islands it was represented that members of the old Free Church in the Highlands had been taking advantage of some of the opportunities for worship given them by the Established Church, and were aware of the sympathy of that Church. An overture in favor of the use in the Assembly's daily service of praise of the organ which had been placed in the Assembly hall was negatived. The Assembly directed inquiry to be made as to whether presbyteries and kirk sessions had any desire for the revision of the hymnal or the provision of an appendix. The report on Sabbath observance in Scotland dealt with the various phases of Sunday labor in Scotland, the question of workmen's clubs, and the growing evil of Sunday trading. The committee did not ask for legislative restriction of Sunday labor, but suggested that the Assembly should use its influence in the direction of regulating ice-cream shops and workmen's clubs. In his address closing the Assembly the moderator urged the desirability, in view of ultimate union of the churches in Scotland, of cooperation with other churches in local Christian enterprises for the common good.

IX. United Free Church in Scotland.—The report on statistics made to the General Assembly of this Church in May gave the number of members as 495,259, as against 492,964 in the previous year. The loss of members through the union was estimated to be 4,170, and as the membership showed a net increase after meeting the losses, especially in the Highlands, it was believed that bottom had been touched, and the Church would now go on increasing.

The report on the Widows' and Orphans' fund showed an increase of £15,000, the total being £447,000, as compared with £432,000 in the preceding year.

The report on the Sustentation and Augmentation funds showed a decrease in the Sustentation fund of £1,680, the total being £176,778, while

the Augmentation fund amounted to £15,123, an increase of £385. In its resolutions on Church and state the Assembly adhered to its testimony in favor of disestablishment, and expressed its sympathy with the free churches of England in their resistance to the education bill.

The General Assembly met in Glasgow, May 20. The Rev. Dr. Robert Howie was chosen moderator. A day was spent in the discussion of the report of the College Committee on a memorial and overtures relating to the views expressed by Prof. George Adam Smith in his book *Modern Criticism and the Preaching of the Old Testament*. The committee reported that it had concluded that it was not its duty or that of the Church to originate any process, not because they accepted the critical results that were presented by Prof. Smith, but because they felt that the time had not come for judgment on any of the problems with which his book dealt. These were meantime in the region of discussion. That volume linked itself to a great movement that touched and embraced within it questions of literary analysis, questions needing detailed examination; and it would have been on that movement, and not on a narrow question, that the Church would have been called to decide had the College Committee originated or advised the origination of a process. It should be remembered that Prof. Smith's volume had been issued in defense of religion, but the committee at the same time felt that he had sometimes been betrayed into forms of expression that were not always wise or fitted to present his views in the best way. Prof. Smith himself spoke in explanation of his position, saying that from the bottom of his heart he believed in the Bible as the revelation of God to sinful man. He had never said that there was any discrepancy between one Testament and the other. The resolution of the Assembly accepted the recommendation of the report that it was not the duty of the Church to institute any process against Prof. Smith in connection with his book, while it declared that it was not to be held as accepting or authorizing the critical theories therein set forth; expressed its unabated reverence for the written Word; called upon ministers and professors who might take part in these discussions to be careful that reverence for Holy Scripture should be conspicuously manifest in their writings; and, recalling the results of former discussions, exhorted the people not to be soon shaken in mind by what they heard of statements regarding the Bible or some parts of its contents. Approval was given to a scheme contemplating the raising during five years of a central sum of £25,000 for promoting church extension in populous and underchurched districts, etc. On the presentation of the Praise Committee's report reference was made to gifts of organs by Mr. Andrew Carnegie. In the discussion of home mission affairs, it was represented that the combined income of the Free and United Presbyterian Churches for 1900 had been £14,443, whereas the income of the United Free Church for 1901 had been only £13,824.

A suit instituted by adherents of the Free Church of Scotland who refused to recognize the United Free Church for the possession of certain property of the former Free Church having been decided by Lord Low in 1901 in favor of the United Free Church, an appeal was taken to the Court of Sessions, Edinburgh. This court gave a decision, July 4, all the judges concurring, dismissing the action, and affirming the legality of the union and of the proceedings by which it was accomplished.

X. Presbyterian Church in England.—The statistical report made to the Synod of this Church in May showed that 5 congregations had been aided during the year, bringing the whole number of congregations up to 326, while the membership had risen from 76,071 to 78,024, and the membership of Sunday-schools to 81,967. The total income of the Church had been £320,851. The church sittings available numbered 167,945, against 166,391 in 1900. Five churches were in course of building. The debt upon church property amounted to £87,858, as against £101,063 at the close of 1900.

The total income for missionary work had been £52,828, including £20,000 from the Sturge bequest. The mission in China returned 87 organized congregations, 123 preaching stations, and 7,500 members. Of these congregations, 34 constituted "native Chinese pastorates as fully organized as any of the home organizations, none of which received a penny from the home funds." The Synod decided to cooperate with the United Free Church of Scotland in the support of the Livingstonia Mission, Africa, and to incorporate it as one of its schemes.

The Synod met in Newcastle, May 6. The Rev. A. H. Drysdale was chosen moderator, and addressed the meeting on the subject of The New Puritanism. The report on home missions embodied the rules for a proposed permanent Church Building fund, which were adopted. In the past periodical funds had been raised, of which the one recently closed had amounted to £50,000. It was now decided to aim at raising at least £5,000 a year, and the institution of a loan fund was contemplated. The question was raised whether the erection of a side pulpit should be permitted in churches aided by the fund, pulpits of that kind being regarded by some Protestants as sacerdotal. The answer was returned to the objection that it was a mistake to set up as a standard of Protestantism what was merely an accident. The Synod decided to leave the matter of a side pulpit optional. The sustentation report showed an income of £46,620, which, with few exceptions, insured a ministerial stipend of not less than £200 a year. Congregations were urged to aid the committee in raising the annuity for aged and infirm ministers from £60 to £100. Two ministers were set apart as Synod evangelists for the year. The Home Mission Committee was empowered to set apart a minister for a limited time to carry on a pioneer church extension work. The Synod decided to assist in providing services on the Continent for English-speaking travelers. While the Synod sends delegates to the United Free Church Assembly in Scotland and has fraternal relations with the Synod in England in connection with the Church of Scotland, it found it inadvisable to go forward in the establishment of similar relations with the Established Church of Scotland at the present time.

XI. Presbyterian Church in Ireland.—The General Assembly met in Belfast, June 2. The Rev. Prof. Henry was chosen moderator. Provision was made for the retirement of ministers at seventy years of age and the appointment of an assistant and successor. Another measure adopted permits the several sessions throughout the Church to select as their representative in the Assembly any elder of any congregation under its jurisdiction. A specimen organ, placed in the vestibule of the church where the Assembly met, was removed under the influence of the Purity of Worship party. The total amount received by churches and Sabbath-schools during

the year was returned at £299,307, and the total ministerial income was £111,317. The Board of Missions reported that the colonial mission had a credit balance of £859, and the Continental mission one of £536; while the other missions had debtor balances—the Irish of £1,969, the Jewish of £1,549, the foreign of £6,778, the Indian Education fund of £200, the fund for weak congregations of £16, and the home mission fund of £2,702.

XII. Welsh Calvinistic Methodist Church.

—The statistics of this Church, presented to the General Assembly in May, gave it 1,579 chapels and preaching stations, having sitting accommodation for 500,000 persons, 976 Sunday-school buildings, 191 mansees, 461 chapel houses, 1,374 churches, 834 ministers, 890 preachers, 160,333 communicants, 74,522 children, 2,532 candidates for membership; total in the churches, 237,277; 1,688 Sunday-schools, with 25,657 officers and teachers and 204,777 members; and 323,951 hearers in the churches. The collections for all purposes amounted to £305,745.

The General Assembly met in Liverpool, May 13. The Rev. Aaron Davis was chosen moderator. The report of foreign missions showed that there had been a considerable deficit in funds, while the work in the Khassia hills of India had met with encouraging success. The income of the society had been £8,751, and the expenditure £14,526. With the consent of the Assembly the De Luchai field was transferred to the Baptist Missionary Society. The Committee on the "Forward Movement" reported that its receipts had been £5,898, and its expenditure £3,454. The profits of the book room had been £1,450. The General Assembly's mission to the Welsh in London was represented to be in a satisfactory condition. These people had now 16 churches and preaching stations, 14 branch Sabbath-schools, 10 ministers, 8 unordained preachers, 95 deacons, 4,005 communicants, and 931 children, with 5,551 hearers at their services, and had contributed £8,456 during the year. The Committee of the Twentieth Century Fund reported that £78,704 had been promised to it, and £50,000 had been paid. The fund would be open till the end of 1902.

XIII. Presbyterian Church in New South Wales.—The General Assembly of the Presbyterian Church in New South Wales met in Sydney in June. The Rev. John Walker was chosen moderator, and made an address insisting upon the necessity of the Church putting more energy into its work and expanding it. As aids in the improvement of existing conditions, he proposed the institution of three new offices—those of a superintendent of parishes, a home mission organizing commission, and a church evangelist. The suggestion for the appointment of a superintendent of parishes was accepted by the Assembly, and Mr. Walker was chosen to the office. The other suggestions were accepted in principle, contingently on men and means for carrying them out being found.

XIV. Presbyterian Church of New Zealand.—The union of the two Presbyterian Churches in New Zealand—the Church of Otago and Southland and the Northern Church—was formally completed in December, 1901, when the act of union was unanimously adopted by the Assembly, and the moderators of the two churches signed the uniting act and gave each other the right hand of fellowship as representatives of their respective churches. The negotiations for union had been going on for a considerable time, but their completion was delayed in consequence of an apprehension by the Southern

Church that the validity of certain trust deeds of which it enjoyed the benefit might be impaired if it lost its identity. This apprehension having been set at rest by a decision of the courts, union became easy. Conferences with reference to union have been begun between committees of the Presbyterian and Congregational Churches in Australia.

XV. Conference of Psalm-Singers.—A conference of representatives of those Presbyterian Churches which insist upon the exclusive use of the Psalms in the service of song in worship was held in Belfast, Ireland, Aug. 6-8. Among these churches are the Presbyterian Church in Ireland, the various Reformed Presbyterian Churches in Scotland, Ireland, and the United States, the secession churches, and the United Presbyterian Church in North America. A different person officiated as chairman at each session. The program included more than 30 papers and addresses of argumentative, historical, and critical character, presenting the subject in various aspects. The divine authority of the Psalms was insisted upon, while it was argued that hymns were destitute of such authority. Arguments were presented for the sufficiency of the Psalms for all occasions of worship, and illustrations were adduced from argument and experience of the adaptation of the Psalms to all purposes and contingencies. In a paper on The Twentieth-Century Interdenominational Psalmody Revision Movement, the Rev. J. C. K. Milligan, of New York, described a movement for the revision of the Psalms contemplating a metrical version, which would more favorably commend them to the Christian public. The effort would be made to meet every objection that could be brought against the Psalms by those who preferred hymns by correcting the defects in the old revision and seeking to impress the exact thought of each line of the original in the language of the authorized and revised versions of the Bible and in the best form attainable. Good progress had been made with the work, and it was hoped that the Psalter would be completed in May, 1903.

PRINCE EDWARD ISLAND, a province of the Dominion of Canada; area, 2,000 square miles; population in 1901, 103,259; capital, Charlottetown.

Government and Politics.—The ministry that Arthur Peters formed early in the year as a result of Premier Farquharson's retirement and election to the Dominion Parliament, was composed of himself as Premier, President of the Council, and Attorney-General; Benjamin Rogers as Provincial Secretary, Treasurer, and Commissioner of Agriculture; J. H. Cumiskey, Commissioner of Public Works; and Messrs. R. C. McLeod, J. W. Richards, Peter McNutt, J. F. Whear, and George Forbes as members without office. The only changes were in the premiership and the substitution of Mr. Whear for Mr. M. McDonald. The Legislature was opened by Lieut.-Gov. P. A. McIntyre on March 11, 1902, with an address from the throne, of which the following were the important passages:

"I regret that the long-protracted war in South Africa still continues. Another contingent from the Dominion of Canada, including volunteers from this province, departed for the scene of war in the month of January. It is pleasing to note the probabilities of an early conclusion of the war, and that our citizen soldiers now serving in South Africa will speedily return to their homes.

"The untimely death of the late President of the United States, the Hon. William McKinley, caused a feeling of horror throughout this province as well as in all parts of Canada.

"For a number of years this Government has been pressing upon the Dominion authorities the right of this province to its share of the fishery award under the Halifax Commission. I am pleased to inform you that it is the purpose of my Government still to urge this claim, and I have no doubt that, in conjunction with the Government of the province of Quebec, which is now moving in the matter, the claims of both governments will eventually be recognized and the amounts justly due paid over to the provinces.

"The inauguration of farmers' institutes in Prince Edward Island, under our Department of Agriculture, has been a great stimulus to our farming industry, and the province will doubtless be greatly benefited by the formation of these societies. The establishment of a dairy school in our province, assisted by the federal and provincial governments, will, I am sure, result in securing a higher standard of, as well as greater uniformity in, the quality of our dairy-products, which now form a very important part of our agricultural exports. Arrangements are being made for the importation this season of some improved breeding stock, comprising horses, cattle, and swine. Measures will be submitted to you for the purpose of improving the road system, and also for increasing the revenue of this province.

"During recess a decision of our Supreme Court was given with respect to the right of the farmers to dig mussel mud within a certain distance of live oyster-beds, under the regulations adopted by the Federal Government. This decision had been adverse to the province, on the ground that the Dominion Government had the power to make such regulations. Since this decision, negotiations have been had between my Government and the federal administration, and the matter will likely be so arranged as not to interfere with the rights of the farmers to dig mussel mud as they have heretofore been accustomed to do, and at the same time to conserve in a proper manner the oyster fisheries of the province.

"The new wing to the insane asylum has been completed, and a large number of the unfortunate patients have been transferred from the old building to it, thus providing means for their better classification and avoiding the overcrowded state of the institution. Since last session the constitutionality of the prohibition act passed in 1900 has been upheld by our Supreme Court."

Prorogation took place on April 11, after the following acts and other minor ones had been assented to on behalf of the Crown:

To amend the public roads act of 1901.

To amend the law relating to trustees.

To amend the prohibition act of 1900.

To amend the public schools act of 1877.

The chief points in the work of the session, aside perhaps from the decision of Judge Hodgson and the action of the Legislature thereon, were the development of the caucus system and the increased taxation. The following from an editorial in the Charlottetown Guardian, a paper usually friendly to the Government, may be taken as correctly summarizing the situation: "A feature of the session of which the influence will be distinctly felt is the increase of taxation imposed, but rendered necessary by the state of the provincial finances. If all were quite as sure as the Premier professed himself to be that we shall shortly recover from the Dominion Government our claim for the fishery award, amounting to a million or more, these increased taxes might at least have been postponed to await the result. But an old claim, however just, is not by any means the same as cash in the treasury. So we must accept

the increase of the road tax, and the added 50 per cent. to the income tax on banks. There will still probably be a deficit on the current year's transactions. The caucus system was much in evidence, and seems to have obtained a greater prominence here than in other provinces of Canada. In fact, the public business is so fully shaped in caucus as to leave but little for the House to do as a deliberate body. Many matters appear in a clearer and different light after being examined from the Opposition standpoint, and the country should have the benefit of this criticism before being committed to important new departures."

Finances.—Mr. Peters delivered his budget speech on April 8. He said that Mr. Farquharson had issued \$48,930 debentures on Prince of Wales College, \$37,890 on the wing to the asylum, \$2,492 on repairs to the Colonial Building, and on permanent bridges \$4,537. The balance, \$25,000, owing to the depression in the money-market, was not sold. He pointed out that in several departments a saving had been made. He wished first to take the Department of Justice for ten years. He found that the Conservatives spent \$19,621, and the Liberals \$16,816 per annum, the saving for the ten years being \$28,059. In legislation the Conservatives spent \$12,907, and the Liberals \$8,748 per annum, or a saving in ten years of \$41,590. In the Public Works Department the Conservatives spent \$23,354 for bridges, the Liberals \$18,203, an annual saving of \$51,510 in the ten years. The expenditure for wharves in ten years under Conservative rule was \$7,306; under the Liberal régime \$4,078—a saving in these departments in the ten years of \$155,324.

The Treasurer referred with pride to some increases in expenditure, such as that upon education, which had grown from a yearly average of \$106,292 under Conservative rule, to \$124,203 under his party. He placed the public debt at \$642,177, of which the Liberals were responsible for \$471,177. Since they attained power in 1892 \$359,155 had been expended on capital account and finally charged to this indebtedness, and the remainder had been spent upon Prince of Wales College, the insane asylum, etc. The Opposition critics, including Daniel Gordon, leader of the party, pointed out that this debt was a floating liability, really amounting, with certain unpaid accounts, to more than \$700,000; that \$220,980 was due to the banks, and \$176,998 was in the form of temporary loans, liable to be called in at a moment's notice. The revenues were placed at \$309,445 for the year ending Dec. 31, 1901, but the Opposition contended that \$25,014 of this amount were proceeds of a sale of debentures and were not revenues at all. The expenditures were \$330,632, and this left a deficit, according to the Government, of \$20,000, and according to the Opposition of \$45,000. The revenues included \$196,931 from Dominion subsidies, \$64,992 from various taxes—land, income, road, commercial travelers, and corporations; \$17,317 from various fees; and \$5,258 from public lands. The chief items of expenditure were as follow: Administration of justice, \$17,524; Department of Agriculture, \$3,265.99; education, \$128,288.10; Hospital for Insane, \$23,436; interest, \$24,803; miscellaneous, \$4,701; poorhouse and paupers, \$7,307; Secretary-Treasurer's Department, \$4,590; Public Works Department, \$4,149; ferries, including the ferry steamers, \$20,322; roads, \$18,969; bridges, \$20,783; Hospital for Insane, \$13,398; bridges (permanent), \$4,055; total expenditure on capital account, \$20,306.

On April 14, Mr. J. A. Mathieson replied to the Treasurer. He gave the figures of extra revenue

items during Conservative and Liberal government of the island. The totals were respectively \$392,667 and \$674,628. From 1880 to 1890, he said, the former party spent while in power an annual average of \$275,787, while from 1892 to 1901 inclusive the Liberals averaged \$312,774. In the first term of ten years a total of \$2,727,863 was expended, and in the second period \$3,127,741—an increase of \$399,877. The estimates for 1902 were given by the Treasurer as \$318,811 revenue, against \$284,431, estimated, for 1901. The expenditures were placed at \$312,792, compared with \$315,326 in the preceding year. The increase in the expected receipts was mainly in the \$15,000 additional Dominion subsidy and larger returns from the road tax and income tax.

Taxation.—A question considerably discussed was the relative taxation of town and country districts in the island. The Charlottetown Guardian pointed out, on April 9, that the population of that city and Summerside was 14,955, and that the rest of the province had 88,303. Yet of the expenditures \$53,264 went to the country districts, while they only paid in taxes \$42,928. Comparing the expenditures upon education, it was said that out of \$114,755 the two cities received \$10,650, or 71 cents a head, and the country \$104,105, or \$1.18 a head.

An important issue also was that of the tax on commercial travelers. On May 3 it was announced that the city of Charlottetown would follow the example of the provincial Government and tax all "transient traders" in its midst. All commercial travelers, therefore, became liable to a tax of \$300 from the city, in addition to the Government's \$20 imposition. Three days later the provincial Supreme Court decided by unanimous judgment that the provincial taxation of resident agents was unconstitutional and at variance with the federal character of Canadian institutions. Meanwhile, the Opposition in the Legislature were denouncing the increase in the income tax, the road tax, and the tax on banks, and one Conservative paper, the Examiner, declared on April 18 that "the province is drifting toward the brink of ruin."

Prohibition.—This question aroused a certain amount of discussion, although public opinion had often been expressed strongly in favor of effective prohibition. On April 4 J. F. Whear presented a petition from 800 residents of Charlottetown, asking the Legislature to repeal the provincial prohibition act or to give the citizens of Charlottetown a plebiscite as to its application to them. It was declared that the majority of citizens were not in favor of the law, and that therefore it never could be properly enforced.

On April 15 the question again came up, in connection with an amendment to the act presented by the Premier. He proposed to strengthen the machinery of enforcement, declared that the act was still defective, said that a great deal of liquor was still being sold, and hoped that this measure—introduced at the wish of the temperance people—would do the subject more justice. In the debate that followed a number of reflections were cast upon physicians and druggists for their alleged misuse of their privileges under the act. An amendment was accepted making it possible for duly qualified druggists and chemists to sell liquor for exclusively medicinal purposes.

Education.—On March 29, 1902, the annual report of the Chief Superintendent of Education was submitted to the Legislature. It contained the usual statistical tables, special reports on the Macdonald Manual Training-Schools, the Provincial Teachers' Association, the Summer School of

Science, the Charlottetown and Summerside School Boards, Prince of Wales College and Normal School, and from the 4 district inspectors. The number of districts and schools in the province in 1901 was 474, an increase of 4. The number of school departments was 590, an increase of 4. There was one vacant school. The number of teachers employed was 589, an increase of 3. The male teachers numbered 229, and the female teachers 290. The average salaries were: First-class male, \$401.35; first-class female, \$306.61. The highest for males of this class was \$700, and the lowest \$300; for females the highest was \$350, and the lowest \$230. The total enrolment of pupils was 20,779, a decrease of 510; the average daily attendance was 12,330, and the percentage of attendance was 59.34, both showing a slight decrease. The expenditure by the Government for education was \$128,288, being slightly less than the previous year. The amounts voted at school meetings were: For supplements, \$8,935; school-buildings, \$8,095; contingent expenses, \$19,616; total, \$36,647.

Agriculture.—Two statements upon the position of Prince Edward Island in this respect appeared in 1902. The first was the slight summary of work published by the provincial department and dealing with its expenditure of \$2,635 in the encouragement of farming and cattle-raising. The other was the elaborate statement in the Dominion census returns for 1901, from which the following details are extracted:

Agricultural values were taken for the first time in this census. They show for farms and lots in the island a total for land and buildings of \$23,118,946; for implements and machinery, \$2,628,787; for live stock, \$4,878,980; and for the crops and animal products of the census year, \$7,467,773. For farms alone the value of land and buildings was \$22,988,508; of implements and machinery, \$2,618,597; of live stock, \$4,826,984; and of crops and animal products, \$7,413,297. The total value of farm property was \$30,434,089. The total gross value of farm-products for the census year was \$4,764,674 for the crops and \$2,648,623 for animal products. The average value of horses on farms per head was \$63.64; milch cows, \$22.04; other horned cattle, \$10.63; sheep, \$3.06; and swine, \$7.40.

In the value of dairy-products was included the milk and cream sold to cheese and butter factories, amounting to \$464,032. There were in operation in the island during the census year 47 factories, of which 27 made cheese and butter, 15 made cheese only, and 5 made butter only. The cheese product was 4,457,519 pounds, worth \$449,008; and the butter product 562,220 pounds, worth \$117,735. In the former census year (1899) there were four cheese factories in the island, and the total value of the product was \$8,448. The rent value of leased farms was 95 cents an acre, and the rate of wages for farm labor was \$3.68 a week, including board.

The number of bearing and non-bearing apple-trees in the island was 202,910; of peach-trees, 163; of pear-trees, 1,962; of plum-trees, 27,480; of cherry-trees, 70,431; of other fruit-trees, 57,924; and of grape-vines, 749. The yield of fruit-trees in the last census year was 184,487 bushels, and in the former census year it was 60,325 bushels.

PROTESTANT EPISCOPAL CHURCH IN THE UNITED STATES. A summary of the statistics of church progress in the year shows the following: Within the United States and their possessions there are 60 dioceses and 21 missionary districts, under the care of 86 bishops. In

foreign lands there are 5 missionary districts, viz., Cape Palmas and ports adjacent, Hangkow, Shanghai, Kioto, and Tokio; and 4 churches under a concordat with the House of Bishops, viz., the churches in Brazil, Haiti, Mexico, and Continental Europe. The number of clergy is 5,226; parishes and missions, 6,544; priests ordained, 136; church edifices, 5,830; baptisms, 60,261; confirmations, 45,809; communicants, 734,146; Sunday-school teachers, 45,018; Sunday-school scholars, 415,859; parish-school teachers, 359; parish-school scholars, 7,631; industrial-school teachers, 388; industrial-school scholars, 4,106; contributions, \$15,596,267.

American Episcopate.—The Right Rev. Francis McNeese Whittle, D. D., LL. D., died on June 18, 1902, and the Right Rev. Robert Atkinson Gibson, D. D., succeeded him as sixth Bishop of the Diocese of Virginia.

By the action of the convention of the diocese and with the consent of the General Convention, the name of the diocese of Indiana was changed to the diocese of Indianapolis.

An order of the General Convention of 1901 directed that the term "missionary district" should hereafter be used in the canons of the Church instead of the term "missionary jurisdiction."

On April 1, at St. Andrew's Cathedral, Honolulu, the Right Rev. Alfred Willis, D. D., formally surrendered his jurisdiction over the former diocese of Honolulu to the Right Rev. William Ford Nichols, Bishop of California, who accepted the former diocese as a missionary district of the American Church. At the meeting of the House of Bishops, April 16 and 17, the Rev. Henry Bond Restarick, rector of St. Paul's, San Diego, Cal., was elected missionary bishop.

In response to a request from the synod of the Mexican Episcopal Church, dated Dec. 18, 1900, asking for the consecration of three bishops for this Church, the House of Bishops, in their April meeting, recommended the presiding bishop to take order for the consecration of three bishops for the Mexican Church, subject to the consent of the majority of the bishops of the Church. The names recommended were the Rev. Henry Forrester, as episcopal vicar and resident representative of the Board of Missions; the Rev. Fausto Orihuela; and the Rev. José a Carrión. In due course it was reported that a constitutional majority of the members of the House of Bishops had given their consent, but somewhat later several of the bishops signified their desire to withdraw their consent. Upon reporting this action by letter to all the bishops a majority of them declared in answer that it was not advisable to proceed without further consideration. At the meeting of the House of Bishops in October a commission of the Mexican Church was appointed, consisting of the Bishops of Kentucky, West Virginia, New Mexico and Arizona, California, and Los Angeles, whose duty it should be to make inquiry as to the character and learning of persons presented for consecration, and when ready to request the presiding bishop to call a meeting of the House of Bishops to consider and decide the question of consecrating one or more bishops for the Mexican Church.

The House of Bishops in April changed the title of the missionary district of Porto Rico and Vieques to the missionary district of Porto Rico. The Rev. William Cabell Brown, D. D., declined to accept his election as first bishop of this district, and the Rev. James Heartt Van Buren, rector of St. John the Baptist's, San Juan, Porto Rico, was elected in his stead. The Bishop of Porto Rico has charge of the district of Cuba

also, it having been transferred to him from the charge of the Bishop of Pennsylvania.

The new missionary district of Salina (western Kansas) was on its formation placed under the episcopal superintendence of the Bishop of Kansas. The Rev. Nathaniel Seymour Thomas, rector of the Church of the Holy Apostles, Philadelphia, Pa., declined the election of first bishop of this district, and the Ven. Shelden Munson Griswold, D. D., rector of Christ's Church, Hudson, N. Y., and Archdeacon of Albany, was elected in his stead. The following have been consecrated bishops since Dec. 4, 1902: The Rev. Cameron Mann, D. D., Missionary Bishop of North Dakota; the Rev. Charles Henry Brent, Missionary Bishop of the Philippine Islands; the Rev. Frederick William Keator, Missionary Bishop of Olympia; Rev. Frederick Burgess, D. D., Bishop of Long Island, in succession to the Right Rev. Abram N. Littlejohn, deceased; the Rev. James Addison Ingle, Missionary Bishop of Hankow; the Rev. Alexander Hamilton Vinton, D. D., Bishop of Western Massachusetts; the Rev. Charles Sanford Olmstead, Bishop of Colorado; the Rev. Alexander Mackay-Smith, Bishop-Coadjutor of Pennsylvania; the Rev. Charles Tyler Olmstead, D. D., Bishop-Coadjutor of Central New York.

On Jan. 8, the Rev. Charles Sanford Olmstead was elected Bishop-Coadjutor of Colorado, and the Rev. Charles Minnegerode Beckwith, D. D., Bishop of Alabama.

Missions.—The entire receipts of the Domestic and Foreign Missionary Society for the fiscal year ended Aug. 31 were \$1,099,018.77. This sum includes the large receipts for "specials" and those for publications and miscellaneous purposes which may not be used by the society in meeting its appropriations. The total amount at the discretion of the board for the work for which it has made itself responsible is \$623,170.88, of which \$570,948.73 came from contributions, and \$52,222.15 from legacies received during the year, such legacies having been designated by the testators either for foreign or domestic missions or for the use of the society. In addition, the board used during the past year \$1,080 from a legacy that it had previously received. After all these sums were applied there was a deficit of \$119,143.95 in meeting the appropriations. The number of parishes and missions which contributed to the work of the society by or through any agency the previous year was 4,075. For the year ended Aug. 31, 4,866 parishes contributed by parish offerings as such \$329,687; through the Sunday-schools, \$108,119.40; and through the Woman's Auxiliary, \$70,967.11. The gain in the total number of parishes contributing was 791; in the amount of the parish offerings, \$93,693.28; in the offerings of the Sunday-school, \$7,771.56; of the Woman's Auxiliary, \$7,307.68.

Legacies were received amounting to \$13,918.36, which, according to the terms of the wills, were permanently invested, and \$28,715 was received from legacies and paid out as "specials." The increase in contributions as compared with the previous year was \$114,084.41; but there was a decrease in the amount received from legacies subject to the discretion of the board of \$17,471.03. The deficiency of \$119,143.95 was temporarily met by drawing upon the reserve deposit of \$109,120.81 (set aside by the Board of Managers to meet payments falling due in the early months of the year, when contributions are few and to be replaced as soon as possible), and the \$12,189.46 of the bequest of Rev. Cleveland Keith, applicable only to the China mission.

A system of apportionment among the parishes

and churches was put into operation so that each diocese was guided in its contributions by the amount expected of it to meet the entire amount desired by the society. Monthly reports were issued by the treasurer. The success of the new system was seen in many dioceses and missionary districts exceeding the amount asked of them. With four exceptions every diocese and missionary district showed an increase in the number of parishes contributing. In the aggregate 1,385 more parishes and missionary districts contributed this year than last. The extension of time to March 1, 1902, before putting into action the resolution providing for a 10-per-cent. reduction in appropriations in the event of a deficit of \$100,000 at the beginning of the fiscal year Sept. 1, 1901, resulted in a rescinding of the action in consequence of the favorable report in February of the bishops as to the successful working of the apportionment plan. The amount available for domestic missions was \$606,453.54, of which sum \$275,353.47 was received as "specials" and paid out over and above appropriations or invested permanently. The amount for "specials" given includes \$82,955.23, being the result of the united offering of 1901 of the Woman's Auxiliary. The payments on account of white mission work were \$172,666.12; of Indian, \$68,174.98; of colored, \$67,021.14; specials were \$135,403.99; Woman's Auxiliary united offering of 1901, \$63,400; portion of Woman's Auxiliary united offering of 1898 applied to appropriations for domestic missions, \$14,089; legacy expenses (half), \$26.02; half amount paid to annuitants, \$694.50; half cost of administration and collection, \$24,556.86; printing reports of the board, Spirit of Missions for the clergy, pamphlets, and leaflets for gratuitous distribution, \$11,878.99; legacies for investment, \$3,025.89; legacies paid to certain bishops, etc., at their discretion, \$19,625; half amount withdrawn temporarily for the "Ann Eliza Tweddle Deposit" for domestic and foreign missions, \$12,500; making a total of payments on account of domestic missions and specials, \$583,062.49, and leaving available for domestic missions and specials at the close of the fiscal year a balance of \$112,968.39.

The total amount for the fiscal year applied upon the work of the Church in foreign lands was \$409,730.84, but of this sum \$117,660.03 was received as "specials" to be paid over and above appropriation or to be invested permanently. The amount for "specials" includes \$24,633.99, the foreign portion of the united offering of 1901 of the Woman's Auxiliary. The statement of appropriations and resources for the year is as follows: Balance of appropriations on Sept. 1, 1901, unpaid, \$51,359.10; appropriations Sept. 1, 1901, to Sept. 1, 1902, \$300,283.68; received for foreign missions, \$129,373.70; one-half general offerings, \$136,083.14; legacies applied toward the appropriations, by order of the Board of Managers, \$3,112.13; undesignated legacies to the society, \$23,501.84; making a total of \$292,070.81, which shows a deficiency for foreign missions of \$59,571.97.

Some facts gleaned from the reports of the missionary bishops are given below:

Church work among the Indians is being carried on in 14 dioceses and missionary districts under the jurisdiction of their bishops, aided by 51 clergymen, of whom 29 are Indians, 83 laymen, and 38 women, in all 172 workers. There are over 250,000 Indians in the United States and about 35,000 in Alaska. Instead of rapidly dying out as a race, the Indians have held their own, and some tribes, such as the Cherokees

and Navajos, have nearly doubled. As a result of the educational system adopted by the Government and the various religious denominations 96,000 Indians have discarded native dress for that of the American citizen, 32,000 can read, 38,000 speak the English language, 21,000 live in houses, 98,632 are self-supporting, and 58,809 own taxable property.

In Alaska, the bishop reports 13 church buildings, over 100 baptisms and 44 confirmations for the year, \$1,212.13 in offerings. The amount of expense for the district was \$7,815.48.

Church work among the Swedes in this country embraces thirty odd parishes and missions with more than 75,000 communicants under the charge of 22 Swedish clergymen of the Church. Work among the deaf-mutes is carried on by 2 general missionaries in the employ of the board. In the Western district the missionary ministers in the sign-language to 600 communicants. Work among the colored people lies principally in the Southern States, covering 21 dioceses and 3 missionary districts under the charge of a commission consisting of 5 bishops, 5 presbyters, and 5 laymen. There are 8,000 communicants, worshipping in 200 churches and chapels, in charge of 100 clergymen. The appropriation for the work is \$65,000 per annum. The workers number 108 clergymen, 65 laymen, and 145 women—318 in all.

Church work in the Philippines has been placed on a permanent basis through the election and confirmation of its bishop, the Rev. Charles H. Brent. Just prior to the bishop's sailing for the islands on May 17 a person whose name was withheld gave \$100,000 with which to build a cathedral in Manila. A further gift of \$25,000 from Mr. and Mrs. George C. Thomas will provide buildings for parish work to be erected in connection with the cathedral foundation. The bishop's settlement, with 9 clergy, 2 trained nurses, some kindergartners, some lay missionaries, including a medical man, will cost \$5,000 a year to maintain. This is not yet accomplished, but is the plan of the bishop. An industrial school for teaching agriculture and woodworking, to cost \$2,000 a year for maintenance, is also desired. A movement is on foot by certain well-known and influential men of New York to raise the sum of \$1,000,000, the income of which is to be given Bishop Brent for his work. About \$75,000 of this amount is in sight. The Church of Liberia, through its bishop, reports a growing disposition to depend upon themselves in the matter of building churches and supplying other needs. In the year 1 priest was ordained, 2 candidates admitted for priest's orders, 13 lay readers licensed, 5 additional catechists and teachers commissioned, 1 corner-stone laid, 310 persons baptized. The grand total of baptisms in the district is 5,842; of confirmations, 2,987; present number of communicants, 1,596, of whom 943 are native Africans. Contributions during the year, \$4,961.52.

The bishop of the missionary district of Shanghai, China, reports that province as the most difficult for evangelistic work in China by reason of the attitude of indifference among the people. The province is wealthy, the people not exposed to famine, as in other parts. The feeling of pride in the literary classes is particularly strong, and the consequent indifference to the preaching of the Gospel is harder to overcome than active opposition. Statistics show the number of catechumens as 44; baptisms, 71; confirmations, 29; baptized Christians, 733; communicants, 397; day-schools, 20; day-scholars, 432; boarding-schools, 4; boarding-scholars, 341; teachers (Chinese), 51;

catechists, 7; Bible women, 7; contributions (Mexican), \$4,131. In addition, \$10,000 have been contributed by the Chinese to the building of a new hall at St. John's College. In St. Luke's Hospital, the Woman's Hospital, St. John's Dispensary, and a small dispensary opened in the old city of Shanghai, there were treated 852 in-patients; 32,375 dispensary patients, of which 12,633 were new cases. The report from the district of Hankow shows mission work to have been begun in two provinces hitherto unoccupied, Kiangai and Hunan. The number of baptisms for the year is not large, as an inevitable after-effect of the Boxer troubles. Rapid improvement is noted in all parts of educational work indirectly due to the fact that the court has sanctioned Western learning and ordered a college to be established in the capital of each province. Since all aspirants for office must pass an examination in branches of Western learning, an eagerness to acquire it is evinced at least by all office-seekers. The figures of the three hospitals of this district show 6,485 new cases and 11,873 patients returning to the clinics, and 488 in-patients and 362 operations in the hospitals. The number of baptisms is 210; of confirmations, 9; of communicants, 894; of contributions (Mexican), \$2,098.03.

The advances made in the mission work in Japan show new entries into two large cities, Akita and Wakamatsu. In the latter place a lot has been purchased and buildings suitable for missionary home and church services about to be put into order for use. At Kumagai 3,000 yen was spent for a lot and house for the missionary, and at Takasaki 2,000 yen for similar purposes. Fifteen were confirmed at the church in Aomori. St. Paul's College, Tokio, has as many students as it can receive. More than half the running expenses, which amounted to 9,000 yen, were met by fees. Grace Church, Tokio, became entirely independent of mission help from July 1. The Bishop of Tokio reports 4 deacons and 1 priest ordained; 221 baptisms; 124 confirmations; and contributions (Mexican), \$4,608.40.

The Bishop of Kioto reports 185 baptisms, 78 confirmations, 728 communicants, \$2,973.38 contributions in Japanese yen.

The Church in Haiti is established at 22 points. The baptisms in the year numbered 102; the confirmations, 8; the communicants, 604; the contributions, \$2,769.75.

The Mexican Church is awaiting with interest the future action of the House of Bishops in consequence of the doubt in the minds of many as to the constitutionality of the action taken in Cincinnati relative to the appointment of three bishops. The statistics from Sept. 15, 1901, to Aug. 15, 1902, are as follow: Baptisms, 59; confirmations, 108; communicants, 784; schools, 4; pupils, 63; offerings, \$870.07; congregations, 32; lay readers, 6; priests, 8; deacons, 8; candidates

for holy orders, 7; total receipts from the United States, \$7,891.87.

The statistics of the American churches in Europe show the number of churches to be 9, 2 in Paris and 1 each in Dresden, Florence, Geneva, Lucerne, Munich, Nice, and Rome. The number of clergy is 12; organized churches, 6; chaplaincies, 3; baptisms, 38; confirmed, 78; communicants, 1,475; contributions, \$60,000.

The receipts of the American Church Missionary Society amounted to \$65,978.47; cash on hand Sept. 1, 1901, \$8,159.62. The disbursements were \$59,133.51, and the cash balance on hand Sept. 1, 1902, \$15,004.58. The disbursements for Brazil for missions were \$21,772.01; for specials, \$844.16; for church building, \$4,572.80; for insurance, \$155. The statistics for 1902 show 8 clergy; 4 church edifices; 264 baptisms; 54 confirmed; 516 communicants; \$5,654.26 contributions.

For Cuba, the disbursements were: For missions, \$13,368.43; for specials, \$158; for the Church in Bolondron, \$1,284.28; for the Church in Havana, \$2,374.40. The statistics for Bolondron and Havana (Matanzas not reported) show 32 baptisms; 121 communicants; 8 Sunday-school teachers; 80 scholars; contributions, \$1,649.39.

The Society for Promoting Christianity among the Jews reports a steady advance in its work. The report from Emmanuel House, Philadelphia, states that its building is wholly inadequate to accommodate the numbers who desire to partake of its benefits. Of the 243 young men and women enrolled the house can accommodate but 80. The New York school enrolled 81 this year. The collections and contributions amounted to \$7,134.07; the expenditures, \$13,762.92; cash balance to new account, \$305.06; but it was found necessary to borrow \$6,525 to meet current expenses.

Woman's Auxiliary.—The summary of work accomplished by the Woman's Auxiliary and its junior department in 60 dioceses and 24 missionary districts shows: Contributions in money, \$236,039.03; and boxes valued at \$190,790.84. Of the total of \$426,829.87, the junior department gave money and boxes to the value of \$35,628.85. This total includes the contributions for the year, the specials, and the income and money withdrawn from the united offering of 1892, 1895, and 1896. In addition to it the united offering of 1901 of \$107,589.22 makes the total of \$534,419.09.

Church Building Fund.—The American Church Building Fund Commission reports that during the year it dispensed gifts to complete 43 churches amounting to \$8,175; loans to complete 4 churches, \$10,500. The contributions to the permanent building fund were \$4,907.27; interest on loans and investments, \$21,641.86; loans returned by parishes and missions, \$34,168.78; investment loans returned, \$15,000. The fund at present amounts to \$372,125.40.

Q

QUEBEC, a province of the Dominion of Canada; area, 347,350 square miles; population in 1901, 1,648,898. Capital, Quebec.

Government and Politics.—The Government at the beginning of 1902 was composed of S. N. Parent, Premier, Minister of Lands, Mines, and Fisheries, and Mayor of Quebec; H. Archambault, Attorney-General; F. G. M. Déchène, Minister of Agriculture; J. J. E. Guerin, member without office; H. T. Duffy, Provincial Treasurer;

Lomer Gouin, Commissioner of Public Works; and A. Turgeon, Minister of Colonization and Provincial Secretary. H. Archambault was Speaker of the Legislative Council, and H. B. Rainville of the Assembly. Late in June the Hon. Mr. Déchène died, and on June 30 Mr. Turgeon was transferred to the Department of Agriculture, and Mr. A. Robitaille, M. P. P., was sworn in as Provincial Secretary. Meanwhile, the Legislature had been opened on Feb. 13 by

Lieut.-Gov. Sir L. A. Jetté with a speech from the throne, of which the following are the significant passages:

"Colonization is admitted to be of the greatest importance in connection with the development of this province. Although there is manifest unanimity in public opinion on this point, it is none the less true that there is extreme diversity as to the methods to be followed to attain the end that all have in view. A bill will accordingly be submitted to you for the appointment of a commission whose duty it will be (1) To make a careful study of the existing law, and to seek the means of improving it. (2) To examine and report upon such new projects or systems as may be submitted to it. (3) Finally, to consider all questions relating to colonization and the granting and settlement of the public lands, without losing sight of the slender resources of the province and the interests of the lumber industry.

"The negotiations opened some time ago with the Dominion Government to secure the recognition of our rights to the fisheries in the territorial waters of the province have been continued. My Government has further submitted to the federal authorities two important claims connected with this question of the fisheries—one for the reimbursement to the province of the amounts collected since 1867 for fishing licenses and permits, the other for its share of the indemnity paid by the United States for the privilege granted the citizens of that country by the Washington treaty to fish along our shores.

"The various reforms effected in the past few years in our educational system have produced satisfactory results. The free distribution of school-books and maps has been well received by the people of the province. I have much satisfaction in informing you that a great many school municipalities and educational establishments have availed themselves of the offer made by my Government, and that over 100,000 copies of *Mon Premier Livre* have already been distributed.

"The aid granted to municipal councils for the improvement of roads has awakened the attention of the rural population to this important question, and I am pleased to state that there is marked progress in the making and maintenance of highways.

"My Government continues to encourage the advancement of agriculture and of dairy-produce, by providing for the improvement of stock breeding, by granting premiums for cheese factories, and by diffusing the necessary technical knowledge through the medium of special publications and special lectures."

The address in reply was passed without division. There was some brief and courteous criticism by Mr. Klynn, the Opposition leader, and remarks by the Premier in which he drew attention to the important new country just opening up for development. East of the Saguenay, he said, there are water-powers and supplies of wood sufficient for an almost infinite production of pulp and paper. Most people had but a very imperfect idea of the proportions of the rivers that watered this vast territory. Thus, the Manicougan, whose great falls had been measured and computed last year, was more considerable than the St. Maurice, both as regards length and volume of water. Its first falls were capable of producing 100,000 horse-power, and ten miles higher were other falls still more extensive. These falls were near both to the sea and to a port that was equally accessible in winter and summer, and were in the vicinity of practically

inexhaustible spruce forests. The Premier spoke also of the Betsiamitz, the Moisie, and the St. John of the north shore, and of the large enterprise recently established by the Messrs. Clarke, of New York and Toronto, on the Ste-Marguerite.

The legislation of the session was not as important as were the acts presented and refused by the House or the Government. A measure proposing to abolish provincial appeals to the Judicial Committee of the imperial Privy Council, except in certain cases arising out of the interpretations of federal jurisdiction, was widely discussed, and finally fell for want of support. The following were the chief measures passed during the session, which was prorogued on March 28 after a non-confidence motion had been defeated by 39 to 3:

- To amend the law respecting holidays.
- Respecting the Protestant hospital for the insane.
- To amend the joint-stock companies' incorporation act.
- To amend the Quebec license law.
- To amend the education act.
- To authorize the organization of a commission to assist in the advancement of the colonization and in the development of forest industries.
- To amend the Quebec game laws.
- To amend the Quebec mining law.
- To amend Article 1834 of the Civil Code respecting the registration of marriage contracts.
- To authorize municipal councils to prohibit the sale of intoxicating liquors.
- To incorporate the Metabetchouan Pulp Company.
- To incorporate the Beauharnois Light, Heat, and Power Company.
- Respecting the agricultural syndicates.
- To amend the law granting exemption from taxation to commercial travelers.
- To amend the law respecting civil engineers.
- To amend the law respecting dentists.
- To amend the law respecting mutual fire insurance companies.
- To incorporate the Power, Pulp and Paper Company of North America.
- To incorporate the St. Lawrence and Megantic Railway Company.
- To incorporate the Agricultural and Industrial Exhibition Company of St. Johns, Province of Quebec.

Respecting butter and cheese exchanges.

Finances.—The Treasurer, H. T. Duffy, delivered his financial statement in the Assembly on March 12. The ordinary receipts for the year ending June 30, 1901, were given as \$4,563,432, and the expenditures as \$4,516,257, leaving a surplus of \$47,174. The receipts from all sources, including trust funds and sales of inscribed stock, were \$4,816,218, and the expenditures, including railway subsidies, Quebec Bridge, trust funds, and redemption of debt, were \$4,756,002, a surplus of \$60,215. The chief increase in ordinary receipts over what had been estimated were in lands, mines, and fisheries, which returned \$375,003 more than had been expected; in licenses, which netted \$11,968 of an increase; in direct taxes on commercial corporations, which showed an increase of \$31,157; and in the maintenance of the insane, which contributed \$21,338 more. The payments in excess of estimates for the year included \$41,701 upon legislation; \$83,410 upon justice; \$15,529 upon public instruction; \$24,067 upon agriculture; \$55,390 upon colonization and mines; and \$48,763 upon services; a total of \$273,472. The first payment on account of the

Quebec Bridge subsidy—\$30,000—was paid, and an extra expenditure of \$13,933 on account of the royal visit was met. The net public debt of the province was placed at \$25,491,638, with an additional \$1,736,974 as its increase by conversion. The estimated expenditure for 1902-'03 was \$4,581,555.18.

Mr. Flynn, in criticizing the budget speech for the Opposition, declared that the sum of \$403,197 received and credited to revenue by the Treasurer was really part of the capital of the province as being the product of timber sales during the year from Crown lands. If this amount were deducted, it would turn the alleged surplus into a deficit of \$331,857.

Agriculture.—The report of the Minister of Agriculture in Quebec, dated Feb. 1, 1902, said that conditions showed a marked improvement. The policy of granting Government premiums to cheese factories had proved successful, and \$5,000 had been expended in 1901 for the purpose. Farmers' clubs had increased in 1901 from 530 to 543. On Dec. 31, 1900, they had 16,077 members, with total receipts for the year of \$86,338 and an expenditure of \$77,074. Horse and cattle breeding had been encouraged and improved. Mr. Déchène referred to the methods of handling milk as being still the chief obstacle in the way of a greater dairying development. Speaking at the Dairymen's Convention held at Rivière du Loup on Jan. 9, 1901, Mr. Leon Gerin referred to the results of help from the governments of Canada and the province to the dairy trade in the following terms: "The effects I observe are three: First, the increase in the number of creameries. In 1895, the first year of the service, there were in the province of Quebec 307; in 1899, 711. In the six counties below Quebec in 1895 there were 52 creameries; in 1899, 86. The second result is the increased quantity of butter exported. In 1895 our butter sent to Great Britain was hardly 2,700,000 pounds; in 1900 it exceeded 24,000,000 pounds. The third result is the relative selling value of our butter. In 1895 Australian butter was quoted at 9 to 13 shillings a quintal dearer than Canadian butter. In the same period we have succeeded in reducing the difference between our butter and Danish butter by from 6 to 9 shillings a quintal."

Mines and Minerals.—There was a great development in asbestos-mining in the eastern townships of Quebec in 1901, and the work done and plants put in warranted the hope of a good output of chrome in Colrairie and of gold in Beauce next year. Copper also assumed a little more importance. Mica passed through a difficult phase, owing to the low prices. The other minerals of the province were worked as in previous years. A new industry, from which much was expected, is that of compressed peat. A small establishment for the purpose was set up at Cacouna and yielded satisfactory results; but in the autumn it was burned.

The Bureau of Mines report showed in the year 1900-'01 the issue of 193 prospecting permits and 12 mining licenses. Asbestos was perhaps the most active mineral. From 1,500 to 2,000 men were employed, and their product was valued at \$1,284,424. The blast-furnaces at Radnor and Drummondville were in full operation, with an extraction of 14,449 tons of pig-iron. The total minerals produced were valued at \$1,727,731, including, besides asbestos, iron ore valued at \$30,978; copper ore at \$126,500; mica at \$39,600; ocher (calcined) at \$14,595; cement at \$28,000; and granite at \$146,000. The number of workmen employed was 2,792, and the wages paid \$865,110.

Public Lands and Forests.—The Hon. Mr. Parent, in his report for the year ending June 30, 1901, said that the territory of the province still available for concession was 6,777,287 acres. In the year 183,228 acres had been sold for \$95,026. Three grants to the extent of 1,700 acres were also given, and 10,900 acres were conceded to the parents of families of 12 living children. The leasing of fishing privileges and licenses on inland and salt waters yielded \$46,537, and hunting permits realized \$9,184. The total revenue from woods and forests was \$830,874, and with the proceeds of sale held in June, 1901, and of arrears paid amounted to \$1,234,072. The total area of all lands granted or sold for colonization was 198,690 acres, against 174,127 in 1900. Referring to the sale of timber limits, 4,634 square miles sold for \$375,947, the Premier said in his report: "To comply with the many requests that had been made to me by persons engaged in undertakings such as those I have alluded to, and with the view of supplying raw material to several very prosperous industrial establishments whose existence already dates some years back, and to others recently erected, I deemed advisable to put up to auction the lease of a rather large extent of public lands scattered throughout nearly all the agencies in the province, and also to include in the advertisements of sale certain territories already put up to auction and not bid for." As a sequel to these facts, he gave a list of 28 pulp and paper mills in operation or ready to begin work, and 12 more in process of organization.

Railways.—In the year ending June 30, 1901, the province paid for construction of railways, in money subsidies or land subsidies converted into money, \$128,318. The roads interested were the Great Northern, \$39,584; the Ottawa and Gatineau Valley, \$22,500; the Pontiac and Pacific Junction, \$31,234; the Quebec Bridge, \$30,000; and the Montfort colonization, \$5,000. According to the annual report of the Department of Public Works, the total grants of land to Quebec railways up to the end of the fiscal year was 13,324,150 acres; the number of miles constructed was 998; the total cash payments were \$4,481,656. The total railway mileage of the province on June 30, 1901, was 3,481, of which 575 miles had been constructed prior to confederation in 1867.

Education.—The report of the Superintendent of Public Instruction for the year ending June 30, 1901, issued under date of Jan. 10, 1902, described the general condition of affairs as improving, but not yet satisfactory. The following table is compiled from his elaborate statistics:

1901.	Roman Catholics.	Protestant.	Total.
Schools under boards and independent.....	5,019	951	5,970
Pupils.....	279,474	85,407	314,881
Attending schools of different faith.....	2,606	1,423	4,029
Teachers, total.....	8,761	1,423	10,184
Teachers, "religious".....	3,545	1	3,546
Teachers, lay, male.....	275	101	376
Teachers, lay, female.....	4,941	1,326	6,267
With diplomas.....	4,482	1,280	5,772
Without diplomas, lay teachers.....	784	187	971
Without diplomas, "religious".....	3,545	1	3,546
<i>Average Salaries, Male Teachers with Diplomas.</i>			
Elementary.....	\$281	\$1,149	\$1,430
Model and academy.....	510	802	1,312
<i>Average Salaries, Female Teachers with Diplomas.</i>			
Elementary.....	113	201	314
Model and academy.....	125	299	424

Besides these there were 45 other institutions, universities, colleges, normal schools, etc., attended by 11,626 students. The report showed an increase of Roman Catholic schools, 60; pupils, 4,795; and teachers, 390; and a Protestant decrease of 8 schools and 1,167 pupils, and an increase of 30 teachers. Out of 6,658 lay teachers, only 391 were men, a decrease of 15; and 6,267 women, an increase of 149. Of the 391 men, 307 were engaged in superior schools. The increase in the number of *religieux* was 286, showing a reversion to the high figures in this class of six or seven years since. The number of teachers without diplomas was: Roman Catholic, an increase of 119; Protestant, 54. There was a marked increase of Protestants—from 83 to 137—which arose probably from the recently introduced policy of compulsory attendance at the normal school. Graduates often declined the small salaries that were offered, and the school boards illegally appointed teachers who were

without diplomas and did not appear to care if they thereby forfeited the Government grant, as this was very small. As to average salaries, there was a general increase. It was most noticeable with the Protestant female teachers, with diplomas in superior schools, who were raised from \$152 to \$201.

Criminal Statistics.—The sentences for drunkenness in the province numbered 1,493 in 1900; for theft, 688; for vagrancy, 662; for assaults, 206. The maintenance of the prisons cost \$126,717, against \$116,602 in 1899. The following quotations and statement are from the annual report of the Inspectors of Prisons and Asylums for 1900: "The total number of prisons in the province of Quebec in 1900 was 4,753—3,919 being men and 834 women—against 4,626 in 1899 (3,787 being men and 839 women). The number of prisoners under sixteen years of age is decreasing year by year. We had only 37 in 1900, against 56 in 1899."

R

REFORMED CHURCHES. I. Reformed Church in America.—The following is a summary of the statistics of this Church as they were reported to the General Synod in June, 1902: Number of classes, 35; of churches, 652; of ministers, 718; of candidates, 48; of families, 61,775; of communicants, 112,896; of catechumens, 35,421; of Sunday-schools, 921, with a total enrolment of 124,672 members; of members received on confession during the year, 5,000; of baptisms, 5,897 of infants and 1,278 of adults. Amount of contributions: Denominational, \$276,028; for other objects, \$115,203; for congregational purposes, \$1,231,464.

The Board of Education reported to the General Synod 62 divinity students in the theological seminaries—the smallest number since 1886. Reports were made from Hope College, Michigan, with 206 students, and from 3 academies in the Northwest. The contributions to the work of the board had been \$7,375.

The business of the Board of Publication was represented as being in a satisfactory condition, the receipts of the past year having been \$25,829, showing an increase of \$2,208. The contributions to the Benevolent fund having increased, the board had been able to enlarge that side of its work in supplying needy churches and schools. About 60 annuitants were receiving aid from the Widows' fund.

The Board of Domestic Missions had closed the year without debt. The amount received from all sources had been \$95,243 for the mission work—an increase of nearly \$10,000—and less than \$8,000 to the Church Building fund. New churches had been organized and new missions begun, while several churches were about to become self-supporting. The new mission work centering in Oklahoma was prospering, and was represented in the General Synod by the first Indian delegate it had ever enrolled. The contributions in the department of the Woman's Executive Committee had increased from year to year till they now amounted to \$31,425, more than \$5,000 in advance of those of the preceding year. The Indian missions and the work among the Kentucky mountaineers had been generously supported by this committee.

The receipts of the Board of Foreign Missions had been \$114,057 for its regular work and \$35,470 for special objects. A debt of \$9,110 had been

paid, and the board was able to present its report to the General Synod free from indebtedness. The receipts for the Arabian mission had been \$11,354 for the regular work and \$7,030 for objects outside of the appropriations, among which was the erection of the Mason Memorial Hospital, at Bahrein. The mission at Arcot, India, now transferred to the Synod of the Church of Christ in India, returned 16 missionaries, 460 Indian agents, 114 non-Christian teachers, 2,305 communicants with a Christian community of 10,060 persons, 167 Sunday-schools, with 5,406 pupils, and 217 other schools, with 6,226 pupils. The mission was an aggregate of village churches, and now included 157 such. Each village, as a rule, had a school and a resident Christian teacher or catechist. Connected with the mission were the college at Vellore and the industrial school at Ami.

The ninety-sixth annual meeting of the General Synod was held at Asbury Park, N. J., beginning June 4. The Rev. Abbott E. Kittredge, D. D., was chosen president. The reply, prepared by the committee to which the subject had been referred, to the questions presented to the previous General Synod by the delegate of the Christian Reformed Church concerned the future attitude of the Church as to secret oath-bound societies, and the reason why it did not include in its standards the rejection of the errors of the Remonstrants. As to the former question, regret was expressed at the want of confidence implied in it toward a Church so closely allied and in correspondence, and answer was made to the effect that the whole matter under the Reformed system of government was in the province of each consistory, and the relation of the higher judicatories to it was only appellate. Hence the General Synod was not called upon to make a deliverance on the subject. As to the other question, conditions in America at the time of the adoption of the Canons were such as to call for nothing beyond a positive declaration of faith, and hence the negative form, that of the rejection of the errors of the Remonstrants, was deemed unnecessary, and was omitted. The fifth annual report of the special committee on the finances of New Brunswick Theological Seminary showed that \$4,994 had been added to the endowment during the year, bringing the whole amount of addition since the committee's work begun, up to \$46,000.

The offerings for current expenses, \$3,437 having been contributed during the year, had been brought up to a total of \$14,050; and with the addition of another gift of \$4,000, the total thus far secured was \$64,000, besides promises and legacies still outstanding. The committee was steadily keeping in view the conviction of the Synod that \$250,000 should be added to the endowment of the seminary to repair its diminished income and increase its equipment for effective service. A report was made of the Western Theological Seminary, at Holland, Mich., and of the progress of the endowment scheme. The second chair had been fully endowed with \$30,000, and \$3,000 had been secured toward the endowment of the third chair. The report on the action of the 34 classes of the Church in the amended forms which had been approved at the last session of the Synod and referred to the classes, showed that 25 of the classes were in favor of some revision of the forms under consideration. Some desired shorter and simpler forms; some objected to changes in long familiar phraseology; others desired "the language of to-day for the people of to-day." Many desired the elimination of the phrase in the form for the baptism of adults, "wholly incapable of any good and prone to all evil," or some change which will bring it into closer accord with other phrases of the Standards. The whole subject was referred to another committee to prepare amended forms conforming as nearly as practicable to the prevailing views of the classes, with the suggestion of the sense of the Synod that in these forms, "simplicity, dignity, and verity should be sought rather than elaboration of form"; this committee to report to the next Synod. The institution of a post-graduate course, covering at least one seminary year, was authorized in the theological seminaries. A special committee was constituted to urge each church in the denomination to undertake a definitely evangelistic work during the coming year; the committee is further to consider the methods of such work and its results, and to report to the next Synod. The Synod of South India having been constituted as an independent native union church by the union of the mission churches of this body and of the Free Church of Scotland, the classes of Arcot, heretofore attached to the Particular Synod of New York, was set off from that judicatory and transferred to the new jurisdiction in India. The resolutions of the Synod on the Sabbath express alarm at the increased tendency to secularize the day; affirm the law of the Sabbath as a divine law of perpetual and binding obligation upon all men and the authority of the Christian Sabbath to be derived from it; direct that its nature and the danger to it be intelligently set forth in the pulpits and frequently brought to the remembrance of congregations; testify against Sabbath desecration under such forms as the publication and encouragement of the Sunday newspaper, unnecessary Sunday travel, Sunday visiting, and the playing of baseball, golf, and other games on the Lord's Day; and express "unqualified disapproval" of all political conferences on Sunday. The Committee on a Uniform Version of the Metrical Psalms reported progress. Responding to an overture of the General Synod of the Reformed Presbyterian Church, a committee was appointed to confer with reference to closer cooperation or unity of organization.

II. Reformed Church in the United States.

—The following summary of the statistics of this Church is from the Almanac of the Reformed Church in the United States (Philadelphia) for

1903: Number of synods, 8; of classes, 58; of ministers, 1,112; of congregations, 1,691; of communicants, 255,408; of unconfirmed, 198,815; of Sunday-schools, 1,662, with 24,796 officers and teachers and 200,178 pupils; of students for the ministry, 199; of baptisms during the year, 13,437 of infants and 1,830 of adults; of confirmations, 11,366; amount of contributions for benevolent purposes, \$283,954, including \$60,000 for home and \$47,710 for foreign missions; of contributions for congregational purposes, \$1,396,654. Number of literary and theological institutions, 17; of periodicals, 17 in English, 8 in German, and 15 published by institutions. In home missions special attention is given to work among Hungarian and Bohemian settlers. The foreign missions are in Japan and China.

The Sunday-School Board had reports from 1,613 Sunday-schools, with 25,938 officers and teachers and 221,917 members, showing a gain in three years of 15,013 members. Fifteen Sunday-school missionaries had been employed during the past three years, 16 schools had been organized, reorganized, or revived, and 7 congregations developed out of Sunday-schools. Since 1894 30 Sunday-schools had been organized or reorganized, out of which 17 congregations had been established. Grants of literature had been made to the Hungarian and Bohemian missions, and inquiry had been made with reference to the publication of Hungarian-English Sunday-school literature, but it had not been begun. An aggregate of 8,273,765 copies of publications had been issued, and the net profits from sales had been \$12,104. The capital of the Publishing Establishment was \$18,953.

The report of the Board of Directors of Orphan Homes represented the institutions at Fort Wayne, Ind., and Womelsdorf (Bethany), and Butler (St. Paul's), Pa. The endowments had been raised through accessions by legacy, \$17,000 during three years. The total receipts had been \$29,678.

The Society for the Relief of Ministers and their Widows had expended during the past year \$3,600 in aid of 13 ministers and 39 widows. Its invested funds amounted to more than \$50,000.

The triennial report of the Board of Home Missions covers the work of the boards of the General Synod, the Central and Northwest Synods, and the German Synod of the East. These altogether returned 145 missions, 17,724 communicants, 179 Sunday-schools, with 19,828 officers, teachers, and pupils, and contributions of \$36,336 for benevolences and \$350,401 for congregational purposes. The two boards of the German synods represented their work of organizing the German immigrants in the new agricultural settlements as being in an encouraging condition. The harbor missionary in New York met these people on their arrival and sought to speed them safely to their destination, taking care thus of 500 or 600 persons a year. Toward the apportionment of \$3,450 for this harbor work during the past three years only \$2,379 had been received. The missions among Hungarian immigrants were growing in numbers and importance, and it had been necessary to bring pastors for them from Hungary. Although \$24,000 had been apportioned for them, only \$10,234 had been received. The board had under its control a Bohemian church in Cleveland, Ohio, and was contemplating the erection of a church building for Bohemians in Chicago. The Woman's Missionary Society of the General Synod had contributed during the triennium \$9,573 to the general and church building funds. The sum of \$119,075 had been in-

vested by the board in church property, the full value of which was estimated to be \$282,545. Of that amount, \$65,700 were borrowed money, loaned to the missions at a lower rate of interest than they could secure. One hundred and twenty loan funds of \$500 and more, named by the donor, amounting to \$70,000, were held by the boards and loaned to missions on first mortgage in all parts of the Church. Ten of the missions had become self-supporting during the triennium, and 23 new missions had been established. The sum of \$19,618 had been received toward the payment of the debt of about \$35,000.

The Board of Foreign Missions had received from May 1, 1899, to May 1, 1902, \$114,990, or \$24,621 more than during the previous three years, of which \$14,224 had been contributed in the form of legacies and large gifts. The invested funds had increased \$2,000. The mission in Japan, with 10 ordained ministers, 25 unordained evangelists, 25 church buildings, and 21 Bible women, returned a net gain of 511 members and about \$1,250 of native contributions. The educational work at Sendai included a boys' school and theological seminary, with 142 students in the theological, literary, and college courses, and the girls' school, with 86 pupils. The girls' school had suffered the loss of its building by fire. An industrial home was also maintained. A mission had been opened in China in 1899, concerning which progress was reported. The board was introducing a system of specialization, under which classes, churches, and societies might directly support some part of its work in heathen lands.

The General Synod met in its fourteenth triennial session at Baltimore, Md., May 20. The Rev. John H. Prugh, D.D., of Pittsburg, Pa., was chosen president. The committee having in charge the preparation of a digest of the rulings of the General Synod reported that the book had been prepared and was on sale. The Committee on the Twentieth-Century Movement reported that 13 tracts had been issued and a number of articles had been published and special sermons preached with reference to the scheme. The committee to which had been referred matters pertaining to the Protestant churches in Germany, Switzerland, Hungary, etc., reported progress. Provision was made for the preparation of a new constitution for the Church by a Committee of Five appointed by the Synod. This committee was instructed to submit the draft of the Constitution to the classes for criticisms and suggestions, from which the committee shall give final shape to the document, preparatory to submitting it to the General Synod. Various measures were approved looking to the strengthening and extension of the foreign mission, to the rebuilding of the school property in Japan which had been recently destroyed by fire, and to the erection of other buildings. A proposition to celebrate the twenty-fifth anniversary of the founding of the mission in Japan was approved; and an effort was authorized to raise during the celebration a thank-offering of not less than \$25,000 for buildings, endowment, equipment, etc. Classes were requested to call the attention of pastors and elders to the objections to allowing independent foreign missionaries or itinerant missionaries not under the control of any recognized board from receiving aid in any of the congregations of the Church. The sum of \$45,000 was appropriated annually for the next three years for the mission work in China and Japan, the money raised by the women's societies not to be a part of the apportionment. The efforts of the twen-

tieth-century movement in connection with the Sunday-schools were ordered continued; a higher standard of excellence for all the schools was urged—in the training of more efficient teachers, the circulation of lesson helps and Sunday-school literature, and the arrangement of Sunday-school instruction in such a way as to lead the children to entrance into the catechetical class and full membership of the Church. Special offerings were appointed to be taken in the Sunday-schools on four Sundays of the year for different benevolences. Special interest was expressed in the home missions among Hungarians and Bohemians, and the classes were requested to keep themselves in close touch with Hungarian and Bohemian churches and their pastors within their bounds. An annual apportionment of 6 cents per member was laid for church building in the English synods, and the creating of church-building funds was commended to classes, societies, congregations, and individuals. Other measures were adopted for increasing the efficiency of the home missions. The sum of \$80,000 was apportioned annually among the English synods. The Committee on Ministerial Relief reporting a prosperous condition of the society, a committee was appointed to report to the next General Synod upon a plan to organize and continue a synodical society for this benevolence. Another committee was appointed to report concerning the use of fairs, suppers, etc., for raising Church funds. The Synod decided that it did not recognize a sermon preached by its presiding officer as an official and authoritative utterance of its doctrinal statements. Three different overtures were sent up with regard to revision of the Heidelberg catechism, but the Synod declined to accede to their requests. The report of the Committee on the State of the Church, while calling attention to some shortcomings, reported general improvement during the past three years. The number of classes had increased by 1; of ministers by 33; of congregations by 76; of members by 11,000; of contributions for benevolence by \$64,867; and of contributions for congregational purposes by \$303,449.

A plan of cooperation was arranged between the General Synod's and the two German synods' Boards of Home Missions, under which \$4,500 a year will be paid by the churches of English synods to establish German Reformed churches. For this the German boards are to report all their work to the General Synod's board.

III. Christian Reformed Church (Dutch).—The Jaar Boekje of this Church for 1903 gives the following statistics: Number of classes, 9; of congregations, 155; of ministers, 99; of families, 11,346; of members, 19,174; whole number of souls, 58,512. Sunday-schools and Young People's Societies are sustained in most of the churches, but the full numbers are not given. The Theological School at Grand Rapids, Mich., has theological and literary departments. The Church has Boards of Home and Foreign Missions, of Missions to the Jews, of Ministerial Aid, and for the Retired Preachers' fund. One weekly and 3 monthly periodicals are published, one of the monthlies being in English; the other 3 periodicals are in Dutch.

IV. Reformed Church of France.—The Free Evangelical Church of France represents a body which separated from the Synod of the Reformed Church of France in 1849, when the Synod declined to subscribe to an evangelical Confession of Faith. About 30 ministers withdrew from the Synod at that time and organized the "Union des Eglises Evangeliques." By

this act of separation the union lost the subsidy which the state afforded to the recognized Reformed Church; and in its constitution it affirmed its duty to support itself independently of the civil list, and to retain its autonomy of discipline. It has, however, been assisted in maintaining itself by the Presbyterian Churches of England and Scotland. With the aid of these churches it has engaged actively in the work of home missions. The fiftieth annual report of these missions gives returns of 22 mission stations, 55 substations, and 130 preaching stations, in all of which evangelistic work, and in some institutional work, is carried on. Besides establishing churches, day-schools are organized in many instances, coffee-houses have been instituted, and total abstinence societies have been formed. The mission work being largely among the laborers of France, much relief work is done. About one-third of the expenses of this work are contributed by churches in England and Scotland.

At the Synod of 1902 of the Reformed Church, held at Auduze, both Orthodox and Liberal delegates took part. A resolution was adopted, with only two dissenting votes, declaring in effect, that the Synod was willing to respect all interpretations of doctrine which left untouched "the great spiritual realities and the essential facts of the Gospel history."

V. Presbyterian and Reformed Alliance in India.—The seventh Conference of the Indian Branch of the Presbyterian Alliance was held in Allahabad in December, 1901. Fifty missionaries and chaplains were present, representing 9 different churches. Arrangements were made for uniting the Presbyterian and Reformed Churches in India under the name of "the Church of Christ in India, Presbyterian."

VI. Presbyterian and Reformed Union in China.—A conference representing the missions of the Presbyterian and Reformed Churches in China was held at Shanghai in April to discuss Presbyterian unity in China. Fifty-four representatives of the various missions attended it. The Rev. Dr. G. Farnham, of Shanghai, presided. As a result of its deliberations the appointment of a committee was recommended to prepare a plan of union, organic or federal, as may be found practicable, and submit the same to the Church courts (native and foreign) concerned.

RHODE ISLAND. (See under UNITED STATES.)

ROMAN CATHOLIC CHURCH. The appointment of the Pontifical Commission on the Bible, by Pope Leo, is a noteworthy event. Catholic scholars all over the world will have the fullest opportunity to set forth their views as to the value of recent criticism of the sacred text. Cardinal Parocchi is president of the commission, and consultants are to be appointed from different countries. Dr. Grannan, of the Catholic University, is the representative from the United States.

The Leonine Institute was founded at Athens by Pope Leo, some years ago, for education of the youth of Greece, and last year he founded a seminary in connection with it. On that occasion he wrote to the Greek bishops, recalling the departed glories of their classic land, and inviting the separated Christians to return to unity with Rome.

The pontifical jubilee was proclaimed on March 3, the anniversary of Pope Leo's coronation. Of the many pilgrimages announced, that of the Lombards was the first, on Feb. 20, the first day of the Pope's twenty-fifth year on the throne. Cardinal Ferrari, Archbishop of Milan, led it. About the same time the Belgians came with all their bishops. In receiving the Roman nobles the

Pope said, "Your presence in large numbers proves false the rumor that you have forgotten the Holy See." The dignity of Noble of Rome has been conferred by the Pope on the excellent Christian diplomatist Señor Pidal, who has resigned his post as Spanish ambassador.

In the midst of all the movements of the jubilee, Pope Leo published his Easter encyclical to all the bishops, dealing with the crises through which the Church and society are passing. He also issued a very important *motu proprio* letter, forbidding the employment of law notaries in ecclesiastical affairs. These were unversed in canon law, and abuses were likely through their acquaintance with secret matters, particularly concerning matrimonial cases sent to Rome for consultation. There were complaints, also, that unjust fees were exacted, and even from the poor. The Pope forbids, moreover, the receiving of any fee whatsoever in cases regarding marriage, no matter who the persons are that make application.

On May 29 the Osservatore Romano published Pope Leo's encyclical on the holy eucharist. The aged pontiff touchingly recalls that Our Lord gave the blessed sacrament as his sovereign gift on the eve of his passion; and so his vicar wishes that his last official utterance should commend the same pledge of love divine. This encyclical completes, he says, his former ones on the Divine Redeemer and the Sacred Heart. The blessed eucharist is the chief source of Christian life, and especially of charity, the greatest need of our modern age. Pope Leo urges upon all the faithful the practise of frequent communion.

At the suggestion of Prof. Pastor, director of the Austrian Historical Institute, the representatives of the foreign historical institutes, in Rome, sought an audience of the Pope to congratulate his Holiness on his jubilee. The following institutes were represented at the audience, which took place on May 4: The Austrian, Belgian, French, Gorresgesellschaft, Hungarian, Prussian, English, Danish, Swedish. Bishop Fraknoi, of the Hungarian Institute, delivered a Latin address, thanking the Holy Father for opening the archives and founding the Leonine Library, and pointing to the 100 volumes of publications, the fruit of the labors of historians in the Vatican, labors that owed their existence to the Pope's liberality and generosity. The Pope, answering in Latin, said he congratulated himself on having thrown open the Vatican archives to historical scholars, since it had led to the creation in Rome by many noble nations of such learned institutes.

Cardinal Ledochowski died of a paralytic stroke on the morning of July 22. Cardinal Gotti, a Carmelite, formerly prefect of the Congregation of Bishops and Regulars, who has succeeded him, was born in Genoa in 1834. For twenty years his life in his order was undistinguished. He took part in the Vatican Council, and soon afterward was made procurator of the Carmelites. Later he spent three years on an embassy sent to reorganize the Church in Brazil. After his return he was made cardinal.

The Romans celebrated the Pope's silver jubilee July 6. Seated on a throne outside the Library of the Vatican, and surrounded by the banners of the 15 *zioni*, or districts of the city, Pope Leo received them. There were persons of all classes, particularly the wage-earners. Fifty thousand tickets had been distributed, but many thousands could find no room. So enthusiastic was the applause as Pope Leo greeted his faithful people of Rome, that it was impossible for him to speak.

The new reference library at the Vatican is the gift of Leo XIII. The Vatican archives and li-

brary consist mostly of manuscripts. A reference library was much needed for the scholars to whom the Pope has thrown open the Vatican's historic treasures. There are few reference libraries in Rome, the Government itself having done little since it took over the public libraries in 1870. The new reference library, excellently situated for use, is well appointed. There are complete sets of the fathers and councils, lexicons in various languages (exegetical lexicons, legal, liturgical, etc.). Cardinal Mai's library has been added to the collection of books, which is still growing under the care of the prefect, Father Ehrle.

In August Mgr. Guidi, who had filled many important posts successfully, was appointed apostolic delegate to Manila. He was born in 1852 at Alatri, in the province of Rome. In 1870 he had finished his studies in the Collegio Romano. Having taken degrees in the Pontifical Seminary, he was sent by Pio Nono to the University of Innsbruck. Here, in 1877, he took the degrees of theology and law. A year in the Sorbonne, Paris, brought him a degree in Oriental languages. He was attached as secretary to the nunciature at Madrid from 1879 to 1883. Then he went as secretary to the embassy sent for the coronation of the Czar. From 1883 to 1887 he was secretary of the nunciature at Lisbon. Later he was auditor, *chargé d'affaires* in Munich, secretary of extraordinary ecclesiastical affairs at the Vatican, on extraordinary diplomatic missions in Ecuador, and again at his former post in the Vatican.

The General Committee of the Work of Catholic Congresses sent in October to the cardinal-vicar its lists for the place of president. Its first choice was Count Medalago, the grandson of Joseph de Maistre, "the right hand of the Pope, and the inspirer of Toniolo," as La Vie Catholique styles him. The cardinal wished to retain Count Paganuzzi on account of his devoted services, but he resigned, desiring to see the newer men advance.

Mgr. Ehses, director of the Gorres Historical Institute of Rome, has disproved, by his investigation, the strange assertion that Pope Clement VII permitted Henry to marry Anne Boleyn. Clement declared "not indeed categorically at first, but clearly as possible, that he had no power to break the lawful marriage of Henry VIII." Paul Friedman, the English historian, gives the best general view of Henry's envoys to Rome. He says their reports give an incomplete and unreliable account of the negotiations. They were guilty of suppression of facts and deception.

On Oct. 15 the General Chapter of the Carmelites elected Father Pius Meyer prior-general of the order. Father Meyer is a native of Riedlingen, in Würtemberg. On Oct. 17 the Congregation of the Salvatorians (Societas Divini Salvatoris) held in the Roman mother-house its first general chapter. Delegates were present from Europe, from Asia, and from the three houses in the United States. The founder of the congregation, Father Jordan, was reelected general, this time for life. The German Catholic papers note with some pride that four religious orders or congregations have Germans at their head: Father Fruhwirth is general of the Dominicans, Father Bernard von Andermatt general of the Capuchins, Father Meyer of the Carmelites, and Father Jordan of the Salvatorians. It is also a sign of the flourishing condition of the religious orders in this country, and of the growth of American influence in Rome, that Father Meyer lived for many years in the United States, where he held the offices of provincial and commissary-general.

The Irish pilgrims were received in audience by

the Holy Father on Oct. 25. With the pilgrims were Cardinal Moran, Archbishop Riordan, and Bishop MacSherry, of South Africa. Pope Leo was greeted with enthusiastic applause as he entered the hall of audience. He recalled, he said, the frequent proofs of loyalty which, in the course of his pontificate, he had received from Catholic Ireland. Going round the hall, his Holiness allowed the pilgrims to kiss his hands, and he received the many addresses sent by corporations, Catholic associations, and the press. The benignity of the pontiff made a deep impression on his warm-hearted spiritual children. The band of 500 pilgrims was, to a great extent, composed of representatives of the Irish party in Parliament, of the municipalities of the principal cities, of the officials of 60 or 70 smaller cities and towns, of county councils, and other administrative bodies, and of several newspapers. There were representatives also of the Working Men's Association of Dublin, which contains 18,000 men, of the 4,000 members of the Society of St. Vincent de Paul in the same city, and of the Association of National Teachers.

An international committee has been formed to present to "the Pope of the Working Men" the international homage of the toilers. These will present to Pope Leo three tables of bronze, to be placed in St. John Lateran's, the mother-church of Christendom, and to form part of a monument symbolizing the ennobling and sanctifying of labor by Christianity. The names of the associations that contribute will be carved on the monument.

Cardinal Gaetano-Aloysi Masella, who occupied the very important post of prodatary in the papal chancery, died Nov. 23, at the age of seventy-six.

Much notice has been given in the European journals to the visit of the Syrian Patriarch of Antioch. He was accompanied by several Syrian bishops, by many prominent persons of his patriarchate, and by representatives of the Eastern seminaries in Rome. Pope Leo, who has so long and earnestly endeavored to unite the Eastern and Western Churches, expressed great joy when the patriarch told of his own unceasing efforts to promote the great and difficult work of reunion. Two Eastern bishops have entered the fold of the Church, "with many priests and a multitude of the laity." The patriarch presented to the Holy Father very valuable offerings, manufactured in Damascus, Beirut, and Aleppo. Among them were a rich white silk tapestry, bordered with gold and Oriental pearls, and an album containing the names of the dioceses and ecclesiastical rulers of the patriarchate.

The United States.—The Catholic statistics for 1902 are: Cardinal, 1; archbishops, 13; bishops, 81; priests, 12,429; churches, 10,689; universities, 7; seminaries, 81; students, 3,402; colleges for boys, 163; academies for girls, 629; parishes with schools, 3,857; Catholic population, 10,976,757.

The Right Rev. Thomas Lenihan, Bishop of Cheyenne, Wyo., died. He was born at Mallow, Ireland, in 1834, came to this country at an early age, and was consecrated bishop in 1897.

The Rev. Dr. Ganss, rector of St. Patrick's Church, Carlisle, Pa., has resigned his parish to become the financial agent of the Catholic Indian schools, with headquarters in Washington. His well-known ability and his acquaintance with the Government Indian School at Carlisle make this appointment one of peculiar fitness.

The Pope has made the Rev. Henry A. Barry, of Boston, a doctor of divinity; the Rev. William Pieper, of Columbia, Pa., one of his domestic pre-

ates, with the title of monsignor; Miss Anne Leary, of New York, a countess; and Mr. John D. Crimmins a knight of the Order of St. Gregory.

In the past year 21,800 children were confirmed, 10 new schoolhouses were erected, and 11 others were generally improved in the archdiocese of Chicago. The number of new parishes established in the same period was 14. Twelve new churches were built, and 18 others have replaced smaller and less substantial edifices. The Catholic population is estimated at about 800,000 and the students of colleges, academies, and parochial schools at 87,318. The priests, diocesan and regular, number 538.

Archbishop Ryan has been appointed by President Roosevelt to fill the vacancy in the Indian Commission caused by the death of the Protestant Bishop Whipple.

By the will of the late Col. John McKee, of Philadelphia, long recognized as the wealthiest colored man in the United States, an estate valued at more than \$2,000,000 has been given to Catholic charity.

On the evening of Monday, May 5, the Most Rev. Archbishop Corrigan, of New York, died. See OBITUARIES, AMERICAN.

On May 17 the Very Rev. William J. Kenny was consecrated Bishop of St. Augustine, Fla., in the cathedral of that city. Bishop Kenny has been for twenty-five years a priest of the diocese, and for some years past its vicar-general and administrator. On May 25 Dr. Garrigan, late vicerector of the Catholic University, was consecrated bishop of the newly erected see of Sioux City, Iowa. The ceremony took place in the cathedral at Springfield, Mass.

On May 10 Mgr. Zardetti died in Rome. He was well known in America, having been Bishop of St. Cloud, Minn. In 1894 he was transferred to the archiepiscopal see of Bucharest, in Roumania.

Archbishop Feehan, of Chicago, died July 12. He had been archbishop since 1880.

Two Augustinians, Father D. J. O'Mahoney, of Lawrence, Mass., and Father J. A. McErlain, of Villanova College, Philadelphia, have been sent to the Philippines by the Rev. M. J. Geraghty, provincial of the order in America.

On Sept. 6 Archbishop Chapelle left New Orleans for Havana. His visit to Cuba was in connection with his duties as apostolic delegate to the island. Just before leaving, the archbishop received instructions from Cardinal Rampolla to set out for Rome as soon as he had inspected the condition of the Church in Cuba.

In September the Right Rev. John M. Farley, Auxiliary Bishop of New York, was appointed archbishop in succession to the late Archbishop Corrigan. Archbishop Farley has held various places of trust in the diocese. He was private secretary of Cardinal McCloskey for several years, was appointed vicar-general of the diocese by Archbishop Corrigan, and on Dec. 21, 1895, was consecrated Bishop Auxiliary of New York.

The Right Rev. George Montgomery, Bishop of Los Angeles, Cal., has been appointed coadjutor, with the right of succession, to Archbishop Riordan of San Francisco.

The Rev. James J. Keane, pastor of the Church of the Immaculate Conception, Minneapolis, Minn., was named Bishop of Cheyenne, Wyo., successor to the late Bishop Thomas M. Lenihan; and the Very Rev. J. N. Stariha, vicar-general of the archdiocese of St. Paul, Minn., as first bishop of the newly erected see of Lead City, which is part of the diocese of Sioux Falls, S. Dak.

His Eminence Cardinal Gibbons celebrated on

Oct. 3 his silver jubilee as Archbishop of Baltimore. This is the third jubilee the cardinal has had since his arrival in that city. On June 30, 1886, he celebrated his silver jubilee as a priest by choosing it for the day of his investiture as cardinal, and on Aug. 16, 1893, he celebrated the silver jubilee of his consecration as bishop.

The Right Rev. William George McCloskey, Bishop of Louisville, Ky., celebrated on Oct. 6 the golden jubilee of his priesthood. The bishop is a native of Brooklyn, N. Y., where he was born Nov. 10, 1823.

His Excellency the Most Rev. Diomede Falconio, O. F. M., papal delegate to Canada since Oct. 12, 1899, assumed his duties at Washington as successor to Cardinal Martinelli on Nov. 20. Mgr. Falconio was born at Prescoccostanza, in Abruzzo, Italy, in 1842, and entered the Order of St. Francis at the age of eighteen. He was sent to the United States in 1865, and in the following year was ordained priest.

The Right Rev. James Edward Quigley, Bishop of Buffalo, has been appointed Archbishop of Chicago, to succeed the late Archbishop Feehan.

Canada.—The Canadian Catholic population is 2,228,997, or nearly half that of Canada. The Methodists number 916,862; the Presbyterians, 842,301; the Anglicans, 680,346; the Baptists, 292,485.

Two events of importance have marked the University of Ottawa, the appointment of the Rev. J. I. Emery, O. M. I., for several years stationed at Buffalo, N. Y., as rector, and the opening of the new Science Hall, thoroughly equipped with all modern improvements and the latest scientific apparatus.

Mgr. Donato Sbaretti, auditor of the American delegation under Cardinal Satolli, and afterward Bishop of Havana, Cuba, has been appointed to succeed Archbishop Falconio as delegate apostolic of Canada. Archbishop Sbaretti was born in Montefranco, in the archdiocese of Spoleto, in 1856.

Very soon after his consecration Bishop Brey not set out to visit his new vicariate of Mackenzie and Yukon, extending from latitude 60° north to the Arctic Ocean. The visitation will thus extend beyond the arctic circle. The Catholic advance is rapid. Dawson City has a parish church, with eight chapels in outlying mining stations. There is a Catholic school also and a hospital.

Three priests, one lay brother, and four nuns of the Order of St. Basil, Ruthenian rite, and one secular priest of the same rite, set out from Hamburg for the Canadian Northwest. They will labor among the numerous Catholic Galicians of Manitoba and the Northwest Territories. There are 35,000 Ruthenian uniates in that section of Canada.

England.—The archbishops and bishops of England and Scotland number 24. There are 3,500 priests, of whom 2,393 are secular and 1,107 regular. The number of churches, chapels, and mission stations is 1,926.

Bishop Vaughan died late in October, at the age of eighty-eight, after nearly fifty years of episcopate. He had been practically inactive for eleven years, a coadjutor having been given to him.

King Edward sent, by Gen. Kelly Kenny, the cross of the exclusive and highly aristocratic orders of SS. Michael and George to Father Hecht, an oblate of Mary and missionary in South Africa. The honor was merited by the devoted care of Father Hecht for the wounded soldiers during the late war. It is said that he opened eighteen hospitals. He himself was near dying through fever contracted during his labors.

The number of religious in England now is far greater than at any time before the Reformation. Among the more numerous communities, the Benedictine monks, who had 25 priories in 1501, have at present 8 principal establishments, with 59 dependent "cells," as they are called. The Franciscans have 14 houses, the Dominicans 9, the Jesuits 31, the Sisters of Charity of St. Vincent de Paul 49, and the Sisters of Mercy 84.

Ireland.—In four years the Society of St. Vincent de Paul has been greatly extended and its good works increased. In one year its receipts for charitable objects were £18,305 (\$91,525). In the past four years more than 63,000 families (more than 235,000 persons) were relieved by its charity.

The scholarly Archbishop of Tuam, Dr. McEvilly, died on Nov. 26, at the age of eighty-six. He was transferred from the see of Galway to become coadjutor to Archbishop McHale, whom he succeeded in 1881. He is known particularly by his commentaries on the Sacred Scriptures.

On June 2 the centenary of the founding of the Christian Brothers was celebrated in Dublin. In the morning there was a solemn high mass in the Pro-Cathedral, his Grace Archbishop Walsh presiding. The panegyric of the order was delivered by the Rev. Dr. Butler, O. C. C.

The Most Rev. Thomas W. Croke, Archbishop of Cashel and Emly, died on July 22, at the age of seventy-nine. He was born in Cork, was created Bishop of Auckland, New Zealand, in 1870, and was transferred five years later to the see which he had filled with such distinction ever since.

Archbishop Plunkett has been declared venerable, and the process of his beatification is being hastened by special dispensations, so that the final congregation appointed to investigate the cause may be held before the end of another year.

The silver casket containing the beautifully illuminated address which the members of the Irish parliamentary party presented to Pope Leo XIII takes the form of a reproduction of the Shrine of Lough Erne, with the beautiful and varied interlacings that are only to be found in pure Celtic ornamentation. The casket is surmounted by the pontifical arms, and underneath is the motto, *Lumen in Cælo*, "Light from Heaven." The casket is supported by four fibulæ, which harmonize beautifully with the whole design and decoration.

Italy.—Murano, in northern Italy, has given the first example in the peninsula of erecting homes for working men. "For each laborer a home and a garden" was the motto of the parish priest, Don Cerutti.

The war on Christian education is less demonstrative than in France, but it is declared nevertheless.

The instructions issued with the approval of the Holy See are bringing the more enthusiastic Catholic youth of Italy into greater harmony with the older and more experienced organization of the work of congresses. Adhesions to the will of the pontiff have been received from all parts of Italy, and Count Toniolo has publicly announced the accord established between the Catholic organizations engaged in social work.

The League of Public Morality began its congress on Sept. 9, in Turin. There was a large attendance, particularly noteworthy on account of the prominence of those who took part in it. The promoter of it, Prof. Bettazzi, presided. Among those present were M. Gouffre, president of a similar league in France, Count Balbo, Count Della Motta, and Canon Gastaldi.

The population of Italy, according to the census lately taken, is nearly 33,000,000. Crime is, unfortunately, increasing with the population; or, rather, much more quickly. Suicides, which in 1872 were 30 in 1,000,000 people, are now more than twice that number. The Socialists, confiding in their growth and strength, are preparing an antimilitary bill as a first step toward abolishing the standing army.

The first Italian Congress was announced at the end of February. Its object was to consider the relation of Catholics to modern Italian literature and to take steps to found a review. There are in this movement very prominent Catholic literary men.

Belgium.—At the annual reunion of Belgian Catholic journalists, the president, M. Verspeyen, read an encouraging congratulatory letter from the Pope, and announced his Holiness's gift of 1,000 francs toward the founding of a retreat for aged journalists. Pope Leo said: "We have already approved and praised your association, formed to defend the truth more efficaciously."

The fourteenth International Congress of the Blessed Eucharist was held at Namur. The cardinal legate presided, and the papal nuncio was present with the Governor of Namur and M. de Woeste, the great Catholic leader.

The Belgian schools have increased by one-third since 1884, and the pupils by more than half. The Catholic religious orders flourish more than elsewhere, and those expelled by France are welcomed. The missionary enterprises of this most remarkable little country are peculiarly vigorous, well-supported, and successful. Each year the Parliament declares as a part of its political faith the necessity of the temporal independence of the Holy See.

China.—The Emperor has conferred upon Bishop Anger, of South Shantung, the button of the first rank in acknowledgment of services rendered to maintain good relations between the Christians and the heathen. China has not yet washed away her blood-stains. Two Belgian missionaries, Fathers Van Merhaeghen and Bongaerts, both of the Congregation of the Immaculate Heart of Mary, have been slain, with a large number of Christians, in Mongolia.

From the official report of the Roman *Congregatio de Propaganda Fide*, a fair idea may be obtained of the really great missionary activity in China. There are 46 vicariates apostolic, which number 904 European missionaries and 417 native priests, 1,326 priests in all. Almost all the principal European nations are represented among the vicariates. A Catholic Church in the legation quarter in Peking is being erected for the benefit of the large Catholic population, mostly official and military, resident there since the late crisis.

Germany.—The opening of the Holy Father's jubilee year was marked in Germany on Feb. 20 by eloquent leading articles in all the Catholic papers, giving expression to the undying love and gratitude and unalterable fidelity of the German Catholics to the great pontiff.

On April 28 the delegates of 29 of the most important Catholic associations in Germany, who had journeyed to Rome to pay their homage to the Holy Father, were received by his Holiness in solemn audience. Prince Karl von Lowenstein, the organizer and head of the pilgrimage, read a beautiful Latin address.

Within five years the Catholics of Cologne have lost their four bishops. In 1897 died in Rome the banished Cardinal Melchers; in 1898 his successor, Cardinal Kremetz, and the eloquent and much

admired coadjutor, Bishop Schmitz; and on May 23, of this year, Archbishop Hubert Simar, after a rule of a little more than two years.

The Catholic Day (Katholikentag) was held Aug. 24-28, in Mannheim, the largest city in Baden and its commercial metropolis.

The Imperial Census Bureau has published the official results of the census arranged according to religious denominations. The last population of the empire counted 56,367,178. There were 35,231,104 Protestants and 20,321,441 Catholics.

The archbishops and bishops assembled in annual conference at the tomb of St. Boniface in Fulda have issued a joint pastoral letter to the Catholic people, the burden of which is the life, labors, and aims of Pope Leo XIII.

Spain.—Pope Leo's strongly worded protest, forwarded to the Spanish ministry, in condemnation of their antireligious project had some influence with them. His Holiness demands freedom for Spanish religious orders as for all other law-abiding men in this intensely Catholic country. The papal nuncio in Spain has announced what is clearly the result of an understanding between the Government and the Holy See, that the only thing required for the authorization of the religious orders, after canonical approval, is civil registration, which can not be refused by the officials of the state. According to the statistics published by the Minister of the Interior, there are in Spain 3,115 religious communities, with 50,933 members; 40,188 are women. The greater number have complied with the Government's conditions for authorization. Some communities have presented reasons for which they consider that they are exempted from the provisions of the law.

The members of the Apostolate of the Press assisted at the mass of communion in the Church of the Sacred Heart and St. Francis Borgia in Madrid, and assembled in the evening to give account of their labors. They have printed 379,000 copies of different works—65,000 of clericalism and 18,000 of defense of religion and its ministers—and 81,780 publications were distributed gratis among the poorer people. In their address to the King, which sums up the resolutions of the Congress, the bishops demand liberty for the religious orders, the best men and minds of Spain recognizing society's debt to them.

The bones of Columbus have been transferred from the Cathedral of Havana. On Nov. 17, the Duke of Veragua arrived in Seville, bearing the remains of his great ancestor. He proceeded to the cathedral, accompanied by the highest civil and military officials, where the reinterment took place.

France.—The Town Council of Arles voted the removal of all religious emblems from public places. In the night all the crucifixes were broken to pieces, and particularly one immense figure much venerated by the people.

The Figaro estimates that 180,000 children are deprived of all opportunities of attending school in consequence of the recent closing of religious schools.

The Subsecretary of State, M. Mouget, ordered that from May 1 the post-offices and telegraph and telephone offices be opened in the forenoon of Sundays, and not in the afternoon, as hitherto. This is contrary to the expressed wish of the majority of the employees, who, being questioned, preferred to be free at an hour in which they could attend divine service.

Seventy-four of the 79 resident bishops of France signed a joint petition to the Parliament for the authorization of the 500 religious congregations which have asked for it. The Council of

State condemned the bishops for this exercise of the ordinary right of citizens. The Bishop of Orleans answered by proofs that no law of France was violated by the bishops' act. Announcing his program, the Premier, M. Combes—who is not an ex-priest, although he is an ex-ecclesiastic—boldly declared: "We shall reject all authorization to compete with state education. The Falloux law, allowing liberty of teaching, will have to go in the name of liberty."

With regard to the Passionist Fathers at Paris, their central position for English-speaking Roman Catholics (especially Americans and Irish), thus attacked, will entail enormous inconvenience on thousands who look to them for ministration, counsel, and help. The hard-working staff of four or six has always its hands full of work for relief among the poor Irish, and for direction among rich Americans.

The Oratorians, who applied for authorization, find themselves with the majority on the list of the proscribed. But their case is not at all the same as that of orders like the Franciscans, Dominicans, etc., from the point of view of legal status. This aspect of the matter the fathers have not been slow in placing as clearly as possible before the Deputies in a letter in which they explain what they pointed out to the Ministry of Worship at the time—that they only applied for authorization in case their status as a simple association of secular priests should be contested. Though styled the Congregation of the Oratory, they are not a congregation in the true sense of the word.

The Council of State having condemned the bishops who signed the petition to the Senators and Deputies in behalf of the religious congregation as being guilty of an abuse of their position, the state stipends of three of the bishops whom the Government regards as having had a principal part in organizing the petition have been stopped. The three prelates are Mgr. Petit, Archbishop of Besançon; Mgr. Touchet, Bishop of Orleans; and Mgr. Bardel, Bishop of Seez.

At Tours private houses have been entered by officials; at Marseilles an attempt has been made to seize ecclesiastical property; and at Rheims there has been interference in an ecclesiastical college. Even missionaries not religious at all, not having vows or possessing property in common, as, for instance, the missionaries of Our Lady of Laus, are being proceeded against. The orders that await suppression are preparing for exile, for none of their members may join the secular clergy or exercise any religious function without the express permission of the Minister of Worship—Combes himself.

The five congregations to be authorized with restrictions are the Brothers of St. John of God (who have 10 establishments), the Cistercians of the Immaculate Conception, the Trappists, the Algerian missionaries, or "White Fathers," and the African missionaries of Lyons—in all 45 religious houses for 40,000,000 Catholics in Algiers.

Australia.—Cardinal Moran, who, owing to his great age, has lately resigned from his archiepiscopal see of Melbourne, said that he "did not know if in the history of the Church one could find such an expansion in schools as that which the country (Australia) presented."

Austria.—The question of the religious orders has come up in both houses of Parliament. In the upper house, Canon Zschokke victoriously pleaded their cause, freely adducing irrefutable and irresistible statistics, showing, among other things, that 30,000 sick persons are cared for by

the hospital sisters alone, and that Catholic education, especially that at the theological faculty at Innsbruck, is internationally famous.

A brilliant young Alsatian priest, Dr. Albert Ehrhard, Professor of Church History at the University of Vienna, has published a work on the Catholic Church and the Twentieth Century, which has made a great sensation in Austria and Germany and in a few months has reached its eighth edition.

There is a growing union between the Christian Socialists and the Catholic Conservatives. It exists already in lower Austria, Salzkammergut, Styria, Tyrol, and Silesia.

Scotland.—The Bishop of Galloway says, in his Lenten pastoral, "the law of nature and of grace" has impelled Catholic parents to provide for the religious education of their children, "and this has been most unfairly hampered in a Christian land."

Archbishop Eyre, of Glasgow, died. He was consecrated in Rome in 1869, and made archbishop by Pope Leo on the reestablishment of the Scottish hierarchy in 1878.

Portugal.—According to a Portuguese correspondent of the *Civiltà Cattolica* (March 15), the regulations of the Government concerning the religious orders will be, if not modified, even more disastrous than those of France. The secularization of the religious, if insisted upon, according to what seem to be the ideas of its authors, will forbid the taking of vows, the receiving of novices, and the observances of the rules of religious enclosure or seclusion.

Colombia.—Nowhere has greater honor been done to the papal jubilee than in Colombia, South America. A decree of the Government, issued in the midst of insurrection, proclaims the celebrations. It recalls the late official acknowledgment of the actual sovereignty of Christ in 1898, and expresses the people's determination "to repay by demonstrations of reverence and gratitude the favors shown them by the great reigning pontiff."

Hungary.—The last census of Hungary gives the whole population as 19,254,559; Catholics, 11,774,056 (Latin Catholics, 9,919,913; Uniate Greek Catholics, 1,854,143). The Catholics form 56.6 per cent. of the whole population, an increase of 10.3 per cent. in the ten years from 1890-1900.

Holland.—According to the recent census, 35.4 per cent. of the population of Holland is Catholic. The Protestants number about 3,000,000, and the Catholics 1,700,000. There are about 100,000 Jews. Of the 58 Deputies of the Second Chamber, 25 are of the Catholic faith.

Brazil.—"Urged by the supplications of the authorities, both civil and ecclesiastical, and at the earnest request of the people," the Pope has erected two new episcopal sees in Brazil—Alagoas and Porto Alegre. He has also appointed bishops to the vacant sees of Spirito Santo and Belem de Para, and a coadjutor, with the right of succession, to the Bishop of Diamantino.

Martinique.—Thirteen Fathers of the Holy Ghost, 11 colonial priests, 33 Sisters of St. Joseph of Cluny, and 28 Sisters of St. Paul of Chartres perished in the earthquake at Martinique.

The Philippines.—One clause in the bill introduced by the chairman of the Senate Committee on Philippine Affairs is of special interest to Catholics. It empowers the present Philippine Commission to purchase the lands now held by the religious orders, and to dispose of them on proper terms to the native tenantry.

Turkey.—The Sultan has issued an *irade* recognizing the right of Germany and Italy to protect their Catholic subjects in the Turkish Empire.

ROUMANIA, a kingdom in eastern Europe. The legislative power is vested in the Senate and Chamber of Deputies. The Senate has 121 members, including the Crown Prince, 8 bishops, 2 members for universities, and 110 members elected for eight years. The Chamber of Deputies has 183 members, who are elected for four years. Owners of property worth 1,250 lei or more a year form the first-class of voters, those who pay 20 lei in direct taxes or have an elementary education form the second, and all others who pay taxes belong to the third, in which priests, schoolmasters, and possessors of property worth 300 lei a year who can read and write vote directly and the others choose delegates, 1 to 50 voters. These three classes elect the members of the Chamber. Senators are elected by two classes of proprietors, the first having an income of 2,000 lei or upward from their property, the second having an income from 800 lei up to 2,000 lei. The reigning King is Carol I, born April 20, 1839, son of Prince Karl of Hohenzollern-Sigmaringen, elected Domn of Roumania on April 20, 1866, by the Constituent Assembly and proclaimed King on March 26, 1881. The heir presumptive is Prince Ferdinand of Hohenzollern-Sigmaringen, the King's nephew, born Aug. 24, 1865.

The ministry constituted on Feb. 27, 1901, was composed as follows: President of the Council, Minister of Foreign Affairs, and Minister of War *ad interim*, Demeter Sturdza; Minister of the Interior, Peter S. Aurelian; Minister of Justice, C. J. Stoicesco; Minister of Finance, G. D. Pallades; Minister of Public Instruction and Worship, Spiro D. Haret; Minister of Public Works, J. J. C. Bratiano; Minister of Agriculture, Industry, Commerce, and Domains, B. M. Missir.

Area and Population.—Roumania has an area of 50,720 square miles. The population in 1899 was 5,912,520, an average of 116 to the square mile. Of the total 92.5 per cent. were Roumanians, 2.9 per cent. were foreign citizens, and 4.6 per cent., 272,421 in number, were Jews and Mohammedans of Roumanian birth who are denied the status of citizenship and regarded as foreigners. Outside of Roumania, in Hungary and Transylvania, Servia, Bulgaria, and Turkey, are between 9,000,000 and 10,000,000 persons of Roumanian race. The number of marriages in 1900 was 40,407; of births, 234,843; of deaths, 146,144; excess of births, 88,699.

Finances.—The revenue for the financial year ending March 31, 1901, was 209,512,633 lei, and the expenditure 237,286,775 lei. For 1902 the estimated revenue was 227,203,000 lei, and the estimated expenditure the same. For the financial year ending March 31, 1903, the budget estimate of revenue is 218,500,000 lei, of which direct taxes produce 43,615,000 lei, indirect taxes 56,510,000 lei, monopolies 50,900,000 lei, the Ministry of Agriculture 23,345,000 lei, the Ministry of Public Works 22,520,000 lei, the Ministry of the Interior 10,534,000 lei, the Ministry of Finance 3,356,000 lei, the Ministry of War 983,000 lei, the Ministry of Foreign Affairs 202,000 lei, the Ministry of Instruction and Worship 794,000 lei, the Ministry of Justice 231,000 lei, and various sources 5,510,000 lei. The expenditure for 1903 is estimated at 218,500,000 lei, balancing the budget, and of this total the public debt takes 86,441,092 lei, the Ministry of War 37,720,000 lei, the Ministry of Finance 34,823,000 lei, the Ministry of Instruction and Worship 24,924,000 lei, the Ministry of the Interior 15,259,000 lei, the Ministry of Public Works 5,790,000 lei, the Ministry of Justice 5,230,000 lei, the Ministry of Agriculture 4,193,000 lei,

the Ministry of Foreign Affairs 1,539,000 lei, and the Council of Ministers 56,400 lei, leaving for supplementary credits 2,524,508 lei.

The public debt on April 1, 1901, amounted to 1,432,015,515 lei. The annual charge for 1902 was 86,040,328 lei.

The Army and Navy.—The army consists of 8 battalions of rifles, 34 regiments of infantry, 6 regiments of hussars, 11 regiments of cavalry, 12 regiments of field-artillery, 2 regiments of siege-artillery, 2 regiments of engineers, 5 companies of artificers, 4 squadrons of train, and 4 companies of hospital troops. The troops are organized in 4 army corps of 2 divisions each, the division consisting of 2 brigades of infantry, with 1 brigade of cavalry attached to each corps, and a separate division in the Dobrudja and cavalry brigades at Tececiu and Galatz. The peace strength in 1900 was 3,474 officers and 116,178 non-commissioned officers and men, with 21,318 horses and 384 guns. The infantry weapon is the Mannlicher rifle of the model of 1883. The territorial army numbers 72,000 men, with 7,500 horses.

The naval force consists of the protected cruiser *Elisabeta*, of 1,320 tons, a training-ship, 7 gun-boats, 6 coast-guards, a despatch-boat, and 6 first-class and 2 second-class torpedo-boats.

Commerce and Production.—The yield of wheat in 1901 from 1,636,557 hectares was 25,508,840 hectoliters; of rye from 211,424 hectares, 3,373,650 hectoliters; of barley from 503,698 hectares, 8,535,925 hectoliters; of oats from 265,124 hectares, 5,828,550 hectoliters; of corn in 1900 from 2,035,268 hectares, 29,970,400 hectoliters; of wine from 145,612 hectares, 3,497,650 hectoliters; of prunes from 72,411 hectares, 3,567,380 hectoliters; of tobacco from 4,550 hectares, 40,096 quintals; of colza in 1901 from 135,000 hectares, 1,518,000 hectoliters; of linseed from 20,929 hectares, 195,205 hectoliters; of hemp in 1900 from 6,077 hectares, 20,350 quintals of fiber and 43,386 hectoliters of seed; of hay from 630,217 hectares, 11,610,841 quintals. There were 864,746 horses, 2,589,040 cattle, 5,644,210 sheep, and 1,709,909 hogs in 1900. The state salt-mines produced 104,665 tons in 1900. Coal and petroleum are among the mineral products and metalliferous ores are mined in the Carpathians.

The total value of imports in 1900 was 216,985,878 lei, and of exports 280,000,431 lei. The imports of cereals were 7,077,657 lei, and exports 172,726,869 lei; imports of textiles 73,963,403 lei, and exports 2,881,325 lei; imports of metals and metal manufactures 53,162,020 lei, and exports 5,333,281 lei; imports of hides and leather 6,395,626 lei, and exports 2,962,227 lei; imports of mineral fuel 4,636,917 lei, and exports 10,448,180 lei; imports of minerals, glass, and pottery 3,939,157 lei, and exports 592,655 lei; imports of oil and wax 5,605,646 lei, and exports 6,326 lei; imports of colonial products 14,252,283 lei, and exports 86,717 lei; imports of fruits 3,198,639 lei, and exports 47,059,215 lei; imports of animal products 4,655,001 lei, and exports 7,202,960 lei; imports of live animals 949,799 lei, and exports 9,548,048 lei; imports of colors and dyes 2,868,450 lei, and exports 165,451 lei; imports of timber 2,138,038 lei, and exports 12,321,859 lei; imports of paper 4,582,959 lei, and exports 247,973 lei; imports of drugs 4,093,790 lei, and exports 17,533 lei.

The construction of a harbor at Costanza has been of benefit to the export trade. The values in lei, or francs, of the imports from and exports to different countries in 1900 are given in the table above.

Navigation.—The number of vessels entered in 1900 was 27,090, of 7,528,855 tons; cleared, 27,

COUNTRIES.	Imports.	Exports.
Belgium.....	6 974,450	140,545,968
Austria-Hungary.....	69,295,518	44,974,896
Germany.....	55,664,507	19,195,877
Great Britain.....	31,150,817	16,873,762
Italy.....	9,664,797	16,269,863
France.....	16,132,373	7,676,624
Turkey.....	10,981,496	12,325,425
Netherlands.....	3,152,498	9,066,889
Russia.....	5,746,531	5,251,825
Bulgaria.....	2,681,818	3,547,157
Switzerland.....	2,685,622	1,902,966
United States.....	909,558	1,551

015, of 7,084,990 tons. The commercial navy in 1900 comprised 392 sailing vessels, of 74,604 tons, and 71 steamers, of 15,116 tons. The Government maintains in connection with the railroads a steamboat service on the Danube and the Black Sea.

Railroads, Posts, and Telegraphs.—There were 2,060 miles of state railroads in 1901, and 930 miles were building or authorized. The receipts in 1899 were 46,197,275 lei, and expenses 37,500,000 lei; capital expenditure, 717,627,050 lei. The post-office in 1900 carried 19,604,457 letters, 12,063,991 postal cards, and 27,897,717 newspapers and parcels.

The telegraphs in 1900 had a length of 4,344 miles, with 11,246 miles of wire. There were 52 telephone circuits in 1900, with 4,090 miles of line and 5,860 miles of wire; the number of conversations in the year was 1,940,824.

Internal Affairs.—The financial difficulties of the Roumanian Government reflect the economic situation of the country, which has grown steadily worse in consequence of the competition of American corn and wheat. Deficits in the budget have in a few years piled up a floating debt of 175,000,000 lei. On Jan. 22, 1902, Minister Pallades laid down the portfolio of finance, which Premier Sturdza assumed *ad interim*, transferring the charge of foreign affairs temporarily to Minister Bratiano in addition to his duties at the head of the Public Works Department. Subsequently this latter portfolio was given *ad interim* to Minister of Justice Stoicesco. The Legislature, which met on Jan. 23, passed a bill for the organization of industrial societies and the protection of Roumanian workmen against the competition of foreigners. A project of the Minister of the Interior to forbid by law all merchandizing by foreigners in rural communities was given up in deference to public opposition. A higher protective duty was imposed on foreign sugar. A bill was passed making criminal judges irremovable during good behavior. The financial deficit for 1901 was provided for without the sale of domains that had been proposed. By curtailment of expenditure a balance was reached in the budget of 1902, and for the next year a considerable surplus was predicted. On March 11 the parliamentary session was closed. In the summer the King visited Bulgaria to indicate that friction between the two countries was at an end. On July 28, the Cabinet was reconstituted as follows: President of the Council and Minister of War, Demeter Sturdza; Minister of Agriculture, Commerce, Industry, and Domains, Peter S. Aurelian; Minister of Justice, E. Statesco; Minister of the Interior, J. D. Pallades; Minister of Public Works, C. J. Stoicesco; Minister of Public Worship and Instruction, Spiro D. Haret; Minister of Foreign Affairs, J. J. C. Bratiano; Minister of Finance, M. Costinesco. At the reassembling of the Chambers on Nov. 27, Minister Aurelian resigned his post on the ground of ill health, and the Prime Minister took charge of the department *ad interim*.

The Jewish Question.—An article in the treaty of Berlin signed on July 13, 1878, runs as follows: "In Roumania the difference of religious creeds and confessions shall not be alleged against any person as a ground for exclusion or incapacity in matters relating to the enjoyment of civil and political rights, admission to public employments, functions, and honors, or the exercise of the various professions and industries in any locality whatsoever." The recognition of Roumanian independence by the powers was declared to be conditional on the acceptance of these terms. The article was inserted in the treaty at the suggestion of France, supported by Great Britain. Its purpose was to ameliorate the civil status of Roumanian Jews, who were in law, and till recently have remained, aliens not under the protection of any Government. In the year following the signature of the treaty the British and some other foreign representatives at Bucharest endeavored to influence the Roumanian Government to remove Jewish disabilities, without success except that the article in the Roumanian Constitution forbidding the naturalization of Jews was amended. Naturalization can, however, be granted only by a special act of Parliament in each case, and citizenship is not transmitted to the children of a naturalized Jew. Out of a Jewish population of about 400,000 not more than 80 have been able to obtain naturalization, and in recent years it has been withheld from nearly every applicant. The legal disadvantages under which the Jews suffered have been aggravated by a series of alien laws, of which they were the objects and the victims, which closed to them the avenues to progress and advancement and even the occupations by which they were accustomed to get their living, causing many thousands to emigrate in successive waves, the great majority to the United States. In 1884 about 5,000 Jewish peddlers were thrown out of employment by a law prohibiting foreigners from hawking. In 1886 aliens were excluded from membership in boards of trade and commerce; in 1887 from employment in the public service, on public works, and in the tobacco trade, and their employment by Roumanian citizens in the retail trade was restricted; in 1889 from prominent positions on railroads. In 1896 Jewish children were excluded from free elementary education, but if there were seats after all Roumanian children were accommodated they could be admitted by paying fees. In 1898 Jewish students were shut out from the secondary schools and the universities. In 1901 Jews were prohibited from keeping public houses, beer gardens, grocery stores, coffee-houses, or bakeries in the rural districts. They are legally incapacitated from practising law or medicine. Although compelled to serve in the army, they have never been eligible to commissions. They can not own or lease agricultural land. Petty ordinances depriving them of control over the inspection of meat, closing their schools because they do not keep them open on Saturday, and other administrative annoyances stimulate their desire to emigrate to a free country. Excluded from one employment after another, many turned to the mechanical trades. In March, 1902, was enacted the new industrial law prohibiting the employment of foreigners in any trade or calling. If applied to the Jews it would throw 25,000 workmen out of employment and cause a fresh tide of emigration to America. Since 1893 about 23,000 Jews have settled in New York city alone. Large numbers have flocked into the congested districts of London and helped to depress the wages of English workmen and exhaust the Jewish charity funds. Vienna has been repeated-

ly overrun by starving emigrants. A large proportion of those who arrived in New York have been sent back as diseased or destitute, and a large proportion of those who passed the emigration barriers became a charge on the public or on the Jewish benevolent societies. There are believed to be about 270,000 Jews still in Roumania. In 1900 a wholesale exodus took place, resulting as much from the failure of the harvest of 1899 as from the new restrictive educational laws. Thousands were stranded in Austria-Hungary and had to be sent back. When a similar movement was threatened in 1902 in consequence of the new trade laws a Jewish colonization society took steps to regulate and control the movement, assisting those who were suitable emigrants of sound health, men possessed of 150 lei who have performed their military duties and women who were accompanied or preceded by relatives. The circumstance that Jews have grown rich at the expense of the peasants by selling them drink, loaning them money at usurious rates, and overreaching them in bargains, furnishes some ground for the laws of Russia and Roumania that drive them into the cities; that they are a cosmopolitan and migratory people and aliens by religion in countries where the Greek religion is an element of nationality is a reason for debarring them from civil and military posts. The Roumanian laws are in some degree protective against an influx of Jews from Russian Poland and Bessarabia. The purpose of their increasing severity can be no other than to drive the Roumanian Jews out of the country. That has been their effect until the countries where they have sought refuge have no room for more Roumanian Jewish immigrants, even the United States, which has been the haven for the immense majority of them in the past. No previous Roumanian ministry has been so hostile toward the Jews in its policy and legislation as that of Demeter Sturdza.

After the trade law was passed a fresh exodus to the United States began. A great many Roumanian immigrants on arriving at New York were refused admittance because they were destitute or suffering from incurable disease. Vienna and London again suffered the inconvenience of the pauper influx, and Hebrew benevolent organizations in America and in Europe were burdened with a task that was growing beyond their power to help. Great Britain has on several occasions intimated to Roumania that the article of the treaty was not carried out in the spirit, if it were in the letter. The Austro-Hungarian Government has made representations regarding the hordes of destitute wanderers that have from time to time swarmed through Hungary and the Austrian lands.

In September Secretary Hay addressed a circular note to the powers that signed the Berlin treaty containing an earnest appeal to them to represent to the Roumanian Government the evils resulting from its neglect to carry out the stipulations of the treaty, to which the United States may not authoritatively appeal as it was not and can not become a signatory. The purpose of the generous treatment afforded to the alien immigrant by the United States is to benefit the country and the immigrant alike; but not to afford another state a field upon which to cast its own objectionable elements. The great number of undesirable emigrants from Roumania coming to its shores furnished ground to the United States for requesting the European powers to seek to give effect to the public law of their making that would prevent the sufferings and disappointments of these emigrants. Great Britain sent a note to the

other signatory powers asking them to state their views as to the subjects raised by the American circular. The Roumanian ministers brought to public notice the fact that the law forbidding any alien to exercise a trade or handicraft in Roumania unless reciprocity exists for Roumanians in his country does not apply to Jews, who now belong to the category of aliens under the protection of the Roumanian Government. The provision of the law that excludes Jews from all trade unions and associations is, however, quite effective in depriving them of employment. The Roumanian Government, after the publication of the American note, ceased to issue passports to emigrants intending to emigrate to the United States, and even turned back those who already had their passports and railroad and steamer tickets. After an interval of several weeks the emigration to America recommenced, and the emigrants were of the artisan class.

International Commission of the Danube.—The navigation of the Danube as far as the Iron Gates, except in the northern outlet, is regulated by agreement between Germany, England, Austria, France, Italy, and Russia by international rules drawn up at the conference of Berlin in 1878 and the London conference of 1883. The International Commission, sitting at Galatz, which enforces the regulations and collects tolls to pay its expenses and the cost of improvements and conservation, is composed of a delegate of each of the riparian states, viz., Austria, Bulgaria, Roumania, and Servia, and one appointed for six months by each of the great powers in turn. The agreement is terminable in 1904. During 1900 the number of vessels cleared at the Sulina mouth was 1,101, of 1,252,509 tons, of which 260, of 458,921 tons, all steamers, were British; 197, of 256,128 tons, consisting of 154 steamers and 43 sailing vessels, were Greek; 81, of 131,503 tons, all steamers, were Austrian; 85, of 129,426 tons, all steamers except 1 vessel, were Italian; 191, of 89,418 tons, 176 of them steamers and 15 sailing craft, were Russian; 178, of 51,822 tons, of which 30 were steamers and 148 sailing vessels, were Turkish; 33, of 43,156 tons, of which 29 were steamers and 4 sailing vessels, were Roumanian; 24, of 31,712 tons, all steamers, were French; 16, of 22,429 tons, all steamers, were German; and 35, of 37,994 tons, 20 of them steamers and 15 sailing vessels, belonged to various other nationalities. The receipts of the International Commission for 1900 were 2,149,299 francs, of which 1,687,220 francs were dues collected, 41,625 francs various receipts, 181,201 francs a balance from the preceding year, and 239,253 francs the value of material and bills receivable. The expenses were 811,368 francs for administration, 319,524 francs for technical service, 119,489 francs for various expenses, 280,747 francs for special expenditure, and 221,321 francs for purchase of material and accounts payable. The debts of the commission were paid up in 1887, and there were 2,216,676 francs on Jan. 1, 1901, of reserve and pension funds.

RUSSIA, an empire in northern Europe and Asia. The throne is hereditary in the dynasty of Romanoff-Holstein-Gottorp. The legislative, judicial, and executive powers are vested in the Emperor, called the Czar, who is assisted by a Cabinet of ministers, each of whom has charge of an executive department; by a Council of State, which passes upon projects of legislation submitted by the ministers; by a Ruling Senate, which watches over the judicial administration; and by a Holy Synod, which directs ecclesiastical affairs.

The reigning Czar is Nicholas II, born May 18,

1868, who succeeded his father, Alexander III, on Nov. 1, 1894. The heir presumptive is the Grand-Duke Michael, brother of the Czar, born Dec. 4, 1878. The members of the Committee of Ministers at the beginning of 1902 were as follow: Minister of the Imperial House and Imperial Domains, Gen. Baron W. B. Freedericksz; Minister of Foreign Affairs, Count W. N. Lamadorf; Minister of War, Gen. A. N. Kuropatkin; Minister of the Navy, Vice-Admiral P. P. Tyrtoff; Minister of the Interior, Dimitri Sergeivich Sipiagin; Minister of Public Instruction, Gen. Peter S. Vannovsky; Minister of Finance, S. J. Witte; Minister of Justice, N. V. Muravieff; Minister of Agriculture and State Domains, A. S. Yermoloff; Minister of Ways and Communications, Prince M. J. Khilkoff; Comptroller-General, Lieut.-Gen. Lobko; State Secretary for Finland, W. K. de Plehwe; Procurator-General of the Holy Synod, K. P. Pobiedonostseff; President of the Committee of Ministers, J. N. Durnovo. The Grand-Dukes Vladimir Alexandrovich, Alexis Alexandrovich, and Michael Nicolaievich, uncles of the Czar, are members of the Committee of Ministers, as are also D. M. Solsky, President of the Department of State Economy; E. W. de Frisch, President of the Department of Legislation; N. M. Tchikhatcheff, President of the Department of Industry, Science, and Commerce; M. Selifontoff, President of the Department of Civil and Ecclesiastical Affairs in the Council of State; and Count Protassoff-Bakhmetieff.

Area and Population.—The land area of the Russian Empire is 8,447,234 square miles, and there are 293,018 miles of internal waters. The total population in 1897 was 129,004,414. In European Russia there are 102.8 women to 100 men; in Poland, 98.6; in Finland, 102.2; in the Caucasus, 89.5; in Siberia, 93.7; in the Steppes, 89.4; in Transcaspia and Turkestan, 83; average for the empire, 99.8. The Jews number 2,843,364 in the western and southwestern provinces of Russia, or 11.3 per cent. of the population; in five governments of Poland they number 431,800, or 11 per cent. of the population. In Odessa, Kerch, and Sebastopol there are 73,389 Jews, 35.1 per cent. of the population. In the whole empire there are over 4,000,000 Jews. The number of births in the Russian Empire, exclusive of Finland, during 1898 was 5,769,218; of deaths, 3,845,968; excess of births, 1,923,350. St. Petersburg, the capital, had 1,439,375 inhabitants in 1900; Moscow, 1,035,664; Riga, 282,943.

Finances.—The ordinary revenue for 1900 was 1,704,128,506 rubles, and expenditure 1,555,427,622 rubles, leaving a surplus of 148,700,884 rubles. The extraordinary receipts were 32,568,983 rubles, and the extraordinary disbursements 333,788,515 rubles. The estimate of revenue for 1901 was 1,730,096,006 rubles from ordinary and 1,500,000 rubles from extraordinary sources, and the expenditures were estimated at 1,656,652,556 rubles for ordinary and 131,829,450 rubles for extraordinary purposes, making a total of 1,788,482,006 rubles, necessitating the raising of 56,886,000 to meet extraordinary expenditure. Of the extraordinary outlay 42,329,450 rubles were for building new railroads, 82,000,000 rubles for the payment of consolidated railroad bonds, and 7,500,000 rubles for various purposes. For 1902 the ordinary revenue was estimated at 1,800,784,482 rubles, and the extraordinary revenue at 1,800,000 rubles, while the ordinary expenditures were estimated at 1,775,913,481 rubles and the extraordinary expenditures at 170,658,495 rubles, making a total expenditure of 1,946,571,916 rubles, exceeding by 143,987,494 the estimated revenue from all sources.

Of the ordinary receipts 130,493,826 rubles were derived from direct taxes, viz., 47,026,863 rubles from taxes on lands and forests, against 47,155,005 rubles in 1901, 66,103,000 rubles from trade licenses, against 62,701,500 rubles, and 17,363,963 rubles from a 5-per-cent. tax on income from capital, against 17,316,400 rubles; 387,127,600 rubles were derived from indirect taxes, viz., 34,593,500 rubles from spirits, against 318,797,000 rubles in 1901, 42,934,000 rubles from tobacco, against 41,409,000 rubles, 69,398,000 rubles from sugar, against 62,368,000 rubles, 34,470,100 rubles from naphtha and matches, against 32,862,800 rubles, and 205,732,000 rubles from customs, against 196,874,000 rubles; 91,999,061 rubles were derived from stamps and dues, viz., 41,093,869 rubles from stamp-duties, against 38,871,537 rubles in 1901, 22,900,000 rubles from transfer duties, against 23,900,000 rubles, and 26,145,187 rubles from passports, railroad taxes, etc., the same as in 1901; 521,724,000 rubles were derived from Government monopolies and enterprises, viz., 1,645,000 rubles from mines, against 4,440,000 rubles in 1900, 3,250,000 rubles from the mint, against 4,018,000 rubles, 33,021,000 rubles from the post-office, against 30,623,900 rubles, 21,000,000 rubles from telegraphs and telephones, against 19,770,000 rubles, and 462,808,000 rubles from the sale of spirits, against 169,143,000 rubles; 508,414,998 rubles were derived from State domains, mines, and railroads, viz., 19,395,064 rubles from rent for domains, against 18,586,861 rubles in 1900, 63,013,400 rubles from Crown forests, against 54,813,300 rubles, 396,072,000 from state railroads, against 360,707,400 rubles, 13,981,883 rubles from Crown mines, against 13,195,494 rubles, 13,021,251 rubles from Crown capital and banking operations, against 13,822,307 rubles, and 2,931,400 rubles as the Crown's share in private railroad profits, against 4,210,000 rubles; 727,992 rubles were derived from sales of domains, against 573,291 rubles in 1901; 86,431,000 rubles were derived from redemption of peasants' lands, of which 36,547,870 rubles came from liberated serfs, against 37,532,242 rubles in 1900, and 49,883,130 rubles from Crown peasants, against 51,374,258 rubles; 67,629,847 rubles were derived from miscellaneous sources, viz., 9,959,369 rubles from railroad debts, against 10,785,804 rubles in 1900, 39,720,322 rubles from Crown debts, against 39,396,151 rubles, 21,850,156 rubles as aid from municipalities, against 19,735,242 rubles, and 3,000,000 rubles as military contribution, the same as in 1900; 6,296,158 rubles were derived from other sources, against 5,963,327 rubles in 1900. Of the ordinary expenditures in 1902 the state debt absorbed 274,909,743 rubles in 1901 and 286,459,713 rubles in 1902, the higher institutions of state 3,155,401 rubles in 1901 and 3,080,667 rubles in 1902, the Holy Synod 23,783,809 rubles in 1901 and 27,954,151 rubles in 1902, the Ministry of the Imperial House 12,715,243 rubles in 1901 and 15,715,243 rubles in 1902, the Ministry of Foreign Affairs 5,289,074 rubles in 1901 and 5,867,350 rubles in 1902, the Ministry of War 324,024,871 rubles in 1901 and 322,638,537 rubles in 1902, the Ministry of the Navy 93,597,666 rubles in 1901 and 98,318,984 rubles in 1902, the Ministry of Finance 305,833,826 rubles in 1901 and 335,198,430 rubles in 1902, the Ministry of Agriculture and State Domains 40,728,781 rubles in 1901 and 43,242,831 rubles in 1902, the Ministry of the Interior 87,650,199 rubles in 1901 and 98,187,205 rubles in 1902, the Ministry of Public Instruction 383,143,459 rubles in 1901 and 435,547,758 rubles in 1902, the Ministry of Justice 46,227,505 rubles in 1901 and 47,392,498 rubles in 1902, the state Control 7,116,715 rubles in 1901 and

7,638,860 rubles in 1902, the state studs 1,599,746 rubles in 1901 and 2,046,942 rubles in 1902, various ordinary expenditures 13,800,000 rubles in 1901 and 15,000,000 rubles in 1902. Of the extraordinary expenditures of 1902 the sum of 165,658,495 rubles was required for building new railroads and 5,000,000 rubles were reserved for various expenses.

The money in the treasury on Jan. 1, 1901, amounted to 106,500,000 rubles. The liabilities due to the state at that date amounted to 2,388,664,431 rubles, of which 252,886,063 were military contributions, 255,648,137 rubles railroad debts, 1,486,017,970 rubles debts incurred for the redemption of peasants' lands, 106,493,507 rubles debts of local treasuries, 122,894,029 rubles the debt of the nobles' land bank, and 164,724,722 rubles various other debts. There were pension funds and funds for alleviation of famine, scientific prizes, and other purposes amounting to 375,410,489 rubles. The payments of interest on the state debt amounted to 248,890,384 rubles in 1901 and 258,816,418 rubles in 1902, redemption of capital to 25,905,922 rubles in 1901 and 27,515,774 rubles in 1902, expenses to 113,437 rubles in 1901 and 127,521 rubles in 1902; total debt charge, 274,909,743 rubles in 1901 and 286,459,713 rubles in 1902. The aggregate receipts of the Zemstvos of European Russia, the Caucasus, Siberia, the Steppes, and Turkestan amounted in 1900 to 76,764,000 rubles, and expenditures to 106,922,000 rubles.

Although the economic situation of the peasants and landowners in Russia is the reverse of prosperous and the state-aided and protected industries that have been built up at the expense of agriculture are undergoing a crisis, the finances of the Imperial Government, by the showing of M. Witte, have steadily improved, in spite of the large borrowings abroad and apparent increase of the debt. While the debt has grown from 5,389,200,000 rubles to 6,497,300,000 rubles, the national capital in railroads and in money owed to the treasury has increased from 2,362,200,000 rubles to 4,614,800,000 rubles, reducing the net debt by 36 per cent., without taking into account the value of fortresses and ships of war, of public factories and docks, or the increased value of domains and forests. Besides a reserve fund of 114,600,000 rubles at the close of 1901, the Government had 127,200,000 rubles of the 4-per-cent. loan raised in the spring, making a fund of over 240,000,000 rubles, from which 144,000,000 rubles could be taken to balance the budget of 1902. The ordinary budget has increased 86 per cent. in ten years, but the main increase is due to the growth of railroad expenses, which are counterbalanced by an equivalent increase in income. The expenditure on education, including the sums allotted for the purpose in the military and naval budgets and those of the Holy Synod and other ministries, amounted in 1902 to 74,800,000 rubles, which was twice as much as in 1892. A new Russian loan of 181,959,000 rubles at 4 per cent. was taken in Germany, Holland, and Russia in April, 1902, to enable the Government to pay off the Chinese indemnity claims to be recouped by China, and to make advances to railroad companies.

The Government in 1895 fixed a ratio at which gold would be received for payments to the treasury and the railroads. The ratio of 10 rubles in gold for 15 paper rubles was finally settled upon, and in 1897 a law was passed requiring the state bank to maintain a gold reserve of half the paper currency issued up to 600,000,000 rubles and of the full amount for all in excess of that sum. The Government and the State Bank had accumulated a gold stock equivalent to 1,315,000,000

paper rubles, exceeding the amount of paper currency in circulation by 316,000,000 rubles and exceeding by 452,500,000 paper rubles the legal metallic reserve, which was 575,000,000 rubles in gold, equivalent to 862,500,000 rubles in paper. Since then 439,000,000 rubles of paper have been withdrawn from circulation. The gold coinage, including recoinage, from 1886 to 1896 inclusive, amounted to 183,305,630 gold rubles. In 1897 the new gold imperials were inscribed as of the value of 15 rubles, instead of 10 rubles. In 1897 the coinage of gold rubles at the new ratio was 331,577,500 rubles; in 1898, 263,890,147 rubles; in 1899, 378,000,150 rubles; in 1900, 161,595,195 rubles. There were coined in the four years 148,152,000 rubles of silver rubles and 15,000,000 rubles of subsidiary coins. By January, 1900, the paper currency had been reduced to 630,000,000 rubles, at which figure it has since been maintained. In January, 1902, there were 1,525,000,000 rubles of gold in the vaults of the treasury and the bank, which contained also 223,400,000 rubles of silver. The gold reserves covered the paper currency nearly two and a half times, and the sum of 830,100,000 rubles set aside as a guarantee fund was exceeded by 32 per cent. the entire circulation.

The Army.—The number of young men who annually reach the age of twenty-one and are liable to military service is 870,000, of whom 308,500 were taken into the active army and the navy in 1901 and the rest were enrolled in the Opolchenie, or militia. The annual contingent includes the frontier customs guards, and in the number given were 16,500 natives of the Caucasus, 1,000 Finns, and 7,000 volunteers. The period of service in the active army is nominally five years and really four years; after the five years are over the discharged soldier belongs to the Zapas for thirteen years, and then for five years to the Opolchenie. In the Caucasus the conscripts remain only three years with the colors, but in Asia the period is seven years. European Russia, with Finland and the Caucasus, is divided into 9 military circumscriptions and the district of the Don Cossacks. There are 25 army corps in the European army, including the corps of guards, the grenadier corps, and 2 corps in the Caucasus. Russia in Asia has the 3 military circumscriptions of Turkestan, Siberia, and the Amur. The effective of the Russian army comprises 1,068 battalions, 636 squadrons, 521 field-batteries, 224 companies of fortress-artillery, and 164 companies of engineers in Europe and 109 battalions, 93 squadrons, 38 batteries, 22 companies of fortress-artillery, and 31 companies of engineers in Asia; total, 1,177 battalions, 729 squadrons, 559 field-batteries, 246 companies of field-artillery, and 195 companies of engineers. The corps of custom-house officers on the frontiers is organized in 31 brigades, including 2 in Turkestan, and numbers about 1,000 officers and 30,000 men. The numerical strength of the Russian army is estimated at over 40,000 officers and 900,000 men on the peace footing, exclusive of the customs guards and marine troops. In case of mobilization the field-army is approximately estimated at 19,500 officers and 1,000,000 men in the infantry, 3,800 officers and 120,000 men in the cavalry, 3,500 officers and 119,000 men in the artillery, 1,100 officers and 46,000 men in the engineers, and 400 officers and 26,000 men in the train; total, 28,300 officers and 1,311,000 men, with 330,000 horses and 3,856 guns. The reserve troops are estimated at 15,470 officers and 832,300 men of all arms, with 163,000 horses and 1,376 guns. The fortress troops are estimated at 2,600

officers and 160,000 men in the infantry, 1,500 officers and 80,000 men in the artillery, and 400 officers and 12,000 men in the engineers; total, 4,500 officers and 252,000 men, with 3,700 horses and 128 guns. The troops of replacement are estimated at 6,640 officers and 373,700 men of all arms, with 50,500 horses and 458 guns, the troops of national defense at 10,500 officers and 740,000 men, and the frontier custom-house guards at 1,000 officers and 40,000 men, with 15,000 horses, making the total war strength of the Russian army 66,410 officers and 3,549,000 men, with 562,200 horses and 5,818 guns. The Russian army was scandalized in March, 1902, by the discovery that Lieut.-Col. Grimm of the general staff in Warsaw, whose duty it was to furnish false information to foreign governments, had been bribed to furnish to German and Austrian staff-officers for several years past the true plans of frontier fortresses and plans of mobilization. He was sentenced to penal servitude in Sakhalin and all plans were changed, entailing a cost of many millions.

The Navy.—The Baltic fleet in 1901 comprised 13 armor-clad battle-ships, 12 armored coast-defense vessels, 18 first-class armored cruisers, 3 smaller armored cruisers, 8 second-class cruisers, 4 torpedo-cruisers, 4 armored gun-vessels, 7 coast-defense gunboats, 3 school-ships, 6 steam-yachts, 11 destroyers, 46 first-class torpedo-boats, 78 second-class torpedo-boats, and 7 transports. There were building 7 battle-ships, an armored coast-defense vessel, 2 armored cruisers, and 16 destroyers. Since the first Russian submarine boat was built in 1901 as many as 50 have been ordered and some of them are completed. Of destroyers, 13 were added to the 21 already launched by the beginning of 1902. The first-class battle-ships Borodino, Alexander III, and Orel, launched in 1901 and 1902, of 13,400 tons, have a complete belt of armor, 11 inches at the thickest part, engines of 16,300 horse-power, to give a speed of 18 knots, and an armament of 4 12-inch guns coupled in fore and aft turrets, 12 6-inch quick-firers in high turrets amidships, and 20 3-inch and numerous smaller quick-firers. The engines, of 10,600 horse-power, are designed to give a speed of 17 knots. The Kniaz Potemkin is a sister to the Tavrichesky, built in the Black Sea, and another of this type is building in the Baltic. The Retvisan, of 12,700 tons, has 10-inch armor like these, engines as powerful as on the Borodino, and an armament of 4 12-inch guns and 12 6-inch and 20 3-inch quick-firers. The Tsarevich, Kniaz Suvaroff, and Slava, launched in 1901, of 13,100 tons, having the same steam-power and speed, carry 4 12-inch guns and 12 6-inch quick-firers in turrets above and below these 20 3-inch quick-firers. The coast-defense vessel Admiral Boutakoff, of 6,000 tons, is armed with 6 8-inch quick-firers. The protected cruisers Diana, Pallada, and Aurora, launched in 1899, of 6,500 tons, are 20-knot steamers, with engines of 10,610 horse-power, and are armed with 8 6-inch, 20 3-inch, and 8 small quick-firers. The Bogalyr and Askold, built in Germany, the Waryag, built in the United States, and the Almaz and Oleg, built in Russian yards, of 6,500 tons, have engines of 20,000 horse-power, capable of steaming 23 knots, and are armed with 12 6-inch, 12 3-inch, and 6 smaller quick-firers. The Novik, of 3,000 tons, built in Germany, is a 25-knot torpedo-cruiser carrying 6 4.7-inch quick-firers. The Boyarin, built in Denmark, is of the same class, and several of these destroyer-destroyers are being built in Russia.

The Black Sea fleet in 1901 consisted of 8 bat-

tle-ships, 2 armor-clad coast-defense vessels, 1 first-class cruiser, 1 second-class cruiser, 6 gunboats, 3 torpedo-cruisers, 25 first-class and 11 second-class torpedo-boats, 3 school-ships, 2 armed steamers, and 8 transports. There were building 1 battle-ship, 2 cruisers, 6 destroyers, and 4 transports. The auxiliary volunteer fleet consisted of 14 ocean steamers, and 3 more were building. The new battle-ship is the Tavrichesky, of 12,480 tons, having 10-inch armor, engines of 10,600 horse-power, giving a speed of 17 knots, and an armament of 4 12-inch guns in armored turrets and 16 6-inch, 16 3-inch, and 30 small quick-firers. The new protected cruisers Kagul and Otchakoff are of the same class as the Bogatyr and Waryag.

In the Siberian flotilla were 1 second-class cruiser, 4 gunboats, 2 torpedo-cruisers, 11 destroyers, 15 first-class and 8 second-class torpedo-boats, 2 armed steamers, and 5 transports. There were building 4 torpedo-gunboats and a steamer for the Yenesei river service.

The fleet in the Caspian consisted of 2 gunboats and 6 steamers.

The total number of torpedo-boats in the Russian navy at the beginning of 1902 was 51 of the first, 41 of the second, and 101 of the third class. These can be taken from one sea to the other through the internal waterways.

The naval estimates for 1903 provide 104,417,791 rubles, against 98,318,984 rubles in 1902 and 67,050,000 rubles in 1898. For ship-building and repairs 36,903,856 rubles were appropriated for 1902 and 40,449,682 rubles for 1903.

Commerce and Production.—Of the total area of European Russia 36.7 per cent. belongs to the Government or the Crown, and of this 31.7 per cent. is uncultivable; 28.3 per cent., of which 14.4 per cent. is waste, is the property of private landowners or of municipalities and other corporations; and 35 per cent., of which 9.6 per cent. is unfit for cultivation, is owned by peasants. Of the area of Poland the Government and imperial family own 6 per cent., peasants 40.9 per cent., and private owners and public corporations 53.1 per cent. Of the total area of European Russia 28.9 per cent. is arable, 14.7 per cent. orchard, meadow, and pasture, 37.3 per cent. forest, and 19.1 per cent. uncultivated. Of the area of Poland 53.2 per cent. is arable, 18.1 per cent. orchard, meadow, and pasture, 22.8 per cent. forest, and 6.1 per cent. uncultivated. Up to Jan. 1, 1899, there were in Russia proper 61,641,108 acres of land redeemed by 6,645,448 peasants for 704,306,095 rubles, an average of 11 rubles 43 kopecks an acre or 106 rubles for an average allotment of 9.3 acres, on which there was an average indebtedness of 37 rubles, which left to the landlord a little less than 70 rubles. In the western provinces, where the conditions were more favorable for the peasants, 2,517,617 peasants redeemed 25,537,539 acres, for 162,619,367 rubles, the value of the average allotment of 10.1 acres being about 65 rubles, or 6 rubles 37 kopecks per acre, giving to the landlord after clearing off an average debt of 27 rubles at the state mortgage bank the average sum of 38 rubles per allotment. The cereal production of Russia proper in 1901 was estimated to be 445,976,000 poods of wheat, 1,024,900,000 poods of rye, 480,413,000 poods of oats, 248,940,000 poods of barley, and 77,995,000 poods of millet; of Poland, 21,244,000 poods of wheat, 66,788,000 poods of rye, 45,531,000 poods of oats, and 21,100,000 poods of barley; of northern Caucasia, 84,527,000 poods of wheat, 9,117,000 poods of rye, 10,660,000 poods of oats, 34,249,000 poods of barley, and 14,856,000 poods of millet. The mines and furnaces in 1899

produced 38,776 kilograms of gold, 5,962 kilograms of platinum, 4,637 kilograms of silver, 318 tons of lead, 7,419 tons of zinc, 2,670 tons of copper, 573,000 tons of rolled iron, 1,314,000 tons of steel ingots, 13,705,000 tons of coal, 8,827,000 tons of naphtha, and 1,643,000 tons of salt. Of the gold 28,276 kilograms was obtained in Siberia and 10,465 kilograms in the Urals, where all the platinum is found and two-thirds of the copper. In the Caucasus 609,000 tons of manganese ore were mined in 1900. The Urals in 1899 produced 15,540 tons of chrome iron in 1899. In southern Russia 357 tons of quicksilver were extracted. In 1900 the production of pig-iron in the south of Russia was 1,483,000 tons; of manufactured iron, 40,000 tons; of rolled steel, 844,300 tons. The Urals produced 810,000 tons of pig-iron, 275,000 tons of iron, and 182,000 tons of steel; Poland produced 295,000 tons of pig-iron, 125,000 tons of iron, and 204,000 tons of steel; the Moscow district produced 230,000 tons of pig-iron, 40,000 tons of iron, and 124,000 tons of steel; the region of St. Petersburg produced 34,500 tons of pig-iron, 50,600 tons of iron, and 86,300 tons of steel. The total production of pig-iron was 2,851,000 tons; of wrought iron, 556,400 tons; of rolled steel, 1,440,000 tons; of steel ingots, 1,816,000 tons. The consumption of iron and steel in 1900 was 3,319,000 tons. The imports of pig-iron were 51,790 tons; of iron and steel manufactures, 260,000 tons. Finland in 1898 produced 27,000 tons of pig-iron, 15,000 tons of wrought iron, and 14,000 tons of rolled steel. The manufacture of agricultural machinery in 1897 amounted to nearly 10,000,000 rubles, having quadrupled in thirty years. On July 20, 1901, the import duty on iron, equal to 26½ rubles per ton, was repealed. The coal production in 1900 was 11,300,000 tons in southern Russia, 3,000,000 tons in the Ural region, and 2,000,000 tons in central Russia. Production is stimulated by protective duties of 90 kopecks a ton on imports on the western frontier and in the Baltic and 3 rubles 60 kopecks at the Black Sea ports. In 1900 the imports of coal and coke were 4,417,000 tons. The oil-wells of the Baku region in 1900 yielded 600,763,812 poods, or 9,840,510 tons, of crude petroleum. The production of illuminating oil was 2,101,000 tons; of lubricating oil, 218,000 tons; of various naphtha products, 23,000 tons; of residuum, 4,706,000 tons. The Terek wells gave 495,000 tons of crude oil. The consumption of Russia requires 6,450,000 tons of crude oil. In 1901 the yield of the Baku wells was 671,000,000 poods, equal to 12,000,000 tons of naphtha, having increased from 84,000,000 poods in 1884, when Baku, which now has nearly 250,000 inhabitants, contained fewer than 70,000. The oil produced for export in 1901 was 2,500,000 tons, while over 5,000,000 tons of residuals were used as fuel on the eastern and southern Russian railroads and the steamers plying on the Black Sea, the Volga river, and the Caspian Sea. The expectation that the oil-supply would prove limited and become soon exhausted is no longer entertained. Some wells have given out, yet the number of producing wells has grown from 458 in 1891 to 1,924 in 1901 and 315 old wells have been deepened. The drainage of a lake covering a rich new field has been undertaken. In borings the oil frequently bursts forth in fountains that jet 200 feet in the air. The price of crude oil, which rose to 16.7 kopecks per pood in 1899, declined to 5.45 kopecks in 1901.

The number of persons employed in mineral industries in 1899 was 646,000, of whom 262,000 were in the Urals, 130,000 in southern and south-

western Russia, 62,000 in the center, 31,000 in the southeast, 33,000 in the Caucasus, 42,000 in the northwest and Poland, 32,000 in the north and Finland, and 62,000 in Siberia. Manufacturing in Russia proper employed 2,098,242 persons in 1899, and the value of the products was 2,839,144,000 rubles. There were 39,029 establishments. The value of cotton manufactures in 1897 was 430,218,000 rubles. The quantity of tobacco manufactured in 1898 was 85,220 tons. The production of spirits in 1900 was 87,098,000 gallons. The number of distilleries was 2,046. Since July 1, 1901, the Government monopolizes the sale of spirits throughout European Russia. The production of beer in 1898 by 1,017 breweries, was 115,860,000 gallons. There were 1,454,000 acres planted to the sugar-beet in 1901, and there were 277 sugar factories. The production of refined sugar in 1898 was 754,758 tons.

The total value of imports into Russia, including the trade with Finland, was 572,496,000 rubles in 1900, compared with an average of 565,461,000 rubles for the previous five years; the value of exports was 688,552,000 rubles, compared with 678,585,000 rubles. Excluding the trade with Finland, amounting to 21,909,000 rubles of imports and 41,950,000 rubles of exports, the imports were 550,587,000 rubles, and the exports 647,502,000 rubles. Imports of articles of food and drink were 79,780,000 rubles in value, and exports 381,215,000 rubles; imports of raw and partly manufactured articles were 304,579,000 rubles, and exports 269,942,000 rubles; imports of live animals were 1,136,000 rubles, and exports 17,900,000 rubles; imports of manufactured articles were 187,001,000 rubles, and exports 19,495,000 rubles. The exports of wheat were 37,628,256 hundredweight; of rye, 30,051,015 hundredweight; of barley, 17,282,558 hundredweight; of oats, 25,794,862 hundredweight; of corn, 6,158,523 hundredweight; of other cereal products, 18,120,891 hundredweight. Of wheat, 23,932,000 poods were exported to France, 15,397,000 poods to Great Britain, and 14,075,000 poods to the Netherlands; of rye, 33,659,000 poods to France, 23,030,000 poods to the Netherlands, and 12,053,000 poods to Great Britain; of barley, 17,955,000 poods to Germany, 13,519,000 poods to Great Britain, and 8,652,000 poods to the Netherlands; of oats, 39,634,000 poods to Great Britain, 18,226,000 poods to the Netherlands, and 17,575,000 poods to Germany, France, and Belgium. The naphtha exports in 1900 were 71,204,000 poods of illuminating oil, 10,724,000 poods of lubricating oil, and 4,759,000 poods of waste; total, 86,687,000 poods. The exports of eggs, which go to Germany, France, and Austria, were 1,780,000,000 in number, valued at 31,352,000 rubles, besides 52,000 poods of preserved eggs in cans, valued at 231,000 rubles. The total value of grain and flour exported was 304,698,000 rubles; of eggs, 31,583,000 rubles; of sugar, 16,330,000 rubles; of dairy-products, 13,709,000 rubles; of potatoes, vegetables, and fruits, 3,072,000 rubles; of fish and caviar, 2,317,000 rubles; of meat, 1,197,000 rubles; of tobacco and cigarettes, 2,457,000 rubles; of alcohol and liquors, 682,000 rubles; of various food products, 5,170,000 rubles. Among raw materials and partly manufactured goods exported the value of timber and wood manufactures was 58,384,000 rubles; of flax, 49,068,000 rubles; of naphtha products, 45,973 rubles; of oil-seeds, etc., 37,945,000 rubles; of oil-cake, 15,540,000 rubles; of furs and leather, 13,729,000 rubles; of hemp, 9,450,000 rubles; of bristles, feathers, and hair, 7,343,000 rubles; of manganese ore, 6,360,000 rubles; of wool, 5,930,000 rubles; of platinum and other raw metals, 1,840,-

000 rubles; of other articles in a crude or half-manufactured state, 18,390,000 rubles. Of the manufactured goods exported the value of metal manufactures was 3,532,000 rubles; of gutta-percha manufactures, 3,494,000 rubles; of cotton goods, 2,081,000 rubles; of woolen goods, 1,820,000 rubles; of various manufactures, 8,568,000 rubles. Of food articles and beverages imported the value of tea was 23,639,000 rubles, besides 16,555,000 rubles through Asia; value of fish, 13,130,000 rubles; of wine, beer, and spirits, 12,735,000 rubles; of fruits, vegetables, and nuts, 10,061,000 rubles; of coffee, 5,430,000 rubles; of rice, 2,196,000 rubles, besides 1,491,000 rubles from Persia; of tobacco, 2,193,000 rubles; of various articles, 10,396,000 rubles. Of raw and partly manufactured articles the imports of raw cotton were 63,201,000 rubles; of coal and coke, 42,589,000 rubles; of metals, 36,673,000 rubles; of wool and woolen yarn, 21,759,000 rubles; of gums and resins, 21,178,000 rubles; of leather, hides, and skins, 15,397,000 rubles; of silk and silk yarn, 13,282,000 rubles; of chemicals, 12,560,000 rubles; of colors, 11,026,000 rubles; of various materials, 66,914,000 rubles. Among the manufactured goods imported the value of machinery was 76,665,000 rubles; of metal goods, 29,022,000 rubles; of textile goods, 16,029,000 rubles; of various manufactures, 65,285,000 rubles. The values in rubles of the imports from and exports to the principal countries in 1900 are given in the following table:

COUNTRIES.	Imports.	Exports.
Germany.....	215,416,000	187,515,000
Great Britain.....	128,176,000	145,564,000
France.....	81,228,000	57,444,000
Finland.....	20,029,000	41,051,000
Austria-Hungary.....	27,290,000	26,426,000
Belgium.....	9,395,000	23,401,000

From the United States the value of 43,615,000 rubles was imported; from China, 16,278,000 rubles; from Egypt, 11,958,000 rubles. Exports to the Netherlands were valued at 69,192,000 rubles; to Italy, 36,765,000 rubles; to Turkey, 18,322,000 rubles; to Denmark, 18,290,000 rubles. The imports from Great Britain formed 22.3 per cent. of the total imports in 1900, the same as in 1890, while the percentage of Germany rose from 27.5 to 37.6 per cent. The Government is endeavoring to induce the farmers to grow wheat and corn for the British market instead of rye for the German market since the increase of the German protective duties. The cultivation of corn has already doubled since 1883. More Russian butter is sold now in England than in Germany, and eggs and poultry are exported, but not meat, because the quality of the Russian breeds of cattle is inferior. American as well as German competition affects British exports to Russia.

Russia did not take part in the Brussels Sugar Conference (see BELGIUM), contending that no sugar bounties were granted by its Government to exporters. This involved the Government in a controversy with the English and other governments that signed the convention of the same kind that has existed between the Russian and the United States governments. Finance Minister Witte proposed a further conference to reconsider the sugar question. Germany, England, Austria, and France declined to reopen the question. The English Government replied on July 30 that it had agreed to the formation of an international commission empowered to determine whether bounties existed in states which had not signed the convention; therefore, if Russia did not adhere to the convention, and if the commission, when constituted, recognized the existence of sugar

bounties in Russia, England would be bound to impose retaliatory duties on Russian sugar, and such a step would be in accordance with the Russo-British commercial treaty of 1859. The Russian reply, sent in September, described its sugar regulations as internal measures for the furtherance of Russian industry, which the favored-nation clause in the treaty allows to both countries, and asserted therefore that countervailing duties upon Russian sugar would constitute a breach of treaty, as the British Government had itself declared after 1897. The exportation of Russian sugar to the signatory countries was unimportant, yet to decide the principle, Russia proposed arbitration by The Hague tribunal, and would not object to have the question tried as to all kinds of goods.

Navigation.—The number of vessels entered at Baltic ports during 1900 was 5,986, of 3,774,000 tons; at Black Sea ports and in the Sea of Azof, 3,876, of 4,404,000 tons; at White Sea ports, 711, of 401,000 tons; total number entered, 10,573, of 8,549,000 tons. The number cleared was 700 in the White Sea, 5,070 in the Baltic, and 3,332 in the Black Sea and Sea of Azof; total, 9,102. Of 5,518 vessels engaged in foreign trade entered at ports of European Russia, of 4,097,000 tons, 1,191, of 732,000 tons, were Russian and 4,337, of 3,365,000 tons, foreign; of 9,102 cleared, of 7,171,000 tons, 1,391, of 721,000 tons, were Russian and 7,711, of 6,450,000 tons, foreign. The number of vessels that visited Russian ports on the Caspian during 1899 was 943. The number of vessels entered at the ports of Vladivostok and Nikolayevsk in the Pacific during 1898 was 384. The number of coasting vessels that visited the Baltic, White Sea, and Black Sea ports in 1899 was 48,420, and the number that visited ports on the Caspian was 19,112.

The Russian merchant navy on Jan. 1, 1900, comprised 2,242 sailing vessels, of 266,418 tons, and 709 steamers, of 334,875 tons. There were 650 sailing vessels, of 86,754 tons, belonging in the Baltic in 1899, and 114 steamers, of 39,917 tons; in the White Sea, 416 sailing vessels, of 23,892 tons, and 39 steamers, of 6,542 tons; in the Black Sea and Sea of Azof, 659 sailing vessels, of 43,937 tons, and 297 steamers, of 165,804 tons; in the Caspian, 517 sailing vessels, of 111,835 tons, and 259 steamers, of 122,612 tons. The Government made a definite arrangement with the Black Sea volunteer fleet in 1902 to enable it to trade with ports of Persia and the far East. The treasury gives a subvention of 600,000 rubles a year for ten years, and the fleet will be increased to 10 steamers. To encourage Russian ship-building the Government has offered to lend half the cost on each vessel, and to take two-thirds of the insurance at 2 per cent. per annum and to give a navigation bounty of half the cost of the fuel, if Russian fuel is used. All material and fittings in Russian-built ships must henceforth be Russian.

Railroads.—The Russian railroad system at the end of 1901 had a total length of 36,526 miles, exclusive of 1,755 miles in Finland. The Ministry of Ways and Communications had control of 34,771 miles, of which 23,340 miles were Government railroads, 10,363 miles belonged to companies, and 1,068 miles were short local lines. Of 29 connected lines of railroad the Government owned and operated 20, embracing 60 per cent. of the mileage. There were besides 6 isolated lines. The annual losses which the railroads formerly entailed upon the Government, amounting to 30,000,000 rubles in 1889, disappeared in 1895, and the net profits have increased with the transfer of railroads from private to Government ownership

and management. In 1899 the gross earnings from 27,485 miles were 540,167,000 rubles. In 1898 they were 495,963,233 rubles from 26,689 miles, and the operating expenses were 305,761,649 rubles, leaving 190,201,584 rubles as net receipts; number of passengers transported, 92,442,045; tons of freight, 130,775,000. The capital cost of the Government railroads was 1,217,755,042 rubles in gold and 1,048,656,189 rubles in paper, equal to 2,870,288,752 paper rubles in all. The net revenue of the Government from the state lines in 1899, after paying 111,935,208 rubles of interest on capital borrowed for their purchase, was 18,134,080 rubles. The capital cost of private railroads was 534,421,985 rubles in gold and 653,840,332 rubles in paper, equal to 1,755,473,310 rubles in all, on which an annual interest of 44,055,116 rubles is paid. The gross earnings of private lines in 1899 were 160,675,883 rubles, and in 1900 they were 163,148,544 rubles; expenses in 1899 were 100,543,547 rubles, leaving 60,132,286 rubles of net earnings.

The Siberian Railroad in 1900 carried 700,000 tons. The first section of this line, from Chelyabinsk to Omsk, 493 miles, was completed in 1895, and the section from Omsk to the Ob river, 388 miles, in 1896, and in the same year the branch from Chelyabinsk to Ekaterinburg, 150 miles, connecting with the Russian network through the Ural Railroad from Perm to Tyumen. The Pacific section, from Vladivostok to Khabarovsk, 475 miles, was ready in the middle of 1897, and the middle sections from the Ob to Krasnoyarsk and Taiga to Tomsk, 528 miles; from Krasnoyarsk to Irkutsk, 668 miles, from Irkutsk to Lake Baikal, 42 miles, from the Lake Baikal station of Mysovaya through Sryetensk to Pokrovskoye on the Amur, 925 miles, were built successively. In 1897 the Manchurian Railroad was begun, which connects the Siberian trunk line with Vladivostok through Chinese territory, and also with Port Arthur and Dalny. From Kaidalovo, in Transbaikalia, this line, which avoids the enormous engineering difficulties presented by the route through Russian territory from Pokrovskoye to Vladivostok, crosses the frontier at the village of Nagadan and runs through Harbin and Gradekovo to Vladivostok, while the line to Port Arthur and Talienwan branches off at Harbin. The Manchurian lines have a length of 1,885 miles, of which 285 miles are in Russian and 1,600 miles in Chinese territory. The Siberian trunk line was to have been built at a cost of 350,000,000 rubles according to the original estimates. The actual cost has been over 1,000,000,000 rubles. The length of the Transsiberian trunk line in 1899 was 2,089, and that of the Ussuri section 481 miles. The Transcaspian Railroad had a length of 1,374 miles, making the total length of the railroads of Asiatic Russia 3,944 miles in 1899, the gross receipts of which for the year from 1,862,304 passengers and 3,005,800 tons of freight were 24,528,397 rubles, while the operating expenses were 26,122,195 rubles. In 1898 on 3,065 miles in Asia 1,530,283 passengers and 2,721,400 tons of freight were conveyed, paying 20,043,179 rubles, while operating expenses were 20,984,260 rubles.

The White Sea port of Archangel is in communication with the main network through a line built in 1897 to Vologda, and another line to Kotlas will connect with the Siberian Trunk Railroad through Perm. Important lines are projected to run from Poltava to Kieff, from Nishni Novgorod to Romanovo, from St. Petersburg to Kieff, through Vitebsk and Mohileff, from St. Petersburg to Vyatka, from Bologoye to Siedlee, and from Orenburg to Tashkend, which is already in

communication with the Caspian by the Central Asian line running to Andijan, with a branch from Merv to Kushka. This last will connect at Samara with the Siberian line. In the Caucasus a new railroad connects the Rostoff and Vladikavkaz line with Baku through Bealan, Petrovsk, and Derbend, and lines have been built to connect Tiflis with Kars, Tikhoryetskaya with Novorossiisk and Tsaritsin, and Kavkazskaya with Ekaterinodar. The Siberian Railroad was opened before the close of 1902 to through traffic from Port Arthur to St. Petersburg. The connection of the Siberian and Transcaspiian Railroads is planned by means of a railroad from Tomsk through Semipalatinsk and Verni to Tashkend. The harbor at Dalny, which is a free port, has been improved at immense expense. A free harbor has been opened at Vladivostok, where goods from China are imported free of duty and articles brought by foreign vessels can be transhipped in bond. The journey from Paris to Peking is made over the Russian Railroad in less than fifteen days.

Posts and Telegraphs.—The post-office in 1900 transmitted 447,667,956 internal letters and postal cards, 13,010,059 money letters, 72,435,857 book packets, 246,633,682 newspapers and periodicals, 5,194,876 parcels, 10,051,531 postal orders, and 229,601 telegraphic orders, and in the international service 54,959,331 letters and postal cards, 591,283 money letters, 23,982,722 book packets, 11,775,279 newspapers and periodicals, 676,272 parcels, and 22,232 postal orders. The postal receipts were 30,682,201. In 1899 the receipts were 29,440,717 rubles, and expenses 33,156,423 rubles.

The telegraphs on Jan. 1, 1900, had a total length of 98,570 miles, with 290,634 miles of wire. The number of messages in 1899 was 18,376,969, besides 81,000,000 railroad telegrams. The telephone-lines in 1899 had 41,850 miles of wire, and the number of conversations was 97,565,867.

Revolutionary Movement.—The industrial depression, which threw great numbers of workmen out of employment and caused a lowering of wages and lengthening of the working day, and the results of the famine of 1901 in southern and eastern Russia, afforded the Socialists and Liberals an opportunity to start an agitation among the people which the nihilists twenty years earlier were unable to do, although they prepared the way, when, throwing up their own careers so as to dwell among peasants and workmen, they preached their subversive doctrines and taught many of the people to read and write. The Government by providing instruction for recruits in the army prepared them to receive revolutionary literature and spread it in their villages. The workmen were imbued with the socialistic ideas of the working classes of western Europe by the foreign skilled artisans employed in every factory. The active propagandists of revolutionary ideas were still to be found among the students and the intellectual proletariat and, as is characteristic of the impressionable and sympathetic Russian race, essentially democratic by nature and tradition, loyal to the Czar but not to the bureaucratic hierarchy which is believed to conceal the state of the country from the Czar, when the wave of political and social unrest starts it spreads among all classes, and the repressive measures used to crush freedom of thought and its expression stimulate a rebellious spirit, so that revolutionary tracts are sent out from Government offices, officers of the army form revolutionary clubs, and members of the provincial nobility at the risk of

imprisonment discuss together political reforms. The intellectual leaders, the chief literary lights of Russia, live in exile, but their writings can not be banished. In 1901 the students rebelled against the antiquated classical curriculum and the prison-like regulations of the universities. M. Bogolepoff, the Minister of Education, was murdered by a desperate student, and Gen. Vannovsky took the portfolio with the intention of introducing reforms. His policy of conciliation was recognized, but no adequate redress was expected in face of the opposition of the Procurator-General of the Holy Synod and the Minister of the Interior. A large proportion of the students, carried away with ideas of political and social revolution, thought the time favorable for political agitation when they could make common cause with the unemployed and discontented working men.

The movement among a section of the students of the higher educational establishments of the empire assumed toward the end of 1901 a character openly revolutionary. The leaders of the movement no longer confined themselves to demanding various changes in the organization of the universities, but endeavored, both in speeches made at meetings held without permission within the walls of the universities and by numerous secret appeals and proclamations, to induce their comrades to take part in a political movement, and openly declared that changes were necessary in the present form of government. At the same time these leaders, recognizing how powerless the students were to realize by themselves the objects of the movement, entered into intimate relations with the existing revolutionary groups and clubs. Animated by the same spirit, they carried on an illegal propaganda in the community and amid the workmen of the large towns. To this end they not only employed personal persuasion, but distributed forbidden literature. The agitators saw that one of the most obvious means for furthering their objects was the organization of street demonstrations, and attempts at such demonstrations were made in various cities. A vast secret association existed among the laboring community throughout Russia which was headed by students in the large towns. In Moscow, Odessa, Kieff, and other manufacturing centers were printed well-edited secret organs of the working class, inveighing not only against capitalistic exploitation, but attacking the Government and the court, and these papers were circulated widely, while the police were unable to discover the publishers or the presses. Circulars giving details and announcements of revolutionary demonstrations were issued broadcast. Subversive documents were found in the possession of officers as well as privates in the army and of men on the ships of war.

The Government warned the agitators that if they provoked trouble the universities might be closed and all students set back for a year. Political suspects of all classes were expelled from the cities and sent to live in the country, with the result that disaffection was fomented by them in the villages throughout Russia. On Feb. 15 street riots, announced beforehand by handbills showered down from the gallery of the theater, were started in Kieff by students and working men, who unfurled red flags, sang revolutionary songs, and shouted for the overthrow of the autocracy. The Cossacks dragooned them through the narrow streets for three days, wounding many and killing some. On Feb. 21 St. Petersburg students and workmen made a demonstration denouncing the Emperor and his Gov-

ernment. On Feb. 22 students assembled with red flags in front of the university hall at Moscow and when ordered to disperse proceeded to wreck the buildings. A large number of women students participated in all these demonstrations, and these were beaten with Cossack whips as mercilessly as the men. On March 2 another riot took place in Moscow. Students barricaded themselves against the police and proclaimed the intention of setting up a republic. There were 537 students of the university, 111 students of other institutions, and 34 other persons of both sexes sentenced by administrative order for rioting or political disaffection. Of these, 95 were banished to eastern Siberia for periods varying from two to five years and 567 were sentenced to from three to six months' imprisonment in Archangel. After one or two large gangs of student prisoners had broken out of the jails in which they were confined it was decided to distribute these latter in the prisons of various towns throughout the empire. Some of them refused to eat in jail unless they were assured of a legal trial. The American consul received an appeal purporting to come from mothers and sisters of the students begging him, as the representative of a free nation, to make known to the Czar the cruelties to which they were subjected. A woman teacher named Allart fired a pistol at Col. Trepoff, chief of the Moscow police, and a few days later another attempt was made to assassinate him. In Kharkoff and Odessa student riots took place, and everywhere the working men had a part. In St. Petersburg 70 students and 200 workmen were arrested. The universities and high schools were closed, even the Warsaw Polytechnic after meetings of the students took place. From Kieff 80 students were rusticated in different villages, and others from Kharkoff were treated in the same manner. Strikes and labor riots occurred in all the industrial centers of south Russia, in the mining districts of the Urals, even in various places in Siberia. In Yekaterinoslav and other towns strikers were shot down by soldiers. At Tula the soldiers refused to fire upon strikers. At Moscow, where the officers received letters appealing to them not to order the troops to use firearms or cold steel against their brothers, a regiment of grenadiers showed such a mutinous spirit that it was withdrawn. In St. Petersburg a battalion of marine infantry would not fire upon the crowd when ordered to do so three times, and several officers were arrested for connivance with the revolutionists. At Rostoff a political demonstration was allowed to pass peacefully because the police were too weak to successfully interfere. At Poltava and other quiet country towns the banished students scattered incendiary proclamations, cheered for Tolstoi, and shouted confusion to despotism. The police issued warnings in the cities that any person found in the streets after they were ordered to be cleared would be liable to imprisonment. On March 16, a few days after the university was reopened, a revolutionary demonstration took place in St. Petersburg in favor of freedom of association and assemblage, free speech, a free press, and personal liberty. Committees of students and of working men arranged the affair, distributing and posting on walls thousands of proclamations and sending notices to the officers of the garrison begging them not to order the soldiers to fire upon the unarmed people whose only object was to make the Government acquainted with their demands by a peaceful demonstration. The demonstrators raised their red flags and uttered their revolutionary

cries only to be struck with the bare swords of the police and the knouts of Cossack horsemen, but none of them offered any resistance. Maxim Gorki, who was interned in the Crimea because he signed the protest of Russian authors against the brutality of the police in dealing with the students' demonstration of the previous year, was elected a member of the Imperial Academy of Sciences, but the Government annulled his election. On April 15 the Minister of the Interior was murdered by a student who pretended he was a messenger of the Grand-Duke Serge. He was the agent of a revolutionary society instructed to kill either M. Sipiagin or M. Pobedonostseff, whichever appeared first at the ministerial palace to attend a Cabinet meeting. Viatsheshaff Constantinovich de Plehwe, Minister for Finland, was appointed on April 17 to succeed M. Sipiagin. Exiled Russians in Paris were discovered by the secret police to have had cognizance of the intended murder of one or both of the ministers, who represented reaction and rigorous repression in the Russian Cabinet. On April 20 Gen. Vannovsky, who was appointed Minister of Education after the murder of M. Bogolepoff, resigned his post, his proposed reform of secondary education by giving studies a modern scientific direction and diminishing the time spent on the classical languages and literature having been condemned or postponed in consequence of the last revolutionary manifestations among the students. Assistant-Minister Zenger was immediately appointed Acting Minister of Public Instruction. The Ministry of War was not deterred by the prevalence of the revolutionary spirit from its efforts to raise the standard of general intelligence in the ranks of the army, primarily impelled thereto by the lack of an adequate supply of non-commissioned officers. It is essential that these should possess an elementary education, and those taken from the town population and the manufacturing districts on account of their possessing such education were found untrustworthy. Hence it was decided to enlarge the scheme of instructing the conscripts in the army, making instruction in reading and writing obligatory for all recruits in the infantry and artillery and for 10 or 12 recruits selected from each cavalry squadron. In May an attempt was made by a Jew to kill Gen. von Wahl, Governor of Vilna, for the flogging of persons who had taken part in seditious demonstrations. Like the other murderous deeds, this also was decreed by a central revolutionary committee and was preceded by threatening letters. Similar threats of murder were sent to M. Pobedonostseff, whose life was attempted in 1901, to M. de Plehwe, and to other high officials. The political assassins were tried by court-martial and executed. Some who were chosen by lot to execute the threatened vengeance of the revolutionary societies committed suicide rather than carry out the crimes. On Aug. 11 Prince Obolenski, Governor of Kharkoff, was wounded by an assassin and his life was saved by a lady conversing with him who struck aside the pistol. M. de Plehwe found that during the two years and a half that M. Sipiagin was in office 60,000 persons had been exiled from the principal cities, including workmen sent back to their villages. He found also that these exiles had created new centers of disaffection and that the banishment of men of intellect and independence of thought had an effect on the community contrary to the one intended. Therefore he let it be known to many professors, lawyers, doctors, and writers who had been expelled that he would consider petitions for a reconsideration

of their cases, and a large number of them were restored to their homes and civic rights. In the night of June 2 a fresh demonstration occurred at Kieff, where 192 persons were arrested. Disorders occurred also at Saratoff. The new Minister of Education removed some of the irksome regulations in the schools and placed the discipline in the universities and the adjustment of differences between students and professors under the jurisdiction of courts composed of members of the faculty. The German university authorities were enjoined from Berlin not to admit Russian students until the Russian embassy gave its approval in the case of every applicant.

Labor Agitation.—The immediate object of the working men was to obtain the right to organize in labor unions and to defend their interests by the methods that are free to the laborers of other European countries. The manufacturing industries of Russia are all new. When Russian capital was not forthcoming to develop the mineral resources of the country and build up domestic manufactures commensurate with the railroad facilities that had been created, M. Witte removed the restrictions on foreign capital and invited foreigners to start industrial enterprises, which were nursed by the Government, not only by high protective duties, but by every means in the power of a paternal despotism. In the last twenty years a large number of companies and syndicates have entered upon the exploitation of the vast sources of mineral and other wealth in southern Russia, the Caucasus, and the Ural mountains, which have hitherto been merely tapped in spots. Of the capital so invested 80 per cent. is French, Belgian, German, and British. Though the earlier companies have been successful, many of those that came later into the field obtained less desirable properties or such as could not be made profitable and financed them in a dishonest fashion, so that the public that took the stock was doomed to suffer losses. The failure of the harvest in successive years reacted on all industry. In 1902 two-fifths of the industrial enterprises were virtually insolvent and few were still making profits. Many concerns had already collapsed, carrying down with them banking and financial institutions equally unstable. All were obliged to curtail expenses, and wages felt the depression first of all. It was estimated that the losses and decline in industrial properties have amounted to 1,000,000,000 rubles in ten years. One of the conditions of the state-aided industrialism was a supply of labor that could be depended on. The foreign companies brought managers and skilled mechanics from Belgium, France, Germany, and Austria, and had no difficulty in obtaining an abundance of raw hands in Russia. Peasants who left the communes during a part of the year to earn wages in the factories developed into a working class, numerous in itself, yet small compared with the peasant population to which the workmen still legally belonged, each being a member of his village *mir*, liable for his part of the taxes and subject to being sent back home if he was not satisfactory to his employer.

The strikes that broke out in 1901 and 1902, doomed to failure because they occurred in the face of a depressed labor market and closing factories, but for that reason more bitter and desperate, were a novel and, in Russia, a revolutionary phenomenon. The strikers were generally treated accordingly as disturbers and malefactors, knouted by the Cossacks and dragooned by the soldiers wherever they were found assembled. There was nevertheless a strong feeling of sympathy throughout the south of Russia for the workmen and an-

tipathy against their employers, the foreign companies that were believed to be draining the natural resources of the country and extracting money from the Russian workmen to pay dividends to stockholders abroad. The nobility and peasantry alike were jealous of the industries that had flourished by the aid and protection of the Government on duties, taxes, special railroad rates, banking facilities, etc., all for the benefit of foreigners who had received concessions of the coal, oil, iron, and other minerals, railroad contracts, and industrial concessions that yielded large profits at the apparent expense of Russian agriculture and the primitive native industries. The demands of the Russian industrial workers, put forward under the instruction of their social-democratic teachers, were similar to those made or already attained in other countries, and in some places the Russian strikers obtained partial concessions. In St. Petersburg they demanded a legal ten-hours' work-day, restoration of holidays taken away in 1897, prohibition of labor of children under fifteen and night labor by women, fortnightly pay-days, stricter factory inspection, liability of employers for accidents, fixed rates of wages and fines, the right to confer by delegates with masters and authorities, arbitration of disputes, and trial in open court in the place of arbitrary arrest and administrative banishment. In Kieff they called for the rights possessed by their brethren in other European countries. In Moscow the workmen, among whom were educated socialists, who chose a life in the factories in order to teach revolutionary ideas, and also many socialistic artisans from other countries, were favored by the Grand-Duke Serge Constantinovich and the police previous to the revolutionary outbreak. The official policy there was to encourage their desire to form labor unions on the English model and treat with their employers as workmen do in France and England, and by supporting them in such economic liberties to prevent the growth of political revolutionary ideas. In tea-rooms established in Moscow and neighboring manufacturing towns benefit societies were started under the auspices of the authorities, and tea-rooms were founded by them in which labor matters, and political theories as well, were freely discussed. A clash occurred between the civil authorities and the manufacturers when the police actively intervened in a quarrel that one of the latter, the French manager of the largest silk-mill, had with his work-people. These complained that the manufacturer unjustly withheld many thousand rubles of their wages, and demanded arbitration. Col. Trepoff ordered the factory management to admit men he appointed to investigate and arbitrate, and when these men approved the claims and the manufacturer refused to pay, the weavers went on strike and were lodged and fed at the cost of the Government. In most places the strikes were for an increase of wages equal to recent reductions and a reduction of the hours of labor or a restoration of the hours that formerly existed. Silk, cotton, and other factories in Moscow and its vicinity were closed by strikes. When the new Minister of the Interior went to that city to investigate, a deputation of workmen submitted the rules of English trade-unions and threatened a general strike if the same privileges were not accorded to them. In November a serious strike of workmen in the railroad shops at Rostoff, organized by social democrats, did not end until Cossacks had killed and wounded many men. In St. Petersburg workmen were permitted to form associations for improving their position, subject to governmental scrutiny.

A new criminal code for Russia on which a commission of jurists spent fifteen years makes strikes criminal when directed against the Government or when they lead to injuries to persons or damage to property. The code of 1845 consisted of 1,711 paragraphs defining each particular offense and grading the punishments from a reprimand up, all other punishments, rising to transportation and hanging, being reckoned as equivalent to so many reprimands. The new code makes imprisonment of various degrees of severity and duration practically the only kind of punishment, estimates degrees of criminality according to the circumstances and state of mind, and classifies crimes, instead of giving minute definitions, so that in a third of the number of paragraphs it embraces a great many crimes that were unknown when the old code was framed.

Agrarian Disturbances.—The nihilist students, the socialist workmen, and others relegated to country villages, to check the revolutionary propaganda in the towns, found among the starving peasantry a fertile soil for propagating disaffection and creating turmoil. The *zemstvos*, charged with the duty of collecting the agricultural statistics, had to employ strangers of intelligence on this work, and many of these were revolutionary agents. The agrarian conditions in Russia are felt by everybody to be radically wrong. The peasants have since their emancipation from serfdom had their view of the causes of evils from which they particularly suffer, and radical social thinkers have sympathized with their view. The allotments of lands to the villages were generally inadequate, and they were often the poorer lands. In the spring of 1902, when in the provinces that suffered from famine there was no grain left for either food or seed, students and other agitators spread far and wide a forged ukase telling the peasantry that the Czar had decided to cut up the estates of the nobles and divide the land among the peasants, having found out that these lands were theirs by right, and giving them permission to go to the granaries and barns of the nobles and help themselves to the seed, fodder, provisions, tools, and cattle they needed. In the governments of Poltava and Kharkoff the peasants proceeded to act on this permission. With long processions of carts they despoiled the grain-bins and fodder-stacks of the great estates. On the farms of the Duke of Mecklenburg the laborers were strong and true enough to drive them off. The authorities called out the military, who put down the rioters with ruthless severity, yet not easily nor quickly, because there were 18,000 peasants helping themselves, and these, when they saw the troops aiding the nobles and large landowners to defeat what they supposed was the will of the Czar, began to sack mansions and to destroy in blind rage everything that they did not carry off. Reinforcements of troops from other provinces were necessary, and the Governor-General of Kieff took command of the military operations. When the peasants broke into the barns on the estate of the Grand Duke of Oldenburg, in the government of Voronezh, the troops, despite the appeal of the peasants that they were acting within their rights, charged with bayonets, killing and wounding a large number. Similar scenes took place on the properties of Prince Kotschulei, Gen. Durnovo, and the other principal landowners. In Voronezh the sugar estates were dismantled and large quantities of sugar were dumped into the river. In some districts the peasants held village meetings and appointed committees, who waited on the landowners and ordered them to vacate the lands wrongfully withheld from the

peasants after the emancipation proclamation. The agents of the landowners were driven off, and the peasants proceeded in an orderly manner to distribute the land and movables, leaving the noblemen 15 or 20 acres as their share of the estate. It was not until the authorities intervened that the work of destruction and incendiarism began. The ravages extended to about 60 estates in Poltava and 20 in Kharkoff. Landowners and their stewards fled in terror. Some of the officials endeavored to mollify the peasants, while others showed extreme rigor, which became the rule when the military authorities had the situation in hand. Rioters who were caught were flogged inhumanly. The disturbances lasted from April 1 to April 17. The Government granted 800,000 rubles as immediate aid to the nobles who were robbed and appointed a commission to value the damages and to assess the whole amount on the communes according to the part their members had taken in the work of destruction, to be repaid in instalments by an extra annual tax. M. de Plehwe, after visiting the provinces in which the disturbances occurred, decided to have the collection of agricultural statistics suspended in Poltava, Kharkoff, Tula, Simbirsk, Samara, Penza, Orloff, Kursk, Ekaterinoslaff, and Bessarabia, and to authorize the governors of the 22 other provinces having *zemstvo* institutions to suspend them if they thought necessary. He warned the local authorities to regard with suspicion traveling book agents and peddlers and all schoolmasters and theological students. The idea that the lands retained by the nobles and those assigned to the Cossack colonies belong to the peasants was spread far and wide. In the Caucasus persons collected money from the Russian peasants by pretending to be lawyers who could establish them in their rights. In June workmen demolished factories at Rostoff, on the Don, and peasants simultaneously looted the estates of landowners and smashed agricultural machines, incited by strangers disguised in gorgeous uniforms, who said the Czar sent them to tell the people that machinery was a device for grinding the poor by diminishing the number of laborers. The troops killed and wounded many rioters. In Saratoff, Kherson, Kieff, Voronezh, and in the northern Caucasus the lower classes were wrought up by the teachings of incendiary agents. A circular was distributed through the length and breadth of the empire and attributed to Tolstoi, urging the peasants and the workmen to refuse to labor for employers for two years, at the end of which all land and property would then be abandoned to them. The crops in southern and central Russia were good for the first time in two years. About 300 peasants were tried for participation in the agrarian disorders of Poltava and Kharkoff. Prince Obolenski, the new Governor, who had been shot at by an emissary of the militant social democracy for letting loose the Cossacks on the riotous peasants, obtained leave to deal with them severely.

The state of Russian agriculture was made the subject of a commission, of which M. Witte was president, with subordinate commissions in the provinces. The *zemstvos* were excluded from direct participation in the inquiry. The marshal of the nobility in each province was the official head of the provincial commission, which was made up of the landed gentry. The opportunity of bringing forward projects of political reform and constitutional liberty was not neglected by the Liberals of Russia, although the commissions were enjoined to confine themselves to economical discussions and practical suggestions, within which limits they were allowed the fullest scope. The

decline in the prosperity of the peasant class was ascribed by some authorities to their ignorance and indolence and the primitive methods of agriculture in use, and some ascribe their backwardness to the communal system of the villages which deprives the peasants of any incentive to improve the land and discourages individual enterprise and initiative. The agricultural classes find fault with the inadequacy of the provisions for the encouragement of agriculture and the education of the masses, compared with the sums devoted by the Government to the development of industry, and also with the incidence of protective duties. Experts estimate that the richest of the black soil is being robbed of the elements of fertility and value the annual deterioration at 725,000,000 rubles a year, which could be balanced by maintaining 30,000,000 more horses and cattle than Russia now possesses. The peasants of each *mir* in the majority of cases graze their cattle on common pastures and cultivate the fields in common, dividing the crops. In other communes, while pastures are common, the arable lands are allotted each year to heads of families. The Government decided to free the village communities of their joint responsibility for the payment of taxes and assess them separately on the individual members, so as to encourage thrift. In view of the existing distress it was decided to remit arrears of taxation amounting to 130,000,000 rubles. The famine of 1901 affected 17 governments having a population of 24,000,000, for whose relief the Imperial Government spent 33,500,000 rubles besides finding employment for 61,000 men. Under the communal system as it exists in Russia a peasant may not without the consent of the *mir* absent himself from the village, but must remain to do his share of the work and bear his share of the taxes and debts unless he has such consent. If he is allowed to go out to earn wages elsewhere he must still pay his share, and there is no legal way of severing his connection with the community, not even by abandoning his share in the common lands. The *zemstvos* have in many places distributed agricultural machinery among the communes at cost price, and have even employed agricultural instructors to teach the peasants better methods. Many of the local committees recommended for the improvement of agriculture education of the peasants, equality with other classes before the law, a juster distribution of taxes, the substitution of an income tax for the indirect taxes that press most upon the poor and have been doubled in twenty years, the increase of their allotments of land, and the reduction of the protective tariff on industrial products. The *zemstvos*, whose powers were curtailed in 1890, put in a plea through their members who were on the committees for independence of the restraints to which they were subjected by officials of the Central Government, for liberty to consult and cooperate among themselves, and in general for reorganization on a democratic basis. Because these suggestions were rejected as outside of the scope of the inquiry one committee dissolved. Other committees reported in favor of increasing the authority and independence of the *zemstvos*, giving the peasants as well as the landed gentry representation in these bodies, placing funds at their disposal, and consulting them on legislative measures affecting the rural population. To curb the discussion of local self-government and other political questions the Government imprisoned or exiled some of the leading members of the provincial and district committees who were responsible for dragging these matters into the reports.

Finland.—The grand duchy of Finland, when united to Russia in 1809, preserved by grant of the Czar Alexander I its constitutional form of government. Its legislative body is composed of representatives of the Four Estates, viz., the knighthood and nobility, the clergy, the citizens, and the peasants. Laws are prepared by the State Secretariat of Finland in St. Petersburg and submitted to the Four Estates, whose unanimous consent is necessary for amendments to the Constitution or for the imposition of new taxes. The Czar in Finland bears the title of Grand Duke. The Governor-General is Gen. N. Bobrikoff. Finland owes its high state of civilization to its excellent educational system. There are 1,757 elementary schools, of which 285 are Swedish, 16 Swedish and Finnish, 1 Finnish and German, and 1,455 Finnish; also 50 lyceums, 20 modern schools, 38 girls' high schools, 7 training-colleges for teachers, 46 technical schools, 1 polytechnic, 1 university with 2,355 students, and numerous agricultural and commercial schools.

The area of Finland is 144,255 square miles. The population in 1899 was estimated at 2,673,200, divided into 1,322,949 males and 1,350,251 females, the whole comprising 2,300,100 Finns, 362,500 Swedes, 7,500 Russians, 1,900 Germans, and 1,200 Lapps. Helsingfors, the capital, with Sveaborg, had 88,711 inhabitants. The number of marriages in 1899 was 19,539; of births, 88,358; of deaths, 53,042; excess of births, 35,316. The immigrants in 1899 numbered 79,074, and emigrants 76,320.

The receipts of the Government for 1900 were estimated at 87,506,882 marks, or francs, including 23,176,554 marks carried over from previous years and 3,000,000 marks from the reserve fund; and expenditures were made to balance the receipts, 21,254,786 marks being carried over to 1902. Direct taxes yielded 5,953,115 marks of revenue, and indirect taxes 34,055,000 marks. The timber of the Government forests yields a revenue of 3,000,000 marks a year. The expenditure for military purposes was 6,959,519 marks; for civil administration, 10,339,806 marks; for education and worship, 9,469,813 marks; for railroad construction, 12,774,460 marks; for the public debt, 4,971,160 marks. The amount of the debt on Jan. 1, 1901, was 111,488,864 marks, an increase of 26,357,920 marks since the previous year. The Finnish army is being assimilated to that of Russia. New military regulations, which go into force in 1903, provide that the Finnish recruits shall be incorporated in Russian regiments, mainly those stationed in the districts of Finland and St. Petersburg, to serve three years in the active army and fifteen years in the *Zapas*. The existing force consists of 9 battalions of rifles and 1 regiment of dragoons. Excepting the life-guard battalion and the dragoons these troops will be disbanded.

The agricultural production of Finland in 1899 was 50,666 hectoliters of wheat, 3,602,551 hectoliters of rye, 1,330,192 hectoliters of barley, 5,279,639 hectoliters of oats, 4,524,059 hectoliters of potatoes, 1,430 tons of flax, and 566 tons of hemp. The live stock consisted of 8,486 horses, 1,457,423 cattle, 1,031,185 sheep, 214,206 hogs, 119,917 reindeer, and 9,083 goats. The production of timber in 1898 was 2,348,604 cubic meters. The mineral production in 1900 was 90,600 tons of iron ore, 31,002 tons of pig-iron, 18,324 tons of bar iron. The imports of cereals in 1900 were 71,100,000 marks in value; of machinery, 16,600,000 marks; of cotton and cotton goods, 15,000,000 marks; of coffee, 14,100,000 marks; of iron and iron manufactures, 13,100,000 marks; of woolen goods, 11,100,000 marks; of sugar, 9,100,000 marks. The

exports of timber were valued at 113,900,000 marks; of butter, 23,700,000 marks; of wood-pulp and cardboard, 21,600,000 marks; of iron and iron manufactures, 13,100,000 marks. The values of imports from and exports to different countries in 1900 were in marks as follow:

COUNTRIES.	Imports.	Exports.
Russia.....	100,831,100	57,166,800
Germany.....	89,892,900	16,738,700
Great Britain.....	34,143,800	57,772,800
Denmark.....	14,762,600	14,894,600
France.....	5,537,000	17,535,600
Sweden and Norway.....	18,661,800	7,484,600
Spain.....	2,881,800	10,004,500
Other countries.....	9,565,900	16,148,100
Total.....	270,755,800	197,730,700

There were 8,438 vessels, of 2,017,957 tons, entered at Finnish ports during 1900, and of these 5,795, of 892,007 tons, were Finnish, 706, of 117,534 tons, were Russian, and 1,937, of 1,008,416 tons, were foreign; cleared, 8,562, of 2,040,088 tons, of which 5,901, of 907,336 tons, were Finnish, 717, of 124,771 tons, Russian, and 1,944, of 1,007,981 tons, foreign. The number of vessels that passed through the canals in 1900 was 31,770. The tolls amounted to 618,324 marks, and cost of maintenance to 340,396 marks.

The railroads of Finland on Jan. 1, 1901, had a length of 2,931 kilometers, and all belonged to the Government except 281 kilometers. They carried in the year preceding 6,898,775 passengers and 2,453,700 tons of freight; gross earnings, 27,698,000 marks; expenses, 20,545,254 marks; cost of construction, 250,780,000 marks. The post-office in 1899 transmitted 16,639,289 letters and postal cards, 19,010,557 newspapers, 3,190,429 parcels, and 1,254,179 registered letters and packets; receipts, 3,140,667 marks; expenses, 2,577,117 marks.

The Finnish people determined to oppose a passive resistance to all measures conflicting with or calculated to abolish their fundamental laws by refusing to comply with any imperial edicts that infringed on the constitutional right of self-government which the Czar's predecessors had promised to respect. The Finnish Senate, which at first had stood up for the ancient laws and liberties of the nation, was altered in composition and temper until it bowed to the decrees for the Russification of Finland issued from St. Petersburg, and justified on the ground that they dealt only with matters of imperial interest. The Senators deemed it unwise to endanger the remaining liberties by engaging in a conflict with the imperial power. The Russian authorities represented that only the Swedish oligarchy stood behind the Nationalist agitation; that the masses of the Finns were convinced of the benefits of a closer union with the empire. The young Finns, nevertheless, were unwilling to serve as Russian conscripts. They preferred to emigrate to the United States and Canada, for which countries 15,000 departed in 1901 and 1,000 were leaving every week in the beginning of 1902 before the conscription. Although the military service edict issued in July, 1901, was not to be applied abruptly, its effect could not be much softened by its gradual introduction. It meant eventually four years in Russian regiments side by side with Russian peasants and under the same harsh discipline, with liability to be called away from family and business afterward to fight the battles of Russia on her distant frontiers. It was ordered that, until the new district conscription boards were formed, the annual levy should be conducted by boards constituted under the old law, which contain two members elected annually by each commune to

protect the interests of the recruits from each locality. Except in the neighborhood of the Russian frontier the communes generally refused to elect representatives in the boards for the reason that the recruits would have to serve under the new edict, which was invalid, being contrary to the laws of the land both in substance and in the mode of its enactment. The Senate ordered the provincial governors to enforce penalties against the recalcitrant communes. A Russian had been appointed governor of one province, which also was against the law of Finland, and he alone ordered some of the communes to pay heavy fines. These could not be collected because the courts pronounced them illegal. The Senate then proceeded to nominate members on the conscription boards when the clergy refused to read the army edict from their pulpits, the communes would not elect members to the conscription boards, and the physicians resigned from the medical boards in order to escape being assigned to the duty of examining recruits. This was all in accordance with the Finnish patriotic program of passive resistance on a strictly legal basis. Gen. Bobrikoff had already made the people of Helsingfors acquainted with the Russian police system by doubling the police force, supplanting municipal by state authority, introducing a secret service, and threatening to have every house watched at the expense of the owner and every person entering a house reported. This was because of the monster petitions signed surreptitiously and sent to the Czar and of the pamphlets and political handbills that continued to be printed and circulated. On April 17, when recruits were ordered to report themselves at Helsingfors, a party of nobles and prominent burghers gathered in the hall and jeered the Governor when he attempted to read the articles of war and call off the names of the recruits. The proceedings were postponed, and on the following day a larger and more boisterous crowd interrupted them again and maltreated the officers of police. At the request of Senators the Governor ordered out two sotnias of Cossacks, who drove the people before them with their knouts, but were stoned from the houses. The Cossacks were ordered back to their barracks on the promise of the citizens to disperse. Only 57 recruits, most of them cripples and invalids, presented themselves, while 800 stayed away. Those who reported for conscription were severely handled by the people. Disturbances occurred in Viborg that the police were unable to quell. Throughout the country 60 per cent. of the recruits summoned failed to respond, subjecting themselves to the penalty prescribed for desertion. The Government finally declared the enforcement of the recruiting law postponed after prosecuting some of the 15,000 recruits who absented themselves and being defeated in the courts on the ground that the conscription law was unconstitutional. An imperial rescript warned Finlanders that a further evasion of military duty would be regarded as demonstrating the prosperous and peaceful development of the country under the form of government that had existed for a century. In consequence of continued disorder several regiments of troops were brought from St. Petersburg. The secret police kept all suspected persons under surveillance.

On Sept. 30 a series of imperial ordinances swept away some of the constitutional guarantees that were vouchsafed to the Finns by the Emperor Grand Duke in 1809. The supreme administrative authority, hitherto vested in the Senate, was transferred to the Governor-General, who has power conferred on him to decide any adminis-

trative matter at his own discretion or to disapprove any act of the Senate and refer it to the Emperor. The inferior officials can now be appointed by the Governor-General, or, when still appointed by the Senate, they must have his approval. Graduates of Russian universities and higher educational establishments are made eligible, even without naturalization, to Government posts in Finland on the same terms as persons educated in Finnish institutions, just as Finns already were eligible to appointments in the Russian service. Applications, addresses, and petitions intended, under the disguise of representations as to the needs of the country, to censure measures of the Government or disturb public order must not be dealt with by the Senate. On Oct. 1, 1903, Russian becomes the official language of the Senate. The Procurator-General may lodge with the Emperor representations as to illegal action of the Senate, but can no longer impeach the acts of the Governor-General. The article in the Constitution making judges and Government officials irremovable except by trial and judgment of a court of law is abolished. The Governor-General, through the Senate, is empowered to dismiss officials, but they can not be tried without the permission of their superiors. On the day when this law was published the judges of the Appellate Court were dismissed who had adjudged the military service law to be invalid. The Senate, having applied for permission to draw up a bill to be submitted to the Diet, setting forth the legislative matters that should be regarded as of imperial interest, the Emperor granted leave to draw up such a project to be submitted to him for approval, but not to the Finnish Diet. In the autumn the emigration of Finns to America was augmented in consequence of the destruction of the grain and hay crops by floods.

SALVADOR, a republic of Central America. The legislative power is vested in the National Assembly, a single Chamber of 42 members, elected for each annual session by universal adult male suffrage. The President is elected by the direct popular vote for four years. Gen. Tomas Regalado was elected President for the term beginning March 1, 1899. The Cabinet at the beginning of 1902 was composed of the following members: Minister of Foreign Affairs and Justice, Dr. Federico A. Reyes; Minister of the Interior, War, and Marine, Dr. Ruben Rivera; Minister of Charity and Public Instruction, Dr. J. Trigueros; Minister of Finance, Public Credit, and Public Works, Dr. F. A. Novoa.

Area and Population.—The republic has an area of 7,225 square miles. The population according to the census of March 1, 1901, is 1,006,848, composed of 493,955 males and 512,955 females. The number of Indians was 234,640, of Ladinos, or mestizos, 772,200. San Salvador, the capital, had 59,540 inhabitants; Santa Ana, 48,120; San Miguel, 24,768.

Finances.—The revenue in 1900 was \$6,293,462 in silver; expenditure, \$6,794,874. For the year ending May 31, 1901, the revenue was estimated at \$4,992,520, and expenditure at \$5,201,720. For 1902 the estimate of revenue was \$5,619,800, of which import and export duties yield \$4,483,500 and excise duties, stamps, and the post-office the remainder; expenditures were estimated at \$5,752,115, of which the public debt takes \$1,280,000, war and marine \$1,103,440, internal admin-

Asiatic Dependencies.—Bokhara, in central Asia, is tributary to Russia. Muzafferaddin, the late Amir, proclaimed a holy war against the Russians in 1886, in consequence of which his country was invaded and he was forced to cede the Syr Daria district to Russia, to admit Russian merchants, and to pay an indemnity. In 1873 he signed another treaty agreeing to exclude all foreigners without Russian passports. Seyid Abdul Akhad, the present Amir, born March 26, 1859, succeeded his father in 1885. The area of the state is 92,000 square miles, its population about 1,250,000. The products are grain, cotton, silk, tobacco, and hemp. Russian traders pay a duty of 2½ per cent. on imports and exports. The annual product of silk is 967 tons; of cotton, 32,000 tons.

The khanate of Khiva, having aided the Khirgiz in their rebellion against Russia, was subdued in 1872 and forced to pay an indemnity of 2,750,000 rubles in annual instalments. The area is 22,320 square miles, the population about 800,000, half of whom are nomads. About 48 tons of silk and 8,064 tons of cotton are raised annually. The reigning Khan is Seyid Mohammed Rahim Khan, born in 1845, who succeeded his father in 1865.

The territory of Kwangtung in China, including Port Arthur and Talienwan, was leased to Russia for twenty-five years by an agreement signed on March 27, 1898, and on Aug. 28, 1899, was made a Russian province. Port Arthur is reserved as a naval port for Russian and Chinese war-vessels, also a part of the harbor of Talienwan, while the other part is open to commercial vessels of all nations. Dalny, a new Russian town at the southern end of the port, is the commercial terminus of the Manchurian Railroad connected with the Transsiberian trunk line.

S

istration \$976,286, public works \$756,100. The Salvador Railroad Company in 1900 assumed the external debt, amounting to £726,420, giving its own securities on the guarantee of an annual subsidy of £24,000. The internal debt on Jan. 1, 1901, amounted to \$9,350,368.

Commerce and Production.—The products are coffee, indigo, sugar, rubber, cotton, dyestuffs, balsam, and tobacco. Cotton-growers receive a bounty of \$1 on every quintal exported. The mines produce gold, silver, copper, quicksilver, and iron. Exports in 1900 were valued at \$9,132,958, of which \$7,568,339 represent coffee, \$638,700 indigo, \$295,439 balsam, \$129,475 silver, \$111,127 tobacco, \$96,981 sugar.

Railroads and Telegraphs.—A railroad from the port of Atajutla to Santa Ana was extended to San Salvador in April, 1900. Another railroad runs from San Salvador to Tecla. The railroad company is building new lines in other directions. The telegraphs have 1,850 miles of wire. The number of messages in 1900 was 596,228. The length of telephone-lines is 750 miles.

SAMOA, a group of islands in the Pacific Ocean, formerly a kingdom under the joint protection of England, Germany, and the United States, divided between Germany and the United States in 1900 in accordance with the Anglo-German convention of Nov. 14, 1899, to which the United States assented in January, 1900. After the death of King Malietoa Laupepa in 1898 Chief-Justice Chambers decided that Mataafa, being a former rebel, was ineligible to the king-

ship, and recognized the claim of Malietoa Tanumafili. Mataafa rebelled on Jan. 1, the day following the decision, and fighting ensued in which his party was in the end victorious and compelled Malietoa Tanumafili to take refuge on a British cruiser. The German authorities upheld Mataafa and refused to recognize the American chief justice, who nevertheless reopened court under an escort of British bluejackets. The party of Mataafa plundered the private property of foreigners and, the fighting and anarchic conditions continuing, the British and American consuls, from whom the German consul had separated himself, called on the naval forces of their governments to intervene. The warriors of Malietoa that had fled to other islands were brought back and supplied with arms, and to support them the British and American war-ships bombarded Mataafa's forces back of Apia and in other places and landed parties to destroy their villages and to fight them in cooperation with Malietoan natives. British and American marines occupied Apia. The chief justice's decisions were carried out. Malietoa Tanu was installed as King. The German cruiser took no part in the conflict. A Joint Commission of the three powers arrived on May 13, 1899, and, after restoring order, it came to the conclusion that the joint control was impracticable and the kingship useless. Consequently the islands were divided, Great Britain receiving compensation from Germany in the Solomon Islands, in Tonga, and in Africa. Before the conventions were concluded for the partition of the Samoa group the three powers signed a convention on Nov. 7, 1899, referring claims for compensation made by their citizens to the arbitration of the King of Norway and Sweden. These claims were on account of losses suffered in consequence of the military action of officers of the signatory powers between Jan. 1, 1899, when Mataafa rejected and rebelled against the decision of the American chief justice, and May 13, 1899, the date of the arrival of the Joint Commission. These claims were to be adjudicated in conformity with the principles of international law or considerations of equity, and the arbitrator was empowered to decide whether, and to what extent, any of the three governments is bound, solely or jointly, with the others, to make good these losses. King Oscar laid the matters in dispute before M. Annerstedt, former Swedish Minister of Justice; ex-Premier Hagerup, of Norway; and M. Cederkranz, formerly Chief Justice of Samoa. In accordance with their views he gave his decision on Oct. 14, 1902. Claims presented by other powers were by arrangement brought within the arbitration. The German Government contended that the military action taken by British and American officers was wholly unwarranted, and that therefore the British and American governments were responsible for losses caused by their action to Germans and persons under German protection. The British and United States governments argued that the military action was necessary and justifiable, and that therefore no claims were entitled to consideration. They contended that under the general act signed at Berlin on June 14, 1899, any one of the signatory powers was authorized to enforce the decision of the chief justice. The Swedish-Norwegian jurists found nothing in the act giving one or a majority of the powers authority to enforce its provisions, but on the contrary a provision that neither of the powers shall exercise any separate control over the islands or their government. The military action of the British and Americans was considered to have the character of a serious

control. The evident intention of the powers was to establish the principle that in their dealings with Samoa they should proceed by common accord, and this principle was reaffirmed in supplementary agreements of 1892 and 1896, which permitted the use of a naval force to support the Supreme Court and the supplying of ammunition to the Samoan Government, yet only with the unanimous consent of the representatives of the three powers. The consular representatives of the three treaty powers had by a proclamation issued on Jan. 4, 1899, recognized Mataafa and his chiefs as the Provisional Government of the islands pending instructions from their governments, and hence the powers were bound by international good faith to maintain the situation thereby created until by common accord they otherwise decided. The military action of the British and Americans tending to overthrow the Provisional Government can not be justified either on the plea of the invalidity of the Provisional Government or on that of its establishment by force. The German consul had refused to sign a proclamation proposed by the two other consuls recognizing Malietoa as King immediately after the chief justice had decided in favor of his claim, and this refusal was held by the British and American governments to have been the cause and origin of the civil conflict that followed. The arbitrator did not find that the German consul had taken any steps contrary to the general act, did not consider him bound to sign the proclamation or support the decision of the chief justice, and therefore absolved his Government of responsibility for any consequences of his attitude. The British and American governments contended that, whether there was authority or not to insist by force on the acceptance of the provisions of the general act, the military action was warranted because it was necessary for the protection of lives and property, and alleged that firing on Mataafa's men was not begun until these were moving to attack the British and American consulates and threatened Mulinu, where a detachment from the ships was stationed, with war canoes. The arbitrator found from the evidence that the supposed movement on the consulates was directed to fleeing women of the Malietoan party and that the canoes were not going to Mulinu, but in the opposite direction; nor did it appear that the general condition of affairs was such as to render military action necessary to protect lives and property. Before the arrival of the United States vessel Philadelphia the Malietoans were completely defeated, deported to distant places, deprived of their arms, and unable to offer any resistance to the victorious Mataafans. The United States admiral ordered Mataafa away from Mulinu, and the Malietoans were brought back there by the British and United States military authorities; arms that when defeated they had surrendered to the commander of the British cruiser were returned to them, and ammunition was served out to them from the stock kept in reserve for the Samoan Government, although the arrangement of 1896 provided that it should be distributed only by the unanimous consent of the three consuls. It ought to have been foreseen that these actions, which can not be considered to have been justified by any threatening attitude of the Mataafans, would exasperate the latter and endanger the peace of the country and the situation created by the surrender of the Malietoans on Jan. 2 and by the establishment of the Provisional Government; therefore the British and United States authorities ought to have

abstained from such proceedings. When British and American forces took possession of the streets of Apia and stopped traffic, demanding a pass before allowing any one to proceed, they infringed the general act, as far as Germans so stopped were concerned, as these were guaranteed the same rights of residence, trade, and personal protection as citizens of the other two powers. The arbitrator decided that the military action, consisting in the bringing back of the Malietoans, the distribution to them of arms and ammunition, the bombardment, the military operations on shore, and the stopping of street traffic, was unwarranted; and therefore that the British and United States governments were responsible for losses caused by such military action. The extent to which the two governments, or each of them, may be considered responsible for such losses was reserved for a future decision. The action of the German consul and the German president of the municipal council of Apia in repudiating the decision of the chief justice and encouraging the pretensions of Mataafa, although the three consuls had been unanimous in exacting from him as the condition of his return from exile the renunciation of all pretensions to the kingship, was the real cause of the trouble. The German consul, disregarding the treaty agreement to abide by the decision of the chief justice in such cases, encouraged Mataafa, although it was on German initiative that this chief, whom the Germans had themselves deported in consequence of a former struggle for the kingship, was debarred from becoming a candidate. This sudden change of policy on the part of the German representative broke the concord which formerly existed; yet, as it was unaccompanied by force, although private German citizens supplied the Mataafans with weapons, the arbitrator did not hold the German Government responsible for the consequences.

German Samoa.—The German part of the group, embracing all islands lying west of 171° of east longitude, consists of the islands of *Savaii* and *Upolu* and adjacent islets. The former has an area of 660 square miles, the latter 340 square miles. The total population is 30,000, of Polynesian race, nominally Christians, converted by Protestant, Catholic, and Mormon missionaries, but still subject to pagan superstitions. There are about 200 whites and 300 half-breeds. The revenue for 1903 is estimated at 441,000 marks, including an imperial contribution of 170,000 marks. The imports are clothing, provisions, kerosene, etc., amounting to about 2,250,000 marks. The exports, valued at 1,875,000 marks in 1899, consist mainly of copra and cacao. The number of vessels that visited the port of Apia in 1900 was 69, of 84,488 tons.

Tutuila.—Tutuila, with Manua and the islets Tau, Olesinga, and Ofu, fell to the United States in the division of Samoa. Tutuila has an area of 54 square miles and about 3,800 inhabitants; Manua, 25 square miles, with 2,000 inhabitants. Both islands are hilly and covered with woods. There are about 20 whites and as many half-castes on the islands. The people collect copra for sale to traders and tropical fruits and vegetables for their own consumption. The United States took formal possession on April 17, 1900. The harbor of Pago Pago, the only safe one in Samoa and the best and largest in the Pacific, was made a naval and coaling station and the residence of the Governor, Capt. Uriel Sebree, in 1902.

SANITARY CONFERENCE, INTERNATIONAL. A conference of the American republics was held in Washington, D. C., on Dec. 3, 4,

and 5, in accordance with Article V of the resolution passed on Jan. 29, 1902, by the second International Conference of the American Republics held in the city of Mexico, providing that within one year a general convention of representatives of the American republics should meet in Washington for the purpose of discussing sanitary matters, recommending the negotiation of sanitary treaties, enacting rules that might be enforced in all countries for the common benefit, and suggesting measures that might be conducive to the fulfillment of the purposes and intents of the conference regarding these questions. The ideas of the conference on this subject are made clear by the report of the committee entrusted with the study of the matter, which was as follows:

"The advance in medical science in America has rendered it necessary that asepsis or sanitation take the place of antiseptics or quarantine. In other words, it is more important to put cities in such sanitary conditions that diseases can not propagate than to be under the necessity of preventing infection by means of quarantine, which hinders traffic and brings obstacles to commerce.

"The constant increase of common interests in the American republics renders it necessary for the present conference to adopt methods and make recommendations for the improvement of sanitary conditions, in order to attack contagious diseases, and that the restrictions of quarantine, so injurious to all, be substituted by precautions which may do away with the causes of quarantine itself. In this manner not only will its consequence be avoided, but the precious treasury of human life will also be efficaciously protected. A system of sanitation will free merchant vessels and railroads from the large expenses which they have to incur on account of the inconveniences of quarantine.

"Strict quarantines, and sometimes prohibitory, have been adopted whenever contagious diseases have appeared in several ports of the Continent, and the losses suffered on that account, as well as the discredit resulting from the existence of such contagious disease, cast upon the places where the disease has appeared, exceeds the amount of expense which the sanitation of those same ports might have required. And not only do the ports of embarkation suffer for such reasons, but the evil is also felt by the producer and the consumer, whose dependence on each other is so manifest."

The report quotes from several high authorities to support its statements, and then continues:

"The committee, on beginning its labors, carefully studied the project of the Mexican delegation on international sanitary police, preceded by a complete and well-proved study of the question, which tends to establish the fact that the solution of the problem of the prevention of contagion of the principal epidemic diseases has undergone modifications, made necessary by the continued advance of science, and for that reason, as well as in view of the wonderful discoveries made since the first Pan-American Conference of 1890, it appears indispensable to reconsider the recommendations that were approved on that occasion, in order to harmonize them with the requirements of maritime and terrestrial intercommunications and with the progress of science.

"The committee considers the foregoing observations as reasonable; but, with a view to reaching immediate results which unquestionably also call for immediate consideration, adhering

substantially to the conclusions in the project of the honorable delegation of Mexico, proposes the adoption of the following recommendations, which certainly will powerfully contribute to combat the plagues that have afflicted humanity, decimating it at the same time, and always causing restrictions to commercial traffic, obstacles to the progress of passengers, and on not a few occasions acts of real inhumanity, on account of the fear of infectious diseases and of an insufficient and capricious idea as to the way in which they are propagated and the prophylactic measures to combat them.

"The committee is pleased to be able to recognize the efficacious cooperation which it has obtained on the part of Dr. Eduardo Liceaga, president of the Superior Board of Health of the Mexican republic, as also of those of Dr. Wyman, surgeon-general of the Service of the Marine Hospital of the United States, and of Dr. M. J. Rosenau, assistant surgeon and director of the Hygienic Laboratory of the Service of the Marine Hospital of the United States. The reports presented at former conferences, and other works of the eminent Peruvian, Dr. D. Francisco Rosas, have been made use of."

Following this report the committee presented its project for the International Sanitary Conference. The project was signed in the form of a resolution by representatives of 15 of the countries represented, the signatures of the Argentine Republic, Brazil, Paraguay, and Venezuela not appearing to the resolution.

In pursuance of the authority granted it by the governing board the International Bureau of American Republics placed itself in communication with Dr. Walter Wyman, supervising surgeon-general of the Marine-Hospital Service of the United States, who at once prepared a plan of organization and a tentative program. Accordingly, and with arrangements made by the Bureau of American Republics, the conference convened at the New Willard Hotel, in Washington, on Dec. 3, with the following delegates representing their respective countries:

Guatemala: Dr. Antonio Lazo Arriaga.

Chile: Dr. Eduardo Moore and Eduardo Garcia Collao.

Paraguay: Mr. John Stewart.

Salvador: Ernesto Shernikow.

Mexico: Dr. Eduardo Liceaga and Dr. José Ramirez.

Nicaragua: Dr. Roman.

Honduras: N. Bolet Peraza.

Ecuador: Luis Felipe Carbo.

Cuba: Juan Guiteras and Carlos Finlay.

Uruguay: Dr. Luis Alberto de Herrera.

United States: Walter Wyman, surgeon-general, United States Marine-Hospital Service; M. J. Rosenau, director Hygienic Laboratory, United States Marine-Hospital Service; H. L. E. Johnson, American Medical Association, chairman Legislative Committee; James Taggart Priestly, Des Moines, Iowa, surgeon-general Iowa National Guard; Arthur K. Reynolds, Chicago, Ill., Commissioner of Health; Charles B. Adams, Sac City, Iowa, member State Board of Health; Edmond Souchon, New Orleans, president Louisiana State Board of Health; Fred. W. Powers, Reinbeck, Iowa, member State Board of Health; Joseph Porter, Jacksonville, Fla., State health officer of Florida; Alvah H. Doty, New York city, quarantine officer of the port of New York; L. M. Powers, Los Angeles, Cal., health officer; Frank William Porterfield, Atlantic City, Iowa, ex-president Medical Society of Missouri Valley; Walter D. McCaw; George P. Bradley,

United States navy, representative medical department of the navy.

Dr. Walter Wyman made an opening address at the morning session, welcoming the delegates to the city. He spoke of the International Conference held in Mexico as marking an era in the progress of civilization in the new hemisphere, in providing for an international conference on customs, a conference for the study of coffee production, and this one for the study of international sanitation and quarantine. "No topics are of greater importance," said he, "than those which will be considered by this conference, for protection against the inroads of disease and the providing of such environments of man as will enable him to cultivate the highest standard of health are the bases of our physical welfare and enjoyment, as well as our intellectual enjoyment and moral uplifting. Health, cleanliness, intellect, and morals might well be the motto of this conference."

Secretary of the Treasury Shaw said, in the course of a welcoming address, that he remembered very well the time when a lawyer was considered great when he succeeded in extricating his client from complications and difficult situations after he had got into trouble; but the successful lawyer now is the one who prevents his client from getting into complications. There was a time when the physician's principal ambition was to cure the individual case of disease, and little attention was paid to its spread among others; but now the physician endeavors to protect others from the epidemic as well as to cure the case in hand.

David J. Hill, Assistant Secretary of State, extended a cordial greeting from the Department of State. "When the first conference between the American republics was proposed," he said, "fears were expressed that it would never come to pass; but those fears have now been dispelled, and benefits are already apparent. What we need between these republics is a closer contact, a mingling with one another in the discussion of questions of mutual vital importance. I am glad to see that the conference held in the city of Mexico has already borne fruit, and that such meetings as this are to be continued."

Señor Quesada, minister and delegate for Cuba, spoke with much warmth of the part the United States had taken in bringing about better sanitation in Cuba, and paid tributes to Gen. Wood, recent Military Governor of Cuba, and to the late Major Walter Reed, for his part in driving the yellow-fever scourge from that island. The Mexican ambassador, Don Manuel de Azpiros, also made a felicitous address. Brief speeches were made by Major W. P. McCall, representing the United States army, and Medical Director George P. Bradley, of the United States navy.

When the conference proceeded to business, Dr. Ulloa, of Costa Rica, being elected temporary chairman, a committee on organization was appointed, and Dr. Walter Wyman was elected presiding officer, with a delegate from each of the countries represented as vice-president. Dr. Arthur K. Reynolds was elected secretary, and an advisory council was appointed, consisting of Dr. Rhett Goode, of the United States; Dr. M. J. Rosenau, of the United States; Dr. Juan Guiteras, of Cuba; Dr. E. Liceaga, of Mexico; Major Walter D. McCaw, United States; and Dr. Ulloa, of Costa Rica. It was decided that the proposed International Sanitary Bureau be composed of 5 members, 1 of whom should be the president of the conference, the other 4 to be nominated to the conference by the advisory council.

The second day's session of the conference was devoted largely during the morning session to hearing reports. A report by Dr. Juan Guiteras, of the sanitary department of Havana, Cuba, described the methods employed in Cuba for preventing the spread of yellow fever. He said there had not been a case of yellow fever in Cuba that had originated there in four months, an unprecedented record. He declared his implicit belief that yellow fever is spread through the agency of the mosquito, and that the most necessary precaution to prevent contagion was to keep the afflicted patient away from the insect. He said that several cases of yellow fever had been imported from Mexican ports and treated in Cuba recently. The patients were put under mosquito-netting from the time of landing until they were well. Although other patients, non-immune, were exposed, being put but a few feet away in the hospital, there was no spreading of the disease.

Dr. Charles J. Finlay, chief sanitary officer of Cuba, described the system of organization for sanitary work in Cuba; and Dr. Eduardo Moore, of Chile, told of sanitary methods in his country, and extended an invitation to the conference to hold its next meeting in Chile. Dr. Ulloa spoke of conditions in Costa Rica, which, he said, was quite free from contagious diseases. He declared that the restriction placed upon products from Costa Rica by the port of New Orleans were unjust, as the imports were not a menace to the health of the citizens of that port. The plan of organization of the sanitary office of Mexico and the methods used there were discussed by Dr. Eduardo Liceaga, president of the Superior Board of Health of Mexico, and he also invited the conference to hold its next meeting at the city of Mexico.

Dr. Wyman told of sanitary conditions in the United States, and said that, by the provisions of the act of Congress at its last session, providing for changing the Marine-Hospital Service into a board of health, thus adding to its functions, the national board of health was brought into closer relations with the State boards. He mentioned that the Government keeps sanitary officers in foreign ports, and spoke of the benefits accruing from the plan.

Dr. Rosenau, of the United States, gave a brief *résumé* of prevailing diseases in this country in recent years, and in speaking of the various epidemics, said there had been no great epidemic of yellow fever in this country since 1878-'79, but that several local epidemics had been recorded. Smallpox, malaria, cholera, and typhus fever were growing milder, and were coming to be less feared. Dr. Arthur K. Reynolds, of Chicago, reported on the conditions in the Northwest, and spoke for the necessity of uniform quarantine regulations, not only between the national and State boards, but between the boards of the American republics as well.

Quarantining of vessels from infected ports having on board yellow fever, cholera, or bubonic plague was discussed at length at the afternoon session. The subject was introduced in a paper by Dr. Eduardo Liceaga, and the discussion was principally on the question whether five days was long enough for detention of persons suspected of having yellow fever. Some of the delegates favored ten days, and the subject was finally referred to the advisory council, which presented a resolution for the detention of suspected cases of yellow fever and cholera for five days, and those of bubonic plague for seven days.

Dr. Edmond Souchon, president of the Board

of Health of Louisiana, read a paper, which was discussed at length, on maritime quarantine without detention of non-infected vessels from ports quarantined against yellow fever. He said: "The key-note of this stride in modern scientific quarantine was struck by the Louisiana State Board of Health when it passed, on Sept. 2, 1902, the resolution that reads: 'Free *pratique* shall be given to non-infected vessels, with or without passengers, from ports where yellow fever is suspected or prevails, provided said vessels are disinfected at the port of departure, or at the last port touched at, in a manner satisfactory to the Louisiana State Board of Health; provided, further, that said vessels upon arriving at the Mississippi river quarantine station shall be disinfected again, and provided still further that five full days shall have expired since the completion of the first disinfection before the second disinfection is done at the Mississippi river quarantine station.' These regulations are based upon the study, mostly, of the records of the Louisiana State Board of Health, which show that a number of non-infected vessels have developed yellow fever after a first disinfection."

At the closing session of the conference, on the third day, the mosquito received a good share of attention, and several resolutions bearing upon the subject of infection from the insect were discussed. Dr. Guiteras, of Cuba, presented a resolution to the effect that the mosquito was the only known cause of yellow-fever infection, which, after some modification, was adopted. Dr. Arthur K. Reynolds, of Chicago, offered the resolution that the different governments study in their respective territories the geographical distribution of the mosquito of the genus *Stegomyia*, in order that said study may have practical application in subsequent conventions. Another resolution offered by Dr. Reynolds was to the effect that bubonic plague and other diseases are spread by rats, mice, and other lower animals, which to a great extent find sustenance in animal and vegetable kitchen wastes, commonly called garbage, and that all organic waste or garbage should be kept separately on the premises until it can be removed or mixed with a disinfectant or destroyed. He said that, inasmuch as typhoid fever and Asiatic cholera are caused by swallowing food or drink contaminated by the discharges of previous cases, if all the discharges of every existing case were instantly disinfected, typhoid fever and Asiatic cholera would cease to be a menace to the world.

Papers were read on Simplicity in Sanitary Measures, by Dr. Joseph Y. Porter, State health officer of Florida; Vessels as Carriers of Mosquitoes, by Dr. S. B. Grubbs, Marine-Hospital Service; and Uncinariasis with Microscopic Demonstration, by Dr. Charles W. Stiles, Marine-Hospital Service. Regarding this parasite, popularly known as the hookworm, Dr. Stiles made the interesting statement that it was responsible for the condition of the so-called poor whites in the sand districts of the South. The presence of the hookworm, he said, was the cause of their poor physical and mental state, the parasite in the human system producing a condition of extreme anemia, similar in its symptoms to a severe attack of malaria, and that any generation of people placed under these conditions must deteriorate. The condition of the children in the factories of the South was not due so much to the work as to the effect produced upon the system by this noxious hookworm. Its eradication, he declared, was the only means for bringing about better conditions among these people.

Resolutions were adopted recommending that the International Sanitary Bureau urge each republic to transmit to the bureau at Washington, promptly and regularly, all data of every character relative to the sanitary conditions of their respective ports and territories, and to furnish said bureau with every opportunity and aid for a thorough, careful, and scientific study and investigation of any outbreaks of pestilential diseases that may occur within their territories. It was further recommended that the International Sanitary Bureau lend its best aid and experience toward the widest possible protection of the public health of each of the said republics, in order that disease may be eliminated, and that commerce between the republics may be facilitated, and to encourage and aid or enforce, in all proper ways, the sanitation of seaports, including the sanitary improvement of harbors, sewerage, drainage of the soil, paving, elimination of infection from buildings, and the destruction of mosquitoes and other vermin.

Santiago de Chile was selected as the place of meeting for the next conference, which is to begin March 15, 1904. Dr. Eduardo Moore, one of the Chilean delegates, thanked the conference for its choice, and assured the delegates that all Chile would welcome them. He said that a hygienic exhibition would be held in Santiago upon the convening of the conference, and he was assured that the attendance from the South American republics would be large. Short speeches were made by the representatives of the other republics, and the session was closed by tendering a vote of thanks to the president, Surgeon-General Wyman.

The details of all the arrangements were under the auspices of the Bureau of American Republics, and were successfully carried out under the direction of W. C. Fox, Chief Clerk of the bureau, and Dr. H. D. Geddings, of the hospital service.

SANTO DOMINGO, a republic in the West Indies, occupying the eastern part of the island of Haiti, or Santo Domingo. The Congress is a single chamber of 24 members. The President is chosen by an electoral college for four years. Gen. Juan I. Jimenez was elected President and Horacio Vasquez Vice-President for the term ending in 1903. The Cabinet at the beginning of 1902 consisted of the following members: Secretary of the Interior and Police, Gen. M. U. Gomez; Secretary of Foreign Affairs, Enrique Henriquez y Carvajal; Secretary of Justice and Public Instruction, G. Perez; Secretary of Fomento and Public Works, F. Despradel; Secretary of Finance and Commerce, E. Brache; Secretary of Posts and Telegraphs, Eliseo Grullon; Secretary of War and Marine, Gen. Rafael Rodriguez.

Area and Population.—The area of the republic is estimated at 18,045 square miles; the population, mostly of mixed Spanish, negro, and Indian blood, at 610,000. Santo Domingo, the capital, has about 20,000 inhabitants.

Finances.—The customs revenue in 1899 was \$1,529,903, and in 1900 it was \$2,392,052. Duties have been collected from both imports and exports, and they formed the bulk of the revenue. Export duties were abolished on May 1, 1901, and import duties were reduced. The total revenue and expenditure for 1902 was reckoned at \$1,238,440.

The foreign debt, converted in 1897, consists of £2,736,750 of 2½-per-cent. and £1,500,000 of 4-per-cent. bonds and a railroad loan of £500,000. The bonds were secured on the customs and other assigned duties, the collection of which was entrusted to the Santo Domingo Improvement Company of New York until, default having been made in the payment of interest on April 1, 1899,

and a dispute having arisen between the company and the new President, the Government took the collection of revenues into its own hands. The amount of foreign debt outstanding in 1901 amounted, with arrears of interest, to £4,188,362; internal debt, \$2,845,550 in gold and \$10,126,629 in silver.

Commerce and Production.—The value of imports in 1900 was \$3,233,000, and that of exports \$6,006,000 in gold. The export of sugar was 53,971 tons; of coffee, 3,952,000 pounds; of cacao, 11,231,000 pounds; of bananas, 285,000 bunches; of mahogany, 665,951 feet; of logwood, 2,234 tons; of tobacco, 8,696 tons. Hides, beeswax, rum, and divi-divi are also exported. The chief imports are cotton goods, provisions, and hardware.

The number of vessels that visited Dominican ports in 1900 was 544 entered and 380 cleared.

Railroads and Telegraphs.—There are 116 miles of railroad in operation, consisting of the line from Samana Bay to La Vega, 62 miles, which is being continued to Santiago. One is to be built from Barahona to the salt mountain.

The telegraphs had a length in 1901 of 430 miles, connecting with the French cable. New lines in the interior were projected.

Revolution.—A revolutionary uprising against President Jimenez was successful in all parts of the country. On May 2, 1902, the capital surrendered and the President took refuge in the French consulate. He signed a document resigning the presidency, which was assumed by Horacio Vasquez, the Vice-President. All adherents of the fallen Government were amnestied. The country was scarcely disturbed by the sudden change of rulers. The new provisional Government, with Vasquez as President, was constituted on April 7 as follows: Minister of the Interior, Casimiro Cordero; Minister of Foreign Affairs, Señor Sanchez; Minister of Finance, Señor Tejera; Minister of War and Marine, Gen. Pichardo; Minister of Justice, Cabral Baez; Minister of Posts and Telegraphs, Justino Castillo.

SERVIA, a monarchy in southeastern Europe. The legislative power, according to the new Constitution proclaimed by the King on April 19, 1901, is vested in a Senate and the Narodna Skupshtina, or National Assembly. The Senate consists of the heir to the throne, the Archbishop of Belgrade, the Bishop of Nish, 30 members appointed for life by the King, and 18 members elected for six years by the departments. The Skupshtina has 130 members elected for four years by all adult male Servians who pay 15 dinars in direct taxes excepting soldiers in active service. The reigning King is Alexander I, born Aug. 14, 1876, who succeeded to the throne on the abdication of his father, Milan I, March 6, 1889, and on April 13, 1893, dismissed the regents and assumed in person the royal powers. The ministry at the beginning of 1902 was composed as follows: President of the Council and Minister of Foreign Affairs, Dr. Michael V. Vuich; Minister of Public Works, P. Velimirovich; Minister of Public Instruction and Worship, L. Kovachevich; Minister of Commerce, Agriculture, and Industry, Dr. M. Milanovich; Minister of Finance, Dr. Michael M. Popovich; Minister of the Interior, N. Stefanovich; Minister of Justice, D. Stamenkovich; Minister of War, Gen. T. Miljkovich.

Area and Population.—Servia has an area of 18,630 square miles. The population, according to the provisional results of the census of Dec. 31, 1900, is 2,493,770, compared with 2,312,484 in 1895 and 2,161,961 in 1890. There were 1,282,625 males and 1,211,145 females in 1900. Belgrade, the capital, had 69,097 inhabitants; Nish,

24,451. The number of marriages in 1900 was 31,203; of births, 104,772; of deaths, 58,034; excess of births, 46,738.

Finances.—The revenue for 1901 was estimated at 74,018,070 dinars, or francs, and the expenditure at 73,992,543 dinars. Of the revenue 28,220,000 dinars came from direct taxation, 6,336,400 dinars from customs, 4,380,000 dinars from excise taxes, 3,390,000 dinars from other taxes, 20,148,970 dinars from monopolies, 9,496,500 dinars from public works, and 2,046,200 dinars from various sources. Of the expenditures 1,200,000 dinars went for the civil list of the King, 20,095,150 dinars for public debt charges, 1,560,000 dinars for dotations, etc., 454,310 dinars for the National Assembly, 406,500 dinars for general credits, 2,950,365 dinars for pensions, 1,792,228 dinars for the Ministry of Justice, 1,802,715 dinars for the Ministry of Foreign Affairs, 9,246,869 dinars for the Ministry of Finance, 17,602,700 dinars for the Ministry of War, 3,401,031 dinars for the Ministry of Public Instruction and Worship, 3,588,929 dinars for the Ministry of the Interior, 8,044,847 dinars for the Ministry of Public Works, 1,486,547 dinars for the Ministry of Commerce and Agriculture, and 360,352 dinars for the Court of Control. In the budget for 1902 the revenue was estimated at 72,845,081 dinars, expenditure at 72,816,047 dinars. The charge for the public debt was 19,422,000 dinars. Ordinary expenditure was reduced 1,176,495 dinars, extraordinary expenditure 2,120,424 dinars, and for the first time all was included in the ordinary budget and receipts were calculated on actual collections, the average for three years, not on assessments, which have proved illusory owing to heavy losses from uncollected arrears and remissions. A deficit of 4,645,000 dinars was expected in 1902.

The amount of the public debt on Jan. 1, 1901, was 422,402,684 dinars, of which 351,551,993 dinars consisted of the conversion loan of 1895, bearing 4 per cent. interest, 29,085,000 dinars of the lottery loan of 1881, 9,568,000 dinars of a loan raised in 1886, 9,535,000 dinars of a loan secured on the tobacco monopoly, 9,285,184 dinars of a loan obtained from the national bank, 3,750,000 dinars of a Russian loan, and 10,420,000 dinars of a loan raised at 5 per cent. in 1899. The floating debt in the middle of 1902 was 36,748,055 dinars.

The Army.—The law of Jan. 27, 1901, makes military service obligatory, lasting two years in active service from the age of twenty, nine years in the reserve, and six years in the first and eight in the second ban of the national militia. The effective provided for in the budget of 1901 was 661 officers and 14,000 men in the infantry, 101 officers and 1,400 men in the cavalry, 270 officers and 4,000 men in the artillery, 65 officers and 1,000 men in the engineers, 10 officers and 300 men in the train, 49 officers and 500 men in the sanitary corps, 68 administrative employees and 24 officers on the staff; total, 1,248 officers and 21,200 men, with 4,846 horses and 192 field-guns. In case of mobilization the active army and its reserves can furnish 110,245 men embodied in 5 divisions; 14,864 cavalry, engineers, fortress-artillery, etc., outside the divisions; and 35,643 depot troops, making a total of 160,752 men, in addition to whom the first ban can muster 126,610 and the second 66,005 men.

Commerce and Production.—In 1900 the grain exports were about 70,000 tons of wheat, 35,000 tons of corn, and 12,000 tons of barley. The exports of dried prunes are about 40,000 tons a year, and nearly as great a quantity are manufactured into brandy. There were 62,385 cattle, 78,700 live hogs, and about 40,000 pork carcasses

exported in 1900. The live stock of the country on Jan. 1, 1901, consisted of 180,871 horses, 942,087 cattle, 3,013,644 sheep, 940,609 hogs, and 425,565 goats. About 1,200 tons of copper are produced annually, and lead, antimony, and silver are mined, besides coal in considerable quantities.

The value of imports in 1900 was 54,027,228 dinars; exports, 66,521,959 dinars; transit trade, 17,723,444 dinars. The imports of agricultural and horticultural produce were 974,615 dinars in value, and exports 30,148,279 dinars; imports of animals and animal products 622,039 dinars, and exports 27,085,684 dinars; imports of colonial products 3,120,951 dinars; imports of hides, skins, and leather 3,829,702 dinars, and exports 3,060,849 dinars; imports of cotton manufactures 6,470,511 dinars, and exports 1,009,009 dinars; imports of wool and woollen manufactures 3,942,208 dinars, and exports 93,368 dinars; imports of articles of food and drink 962,671 dinars, and exports 3,207,329 dinars; imports of metals 6,667,474 dinars, and exports 445,120 dinars; imports of clothing 2,968,860 dinars, and exports 48,825 dinars; imports of pottery and glass 2,353,156 dinars, and exports 802,616 dinars; imports of timber and wood manufactures 2,606,579 dinars, and exports 247,993 dinars; imports of machinery 7,457,030 dinars, and exports 6,851 dinars; imports of chemicals and drugs 6,960,772 dinars, and exports 150,629 dinars; imports of hardware 1,615,340 dinars, and exports 231 dinars. The values of imports from and exports to the principal countries in 1900 are given in dinars in the following table:

COUNTRIES.	Imports.	Exports.
Austria-Hungary	25,598,000	56,584,000
Germany	15,016,000	3,913,000
Roumania	944,000	3,064,000
France	3,553,000	369,000
Great Britain	3,774,000
Turkey	1,939,000	1,456,000
America	1,119,000
Bulgaria	779,000	699,000
Italy	768,000
Switzerland	351,000	115,000
Greece	431,000
Belgium	387,000	60,000
Bosnia	41,000	223,000
Russia	197,000	81,000
Other countries	432,000	19,000
Total	54,027,000	66,522,000

Railroads, Posts, and Telegraphs.—The Belgrade, Nish, and Vranja Railroad with its branches has a length of 354 miles. The cost was 105,547,724 dinars; gross earnings in 1899 were 6,397,709 dinars, and in 1900 they were 6,776,824 dinars. A new line from Nish to Kladovo, to enter Roumania by means of a bridge over the Danube, has been authorized; also one from Nish to the Turkish frontier, to be continued through Albania. The former is to be prolonged to the Adriatic through Montenegro, forming part of a scheme for a Slav railroad. Lines are being constructed from Paracin to Zaichar and from Krushevatz to Stalacs.

The length of telegraph-lines on Jan. 1, 1901, was 2,550 miles, with 5,170 miles of wire. The number of despatches in 1900 was 1,079,435.

The post-office carried 18,211,000 letters in 1900. The receipts, including telegraph receipts, were 2,250,000; expenses, 1,406,150 dinars.

Political Affairs.—The Cabinet of Dr. Vuich was a combination of Moderate Radical and Progressist elements. It introduced economies in the budget, yet was not able to overcome the financial difficulties. The expenditures of the Government have increased from 20,000,000 dinars in 1880 to over 72,000,000 dinars, and receipts have

not kept pace. The deficits in the ordinary budgets in twenty years amounted to 100,000,000 dinars, the extraordinary deficits to an unknown sum. After the unification of the debt in 1895 it was hoped that an equilibrium would be maintained. The debt, however, continued to increase and the terms on which money could be maintained grew more onerous. A foreign loan was absolutely necessary to clear the floating debt, and one of 90,000,000 francs at 5 per cent. was sought in Paris, but no better terms than 75 could be obtained. On March 19, the Skupshtina, having approved a bill offered by the independent Radical leader to make officials irremovable except for cause and prevent a general change by each incoming Cabinet, the ministers offered their resignations, but the King declined to accept them and the Skupshtina passed a vote of confidence. On April 6 Dr. Popovich resigned his post. On May 15 the entire Cabinet resigned, and Nikola Pasich, former Radical leader, was entrusted with the formation of a new ministry. The Skupshtina was dissatisfied with the terms on which the new loan was arranged. The attempt to form a Radical Cabinet having failed, Dr. Vuich was asked to organize a new one, which was constituted on May 20 as follows: President of the Council and Minister of Foreign Affairs, Dr. Michael Vuich; Minister of Finance, Dr. Mika Popovich; Minister of Public Instruction and Worship, Dragotin Stamenovich; Minister of War, Lieut.-Col. Basil Antonich; Minister of the Interior, Nikola Stefanovich; Minister of Public Works, Peter Velimirovich; Minister of Justice, Aron Ninichich; Minister of Commerce, Dr. Gioka Nikolic. The Cabinet was composed of 4 Radicals, 3 Progressists, and 1 Independent. A loan of 60,000,000 dinars at 5 per cent., redeemable in fifty years, was placed in Paris at the issue price of 75 and approved by the Skupshtina in August, although a syndicate seeking the privilege of establishing a gambling casino offered to lend at 90. The Government received no ready money from the loan, but cleared off all floating obligations. On Oct. 14 the Vuich ministry resigned.

The King was not popular. The people resented the abrogation of the liberties they enjoyed under the old Constitution. In April a great many students were punished for a manifestation in favor of liberty of meeting and association. Early in the year the party of Peter Karageorgevich of the old reigning family made attempts to stir up a rebellion against the King. Letters were sent to the officers of the army telling them to prepare for a change of dynasty. On March 5 a political exile living in Austrian Mitrovitz, a former lieutenant named Radomir Alavantich, crossed the Save into Serbia, donned the uniform of a Serbian general, enlisted and armed some professional smugglers, ordered the frontier guards and custom-house officials at the river stations to follow him, and was obeyed, entered Shabatz, ordered the firemen to join his band, proceeded then to the prefecture and commanded the gendarmes to fall in. A few objected, but were quieted by threats, and the doors were locked to prevent any person from escaping. Two gendarmes who recognized the adventurer as a political conspirator who had been convicted for participating in the plot to kill King Milan got out through a window and informed their commanding officer, Capt. Nicolich, who hastened to the prefecture and called upon the impostor to explain his actions. Alavantich answered with a pistol shot which slightly wounded the captain, who disabled his antagonist by a shot in the leg and ordered the gendarmes to despatch him. Alavantich had

about 80 men under his orders when killed. The firemen and the frontier guards were condemned to prison for five years. Servians took little part in the Macedonian disturbances, which were largely directed against the Serbian nationality by the Bulgarian agitators. Many persons of Serbian race fell victims to Albanian lawlessness, and on this account Russia established a consulate in Albania. The long-deferred consecration of the Serbian Bishop Firmilian as metropolitan of the Greek patriarchate in Uskub was allowed by the Porte to take place in April under pressure from Russia, although it was bitterly opposed by the Bulgarians, who asserted that only a sixth of the Christians there were of Serbian nationality and another sixth Bulgarians and Greeks of the Greek Church, while two-thirds were Bulgarians of the exarchate, who have their own bishop in Uskub.

A new Cabinet was formed on Nov. 20 as follows: President of the Council, Gen. Zinzar Markovich; Minister of War, Gen. Milovan Pavlovich; Minister of the Interior, Velimir Todorovich; Minister of Finance, Miloran Marinkovich; Minister of Public Works, Paul Denich; Minister of Commerce, Liubomir Novakovich; Minister of Public Instruction, Lukas Lazarovich; Minister of Foreign Affairs, Lieut.-Col. Vaffe Eutonich. The Skupshtina was prorogued the same day. The head of the new Cabinet, who had been in favor with King Milan, was appointed commander-in-chief of the army earlier in the year. The chief task which King Alexander set before this ministry was a revision of the Constitution.

SHIP-BUILDING IN 1902. So far as is ascertainable in view of the divergence between the calendar years and the fiscal years of the maritime nations, the total shipping tonnage finished, under construction, or so far advanced toward completion as to justify mention, amounted in round numbers to about 3,000,000 tons. This shows a slight gain over the preceding year. The British ship-builders of course lead the list by an overwhelming surplus. The new construction in the United Kingdom during the year was not far from 1,700,000 tons, or more than 60 per cent. of the world's production. It is gratifying to know that in spite of all set-backs the United States is still her nearest rival, although she can claim only 317,775 tons. She is followed by Germany with 272,719 tons. In France there was a gain of a little more than 100,000 tons; in Holland, about 40,000; in Italy, 22,000; and in Japan, 15,000. All these amounts, so far as can be definitely judged from the returns, include war-vessels. In France the increase is to some extent accounted for a new bounty law, which has stimulated the industry rather more than would have been the case naturally.

While the vast preponderance of modern construction is in the direction of steel-built steamers of heavy tonnage, there is a marked tendency, particularly in Great Britain and the United States, toward an increase of the proportion of sailing vessels. In this respect Germany leads the record for Europe with a five-masted, full-rigged ship of 5,080 tons; but the American seven-masted schooner, described hereafter, exceeds this by 138 tons. In British yards the proportion of sailing ships in 1902 was 5.6 per cent. of the whole output.

The preponderating tendency is toward larger and faster ocean steamers. The Kaiser Wilhelm II, the latest accession to the German Atlantic fleet, was built at the Vulcan yards, Stettin, by the same firm that has constructed the rest of the great German liners, which at this time hold the

record for transatlantic speed. This great vessel is constructed in the usual way, with a double bottom, 4 separate decks, and 16 bulkheads extending from the keel to the upper deck. They are reinforced by a longitudinal bulkhead extending the whole length of the 2 engine-rooms, forming 4 separate compartments for the engines. Flush with the upper edge of the ship's plating is a spar-deck carrying a deck-house amidships 49 feet wide and 443 feet long, and an after-house 79 feet long. The roof of the deck-house affords a promenade 538 feet long, and above all this is an upper promenade deck, and above this again a boat-deck.

The length of the Kaiser Wilhelm II over all is 706½ feet; breadth, 72 feet; molded depth, 44 feet 2 inches; and displacement, 26,000 tons. This makes her 2½ feet longer than the *Oceanic*, 3 feet narrower than the *Cedric*, and about 1,000 tons less displacement than the last-named vessel. Her estimated speed is 24 knots an hour—that is to say, about 27 statute miles, which is faster than her speediest sisters in the Atlantic trade. She has accommodations for 775 passengers in the first cabin, 343 in the second, and 770 in the third. Her ship's company includes 48 engineers, 229 stokers and trimmers, 170 stewards and waiters, 61 cooks, and 46 sailormen. In her equipment are included the various novelties, such as a children's saloon and a *café* and grill-room on the upper deck, while the first-class dining-room exceeds in size the most spacious and luxurious of those that have heretofore distinguished the luxuries of transatlantic travel.

The two engines of the largest ship in existence prior to this could develop under favorable conditions 38,000 horse-power, but it was determined to make the Kaiser Wilhelm II the fastest vessel afloat, which, with her increased size, called for engines capable of producing 40,000 horse-power as called for by the contract, which means considerably more in actual service. Such enormous power could hardly be developed by the two engines that have been found sufficient in previous cases. It was therefore determined to use four engines, two on each side of the main bulkhead, arranged so that they could, as it were, be driven "tandem," or coupled in pairs to the separate shafts. There is, therefore, in each engine-room a complete four-cylinder, quadruple-expansion engine working on three cranks to secure the greatest efficiency. The common stroke of the four cylinders is 70.8 inches, and the crank-shaft of the forward engine is 20.87 inches in diameter; that of the after-engine is 25 inches. Each engine has its own individual condenser, containing 11,732 square feet of cooling surface. The two screw propellers are of bronze, 22 feet 9½ inches in diameter. The idea of using three screw propellers to attain greater speed has been abandoned by common consent, and was therefore not considered in preparing the plans for this greatest of ocean-liners. The reason is, that when three propeller-screws are in operation two of them do all the work, since they so effectually turn the water into foam that the third screw has nothing to push against.

The Kaiser Wilhelm II has in all 19 separate boilers, 3 double-enders in the first boiler-room, and in the second 3 double-ended and 3 single-ended boilers, the same number being allotted to the third boiler-room, while in the forward room of the four there are 3 double-ended and 1 single-ended boiler. This arrangement was adopted in order to facilitate the delivery of coal from the bunkers; the boiler pressure is adapted to 225 pounds to the square

inch. The total grate area is 3,121 square feet, and the total heating surface 107,643 square feet, an area believed to be unprecedented in steam service of this character.

According to published statements, there is a national prejudice on the part of the Germans against the use of forced draft, of which English and Americans are disposed to make use perhaps rather in excess; at all events, the great engines of the Kaiser Wilhelm II will be driven entirely under natural draft, which accounts for the necessity of extraordinarily large space for boiler-room and for the heating surfaces. It is probable, therefore, that she will in practise handsomely exceed her contract power, and though it is too early as yet to speak from actual figures, it is expected that she will develop certainly 45,000 and possibly 47,000 horse-power and attain a speed of perhaps 24½ knots.

While it is not strictly within the domain of ship-building, the problem of provisioning these great passenger-carriers for their ocean voyages is certainly germane to the subject, and though the description of supplies in pounds does not convey a very definite idea to the average mind, still it may be said that one of the great liners requires for a single voyage about 35,000 pounds of meat, divided about half and half between the salt and fresh varieties. The poultry for the same voyage weighs nearly 5,000 pounds; while beans, peas, rice, vegetables, and, on German ships, sauerkraut, reach about 25,000 pounds. Of eggs about 2,000 dozen are required, usually packed in cases of 30 dozen each. The bakers use more than 30,000 pounds of flour in the single voyage, and large quantities of fresh and salt fish are required to meet the views of those who fast on a Friday or who otherwise desire sea food for a change of diet. More than 6,000 pounds of butter are required, and fresh fruit to the amount of 11,000 pounds is often carried. In the matter of beverages, water, of course, heads the list, and several hundred tons of fresh water are habitually carried, besides that which is produced from day to day by the condensers. Canned milk is required to the amount of about 1,800 gallons, and of beers, wines, and alcoholic liquors the supply passes belief. It has been estimated that if one receptacle were constructed capable of containing all these liquids in bulk, its height would be more than 24 feet and its diameter more than 6 feet. Of course ice is an important item, as well for the preservation of fresh meats, etc., as for other purposes, and the larger liners usually begin their voyages with about thirty-five tons of ice ready for use; this, however, would be a mere trifle of the amount actually required during the voyage, and the remainder is made good by the refrigerating machines, which supplement the actual supply required at the outset.

One of the most interesting and promising devices introduced in recent years has been the turbine principle of propulsion as applied to yachts and other vessels, for the most part as yet in British waters. It has been said that the use of three screw propellers in the ordinary acceptance of the term has been found impracticable, but with the turbine plan of propulsion it is possible to use smaller screws at greater distances apart, to the number of six, two being carried astern near the rudder, and two others on separate shafts under each counter of the vessel. The original Turbinia had nine screws, and she was for a while the fastest vessel of any kind in the world. The passenger steamer *Queen Alexandra*, it is believed, is at present the largest turbine-driven vessel afloat. Her length is 270 feet; beam, 32 feet;

depth, 11 feet 6 inches; and speed, 21.63 knots. This indicates a gain in horse-power on the part of the turbine-fitted steamer of at least 20 per cent. over her larger sisters propelled by the ordinary type of screw. The turbine is as yet only at the beginning of its career.

At Sparrow Point, Maryland, two large steamers are under construction for the Atlantic Transport Company by the Maryland Steel Company. These vessels are so nearly completed that preparations for launching them are under way. Each of them will have a displacement of about 17,000 tons, with 507 feet in over-all length, 58 feet beam, and 43 feet molded depth; they are designed to carry about 10,000 tons in dead weight as cargo. Twin-screw propellers, the latest type of triple-expansion engines, and a speed of 12½ knots, are among the contract details. Both of them are designed as freight-carriers, wherein speed is sacrificed to stability and capacity. Each ship will have four masts and a full outfit of freight booms and winches to the number of 16; the upper decks will be arranged for the accommodation of 750 head of cattle.

Within the last generation an enormous fleet of oil-carriers has taken its place in the ocean commerce of the world. Its total tonnage may be as high as 300,000 tons. In the beginning vessels that engaged in this traffic were sailing ships, as some danger was apprehended from the necessary heat arising from machinery. Sailing vessels still perform a large part of the service, but an increasing number of specially constructed steamers now do duty, and they are under the flags of all the maritime nations. The vessels are divided technically into "tank-ships" and "case-ships." The last-named are largely sailing vessels and carry their cargo in packages, mainly barrels and cans. The tank-steamers are divided into separate tanks, which are filled with oil in bulk, and are of such shape and dimensions that the washing to and fro of the oil with the motion of the sea is not sufficient to cause any damage or inconvenience. These tank-steamers of course can be loaded and emptied with great expedition, an 8-inch hose being sometimes used for the purpose. When such a vessel reaches its destination and discharges its liquid cargo, the tanks are immediately washed out with scalding hot water forced by the ship's engine, and afterward disinfected and cleansed with a coat of whitewash. A few hours of fresh air renders them fit to receive return freight of any kind, and all sorts of miscellaneous cargoes are carried back to a market, and thence again to points where the great pipe-lines discharge the product of the oil regions.

An interesting feature of construction in these vessels is found in the bulkheads that separate the boiler- and engine-rooms from the oil-tanks; these fill the entire transverse section of the ship, like an ordinary water-bulkhead, but are made double, so that in case of need the interspaces can be filled with water, thus preventing the possibility of excessive heat reaching the oil-tanks. Ordinarily the air that fills this space of four or five feet is sufficient in its non-conducting properties for all reasonable security. The newest steamer of this type, now building at Greenock, Scotland, will carry more than 70,000 barrels of oil in bulk; she is intended to run between the United States and British ports. The vessels are fitted with all modern appliances of electric lights and quarters for the officers and crew, which compare favorably with those of anything afloat. Of course extraordinary safeguards must be taken against fire from the electric wires, but even in case of the ignition

of oil in a tank a sea-cock may be opened, the oil run out, and the compartment almost instantly filled with steam. Indeed, the entire hold can be filled with steam under pressure, which instantly extinguishes any fire.

The project of detailing these vessels for double duty in carrying oil in one direction and bringing back miscellaneous freight in another infringes very seriously upon what other freight-carriers regard as their special rights, and it may account to a very large extent for the low and often unremunerative rates that prevail on certain trans-oceanic routes. That this is one of the hardships of legitimate competition can hardly be denied, but the ultimate result is probably in favor of the general public, however it may incidentally favor the trust or other association that at present controls its interests.

The probable development of vast American interests on the Pacific Ocean has led to the construction of two great freight-ships for that trade. It is a singular feature of modern construction that it seems possible to install a plant for this kind of work at short notice and in places where nothing of the kind previously existed. In this instance the harbor of New London, Conn., was selected. Another instance is the Fore River Works, near Boston. The vessels referred to are not as yet named, but are popularly known as the "New London ships." They will belong to the International Steamship Company, of which James J. Hill is president. These vessels represent the most advanced modern construction. They are 630 feet long and 73 feet wide, with a molded depth of 56 feet. A maximum draft of 36½ feet is contemplated, and with that draft the displacement will be 37,000 tons. In extreme dimensions the New London ships are somewhat less than the Celtic and the Cedric, but they are deeper by several feet, so that their displacement nearly equals that of the longer and wider White Star boats.

While these vessels are not intended to attain a high rate of speed, compared with the ocean greyhounds, they are fitted with ample accommodation for passengers and will offer exceptional advantages in some respects from the great height of the promenade decks. Even when the ship is fully loaded, the navigating bridge will be 57 feet above the water-line, and when it is running light and drawing only 17 feet of water, as may sometimes be the case on return trips, the bridge will be 73 feet above the water-line and the upper promenade deck will be 65 feet above the same level. Quarters are provided for 150 first-cabin passengers, 100 second-cabin, 100 third-cabin, and 1,000 steerage. There are also spaces that may be adapted for transportation of troops to the number of 1,200; this, of course, in view of the Government transport service to our recently acquired Oriental possessions.

Notwithstanding the vast preponderance of steam construction for traffic on the high seas, there are those who still retain faith in canvas and the winds of heaven for certain spheres of navigation. The latest exponents of these ideas are found in the seven-masted schooner Thomas W. Lawson and the square-rigged five-masted ship Preussen. It goes without saying that the first-named is American in design and construction, and the second European. The Lawson was built at the Fore River Works, near Boston, Mass. Capt. J. G. Crowley, her master and managing owner, is credited with the idea of building such a vessel, and Mr. Crowninshield, of Boston, worked out the plans in detail. A tabulated comparison of the two vessels is as follows:

VESSELS.	Length over all.	Beam.	Depth.	Tonnage.	No. of crew.
Schooner...	408 ft. 4 in.	50 ft.	35 ft. 2 in.	4,914	16
Ship.....	440 ft.	50 ft.	38 ft.	4,000	46

Several fanciful suggestions were made for the naming of the seven masts, but the following was sensibly decided upon as good seagoing form, to wit: Fore, main, mizzen, spanker, jigger, driver, and pusher.

There can hardly be two opinions regarding the appearance of the two vessels under full sail. The ship is beyond question the more stately and beautiful; but the champions of the square rig, on the one hand, and of the fore-and-aft rig on the other, can never be brought to amicable agreement. The square-rigger holds, with good reason, that his craft is the better of the two with a fair wind. The fore-and-aft, with equally good reason, declares that his rig is by far the best going to windward, and he will by no means admit that it can be so very much outsailed running free. In the matter of ease and simplicity of handling, the schooner is far superior; and in regard to pay-roll her running expenses are about half those of the ship. Both vessels are fitted with donkey-engines and all modern conveniences.

The Lawson is built of steel, with the exception of deck and cabin furnishings. Her lower masts are steel cylinders 135 feet long, and her topmasts, of Oregon pine, 55 feet long. She spreads 43,000 square feet of canvas with all plain sail set. The sail-spread of the Preussen is considerably in excess of this, but exact figures are not at hand. The Lawson has given a good account of herself in actual service, and at present holds first place in the matter of carrying large cargoes at small expense. The revival of sailing craft will restore in some degree the romance of a seagoing life, which has been largely destroyed by the prosaic mechanics of steam navigation.

The Young America, a full-rigged sailing ship with auxiliary steam power, is now building, with the intention of fitting her out as a preparatory school for boys, whereon they may be fitted for college and at the same time may see the world and be subjected to wholesome naval discipline under highly favorable conditions.

SIAM, a kingdom in southern Asia. The King is advised by a Cabinet, called the Senabodi, composed mostly of his half-brothers and sons, each of whom is advised by a foreign expert except at present the heads of the army and navy. A Legislative Council was created in 1895, containing in 1902, besides the 10 ministers, 45 nominated members. It has authority to amend and complete the laws with the approval of the King. Many new laws have been made after European models, but the actual administration of the country by corrupt and oppressive local mandarins has not changed. The industries and local trade have passed into the hands of Chinamen, while Europeans have introduced enterprises with the encouragement of the Government. Belgian jurists have improved the administration of justice, and at present Japanese lawyers are preparing a new code of laws. An International Court tries cases between natives and foreigners. An Englishman has organized a police force and Sikhs are employed as police in the capital. English assistants are employed in the financial department and in the forestry, survey, customs, sanitary, mining, and other branches of administration. There are also numerous Belgian and Danish officials, and recently Japanese experts have been called to responsible positions, while

Siamese who have received a European education have replaced some of the Europeans. The reigning King is Chulalongkorn, born Sept. 20, 1853. Prince Vajiravudh, born Jan. 1, 1881, was proclaimed heir to the throne on Jan. 17, 1898. Siamese is the official language in all parts of the country. A system of education has been established by the Government under English guidance, and English is taught in some of the higher schools. There is a school for the children of nobles, many of whom, however, receive only the education of the lower vernacular schools. There were 90 young princes and others studying in Europe in 1902. The normal school has 60 pupils. A military school and a civil-service school prepare youth for an official career. The imported educational system has made little impression. There are 5,000 Buddhist temples and 60,000 priests, and of these 3,300 are teachers having 23,000 pupils. There is no class now between the nobility and the serfs, the Chinese having taken the place of the free Siamese.

Area and Population.—The present area is estimated at 220,000 square miles, the population at 7,500,000, of whom 2,500,000 are Siamese, 300,000 Laotians, 1,000,000 Malays, 3,000,000 Chinese, and 700,000 Burmese, Cambodians, Annamites, and Indians. The Chinese immigration in 1900 was 28,499, while 17,230 returned to China. The population of Bangkok, the capital, is about 600,000. The Siamese Government estimates the total population at 12,000,000. Slavery has existed from early times. One can become a slave by falling into debt. The insolvent debtor is sold to any bidder who assumes the debt. Forced labor is exacted from the laboring population for any public work and often for the benefit of the officials. This is being abolished and a poll-tax collected instead. Slavery also will be abolished by a decree of 1890 freeing all children of slaves born after Dec. 16, 1897, and reducing the redemption fees for all slaves. Free labor is very hard to obtain. Chinese coolies do the work in the rice-mills and mines of the south, and in the northern forests Karens, Khamus, and Burmese are employed.

Finances.—The revenue for 1901 was estimated at 33,000,000 ticals and for 1902 at 35,500,000 ticals, expenditure for 1901 at 32,669,966 ticals and for 1902 at 38,074,288 ticals. The actual receipts in the year ending March 31, 1901, were 35,611,306 ticals, and the actual disbursements 31,841,257 ticals. The receipts in 1900 were 30,022,640 ticals, and expenditures 27,052,077 ticals. The opium, spirit, and gambling monopolies, which are farmed out, yielded 4,568,622 ticals, 3,730,059 ticals, and 6,299,255 ticals respectively; land tax and fisheries, 3,001,145 ticals; customs, 4,450,523 ticals; forests and mines, 1,414,402 ticals; posts, telegraphs, and railroads, 795,753 ticals; personal tax, 1,664,400 ticals. There are taxes on boats and shops, on pigs and poultry, on Chinese cakes and birds'-nests, and on various other articles that yield in the aggregate 442,765 ticals. The revenue for 1903 was estimated at 39,000,000 ticals. The revenues in the last ten years have increased rapidly without change in the tax levy. The civil list and household expenses of the King amount to 6,500,000 ticals a year, besides which 90,000 ticals are expended in charities, 100,000 ticals on precious stones, 100,000 ticals in entertaining strangers, and 800,000 ticals in funeral expenses for the court. The sum expended on new roads in 1901 was 275,000 ticals.

The tical is the standard coin, equal in silver content to three-fifths of a Mexican dollar. The

dollars have been received and were legally current at that rate. In 1902 the English financial advisers induced the Government to adopt a gold basis similar to the Indian and to issue banknotes to take the place of silver, which can no longer be coined freely at the mint nor pass current in the shape of Mexican dollars, though the Government accepts dollars for the deposits it has in the banks at the old rate of \$3 for 5 ticals. The sterling rate for national coins and paper currency was fixed at 20 ticals to £1.

The Army and Navy.—The Government has 40,000 Mauser and 10,000 new Mannlicher rifles and many old bronze guns and maintains 5,000 men under arms and 7,000 reserves, who have been instructed by European officers. There is a conscription law requiring every young man to serve for three years from the age of eighteen and three months in every year thereafter, but Chinese pay a commutation tax and natives can obtain exemption by paying 6 ticals a year or can furnish a slave as a substitute, slaves, priests, and officials being exempt. There is a marine infantry numbering 15,000, who are on active duty by turns, 2,500 at a time, between the ages of twenty-two and forty.

The naval force consists of the cruisers *Maha Chakrri* and *Makut Rajakumar*, of 3,050 tons, 7 gunboats, 2 monitors, a school-ship, a torpedo-boat, 10 other armed vessels over 100 tons, and 40 smaller steamers. The vessels are armed with quick-firing guns. There are 10,000 trained seamen, of whom 2,000 are required to serve in the navy at one time and 2,000 more are held in readiness.

Commerce and Production.—The staple product of the country is rice, and the production is being greatly increased by the extension of irrigation canals. Most of the rice-mills are owned by Chinamen, a few by Europeans; Japanese are introducing silk culture. The teak forests are exploited by British companies. Pepper, salt, dried fish, cattle, and sesame are exported. The teak exported in 1900 was 45,261 tons. Stricter forest regulations will reduce the supply in the future, though vast quantities have been cut and all will not be got out for five years. An English forest official from India is conservator. Gold, rubies, sapphires, and copper are mined by European companies, tin by Chinamen. The imports of cotton goods in 1900 were £409,058 in value; opium, £141,149; silk goods, £128,127; iron and steel goods and machinery, £169,346; sugar, £101,819; kerosene, £97,887; gunny-bags, £91,432; cotton yarn, £53,260; hardware and cutlery, £33,112; other merchandise, £1,014,996; treasure, £336,304; total imports, £2,576,540. The exports of rice in 1900 were £2,225,470 in value; teak, £324,748; other woods, £31,724; sea products, £121,821; cattle, £48,524; pepper, £46,640; treasure, £20,115; total exports, £3,087,819. The imports come from Singapore, Hong-Kong, China, Europe, and Bombay, and the exports go to Singapore, Hong-Kong, Europe, Bombay, Saigon, and China. Salt, iron, silk, and tea come also overland from China and cotton goods and hardware are exported to Yunnan.

Navigation.—There were entered 454 vessels, of 380,073 tons, and cleared 450, of 378,073 tons, during 1900. The regular steamers, formerly British, have been sold to Germans.

Railroads, Posts, and Telegraphs.—A railroad, 16 miles in length, from Bangkok to the harbor of Paknam was opened by a Danish company in 1893. In 1898 the Government began to build a line from Bangkok into the northern and eastern provinces, and in the first two years

18,000,000 ticals were expended. The northern line was completed to Muang Khorat, 102 miles, by the end of 1900. A branch was built westward from the main line 26 miles to Lopburi, and is to be continued 347 miles farther to Kiangmai, and eventually to the Burmese frontier at Kiangsen, 124 miles farther west. A line is being constructed from Bangkok southwestward to Pechaburi, 94 miles. Another will run south and east to the port of Simaharatha, 87 miles. A private line, 10 miles long, runs from the Lopburi line to the Buddhist shrine at Prabat, and will be extended into the mineral and forest region beyond, and a company has undertaken to build one from Bangkok northwestward to the mouth of the Tattien river.

The telegraphs have a total length of 2,900 miles. Siam joined the International Postal Union in 1885. There were 583,460 domestic and 470,624 foreign letters sent in 1900.

The Malay States.—Siam from early times claimed suzerainty over the Mohammedan states of the Malay peninsula, invading them at times and attempting to rule, often deciding questions of succession, but usually being satisfied with the triennial tribute and emblem of vassalage, consisting of gold and silver flowers. Great Britain took Perak under its protection in 1874, and others of the southern states followed, Pahang in 1888. These events impelled Siam to assert authority in the peninsula in a more visible form. Petani was reduced to subjection by a Siamese army and divided into four states, each governed by a native rajah appointed by the Government at Bangkok. Siamese officials controlled the affairs of Kedah. After the latest extension of British protection the King visited Kelantan and Tringano and inaugurated a more active policy, introducing the Siamese postal system, raising the Siamese flag, and after taking advantage of a quarrel over the succession in Kelantan to place on the throne a subservient sultan, appointing a resident with an armed escort after the manner of the British. The Siamese officials in those states bordering on the Federated Malay States have not governed as justly or wisely as the British residents, and the British officials have been preparing the situation for a further extension of the British protectorate. The Rajah of Petani and the Rajah of Raman asserted their independence, and were taken as prisoners to Bangkok. The Sultan of Kelantan showed a similar restless disposition. The rulers and the people alike of these states expect to be more prosperous under British rule, witnessing the prosperity of their neighbors. In the Franco-English agreement of Jan. 15, 1896, respecting Siam, France recognized the Malayan peninsula as a British sphere of interest, as England recognized the Mekong basin as a French sphere. In September, 1902, the Sultan of Kelantan took 300 Sikh soldiers into his service as a counterpoise to the guard of the Siamese resident. A few weeks later he was visited by the Governor of the Straits Settlements. In October the Siamese and British governments came to an arrangement with regard to both Kelantan and Tringano, which border on Perak and Pahang and are regarded by the British as being in such a state of unrest and confusion as to constitute an impediment, while under exclusive Siamese control, to the peace and well-being of the British protectorate.

Rebellion.—Just as the British claim a right to intervene for the elimination of Siamese misrule and oppression of the Malays of the peninsula and Karens and Shans on the Burmese fron-

tiers on the ground that the neighboring populations over which they rule are disquieted, so the French claim a sphere of influence and a right of intervention in the parts of the Siamese Empire inhabited by Laotians, Cambodians, and the Shan tribes of the northeast. In April, 1902, troubles occurred on the upper Mekong, and the Siamese Government sent troops into the disturbed region. The French Governor of Indo-China at the same time made a military demonstration on the lower Mekong on account of some infringement by the Siamese in Battambang of the treaty obligations forced upon them in 1893. The Siamese rebels in the north crossed the Mekong and came into collision with the French forces posted there. These Shan rebels captured Muang Pray and held it against the Siamese troops, having put to death all the Siamese officials. The uprising became more formidable and extensive. When the French complained of the invasion of their territory the Siamese Government disclaimed responsibility for the acts of rebels and freebooters over which Siam has no control. The French Government had often to complain of the violation of the frontier by the Siamese and of their disregard of treaty obligations in the neutral zone. One of the conditions of the Anglo-French agreement of 1896 guaranteeing the inviolability of the Menam valley against either French or British encroachment was that the King of Siam should employ within it no British nor French troops. Yet he had engaged 1,500 Sikh soldiers as police in Bangkok. When the French objected the Siamese reply is said to have been that they were necessary for night patrols because the Siamese police could not be depended upon to keep awake. The rebellion in the north, caused by the exactions of Siamese officials, was quelled in the end by the troops. The rebel chiefs and many of the inhabitants took refuge in French Laos.

New Treaty with France.—Since the bombardment of the Paknam forts by the French and other hostilities that ended with the treaty of Oct. 3, 1893, the French have been excluded from all influence at Bangkok and from the commercial and other favors shown to the nationals of other powers, while British influence, which the French then sought to counteract, was not impaired. The French annexed at that time the territory of Luang Prabang that was claimed by Siam east of the Mekong; they have occupied the town of Chantabun, and though the occupation was declared to be temporary they have expended 15,000,000 francs there; they forced Siam to agree to keep no troops in a zone of 25 miles on the right bank of the Mekong; and the police rights of Siam were restricted, and she was forbidden to maintain troops or build fortifications in Battambang and Angkor, old Cambodian provinces.

The British expansion in Burma was the occasion of French aggression. In January, 1896, the grounds for a forward policy on the part of France were taken away by an agreement between France and England by which they mutually guaranteed to Siam the integrity of the Menam basin and the coast from Muong Bang Tapan to Muong Pase.

On Oct. 7, 1902, a treaty was signed at Paris by which Siam ceded to France the province of Meluprey, a part of the province of Angkor, and a part of the Laos territory west of the Mekong river. The boundary between Siam and Cambodia starts on the left bank of the Great Lake from the mouth of the Stang Rolnos river, runs westward to the Prek Kompong Tiam river,

northward to the Pnom Dang Rek mountains, thence along the Nam Sen-Mekong and Nam Moun watershed to the Pnom Padang chain, and along the summit of the mountains eastward to the Mekong. This is the old Cambodian province of Meluprey, and it includes also a slice of Angkor with the best part of the fisheries on the lake. The Laos boundary west of the Mekong starts from the mouth of the Nam Huong, follows the crest of the mountains separating the two valleys westward to the watershed of the Menam basin, and this watershed northward to the source of a tributary of the Nam Ngoum, descends it and the Nam Ngoum to the Ban Luak, ascends the latter river to the Menam watershed, runs along the watershed westward to the Nam Kop river, and follows the course of this river down to the Mekong. This is the Laos province of Bassak. The traditional relations between the King of Siam and the inhabitants of this province are not altered. France agrees to evacuate the town of Chantabun. The King of Siam will be free to maintain troops on the right bank of the Mekong, but binds himself to keep in the whole Siamese part of the Mekong basin only Siamese troops, commanded by Siamese officers, and if he wishes to construct ports, canals, or railroads, unless they shall be constructed with a Siamese staff and Siamese capital, he must first come to an agreement with the French Government. France abandons the clause of the treaty of 1893 requiring Siam to recognize as under French protection and subject to French consular jurisdiction all persons of Laotian, Cambodian, and Annamite descent and all Chinese coming from French territories, which has been a source of constant friction. In the new treaty it is stipulated that persons of Asiatic origin born on territory under the direct rule or protection of France since it became French and the children of such persons, but not their grandchildren and remoter descendants, shall enjoy French protection. Chinamen already inscribed in the lists of the legation and consulates will continue to be French *protégés*, but are amenable to Siamese law and can be judged by Siamese courts, a representative of the French legation or consulate having the right to be present at the trial and to demand a copy of the indictment and evidence. As regards the admission to French protection of persons not born on French territory, France will enjoy equal rights with any that may be accorded to other powers. As regards the use of harbors, canals, and railroads in any part of the kingdom no differential tax can be established. The French Government expected by restoring Chantabun and removing the causes of rancor to receive as good treatment as regards official appointments given to foreigners and the granting of commercial concessions as any other nation, to develop a French influence at Bangkok equal to that of the English, and to promote the trade of French Indo-China. The cession of territory embraces only a part of the provinces that were once Cambodian and were conquered by Siam, but in the treaty Siam recognizes French rights to a special position in the Siamese part of the Mekong basin, to which before she would not formally agree.

After the conclusion of the treaty the Siamese Government asked that a Frenchman be designated for a high official position and intimated a willingness to establish a department of hygiene and sanitation with a French staff. A French engineer was engaged to superintend public works at Bangkok. The mail subsidy to French steamers running between Bangkok and

Saigon was restored. The territory ceded to France has a total area of 7,750 square miles.

SOUTH AFRICA. With the conquest of the two Boer republics the whole of South Africa becomes British territory, with the exception of the coast regions belonging to Portugal in the east and west and the unproductive sphere of Germany in the southwest. British South Africa, thus expanded, has an area of about 1,000,000 square miles, of which 700,000 square miles are south of the Zambesi, for the most part already provided with civilized institutions, and 300,000 square miles are a promising region of great natural agricultural and mineral resources extending from the Zambesi northward to the boundaries of German East Africa and the Congo Independent State. The High Commissioner for British South Africa is Lord Milner.

Final Campaign.—At the beginning of 1902 the theater of the war still extended over the length and breadth of British South Africa excepting the coast regions and populous parts of Cape Colony and Natal; a circuit of about 40 miles radius around Bloemfontein, and the cultivated districts surrounding Pretoria and Johannesburg as far west as Rustenburg. The British had garrisons in all the considerable towns of the late republics and occupied the railroads so effectually that the Boers could no longer derail trains and help themselves to supplies on the principal lines of communication. The main line from Cape Colony was so effectually guarded by blockhouses and constabulary posts, connected with barbed-wire fencing, with trenches dug on both sides of the track in the threatened portions and spring guns and automatic electric-alarm signals, that the Boers could no longer cross it in large parties at any point between Pretoria and Bloemfontein or south of there. Lord Kitchener had ceased active operations while extending the blockhouse system not only along the railroads but east and west to garrisoned posts away from the railroads. All the 2,300 miles of railroads were blockhoused, but only completely enough to prevent Boers from crossing in the important sections separating the districts still held by the Boers. Constabulary posts of from 50 to 100 men were established along the railroads 5 or 6 miles apart, with 4 or more blockhouses around the circumference and an entrenched position for the garrison and horses in the center. These posts were connected by a chain of blockhouses manned by from 7 to 16 men, set at intervals of from 700 to 2,000 yards. The blockhouses, of corrugated iron, were strengthened by bags of earth and protected by spider-web entanglements of barbed wire and trenches. When these were completed trenches were dug from blockhouse to blockhouse and barbed wire stretched between them. More strongly garrisoned than the constabulary posts, but with unmounted troops for defense only, were the stations placed at sufficient intervals from which were distributed rations, water, and ammunition along the line and where convoys halted at night on the lines stretching away from the railroads, which were safe lines of communication by day. Along the Bloemfontein-Pretoria Railroad the country was safe by day for 10 miles on each side of the line. The lines of posts erected away from railroads proceeded rapidly in the beginning, and more slowly as the distance from the base increased, because materials and supplies had to be transported by ox-teams, and these were scarce.

The Boers had undisputed possession of the great quadrilateral in the eastern Orange Free

State from Frankfort on the north to Bethlehem on the south, and from Lindley on the west to Botha's pass on the east. This area the British proceeded to enclose with lines of blockhouses. Away from the blockhouse lines the Boers roamed at will and could concentrate 1,000 men or more at any point north of Basutoland, and the British could only move in large bodies. In the western Transvaal the region between Klerksdorp and Vryburg was Boer country. In the southeastern Transvaal, east of the strong blockhouse line running from the Natal to the Lourenço Marques Railroad the Boers under Commandant-General Louis Botha held the country undisputed. A line of blockhouses from Wakkerstroom to Piet Retief was intended to protect northern Natal and Zululand from their raids. In the northwestern Transvaal the British held the Magaliesberg range as well as the Pretoria-Rustenburg Railroad by numerous blockhouses. From Rustenburg and Zeerust northward the possession of the country by the Boers was not yet challenged, and there their most considerable force was still a coherent and disciplined body under the chief command of Gen. Delarey, while Gen. Christian de Wet was in the eastern part of the Orange Free State. Throughout the whole northeastern Transvaal north of the Delagoa Bay Railroad the Boers were left undisturbed, and they were numerous and busy, though not with directly hostile operations. These were not the fighting Boers, but the ones who supplied the fighting forces with food, clothing, and such war material as could be manufactured in the country. In the fertile valley north of Lydenburg they raised grain enough to feed their entire army and ground it into flour at Pilgrim's Rest and, after their mill was blown up by treachery, at Sabie Drift. A blockhouse line was being carried from Klerksdorp through Ventersdorp to the Rustenburg line to protect the Rand from raids, and it extended across the Vaal to Kronstad. When the completion of the line was of urgent necessity the blockhouses were placed wider apart, leaving the intervening ones and the fencing to be filled in later. The Vaal river from Klerksdorp to Standerton was lightly guarded with a long blockhouse line. A transverse line crossed the railroad in the Orange River Colony from Winburg to Bloemhof; one passed through Thaba Nchu to Maseru on the border of Basutoland, and through Ladybrand to Ficksburg; beyond these there was one connecting Fouriesburg with Bethlehem. There was a network no longer needed in the northern parts of Cape Colony, though bands of rebels were still at large in the hilly country north of Cradock and on the borders of Basutoland and Caffraria; in the west of Cape Colony, where the rebels were still active, a long line, stretched from Lambert's Bay to Victoria West on the railroad, protected the settled districts; and the railroad was well protected northward to Kimberley, and even to Vryburg and Mafeking, and lightly farther north, with lines crossing the country from Kimberley to Boshof and from Jakobsdal along the Riet to the cleared country about Bloemfontein. This cleared region, protected at first by the South African constabulary, was left principally to the national scouts, a body recruited by ex-commandants among surrendered Boers who wished to bring pressure upon the leaders still in the field to induce these to abandon what the Boers who had accepted British sovereignty at various times since the fall of Bloemfontein and Pretoria, contemptuously called "handups" by the others, considered a hopeless struggle that was ruining and extermin-

nating their race. The national scouts extended the area of occupation westward from Bloemfontein, just as the constabulary extended the territory held and patrolled west of Pretoria and the Rand. The British army of over 200,000 men rested in the garrison towns and in the blockhouses, relieved of the long marches and dangerous drives that had previously exhausted the troops actively employed. The Boers in the field were reckoned to be not over 8,000, though in reality they were twice as numerous; yet Lord Kitchener could not rely on his troops, constantly renewed by fresh drafts from England, more untrustworthy than the earlier volunteers. He was hampered still more seriously by lack of horses. The Government was buying horses in the British Islands, Hungary, the United States, Canada, the Argentine Republic, Australia, and India at enormous expense, requesting the remount department in South Africa to reduce its demands. During 1901 the Government sent 129,000 horses, and in 1902 continued sending them at the rate of over 13,000 a month. The United States alone furnished 201,000 horses and mules from the beginning of the war. The horses, however, were used up almost as fast as fresh shipments came owing to hard usage, sickness, and lack of proper nourishment. There were scandals in the contracts for horses and for fodder, clothing, and other army supplies. The British, American, and Canadian horses stood the work best. After the Boers had lost all their artillery the British discarded most of theirs and converted the men with their horses into mounted infantry. In January the acting President of the South African Republic, Schalk Burger, with his Government, was in the mountainous district northwest of Lydenburg in the vicinity of Roos Senekal, guarded by a commando under Stephanus Trichardt. To the northeast Commandant Muller protected the factories and the women's laager at Sabie Drift. Lydenburg, between the two, was strongly held by the British. Two British columns moved about in this region, but did not accomplish as much as the national scouts. Gen. Ben Viljoen, one of the best of the Boer leaders, was captured while journeying to a conference with Schalk Burger. In the western Transvaal Lord Methuen, from the Mafeking Railroad as a base, moved on the skirts of the territory commanded by Gen. Delarey, and Col. Kekeveich and other column leaders swept the border districts, but there were large and fertile regions in the interior where Boer farmers raised ample crops and reared herds of cattle with scarce any consciousness that war was going on in the country. The grazing country west of the Mafeking Railroad was also a source from which herds of cattle were driven through the thin line of posts on the railroad without hindrance. West of Kimberley Commandant van der Merwe was in communication with the rebels operating in the western part of Cape Colony. President Steyn of the Orange Free State was with Commandant de Wet, between the Frankfort and Bethlehem lines of blockhouses, which were being strengthened with the idea of enclosing the Boers in this area and breaking up this already weakened force by the first forward movement. In the towns permanently occupied by the British, like Rustenburg, Zeerust, Lichtenburg, Wakkerstroom, Utrecht, and Vryheid in the Transvaal and Lindley, Heilbron, Frankfort, Bethlehem, Thaba Nchu, Jakobsdal, and Koffyfontein in the Orange River Colony, acting resident magistrates were installed and schools were established. Lands in the neighborhood of Bloemfontein, Jo-

hanneburg, and Pretoria were apportioned out to surrendered Boers and loyalists for small cultivation. Large blocks of land near Thaba Nchu and Ficksburg were purchased for proposed British colonies. Railroads were extended. One was built to Thaba Nchu. The Australasian colonies and Canada raised fresh contingents for the war early in January, and Great Britain additional yeomanry regiments. Gen. Bruce Hamilton's cavalry columns were active against the commandos of the Bothas and Grobelaar near Swaziland frontier, while Lord Kitchener continued concentrating troops in the Orange River Colony to surround De Wet, who had collected the small parties into which his forces had been divided and scattered throughout the country into several large bodies and resumed aggressive tactics. Commandants Fouché, Myburg, and Wessels penetrated once more into the central part of Cape Colony. Commandant Kritzingen was captured. Commandant Scheepers, previously captured, was tried by court-martial and shot on Jan. 18, as Lotter and other leaders of the colonial rebels had been before. Other rebels were shot on charges of killing armed blacks or native spies, often on the testimony of blacks. Members of the Cape Legislature and magistrates were arrested for treason. The prisons of Cape Colony were crowded. The Cape Colonists were exasperated. There was an outcry in England against the courts-martial and the placing of all Cape Colony under martial law. The suspension of the Constitution and the failure to call a session of the Cape Parliament were condemned as illegal. The British ministers justified martial law in the coast districts where no rebellion occurred as a military measure to prevent the bringing of foreign recruits and arms to the enemy. The foreigners had in fact left the Boer army, and the only persons not of Dutch blood still fighting with the Boers were South African residents. The shooting of rebels by the decree of courts-martial composed of young British officers ceased. When Kritzingen was tried he was acquitted. Two Australian officers convicted of murdering 12 Boer prisoners, accused also by the German Government of having murdered a missionary to prevent his denouncing them, were executed and their commanding officer was cashiered for concealing their crimes.

The voluntary surrenders were procured mostly by the national scouts, of whom another corps of 1,500 was organized by Gen. Vilonel in addition to 2,000 organized by Gen. Piet de Wet. By the end of February all those who were willing to surrender voluntarily had come in. Many prominent Boers who believed the war to be hopeless gave themselves up with their commands when unable to escape British columns in that month. The Boer forces left in the field were the best fighting men, prepared for a long struggle to preserve some remnant of independence and to save from hanging the Cape Colonists who had fought with them. Of the Boer leaders 23 had been captured by the British and sent into perpetual banishment. The blockhouse system was gradually extended over the country, enclosing areas that were cleared in sections by mobile columns. The clearing consisted in burning all dwellings, destroying or carrying away all crops, stores, and other movables, driving off the cattle, and taking the people found on the farms into concentration camps. The native districts in the northeast part of the Orange River Colony were devastated in the same way, all huts and grain burnt, cattle seized, and the natives removed to concentration camps, but receipts were given for property commandeered or

destroyed. The raiders in the midland districts of Cape Colony were driven out once again by Gen. French's columns. Mobile columns were sent out next after De Wet. On Feb. 3 Col. Garratt captured a convoy with 2 of the guns that De Wet had taken from a British column on Dec. 24. The extension of the blockhouse lines brought the British nearer to the Boers and greatly improved the mobility of their columns. Almost every day a Boer laager or convoy was taken, with cattle and wagons, and a dozen or more prisoners reduced the fighting strength. The captures already amounted to more than the estimated strength of the whole Boer army. The result of the drive against De Wet was a Boer loss of 283 men killed, wounded, and prisoners, 1,700 horses, and 5,000 cattle. De Wet himself narrowly escaped capture. There were about 1,200 Boers with the leader north of Heilbron, and Lord Kitchener stretched out 10,000 troops to encompass them. De Wet divided his command into 3 main and many small parties, offering every man the opportunity to surrender to the British who was unwilling to fight to the end. Two of the larger bodies and several small ones broke through the girdle of British troops in the night of Feb. 6, and on the following night De Wet's own party broke the wire fencing by driving cattle against it, but only half got through. The Boers captured British detachments from Gen. Bruce Hamilton's force, which had been weakened to increase the forces that attempted to corner De Wet, and from the bodies operating in the northwestern Transvaal.

On Feb. 16 was begun another great drive with the object of capturing De Wet and Steyn, who were not aware of the movement until the columns were extended and advanced to push them upon the blockhouse line from Vrede to Botha's pass. In the night of Feb. 19 a commando of Transvaalers that had inflicted severe losses on a detachment of mounted infantry a week before rushed their cattle upon the wire fence and passed through the blockhouse line without loss. In the night of Feb. 24 De Wet and Steyn broke through the cordon of troops at Botha's pass, though not without a heavy loss inflicted by the New Zealanders, who likewise had 60 killed and wounded. The Boers drove a herd of 6,000 oxen ahead of them against the position of the New Zealanders, but these kept up so sharp a fire that the onset was checked, and beasts and men were piled up as a rampart. The new tactics of stampeding their own cattle to break the British lines or obstructions lost for the Boers the services of many of their native ox-drivers. A third body fought its way through the cordon, and on Feb. 27 the commando of Jan Meyer surrendered. The total Boer losses were 800 men, with 2,000 horses, great numbers of sheep, wagons, and 23,000 cattle. There were 750 Boers who gave themselves up when cornered. A third great drive in March resulted in the capture of much baggage, the discovery of a Boer arsenal in a cave, and some 50 surrenders, but the Boers in parties of 200 or more passed through the gaps in the cordon and De Wet broke through the blockhouse line, passed between blockhouses on the railroad unobserved, and joined Commandant Paris, who had long defied the British in the vicinity of Potchefstroom, and afterward President Steyn joined Delarey's forces in the Transvaal.

The Boers were able to move about freely in small parties and to concentrate by appointment or on command even in the districts cleared by the British troops. They could not, however, feed themselves long without returning to their base

of supplies, and they were obliged to be vigilant. Gen. de Wet issued orders that any burgher found sleeping in a house should be fined or flogged with the sjambok. The commandos never slept on the same spot two nights in succession, thus making it difficult for the British to carry out successful night raids. De Wet and Delarey had their scouts so well posted that if a British column or convoy moved from any post every commando within 70 miles knew it before night and could prepare for a combined attack or vanish out of the district. The British could obtain intelligence from the natives by paying for it, but native spies and guides were not trustworthy at times. When the surrendered burghers became sick enough of the war that kept them from their farms and families and the Boers weak enough and they themselves numerous and bold enough not to fear the sjambok, they acted as guides and latterly fought in the British ranks, besides forming the bodies of burgher scouts, whose principal service was to go among the wavering commandos and persuade them to surrender also. The sjambok was frequently used by commandants to bring wavering Boers back into the line, and it was the disgrace more than the pain of the punishment that was effective.

Members of the Boer commandos entered Johannesburg, Krugersdorp, and Pretoria frequently and learned all that the civil population could tell of the military conditions and plans of the British. The British general who let a body of 300 Boers pass because they wore khaki raised a complaint against this breach of the customs of war. Many of the Boer commandos were supplied with khaki uniforms, which they had taken from prisoners or captured convoys. They wore them as lounging clothes, but in action they wore at least their distinctive Boer hats. Most of the Boers were clad in home-made leather garments.

The English, if they failed to encompass the Boers, nevertheless reduced the area of Boer occupation by clearing the country swept by their columns. On the night of Feb. 24 a large force of Boers in the western Transvaal suddenly attacked Col. von Donop's convoy near Klerksdorp, stampeded the mules, and received the surrender of Lieut.-Col. Anderson and 475 of his yeomanry and volunteers. The absolute losses of the British were still as heavy as those of the Boers. The captured British did not affect their fighting strength appreciably and were invariably set free by their captors. The men and rifles captured from the Boers reduced their numbers materially. On March 7 Lord Methuen, who, with 1,200 men and 5 guns, was marching from Vryburg to join Gen. Grenfell south of Lichtenburg, was attacked at Tweebosch by the commandos of Delarey and Kemp, which surrounded the rear-guard and delivered so sudden and accurate a fire that the yeomanry fled in a panic, mingled with the stampeded mules. The infantry attempted to make a defense until the Boers completely surrounded them and Lord Methuen was incapacitated by a wound.

This was the last important success of the Boers. Delarey released Lord Methuen and the surrendered troops. The Orange River Colony was already made untenable for any large body of Boers. Lord Kitchener began vigorous operations against Delarey. On March 23 Col. Kekeovich recaptured the guns taken from Lord Methuen's column. It was a big drive, like those that had been carried out against De Wet, and was not more successful in the capture of Boers in the enclosed area, although 8 columns took part and some of the lightly equipped mounted troops marched 80 miles in

twenty-four hours. The Boer losses were 12 killed, 185 taken prisoners, 5 guns, and a part of their cattle, horses, mules, and wagons. Commandant Kemp slipped round one end of the enveloping line, while Commandant Liebenberg placed his men, clad in khaki, in the order of a British column and was allowed to pass through unmolested. Peace negotiations were proceeding, but no truce was made, so that the operations against Delarey were not interrupted. On March 31 Col. Kekewich and Gen. Walter Kitchener attempted to close in upon Delarey's main force near Barberspan. A part of the latter's force became engaged with Kemp's men on the Hart river. The British entrenched themselves in a good position, and held it against a determined attack from all sides. A Canadian detachment of 54 men under Lieut. Bruce Caruthers fought till all were slain. A new contingent of Canadians and the ninth contingent from each Australian colony and from New Zealand were on the sea. The latest estimate of the Boer effective forces was still 8,000 men. In the Orange River Colony no single force exceeding 400 was able to concentrate. In Cape Colony the bands of 100 or 200 that appeared intermittently in the midland districts or on the northwestern border could always be driven back into the hills or the desert. In the eastern Transvaal the largest body under Botha was 400 men led by Commandant Alberts, and in the north Beyers had about as many men and other leaders had smaller bands about Lydenburg. Delarey was still able to muster 2,000 men or more for an attack. The remnants of the Boer army were being used up at the rate of 150 a week. The total number of prisoners taken by the British from the beginning of the war was about 29,000.

Col. Colenbrander carried the war into the northern Transvaal. With a strong force he invested the laager of Commandant Beyers in the mountains, which he captured with over 100 prisoners. In the west Gen. Ian Hamilton took charge of the columns. Commandant Potgieter, who led a fierce attack against Col. Kekewich's force on April 11 at Rooiwal, was killed, with 43 of his men, and 34 were wounded, while the British lost 6 killed and 52 wounded. The Boers were pursued and lost 88 more men. A movement of Gen. Bruce Hamilton from Middelburg resulted in a loss to the Boers of 145 in killed, wounded, and prisoners. Col. Lawley led a small column unawares into the laager of Commandant Prinsloo at Boschman's Kop, and in a hand-to-hand fight the British regulars fought their way out, killing or wounding the Boer officers and 60 of their men. Drives in the east and the west were still carried out in May. The Boers, with peace in prospect, showed more disposition to surrender than to fight. Several commandos, consisting mainly of Transvaalers, continued to operate in the eastern part of Cape Colony, and laid siege to the town of Ookiep until driven off by British reinforcements. Of the captured Boer leaders 30 more were sent into perpetual exile in accordance with Lord Kitchener's proclamation of Aug. 7, 1901.

The war came to an end on May 31. The number of Boers estimated by the British intelligence department to be still on commando had risen to 8,900. The British garrison in South Africa in August, 1899, was 9,940. Before the outbreak of the war on Oct. 11, 1899, it was increased by 12,546 troops, and before Aug. 1, 1900, by 155,535 regulars from Great Britain and the colonies, 1,891 from India, 11,584 colonials from Australasia and Canada, 30,319 raised in South Africa, 21,457 militia, 10,731 yeomanry, and 11,129 volunteers

from Great Britain, making the total, including the garrison before the war, 265,132 officers and men. Between then and May 1, 1901, there were sent out 22,987 regulars from home and the colonies, 5,790 colonials in addition to 22,095 raised locally, 3,939 militia from home and the colonies, 16,733 yeomanry, 5,805 volunteers from the United Kingdom, and 5,180 South African constabulary recruited in the United Kingdom for the special pay of 5s. a day; and before the end of 1901 the additional reinforcements were 22,746 regulars from the United Kingdom, 3,857 from India, 1,194 colonials, 8,562 militia, 921 yeomanry, 407 volunteers, 454 Scottish horse, 1,709 South African constabulary from the United Kingdom, and 1,238 from Canada.

Further reinforcements till May 31, 1902, were 20,280 regulars from home and the colonies, 6,578 from India, 10,827 colonial troops, 11,608 militia, 7,135 yeomanry, 2,515 volunteers, 379 Scottish horse, and 384 South African constabulary. The total sent to and raised in South Africa from the beginning of the war, including the original garrison, was 17,559 officers and 430,876 men. The numbers of volunteers, constabulary, and other troops raised in South Africa after the first enlistments are not known and are not included in the total, which comprises, besides the original garrison of 9,940 regulars, 228,171 regulars, 45,566 militia, 35,520 yeomanry, 833 Scottish horse, 19,856 volunteers, and 7,273 South African constabulary from the United Kingdom; 18,229 regulars and 305 volunteers from India; 29,090 in the colonial contingents, 1,238 South African constabulary, and 52,414 men raised in South Africa. Of the total 68,531 returned to England in health and 12,294 to the colonies, 10,134 regulars were ordered to India and 3,578 to the colonies, 389 militia were stationed at St. Helena, 75,430 were taken back to England sick or wounded or died on passage, 9,713 were in hospitals in South Africa at the end of hostilities, 6,685 were disbanded in South Africa, 16,168 died in South Africa of disease or wounds, 5,774 were killed in battle, and 22,829 were wounded. The war came to an end because the Orange Free State was practically cleared and held by the British and in the eastern Transvaal foodstuffs were exhausted. In the west the Boers still had provisions, but the British columns, released from the Orange River territories, could be concentrated for drives that would soon clear all except the wilder and more distant parts.

The mortality from battle among British officers was 71.48 per 1,000 in the first, 21.94 in the second, and 32.63 in the third year of the war; from disease, 29.09 in the first, 15.03 in the second, and 16.40 in the third year. Among the rank and file 19.62 per 1,000 were killed or died of wounds in the first, 10.87 in the second, and 11.13 in the third year; and 31.07 per 1,000 died of disease in the first, 20.56 in the second, and 18.24 in the third year. The average rate of mortality of British troops on foreign service is 15 per 1,000. In the American civil war the death-rate from all causes was not reduced below 46.49 per 1,000 in the last year of the war, and in the Franco-Prussian War the average was 46 per 1,000 per annum, while in the Boer War it was brought down to 30.03 in the closing months. In the two years, seven months, and twenty days that the war lasted 728 officers and 7,862 non-commissioned officers and privates were killed or died of wounds or of accidents and 344 officers and 13,008 non-commissioned officers and privates died of disease. The Boers had about 50,000 combatants at the beginning of the war. No foreigners joined them after the first

year. The number who went into the field from first to last is estimated at 75,000. Their losses during the war were 3,700 killed or died of wounds and 32,000 prisoners of war, of whom 700 died.

After the terms of peace were signed Lord Kitchener appointed as commissioners to receive the surrenders of armed burghers Gen. Bruce Hamilton for the eastern and Gen. Walter Kitchener for the western Transvaal; Gen. Elliot for the Orange River Colony, and Gen. French for Cape Colony. Gen. Louis Botha, Gen. Delarey, Gen. Christian de Wet, and other influential Boer leaders accompanied the British commissioners and induced all the burghers to surrender except some that joined commandos in the remote wild regions of the north and west that were British territory or trekked beyond into German and Portuguese territories. The commissioners received the surrenders of 11,166 armed Boers in the Transvaal, 6,455 in the Orange River Colony, and 3,635 in the Cape Colony; total, 21,256. The surrendered burghers who were unwilling to take the oath of allegiance were permitted to sign a declaration that they accepted British sovereignty and would not again take up arms against Great Britain. The prisoners of war in St. Helena, Bermuda, India, and Ceylon were brought back to their own country on subscribing to the oath or the declaration, which, however, some of them refused to do.

Conclusion of Peace.—On Jan. 25, 1902, the Dutch Government, in view of the exceptional circumstances in which one of the belligerents was placed, the Boer authorities in South Africa being unable to communicate with the delegates in Europe, who bore no instructions later than those drawn up in March, 1900, binding them so strictly to the independence of the republics that they could not even accept the *status quo ante bellum* unless a mode of settling disputes were laid down at the same time, seeing that the Boer delegates were in Netherlands territory and accredited to that Government alone, offered its good offices as a neutral power to bring about negotiations for peace that could not otherwise be opened. The Dutch memorandum proposed that the Boer delegates proceed under a safe-conduct to South Africa in order to deliberate with the Boer leaders and return with full powers to conclude a treaty of peace binding the Boers in Africa and the Boers in Europe, in which case the Netherlands Government offered to place them in communication with plenipotentiaries sent over to Holland by the British Government.

The British Government declined to accept the intervention of the Dutch Government, intimated a belief that the Boer delegates in Europe have no influence over the representatives of the Boers in South Africa, stated its understanding that all powers of government, including those of negotiation, were vested in Mr. Steyn and Mr. Schalk Burger, and therefore inferred that the quickest and most satisfactory means of arranging a settlement would be by direct communication between the leaders of the Boer forces and the British commander-in-chief in South Africa, who was already instructed to forward any offers he received for the consideration of the British Government.

On Sept. 5, 1901, Schalk Burger sent a communication to Lord Kitchener to ascertain what measure of self-government would be left to the republics and what conditions could be obtained for the Cape rebels if the Boers should lay down their arms. Lord Kitchener replied on Sept. 22 that the annexation of the republics must stand to prevent South Africa from again being con-

vulsed with war and to protect those who had accepted British rule, and that amnesty to rebels was the prerogative of the ruler of the state, pointing out that the Republican Government had tried and shot traitors and that the commandant-general had threatened to burn the farms and confiscate the property of burghers who, after taking the oath of allegiance to Great Britain, refused to rejoin the commandos.

Presidents Steyn and Schalk Burger, supported by Commandant-General Botha, Gen. de Wet, and the rest of the Boer leaders, still held out in the hope, not of intervention by any European power, but of a revulsion of feeling in Great Britain, caused in part by the farm-burning, the hanging of Cape Colonists, compelling their neighbors and relatives to witness the spectacle, the arming of natives to fight the Boers, the concentration camps, and other practices denounced by the Liberal leader in the British Parliament as "methods of barbarism," and in part by the cost and apparently interminable nature of the guerrilla war, which kept a larger British army in the field than ever and entailed heavier expenses than ever, the total cost from the beginning having already exceeded £220,000,000, which was three times the cost of the Crimean War and more than the indemnity paid by France to Germany. The Boers, moreover, were encouraged to believe that the British nation would recognize, now that formidable hostile action on their part was no longer possible, the unconquerable national spirit and love of independence that they had inherited from their fathers.

The correspondence between the British and Dutch governments was forwarded by the British authorities to President Schalk Burger, who decided to act on the intimation that, although the British Government would not treat with the Boer delegates in Europe, it would listen to proposals from the Boer authorities in South Africa. President Burger went into the British lines and obtained permission, on March 23, to consult President Steyn. Accompanied by Lucas Meyer, State-Secretary Reitz, Attorney-General Krogh, and their colleagues, Jacoby, Vanderwalt, and Van Velden, he was conducted to Kroonstadt. There the members of the Acting Government of the South African Republic remained until the Government of the Orange Free State could be reached. President Steyn and the chief commanders Louis Botha, De Wet, and Delarey, met them in consultation at Klerksdorp, and on April 12 all went to Pretoria to open formal negotiations with the British High Commissioner and the British commander-in-chief. Their first proposal was that the two republics should concede the demands made by the British Government before the war as to the franchise for Uitlanders and similar matters. Their proposals were franchise, equal rights for the English and Dutch languages in education, a customs union, dismantling of forts, postal and railroad union, arbitration of differences by Boer and British commissioners, and mutual amnesty. If these terms were not satisfactory they desired to know what the British Government would offer. When these proposals were forwarded to the British Government Mr. Brodrick telegraphed back his astonishment that the Boer delegates should persist in misapprehending the situation and referred them to the terms offered at Middelburg a year before as the minimum. Although the reduction in the Boer forces and the additional sacrifices thrown upon the British by the rejection of those terms would justify more onerous demands, the British Government was willing in the interest of permanent

peace and reconciliation to accept a general surrender on the lines of that offer with modifications in detail to be mutually agreed upon. The Boer leaders then asked to be allowed to consult the Boer authorities in Europe or to have these deputize one of their number to go to South Africa to assist in the peace conference. Lord Kitchener returned a categorical refusal to this demand, and a message was sent from London that negotiations had better terminate at once if the Boers did not intend to make serious proposals. The delegates announced that they had no power to accept peace on the basis of the surrender of the independence of the republics, and asked for an armistice to enable them to obtain authority from the burghers. Lord Kitchener refused to grant an armistice, but undertook not to molest burghers while actually holding any meetings necessary for securing the authority required by the delegates. The delegates left Pretoria on April 19 to consult the burghers in the field, with the understanding that the British authorities would not treat with them further unless they had full powers, to which President Steyn took exception. The commandos in the field elected delegates.

A national convention of 160 Boer representatives, all prominent burghers, met at Vereeniging on May 15, and gave the peace delegates power to negotiate subject to ratification by the convention. The convention commissioned Louis Botha, Christian de Wet, Judge Hertzog, Delarey, and Smuts to negotiate on the basis of surrender of independence in foreign relations, self-government under British supervision, and surrender of part of the territories. Lord Milner and Lord Kitchener refused to negotiate on this basis, and proposed to draw up a document to be submitted to the convention for a simple affirmative or negative vote. The Boer commissioners at Pretoria and the British High Commissioner and commander-in-chief arranged on May 21 the terms to be submitted to the Boer convention, but it was not till May 28 that the British Government finally communicated the exact terms it was willing to offer, and these were finally accepted by the convention on May 30. Schalk W. Burger, F. W. Reitz, Lucas Meyer, Krogh, J. H. Delarey, and Louis Botha, as delegates of the South African Republic, and M. T. Steyn, C. R. de Wet, J. B. M. Hertzog, J. Brebner, and C. Olivier, as Free State delegates, went to Pretoria and signed the treaty of peace on May 31, which they were authorized to do by resolution of the convention, explaining that the reduced and dwindling numbers of Boers in the field, and consideration for the 20,000 deported prisoners of war and the dying inmates of the concentration camps, which threatened the extermination of the whole race, compelled them to surrender their national independence. The terms of peace were substantially those that Lord Kitchener had offered to Gen. Botha at Middelburg. The burghers in the field were to hand over all arms and ammunition and acknowledge British sovereignty. Those outside the limits of the Transvaal and the Orange River Colony were to be brought back to their homes on acknowledging allegiance to the King, and all prisoners of war were to be repatriated on the same terms, including leaders doomed to perpetual proscription by the proclamation of Aug. 7, 1901. Burghers surrendering or returning were not to be deprived of their personal liberty or their property. No proceedings, civil or criminal, would be taken against any of them for acts in connection with the war, except certain acts contrary to the usages of war that had been notified by the British commander-in-chief to the Boer generals, which would

be tried by court-martial immediately after the close of hostilities. The Dutch language will be taught in public schools of the Transvaal and the Orange River Colony where the parents of the children desire it, and will be allowed in courts of law when necessary for the better and more effectual administration of justice. The possession of rifles will be allowed in the Transvaal and Orange River Colony to persons requiring them for their protection on taking out a license according to law. Military administration in the Transvaal and Orange River Colony will at the earliest possible date be succeeded by civil government, and, as soon as circumstances permit, representative institutions, leading up to self-government, will be introduced. The question of granting franchise to the natives will not be decided until after the introduction of self-government. No special tax will be imposed on landed property in the Transvaal and Orange River Colony to defray the expenses of the war. As soon as conditions permit, a commission, on which the local inhabitants will be represented, will be appointed in each district of the Transvaal and Orange River Colony, under the presidency of a magistrate or other official, for the purpose of assisting the restoration of the people to their homes and supplying those who, owing to war losses, are unable to provide themselves with food, shelter, and the necessary amount of seed, stock, implements, etc., indispensable to the resumption of their normal occupations. The Imperial Government will place at the disposal of these commissions £3,000,000 for the above purposes, and will allow all notes issued under the law of 1900 of the South African Republic and all receipts given by officers in the field of the late republics, if found by a judicial commission to be appointed by the Imperial Government Commission to have been duly issued in return for valuable considerations, to be received by the commissions as evidence of war losses suffered by the persons to whom they were originally given.

In addition to the free grant of £3,000,000, the Imperial Government will be prepared to make advances on loan for the same purposes free of interest for two years, and afterward repayable over a period of years with 3 per cent. interest. No foreigner or rebel will be entitled to the benefit of this clause.

With regard to the Cape Colonists and Natalians who had been in rebellion Lord Milner read a statement on behalf of the Imperial Government that they would be left to be dealt with by the colonial governments according to their laws, and the Irish and other British subjects who had fought with the Boers would be subject to trial under the law of that part of the British Empire to which they belong. He also stated the views indicated by the Cape Government as to the terms to be granted to Cape Colonists in the field or such as had surrendered since April 12, 1901. With regard to the rank and file, on giving up their arms, they should sign a document acknowledging themselves guilty of high treason; their punishment would be, provided they had not been guilty of murder or acts contrary to the usages of war, that they should not be entitled during their lives to vote at any parliamentary or local election. Justices of the peace, field-cornets, or other colonial officials and all Cape Colonists who had been commandants of rebel or burgher forces would be tried for high treason, but in no case should the death penalty be inflicted. The opinion communicated by the Natal Government was that rebels should be dealt with according to the law of the land.

The Boergenerals Louis Botha, Christian de Wet, Delarey, and Lucas Meyer went to Europe soon after the peace, visited Paul Kruger, Dr. Leyds, and the Boer delegates Wolmarans, Fischer, and Wessels. They had a conference with Mr. Chamberlain and endeavored to secure from the British Government an allowance or annual grant for the support of widows and orphans of burghers and maimed burghers unable to work; also the equality guaranteed in the peace convention of the Dutch and English languages in schools and law courts; the restoration of farms confiscated and sold under the proclamation of Aug. 7, 1901, the repatriation of all the proscribed leaders, amnesty for British subjects who fought with the Boers, pardon for persons convicted of acts committed in connection with the war, the reinstatement of officials of the republics or compensation for loss of office, compensation of private persons for property seized or destroyed by British troops, and for use of properties taken possession of, the reconsideration of the decision to annex Transvaal territories to Natal, and the recognition as lawful obligations of the debts incurred by the republics during as well as before the war. The Colonial Secretary declined to reopen any question settled in the treaty. The generals visited other countries and appealed to the public of the Continent of Europe and of the United States to assist the widows and orphans of fallen Boers.

Cape Colony.—The colony of the Cape of Good Hope has responsible government. The legislative authority is vested in a Parliament consisting of a Legislative Council of 23 members elected for seven years and a Legislative Assembly of 95 members elected for five years by the registered electors, who must be able to write their names, and occupations and are qualified by the occupation of a house worth £75 or the receipt of a salary of £50. Speeches in Parliament may be made in either English or Dutch. The Governor of Cape Colony is Sir Walter F. Hely-Hutchinson. The Cabinet at the beginning of 1902 was composed as follows: Prime Minister and Treasurer, Sir Gordon Sprigg; Colonial Secretary, T. L. Graham; Attorney-General, Sir J. Rose-Innes; Commissioner for Public Works, Dr. J. W. Smartt; Secretary for Agriculture, Sir Pieter Faure; without portfolio, J. Frost. The appointment of Sir J. Rose-Innes as Chief Justice of the Transvaal necessitated changes in the Cabinet. Mr. Graham on Feb. 19, 1902, became Attorney-General, and Mr. Douglass succeeded the latter as Colonial Secretary.

The colony has an area of 221,311 square miles, with 376,987 white and 1,150,237 colored inhabitants at the last census. Of the white population, 27,667 are of English, 6,646 of Scottish, 4,184 of Irish, and 6,540 of German birth, and over 325,000 were born in South Africa. The colored population consists of Hottentots, Kafirs, Fingoes, Bechuanas, Malays, and mixed races. The number of marriages in 1900 was 8,736. The births among Europeans were 15,195 and deaths 8,480 in number; births among the rest of the population 37,376 and deaths 38,889. The number of arrivals by sea was 29,848 and departures 21,163. The total estimated population of the colony on Jan. 1, 1901, was 2,350,000.

The revenue for the year ending June 30, 1900, was £6,565,752, of which £2,495,925 came from taxation, £3,466,002 from railroad and other services, £236,011 from the colonial estate. £128,336 from fines, stores issued, etc., £128,376 from loans. The total expenditure was £7,773,230, of which £1,415,685 were for the public debt,

£2,017,424 for railroads, £223,429 for defense, £564,395 for police and prisons, £191,347 for civil establishments, £1,087,160 out of loans.

The debt of the colony on Jan. 1, 1900, amounted to £31,409,755, including £3,525,677 raised by harbor boards with a Government guarantee.

The revenue of the divisional councils in 1900 amounted to £187,493, and expenditure to £168,901; debts, £36,440. The revenue of municipalities footed up £942,317, and expenditures £922,992; debts, £2,396,105.

Cape Colony in the year ending May 31, 1899, produced 2,220,847 bushels of wheat, 1,810,611 bushels of oats, 830,730 bushels of barley, 2,857,809 bushels of mealies, 2,000,000 bushels of Kafir corn, 304,491 bushels of barley, 4,826,432 gallons of wine, 1,107,344 gallons of brandy, 35,179,900 pounds of wool, 6,707,379 pounds of mohair, 278,167 pounds of ostrich-feathers. The live stock consisted of 387,824 horses, 90,379 mules and asses, 1,263,992 sheep, 5,572,793 goats, 245,947 hogs, and 260,672 ostriches.

The total value of imports in 1900 was £19,678,336, of which £16,106,984 represent merchandise. The exports of colonial produce were valued at £7,042,358; total imports, £8,147,670. The exports of diamonds were £3,433,832 in value; of ostrich-feathers, £876,801; of wool, £837,809; of copper ore, £498,552; of Angora hair, £389,905; of hides and skins, £346,800; of gold from the Transvaal, £336,795; of wine, £29,541; of grain and meal, £14,472. The exports of diamonds from 1867 amounted to £95,447,399. The chief imports were food and drink of the value of £5,584,600 and textile goods and clothing of the value of £4,301,331. The imports of Cape wool into Great Britain in 1900 were 37,463,754 pounds, against 84,032,536 pounds in 1899. Of the total value of imports in 1900 Great Britain sent £11,052,428, and received £6,854,175 of the exports, British possessions furnished £2,477,692 of imports and took £238,047 of exports, foreign countries furnished £3,631,691 of imports and took £554,460 of exports.

The number of vessels entered from abroad at the ports in 1900 was 1,555, of 4,803,456 tons; cleared, 1,506, of 4,701,536 tons. Of those entered 1,188, of 4,306,656 tons, were British, of those cleared 1,165, of 4,232,057 tons. The number of coasting-vessels entered was 1,266, of 4,608,893 tons; cleared, 1,266, of 4,558,851 tons.

The shipping registered in the colony consisted on Jan. 1, 1901, of 5 sailing vessels, of 331 tons, and 33 steamers, of 5,810 tons.

The Government owned 2,089 miles of railroads on Jan. 1, 1901, and operated 587 miles more owned by companies, while 238 miles were owned and operated by companies and 139 miles were being built by companies with a Government subsidy. The Government railroads cost £21,842,000, or £10,456 per mile. The gross earnings in 1900 were £3,520,537; expenses, £2,198,205; number of passengers carried, 13,640,414 in 1900; tons of freight, 1,370,248.

The number of letters that passed through the post-office during 1900 was 31,112,004; newspapers, 11,547,990; postal cards, 806,663; books and samples, 2,750,050; parcels, 503,282; receipts for the year, £342,431; expenses, £346,779.

The telegraph-lines had a length of 7,467 miles on Jan. 1, 1901, with 22,597 miles of wire. The number of messages in 1900 was 3,562,039; receipts were £202,454, and expenses £205,986.

In Cape Colony parliamentary government was suspended during two-thirds of the period of the war and for some time after its close, and it was practically under military rule. Parlia-

ment was prorogued from one date to another. Some of the members had been convicted by military tribunals, some were kept in prison without trial, some had fled overseas to avoid a like fate, and elections were not held to fill their places because none but men of the same principles could be elected in their districts. When peace was signed a petition was signed by a large majority of the members of Parliament belonging to the Progressive party, which was the ministerial party, begging the Imperial Government to suspend the Constitution. The Premier, who had assented to the military measures of the army authorities during the war and organized the bodies of Cape volunteers for local defense and auxiliary service in the war, rejected the proposition from the start, the ministry refused to countenance it, and the Imperial Government finally decided against it and advised the convening of Parliament at an early date so as to test the willingness of the House of Assembly to pass the measures necessary for the maintenance of orderly government, including indemnity bills for acts committed under martial law and for unauthorized expenditure. Sir Gordon Sprigg assured Mr. Chamberlain that he could pass these indemnities and the budget, although he could not rely on the support of a fourth of his former followers. Dr. Smartt, Commissioner of Public Works, resigned in May and took the leadership of the party in favor of suspension, and as 42 members of the Assembly supported him he practically displaced the Premier as head of the Progressive party. The Constitution was suspended already. Martial law and press censorship were still in force after the war ended. The Parliament had not been convened for eighteen months, although the Constitution requires that twelve months shall not elapse without a session. The ministry had expended in the defense of the colony all the ordinary resources and £2,600,000 raised for railroads and harbors, and had no power to levy taxes. What the Progressives wanted was the repeal of the Constitution. They proposed that the Cape should be ruled as a Crown colony until the seats could be redistributed in such a way as to give them, the active English Imperialist party, a majority. The petition for the suspension of the Constitution was sent before the peace was signed. It could not be done without sanction of the Imperial Parliament. Lord Milner was in favor of suspension, but Mr. Chamberlain on July 2 declined to propose such a measure to the British Parliament unless the Cape Parliament should fail to pass the bills of indemnity and other measures indispensable for the maintenance of British interests. Parliament was convened on Aug. 20. The withdrawal of the martial-law proclamations was declared in the Governor's speech to be dependent on the passage of a bill indemnifying the Governor and all persons concerned for acts performed in the administration of martial law. The House of Assembly was further called upon to pass bills dealing with the failure to summon Parliament within the prescribed period, the failure to register voters at the biennial term, unauthorized expenditure, and various minor infractions of the law. Measures were announced prohibiting the immigration of Asiatics not British subjects, and of paupers and persons suffering from loathsome and contagious diseases, dealing with betting and gambling, forbidding the sale of liquor to aboriginal natives, providing for the location of natives, and authorizing railroad extensions, harbor and irrigation works, local loans, and the contribution of £20,000 to the im-

perial navy in addition to the previous annual grant of £30,000. There were 9 seats vacated by rebels or refugees, and in declining to have them filled until the repeal of martial law the Premier opposed his former party which he had led for twenty-five years, only 5 members of which, besides the ministers, still followed him, and was supported by the party of the Afrikaner Bond, the Dutch party. The Government further offended the Progressives by proposing a commission to inquire into the administration of martial law and commandeering. The Imperial Government sent over a commission of judges to revise the sentences passed by military tribunals with a view of releasing imprisoned persons whose offenses were not serious and criminal. Jurists pointed out that with the removal of martial law all unexpired sentences lapsed and no person could be held in duration unless resentenced under the law of the land. The Chief Justice of Cape Colony ruled that after the conclusion of peace martial law became void and the courts could not recognize any subsequent proceedings taken under martial law. The general indemnity bill was passed on Sept. 3. Under martial law the Boer sympathizers had to suffer severely. They were deported from their homes, their business was ruined, their property was taken from them, and when they were not confined they were compelled to make long journeys to report to the military. Now the loyal Dutch and the British colonists who profited by their misfortunes were boycotted and made to suffer in turn, but the Government would give them no redress. When Parliament was before in session and martial law had been proclaimed in a few districts, after the first rebellion had been quelled Sir Gordon Sprigg promised in August, 1900, to appoint a parliamentary commission to inquire into its administration. Parliament was prorogued, and afterward came the second rebellion. Martial law was extended over all the colony, and finally embraced even the port towns. For a year and a half it constituted the Government of the country. The grievances and wrongs that arose from the despotic rule of English officers were admitted by everybody, and hence the imperialists desired to cover with oblivion the whole period. The ministry and Parliament could not ignore, however, the wrongs that many were still suffering in consequence of martial law. The Legislative Council investigated the cases of two of its members who had been punished by military tribunals and found that they had been thoroughly loyal citizens. Many persons were still confined in prison under unjust and capricious sentences. The Royal Commission, composed of Baron Alverstone, Lord Chief Justice of England, Justice John C. Bingham, and Sir John Ardagh, examined into 721 cases tried in Cape Colony, 59 in the Transvaal and Orange River colonies, and 14 in Natal, and in accordance with its recommendations 119 prisoners were released at once, and in most other cases sentences were reduced—a life sentence to one of two or three years—and fines were remitted.

The financial indemnity bill covered a total unauthorized expenditure of over £11,000,000. The Parliament authorized new loans of £4,400,000 for railroads and harbor works. The ministers, supported by the Progressives, mustered only 27 votes on Sept. 4 against 41 given by the Bond for enlarging the powers of school commissioners, yet all the indemnity bills were passed. The expenditure for the two years ending June 30, 1902, was £19,224,000 and the revenue £17,030,000, leaving a deficit of £2,194,000. For the next year

a revenue of £10,370,000 was expected, and a surplus of £286,227. The bonds of the Free State given for the Bloemfontein Railroad built by Cape Colony would pay the war cost of £1,800,000. The 3,437 rebels who surrendered under the proclamation of June 11, 1902, were disfranchised for life, in addition to 2,337 voters convicted by the special tribunals constituted in 1900, besides whom 1,217 were convicted who were not voters. A bill provided for raising a loan of £1,250,000 for compensating war losses, first of those not found guilty of treason, and second of those found guilty, though not such as had twice rebelled. On Nov. 4 the Government was defeated on a bill to reorganize and augment the mounted troops of the colony by 34 votes to 29. In elections to fill the vacant seats Progressives were elected. The Afrikaner Bond changed its name to the South African party, and put forth as its program the realization of the unity of the different nationalities in South Africa and the federation of the South African colonies with due regard to their individual interests and the supremacy of the British Crown. Martial law was repealed on Sept. 17, and at the same time the peace preservation act was proclaimed, enabling the Government to control the importation and possession of arms and requiring the registration of all arms and ammunition. In the new colonies the importation of arms was forbidden; only specially licensed persons could have them, those needing them for defense against natives; and no dealer could keep more than a certain small stock of ammunition. One of the causes of quarrel between the Premier and his party was that he would not duplicate this legislation in Cape Colony and introduce more stringent treason and sedition laws, but he insisted that existing laws were sufficient.

Bechuanaland.—The native territory west of the Transvaal and east of German Southwest Africa, extending northward to the Zambesi, belonging to the Bamangwato under Khama and the Bakhatla under Lenchwe, the Bakwena under Sebele, the Bangwaketse under Bathoen, and the Bamaliti under Ikaning, is a British protectorate over which there is a resident commissioner under the High Commissioner for South Africa. There is a European mounted police of 12 officers and 115 men and a native police of 60 men. The natives pay a hut tax, which is collected by their chiefs. The Resident Commissioner in 1902 was R. C. Williams. When British Bechuanaland, including the suppressed Boer Republic of Stellaland in the country of the Baralong under Montsioa, with an area of 51,736 square miles and a population of 72,736, including 5,211 whites, was incorporated in Cape Colony in November, 1895, new arrangements were made with Khama, Sebele, and Bathoen, through whose districts the railroad to Rhodesia was afterward built. The area of the protectorate is about 213,000 square miles, and the population 200,000.

Basutoland.—The Basuto country, lying between Cape Colony, Natal, and the Orange Free State, was made a British protectorate in 1868, annexed to Cape Colony in 1874, and taken directly under the authority of the Crown in 1884. It is administered by a Resident Commissioner, H. C. Sloley in 1902, under the High Commissioner's direction. Chiefs allied to the family of Moshesh hold authority in the wards into which the 7 districts are subdivided. European settlement on the land is not allowed. There were 674 European officials, missionaries, and traders in 1891 and 263,500 natives, who grow mealies, wheat, and Kafir corn and rear live stock. There were 81,

194 horses and 320,934 cattle. The police force consists of 21 Europeans and 238 natives. The revenue in 1901 was £74,891, derived from a hut tax of 20s., licenses, the post-office, and a share in the customs duties. The dutiable imports, consisting of clothing, groceries, blankets, plows, saddlery, and hardware, amounted in the year ending June 30, 1901, to £145,474. The exports, consisting of grain, wool, horses, and cattle, amounted to £361,647.

The British authorities had difficulties with the Basutos during and after the war. The young chief, Joel, offered to make common cause with the Boers, but was told it was a white man's war. He nevertheless gave them valuable assistance in food and horses, and his men served them on their farms and in the field. After the war the British proposed to try him for treason. Lethorodi, the paramount chief, demurred, but he was arrested and tried at Maseru, and sentenced to pay a fine in cattle and spend a year in prison.

Natal.—The colony of Natal has a representative government. The Governor appoints the ministers and the Legislative Council, and his assent, which can be revoked within two years, is necessary for the enactment of laws. He may also present laws to the Assembly or the Council. The Legislative Council has 12 members, 1 of whom represents Zululand, which was annexed to the colony on Dec. 30, 1897. The Legislative Assembly has 39 members, including 2 for Zululand. They are elected for four years by owners of £50 worth of real property or occupants of property paying £10 rent or possessors of an income of £96. All money bills must be introduced by the Governor. The Governor is Col. Sir Henry Edward McCallum. The ministry formed on June 9, 1899, was composed as follows: Premier and Minister of Lands and Works, Lieut.-Col. Sir A. H. Hime; Attorney-General and Minister of Education, H. Bale; Secretary for Native Affairs, F. R. Moor; Colonial Secretary, C. J. Smythe; Treasurer, W. Arbuckle; Minister of Agriculture, H. D. Winter.

The colony contained 18,750 square miles before the annexation of Zululand, which added 10,450 miles to its area, making a total of 29,200 square miles. The population in 1900, exclusive of military, foreigners, and refugees from the Orange River State and the Transvaal, consisted of 64,951 whites, 70,369 East Indians, and 794,650 Kaffirs. Durban had 48,410 inhabitants on Dec. 31, 1900; Pietermaritzburg, 28,500.

The revenue of the colony for the year ending June 30, 1900, was £1,886,710, and the expenditure £1,990,522. Of the revenue £792,384 came from railroads, £560,415 from customs duties, £154,817 from stamps, licenses, and the native hut tax, £78,366 from sales of land, £69,529 from the post-office, £52,106 from port dues, and £28,909 from excise duties. Of the expenditures £756,044 were for railroads, £127,035 for public works; loan expenditure, £816,213. The public debt on June 30, 1900, amounted to £9,019,143. The cost of the police in 1900 was £163,803, and the expenditure of the colony for the Natal volunteers was £52,716, in addition to which the volunteers and police on active service were paid by the colony. The white police force numbered 671 men, the volunteers 1,471 men, not counting the naval defense corps of 101 men.

The sugar-crop of 1900, impaired by drought, was only 333,768 hundredweight. There were 4,162 acres planted in tea, yielding 1,679,600 pounds. The total cultivated area was 636,374 acres, of which 176,655 acres were planted by Europeans, 38,268 acres by Indians, and 421,451 by

natives. The live stock of the Europeans consisted of 29,222 horses, 202,591 cattle, 530,754 sheep, and 70,310 goats; that of the natives numbered 24,874 horses, 145,409 cattle, 55,701 sheep, and 331,554 goats. The output of coal for 1900 was 241,330 tons, only from June, when the British recaptured the mines. Iron-mining has begun, and copper has been found in the north. The total value of imports in 1900 was £9,789,104, and of exports £4,792,097. About 63 per cent. of the imports come from Great Britain, but in 1900 only 17 per cent. of the exports went to Great Britain. The imports of machinery were £669,262; of dry-goods, £409,344; of clothing, £374,711; of iron manufactures and hardware, £368,342; of flour and grain, £287,707; of wine, ale, and spirits, £202,000; of leather manufactures, £191,071; of cotton goods, £85,969; of woolen goods, £40,136.

The number of merchant vessels entered in 1900 was 664, of 1,318,885 tons; cleared, 641, of 1,296,468 tons. Of those entered 109, of 165,887 tons, came direct from Great Britain and 354, of 966,500 tons, from Cape Colony, of which 339, of 766,483 tons, came from Great Britain; of those cleared 53, of 111,255 tons, sailed direct for Great Britain and 254, of 567,863 tons, for Cape Colony.

The length of railroads in 1902 was 612 miles, all operated by the Government, and all, except 50 miles in Zululand, owned by the Government. The main line from Durban through Pietermaritzburg to the Transvaal frontier, 306 miles, connects with the line to Johannesburg and Pretoria. The branch from Glencoe to the Buffalo river is to be extended to Vryheid. The capital cost of the railroads was £7,808,216. The receipts in 1900 were £1,242,280, and expenses £891,089. The net receipts were equal to 4.49 per cent. on the capital.

The British Government, acceding to the request of the Natal Parliament, annexed to Natal the Transvaal districts of Vryheid and Utrecht, but refused to add the districts of Piet Retief and Wakkerstroom and the Harrismith and Vrede districts of the Orange River Colony.

Orange River Colony.—The annexation of the Orange Free State to the British Empire under the name of the Orange River Colony was proclaimed on May 24, 1900, after the occupation of Bloemfontein, the capital, by the British forces. The entire territory was still under military administration in the beginning of 1902. The British Government promised to restore civil government as soon as circumstances would permit. Lord Milner was appointed Governor of both the Orange River Colony and the Transvaal, and Brig.-Gen. H. J. Goud-Adams Lieutenant-Governor under him of the Orange River Colony.

The area of the colony when the annexation was declared was 48,326 square miles, with a population in 1891 of 77,716 whites and 129,787 natives. Of the whites 10,761 were farmers, and of the colored 41,817 were servants of the whites. The normal revenue in time of peace was estimated by Sir David Barbour, appointed by the British Government to investigate the financial resources of the conquered territories, at £740,000, and expenditure at £494,000. The British administrators calculated for 1902, on the basis of a restoration of peace, on a revenue of £756,200 and an expenditure of £691,140, including £300,000 for the South African constabulary. The receipts of the British administration from May 24, 1900, to June 30, 1901, were £402,925; but the civil revenue was £301,800, of which £151,000 came from customs, £43,636 from the post-office, £28,000 from licenses and stamps, £11,823 from quit-rents, and £10,100 from the native poll-tax. The

total expenditure for the same period was £386,038, the expenditure for purely civil purposes £217,974.

The revenue of the Boer Government in 1898 was £799,758, including £408,578 from railroads, and the expenditure was £956,752, including £508,478 for railroads. For 1899 the revenue was estimated at £656,914, and expenditure at £948,523. The Government in 1898 had a debt of £30,000, exclusive of the debt to the Cape Government for building the railroad, while it owned £70,000 of stock in the national bank and possessed telegraphs, etc., worth £496,381. The Government lands had an area of 565,000 acres. The Boers raised sheep, horses, cattle, and ostriches and cultivated grain, although much of the land is too dry for agriculture. There are extensive coal-fields and diamond-fields which yielded £1,508,661 in 1898. The British authorities settled military colonists on farms in the conquered districts and furnished them with implements, stores, and breeding stock with the object of checking Boer influence and restocking the country with animals. Large tracts in the Ficksburg and Thaba Nchu districts were acquired with the object of dividing them among British settlers.

All merchandise imported into the country figures in the imports of the Cape Colony or Natal except cereals from Basutoland, which are consumed or reexported to the Transvaal, as also Basuto cattle and horses, and the wool from Basutoland, which appears again in the Orange River wool exports. Of £1,190,932 of imports in 1898 the value of £849,540 came from Cape Colony, £224,029 from Natal, £68,708 from Basutoland, and £48,655 from the South African Republic. Of £1,923,425 of exports £910,289 went to the South African Republic, £820,467 to Cape Colony, £147,177 to Natal, and £45,492 to Basutoland. The length of the Government railroad, traversing the country and connecting the Transvaal mines and towns with the Cape network, is 392 miles, built at a cost of £2,771,945. The telegraphs in the colony have 1,480 miles of line, with 1,700 miles of wire, besides 420 miles of line and 1,119 miles of wire on the railroad.

The Transvaal.—The South African Republic after the occupation of Pretoria by British troops was declared on Sept. 1, 1900, to be annexed to the British dominions under the name of the Transvaal Colony. Sir Alfred Milner, created Lord Milner, was appointed Governor of both the Transvaal and the Orange River Colony, being replaced as Governor and Commander-in-Chief of Cape Colony by the Governor of Natal, but retaining the office of High Commissioner for British South Africa.

The area of the Transvaal is 119,139 square miles. The imperfect census of 1896 gave the population as 245,397 whites and the colored population was estimated at 622,500. An official estimate of 1898 made the colored population 748,759, raising the total to 1,094,156. Pretoria, the capital, had about 10,000 inhabitants; Johannesburg, 102,078, of whom 50,907 were white, 42,533 Kaffirs, 4,807 Indians and Chinese, 952 Malays, and 2,879 of mixed race. The revenue of the Republican Government in 1898 was £3,983,560, and expenditure £3,971,473. For 1899 the revenue was estimated at £4,087,852, and expenditure at £3,951,239. Sir David Barbour, in a report on the finances made to the British Government, estimated the future revenue at £3,341,920, and expenditure at £2,607,121. From customs a revenue of £1,100,000 is expected to be obtained; from stamps and licenses, £480,000; from the Netherlands Railroad Company's line

to Delagoa Bay, £375,000; from prospecting and mining licenses, £200,000; from the post-office, £135,000; from taxes on natives, £110,000. The Boer Government imposed a poll-tax of £2 on all adult male natives except those living with white people as servants, also a native hut-tax of 10s. The chief expenditures as estimated by Sir D. Barbour were £528,788 for public works, £383,480 for police and prisons, £344,220 for posts and telegraphs, and £200,000 for education. The receipts under British administration, with balances left in bank by the late Government, were almost sufficient to defray the expenses of civil administration, exclusive of the Boer concentration camps and the constabulary, so that from an advance of £1,500,000 voted by the British Parliament for the Transvaal and Orange River Colonies only £250,000 were required by the Transvaal. The debt left by the South African Republic amounted to £2,660,394 on Jan. 1, 1899. The Government owns lands in the gold-fields of the Rand and the whole of the Barberton gold-fields, valued at millions of pounds sterling.

Several parts of the Transvaal are well adapted for agriculture, but not more than 50,000 acres are cultivated, and the bulk of vegetable foods must be imported. Cattle and sheep were kept on the great farms of the Boers. There were 12,245 farms in 1898, of which 2,861 belonged to the Government, 1,612 had passed into the hands of non-resident owners and companies, and 7,772 were owned by Boers. Gold was first produced in the Transvaal in 1884 in small amounts for the first years, reaching an annual production of £967,416 in 1888, and rising to £16,044,135 in 1898, after which the war interrupted regular mining operations. The entire production up to the end of that year was £69,844,643. In 1899 the mines of the Witwatersrand produced 4,069,066 ounces. From the beginning of October, 1899, to the end of March, 1900, the Republican Government operated the Rand mines, taking out 251,677 ounces in the first quarter of 1900. Then mining ceased until operations were resumed in May, 1901, by 8 companies, which in six months extracted only £624,012 worth.

New regulations framed by the British authorities are intended to protect the native laborers from fraud and oppression, and to suppress the illegal liquor traffic. Labor agents and overseers of compounds are obliged to take out licenses. The passport regulations have been made lighter for natives, and labor contracts can not be made with them unless approved by the native commissioner for a longer period than one year. There were about 13,000 whites and 77,000 natives employed in the mines of the Witwatersrand in the beginning of 1899.

Diamonds are found near Pretoria and in other parts of the Transvaal. In 1898 the value of £43,730 was produced. Copper, silver, and lead exist, and good coal is mined in the neighborhood of the gold-fields. In 1898 the output was 1,907,808 tons, valued at £668,346.

The dutiable imports in 1898 were valued at £10,632,893. In 1899 the value was £3,385,349; in the year ending June 30, 1900, until the war interrupted trade, £737,356. Under the British administration the imports for the first six months of 1901 were £1,143,192, exclusive of supplies for the army or military purposes or for the railroads or the Government. The chief articles were dry-goods, clothing, boots and shoes, preserved meats, groceries, flour, butter, condensed milk, sugar, preserved fish, whisky, mealies, woolen cloth, hats, cigarettes, cigars, and smoking tobacco.

The length of railroads completed in the Trans-

vaal in 1898 was 774 miles, and 270 miles were building and 252 miles projected. The telegraph-lines have a length of 2,200 miles, with 5,650 miles of wire.

The Rand mines were opened gradually as the military authorities allowed the refugees from Johannesburg to return. Permission was given for 450 stamps before the end of 1901, and in July 2,000 stamps were working. During the war the Boer Government operated some of the mines until their evacuation of Johannesburg, and from these and the vaults and trains the Boers obtained £2,700,000 of gold, besides which the mines sustained direct losses from the war amounting to £3,400,000. Capital did not flow readily to Johannesburg, and there was a fall in mining shares after the peace and the reopening of the mines owing to uncertainty as to the part of the war debt that the British Government meant to make the mining industry bear. The cost of living was higher than it ever had been. The railroad tariffs, customs duties, and other taxes were as high or higher. Before the war the Republican Government imposed a direct tax of 5 per cent. on the profits of mines, promising to counterbalance it by reducing railroad freights and customs duties. Lord Milner abolished duties on building materials, machinery, and other articles needed for the rapid development of the country, and American machinery, structural steel, and timber were sold in quantities auguring a recovery of enterprise. The labor difficulty affected mining more than anything else. The black laborers that formerly worked in the mines were scattered. The chiefs in the northern Transvaal furnished some. The Basutos were employed mostly in transport. The Government employed other blacks on the railroads that were being constructed to Thaba Nchu and Vereeniging. The mines obtained no considerable supply until an arrangement was made with the Portuguese authorities for natives from the coast territories. On inquiry it was found that there were not half enough blacks in all South Africa for the mines, farms, and other industries. White labor was tried in some mines, but was found too expensive.

The restoration of the burghers to their farms with their families in the concentration camps was a slow business. The Boers had many complaints to make of the way in which it was carried out. Tools, stock, material for houses, seed, and provisions were to be furnished from the fund of £3,000,000, but this was administered in a way that did them little good. Even those that had means could not get permits to return or leave to take their families from the concentration camps. Martial law was not withdrawn until Nov. 19, and it was succeeded by an indemnity and peace preservation act confirming all acts and sentences of the courts-martial, empowering the authorities to arrest and detain without a warrant persons suspected of sedition and to expel from the country persons considered dangerous to the peace, and requiring permits to be taken out by any person wishing to enter the country, which would not be granted to burghers unless they take the oath of allegiance or make the equivalent declaration. The Boer generals complained to Mr. Chamberlain that under the peace convention the oath of allegiance could not be required. The Boers of the *dykwohner* class who had no land or capital of their own, by arrangement with the landowners, received small farms on lease and were assisted by the Government with implements and farm animals. The Transvaal was nearly denuded of live stock excepting the remaining draft-oxen used in transport. Cattle

for restocking the farms were brought from Madagascar and other countries by the Government, and Boers were allowed to go to Cape Colony to buy breeding stock. Lord Milner had a plan for settling British farmers on irrigated farms of 20 acres or more and grazing farms of 2,000 or 3,000 acres. Excepting some of the discharged soldiers, no settlers were found suitable to form colonies, nor could they be started until large sums had been spent on irrigation works for the agricultural colonies. The Government possessed large tracts of land and also many town lots. The most valuable undeveloped mining lands in the country belonged to the Government. Those whose capabilities were known had been promised by the Republican Government to the miners, to be apportioned by lot. The lands next to the Rand mines under which the ledges run far below the surface were promised to the mining companies at a fixed price. Mr. Chamberlain disappointed the miners and prospectors when he intimated that the Government would not, like the Republican Government, give away such valuable assets in the future, and the opinion of the mining community was that unless prospectors were, on paying a small license fee, allowed to peg claims no one would explore new territory for gold. The Government increased the tax on mining profits from 5 per cent. to 10 per cent. Lord Milner was perplexed by the financial difficulties that beset him. He endeavored to induce the Cape and Natal governments to abolish the duties on mealies and other foodstuffs imposed for the protection of their agriculture from overseas competition and also to reduce their railroad tariffs. When they refused he intimated to the Cape Commissioner of Public Works that the military rule might be restored in Cape Colony. The freight in the Transvaal sections of the railroads is twice as high as on the Cape and Natal railroads, and he could not reduce that without a deficit in his budget. The South African freights are the main cause of the dearth of living in the Transvaal. Goods transported 1,500 miles in the United States and thence by steamer pay higher rates for the rest of the carriage to Johannesburg than the rail and ocean freights to Delagoa Bay. The estimate of revenue for the Transvaal for the year ending June 30, 1903, is £4,000,000, and of expenditure £3,700,000. Sir Arthur Lawley was appointed Lieutenant-Governor of the Transvaal under the High Commissioner and entered upon office on Sept. 1.

Swaziland.—The native territory of Swaziland, inhabited by a branch of the Zulus, was a dependency of the South African Republic. It has an area of 8,500 square miles and a population of about 65,000 natives and 1,000 whites. The latter are Boers who have obtained farms from the native chiefs and British traders. Ngwani, or Bunu, the paramount chief, died in December, 1899, and a queen regent rules the natives. When the Boer War broke out the Boer officials and almost all the other whites left the country. The revenue is about £32,000 and the expenditure has been £80,000.

Rhodesia.—Matabeleland and Mashonaland were declared to be within the British sphere of influence in 1888, and in 1889 the British South Africa Company was chartered and empowered to administer these countries and to exploit their mineral and other resources with the object of promoting trade, encouraging colonization, and extending northward the railroad and telegraph systems of Cape Colony. The sphere over which the administrative powers and commercial privileges were extended, after the agreement to

which Portugal, yielding to superior force, subscribed on June 11, 1891, embraced all the regions north of the Transvaal and Cape Colony and south of the Congo State and German East Africa, west of the territories of Mozambique and Lourenço Marques left to Portugal and east of the Portuguese colony of Angola and German Damaraland and Namaqualand. British Bechuanaland was subsequently annexed to Cape Colony, the British Central African Protectorate obtained the right to retain its separate administration, and the Bechuanaland Protectorate was placed under the immediate direction of the High Commissioner. On Nov. 25, 1898, after Dr. Jameson's raid from Matabeleland into the Transvaal, a new scheme of government was promulgated. A Resident Commissioner is appointed by the Secretary of State for the Colonies, and to assist the company's administrator there is an Executive Council, consisting of the Resident Commissioner, the administrators of the different divisions, his subordinates, and 4 members appointed for three years by the company with the approval of the Secretary of State. A Legislative Council was created, consisting of the company's administrator, who presides, the Resident Commissioner, 5 members appointed by the company and approved by the Secretary of State, and 4 members elected by the registered electors. The life of the Legislative Council is three years unless it is dissolved previously. It has power to pass ordinances which have the effect of law when approved by the Resident Commissioner, but may be vetoed at any time within a year. Financial estimates for each year are submitted to the Legislative Council by the company's administrator, and when passed must have the approval of the Resident Commissioner. Judges are nominated by the company and confirmed by the Secretary of State. Natives are on an equal political footing with whites, excepting that no arms, ammunition, or liquor may be sold to them. A secretary for native affairs looks after their interests under the direction of the Resident Commissioner, who has entire control over the military police. If the company takes possession of mineral lands within the native reservations, other lands must be given in exchange. The Resident Commissioner in 1902 was Lieut.-Col. Sir Marshal J. Clarke. The administrator of Southern Rhodesia was W. H. Milton; administrator of Northeastern Rhodesia, Robert E. Codrington; administrator of Northwestern Rhodesia, R. T. Coryndon. The capital of the British South Africa Company, originally £1,000,000, has been successively increased to £4,375,000 of stock and £1,250,000 of debentures. The revenue, derived from mining, trading, and professional licenses, business stands, and the postal and telegraph services, amounted to £469,000, and expenditures, including supplementary estimates, to £758,582. The regions covered by the charter of the British South Africa Company have a total area of over 1,000,000 square miles, of which 300,000 lie south and 700,000 north of the Zambezi river. The division bounded by 22° of south latitude and the Limpopo on the south and the Zambezi on the north, known as Southern Rhodesia, embracing Matabeleland and Mashonaland, has an area of 144,000 square miles. The population of Matabeleland in May, 1901, comprised 4,021 Europeans, 187 Asiatics, and 328,729 natives. The population of Mashonaland comprised 7,011 Europeans, 906 Asiatics, and 162,211 natives. At the end of 1901 there were over 300 companies or syndicates formed for the purpose of mining in Rhodesia, mostly for the development and ex-

exploitation of the gold-fields of Mashonaland and Matabeleland, which have an extent of 5,250 square miles. The quantity of gold extracted up to that time was 337,056 ounces. A company has the concession of the coal-fields of Wankies, which have an area of 600 square miles. Silver, copper, zinc, lead, antimony, and arsenic have been found.

The Rhodesian Railroad, which joins the Cape system at Vryburg and runs through Bechuanaland and Matabeleland to Buluwayo, has been taken over by the Cape Government. It will be extended by the company to the Wankie coal-mines, and thence to the Victoria Falls of the Zambesi and northward to Lake Tanganyika. A branch will run southward to Gwanda, and thence to Tuli. A railroad built by the Mashonaland Railway Company from Beira across Portuguese country to Umtali has been completed to Salisbury, and a line is being built from that town, which is the seat of the administration, through Hartley and Gwelo to Buluwayo. A railroad 75 miles long connects the mines of Lomagundi with Salisbury.

The post-office in 1901 carried 661,444 South African letters and postal cards and 279,921 for places beyond the seas; number of newspapers, books, and parcels, 228,783; registered packets, 31,889. The postal revenue was £16,730; expenditure, £27,237.

The length of telegraphs in Rhodesia on April 1, 1901, was 3,554 miles, with 5,215 miles of wire. Of the African transcontinental line, which has reached Blantyre in British Central Africa and been carried to Tanganyika and along its shore through German territory to Ujiji, and is being extended to the Nile north, was 1,308 miles. There were 185,408 telegrams received and 211,267 despatched in 1901; receipts, £34,653; expenses, £27,321; receipts from telephones, £4,230.

The undeveloped region north of the Zambesi is divided into Northwestern Rhodesia, embracing the native kingdom of Barotseland, and Northeastern Rhodesia. Northeastern Rhodesia, comprising the region lying between the lakes Tanganyika, Nyasa, Mweru, and Bangweolo has an area of about 120,000 square miles and a population exceeding 300,000. There were 165 British residents in 1901. It is divided into the districts of Tanganyika, Mweru, Awemba, Luapala, Kafue, Zumbo, and East, West, and North Loangwa. The seat of administration is Fort Jameson, on the Tanganyika plateau. The forces of the British Central Africa Protectorate preserve order. Settlers have begun to plant coffee and to utilize the abundant fiber-plants which grow wild. Rubber and ivory are the chief exports at present. Coal and gold have been discovered.

In Barotseland the seat of the administration is at Victoria Falls. There are 6 stations altogether. Col. Colin Harding has organized a native police force. The slave-trade has been suppressed and the traffic in liquor is regulated, with the concurrence of Lewanika, the Barotse king, whose kraal is at Lealui.

Central Africa Protectorate.—The British Central Africa Protectorate, constituted on May 14, 1891, is administered by a Royal Commissioner under instructions from the Secretary of State for Foreign Affairs. The area is 42,217 square miles, south and east of Lake Nyasa. The population is about 900,000. There were 450 Europeans and 250 East Indians in 1901. Europeans cultivate coffee in the Blantyre province, exporting 1,100 tons in 1899. Rice is grown with success, and wheat has been introduced. Horses thrive in the highlands. The revenue collected in 1900

was £47,077, and expenditure £96,366, the deficiency being supplied by a grant from the Imperial Government. In 1901 the local revenue was £49,215, and expenditure £78,366. The military force maintained to preserve order and combat the slave-trade consists of 215 Sikhs and one of the battalions of the native Central Africa regiment, the other battalion of which has served in Mauritius and Somaliland and in active operations on the west coast of Africa. There is also a police force of 200 men. The Gwendolen, of 350 tons, and two other gunboats are maintained on the upper Shire and Lake Nyasa, and British gunboats by arrangement with the Portuguese Government patrol the lower Shire and the Zambesi. At Chinde, the port at the mouth of the Zambesi, merchandise is transhipped to and from river steamers free of duty in the British concession. A railroad is being constructed from Chirromo to Blantyre. The imports, consisting of cottons, machinery, provisions, hardware, and agricultural implements, rose steadily from £78,655 in 1897 to £176,000 in 1900; the exports, consisting of ivory, coffee, and rubber, from £23,299 to £79,000. Coffee, owing to a decline in price and failure of transport, fell off in the latter year, and still more in 1901, when the total value of imports was £146,063 and of exports £38,722. The transit trade was £31,300 in 1900 and £51,333 in 1901.

Portuguese Possessions.—The Mozambique and Loanda territories, now separated by British Central Africa and Rhodesia, are nearly all that remains of the former colonial empire of Portugal. Portuguese East Africa, divided into the districts of Mozambique, Zambesi, and Lourenço Marques, the last including the Inhambane and Gaza territories, has a total area of 301,000 square miles, with about 3,120,000 inhabitants. The chartered Nyasa Company has a commercial monopoly and administrative authority over the northern part lying between the Rovuma and Lurio rivers and Lake Nyasa. The Mozambique Company has sovereign rights till 1941 over Manica and Sofala. The Zambesi Company conducts agricultural and mining enterprises and trading operations on the Zambesi river. The Inhambane Company failed to utilize its privileges in the district conceded to it and forfeited its charter. The Portuguese Government keeps up a military force of 3,904 men, of whom 2,468 are natives, reducing it to 2,250 when there are no disturbances. The local revenue in 1902 was estimated at 2,837,545 milreis, which the metropolitan Government has to supplement to provide for a total expenditure of 3,050,301 milreis. The imports of the territories under Government administration were 5,829,880 milreis in value, and exports 5,836,404 milreis; imports of the Mozambique Company were 4,737,723 milreis, and exports 270,601 milreis; imports of the Nyasa Company were 469,396 milreis, and exports 320,060 milreis; total imports, 11,036,999 milreis; total exports, 6,427,065 milreis; transit trade, 6,263,867 milreis. The port of Mozambique had in 1900 a population of 285 Europeans, 226 Asiatics, and 5,000 natives; Chinde, 218 Europeans and 1,300 natives; Beira, 1,438 Europeans and 2,000 natives; Inhambane, 100 Europeans, 250 Asiatics, and 3,000 natives; Lourenço Marques, 5,130 Europeans and 1,500 natives. The imports at Lourenço Marques in 1898 were £751,931; exports, £16,800; transit trade, £1,770,082; tonnage entered, 1,032,543. At Beira in 1900 the imports were £1,075,161; exports, £60,133; transit trade, £926,402; tonnage entered, 726,725. At Quilimane imports were £117,987, and exports £73,587; tonnage entered,

102,959. At Inhambane imports were £50,337; exports, £30,565; transit trade, £137,955; tonnage entered, 41,000. At Chinde the transit trade amounted to £69,419. At Mozambique the imports were £90,351; exports, £62,434; tonnage entered, 266,239. The imports into the Portuguese colony consist of cotton goods, hardware, and liquors. The exports are rubber, ores, ivory, and wax. The gold-fields in Manicaland have been prospected by British and other miners, and their claims are awaiting transport facilities before they can be developed. There were 23 steamboats, of 742 tons, and 106 barges, of 3,320 tons, plying on the Zambesi and Shire rivers in 1900. The Delagoa Bay Railroad has a length of 57 miles in Portuguese territory to the Transvaal border, and from there to Pretoria, 290 miles. The Beira Railroad runs for 222 miles in Portuguese territory and is continued to Salisbury. The telegraph-lines in the colony have a length of 1,850 miles, connecting with those of the Transvaal and Rhodesia. Brig-Gen. Raphael Gorjão was Governor-General of Portuguese East Africa in 1902.

The colony of Angola has an area of 484,800 square miles and a population estimated at 4,119,000. It is divided into the districts of Congo, Loanda, Benguela, Mossamedes, and Lunda. The military force is 4,731 men, of whom 3,602 are natives, reduced in time of peace to a total of 2,721 men. The revenue for 1902 was estimated at 1,844,075 milreis, and expenditure at 1,994,072 milreis. The Governor-General was Dr. F. X. Cabral d'Olivierá Moncada. Portuguese and Belgian companies have commercial, mining, and industrial privileges. Copper, iron, petroleum, salt, and gold exist. The chief exports are rubber, coffee, wax, vegetable oils, ivory, cattle, and dried fish. The coconut-palm flourishes. Sugar-cane is raised for the distillation of rum. The total value of imports in 1900 was 7,267,239 milreis, and of exports 5,369,818 milreis. The export of rubber was 1,995,934 kilograms. The number of merchant vessels that called at the ports of Ambriz, Loanda, Benguela, and Mossamedes in 1900 was 348, of 505,146 tons. There are 244 miles of railroad and 1,170 miles of telegraph-lines.

German Southwest Africa.—The German Southwest Africa Protectorate has an area estimated at 322,450 square miles, with a population of about 200,000 Hottentots, Bushmen, Damaras, and Bantus. The number of Europeans on Jan. 1, 1901, was 3,388, of whom 2,104 were Germans, including 761 soldiers, besides whom a native force has been organized and trained. The Governor in 1902 was Col. Leutwein. A German company has commercial and mining privileges in the coast districts of Namaqualand and Damaraland, and in the north an Anglo-German company has obtained concessions. Refugee Boers have settled on grazing lands in the northeast. The German Government offers to advance 4,000 marks without interest to establish German settlers on the land. The Damaras have great herds of cattle and flocks of sheep and goats. Johannesburg capitalists have undertaken to develop copper, graphite, and asbestos deposits. The imports consist of provisions, iron manufactures, and textiles, and in 1899 amounted to 8,941,000 marks; the exports, consisting of live animals, guano, wax, feathers, etc., amounted to 1,399,478 marks. The expenditure for 1903 is estimated at 9,458,900 marks, to which the Imperial Government contributes 7,634,900 marks.

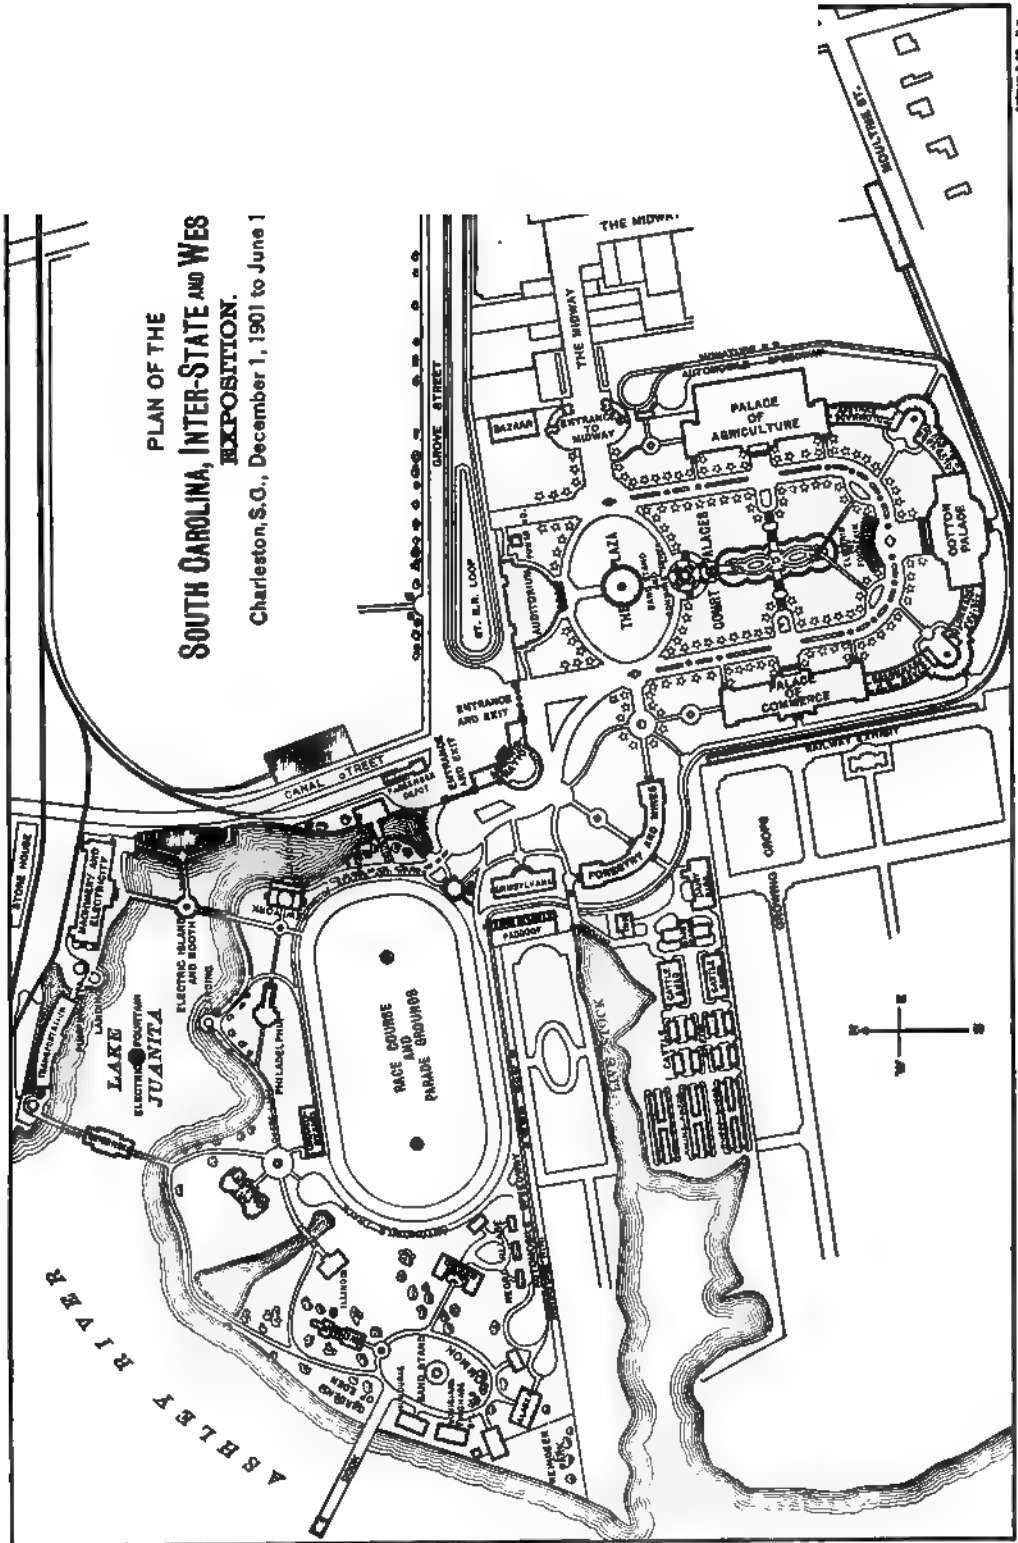

SOUTH CAROLINA. (See under UNITED STATES.)

SOUTH CAROLINA INTERSTATE AND WEST INDIAN EXPOSITION. This was held in Charleston, S. C., from Dec. 1, 1901, to June 1, 1902. It had for its special objects the establishment of new industries and commerce in the South; the opening up of new foreign markets, particularly in the West Indies; the development of American culture of silk and tea; the promotion of Southern manufactures of cotton and iron; the establishing of new steamer lines from Charleston, the central seaport of the great Southeast; and the presentation to the world of the resources and attractions of the territory along the Southern seaboard.

Organization.—A resolution approving the project of holding such an exposition in Charleston was passed by the General Assembly of South Carolina in January, 1900, and a year later an act appropriating \$50,000 for the purpose of erecting a State building on the exposition grounds and making a complete display of the products and resources of the State was unanimously adopted. Soon afterward the Governor of the State appointed a special commission of five members to direct the State exhibit. Meanwhile, the City Council of Charleston appropriated \$50,000 in aid of the exposition. A company was organized, with a capital stock of \$250,000, of which the officers were as follow: President, F. W. Wagener; vice-president, W. H. Welch; treasurer, Samuel H. Wilson; director-general, John H. Averill; assistant director-general, Algar M. Wheeler; general counsel, John F. Ficken; general auditor, P. J. Balaguer; manager of publicity and promotion, J. C. Hemphill; manager of exhibits and concessions, E. L. Tessier, Jr.; manager of law and legislation, John F. Ficken; manager of admissions and collections, H. J. Fleming; manager of negro department, Booker T. Washington; manager of live-stock department, George F. Weston; president of woman's department, Mrs. Sarah Calhoun Simonds.

Location.—A tract of 250 acres about two miles from the business center of Charleston was chosen as the site of the exposition. It included the old Washington race-course and an old plantation settled in colonial days, which had become the property of the president of the Exposition Company. The slightly rolling country lent itself readily to varied and artistic effects, and the live-oaks with their pendants of Spanish moss formed a feature that was specially attractive. The groves and green slopes of the Wagener farm provided a permanent background for the architect and landscape gardener to work upon. The grounds were easily accessible from the city by the electric railway system, and on the west side by means of Ashley river, to which the grounds extended.

Buildings.—Owing to the happy shape of the irregular tract constituting the site, it was possible to divide the grounds into a Natural Section and an Art Section, with the Administration Building marking the separation of the two. In the Natural Section were the Art Palace, the Transportation and Machinery Building, the Woman's Building, and the Negro Building, all shaded by century-old live-oaks, besides the Avenue of States and Cities, including the State buildings from New York, Pennsylvania, Maryland, Illinois, Missouri, and city buildings from Philadelphia and Cincinnati, and also Lake Juanita, covering 30 acres, over which extended the main bridge with its electrical booth and fountain. To the west were the breakwater and the building devoted to the fisheries exhibit made by the Government. To the east and south of the Adminis-

A SECTION OF THE NORTH CAROLINA BUILDING.

tration Building was the Art Section, in which were the main buildings. These were designed by Bradford L. Gilbert, who was architect in chief of the exposition, and were constructed of strong timber framework, with such iron as was needed for stiffness and additional strength, and the entire exposed surfaces were covered with stucco, the predominating color of which was a soft ivory, with white trimmings, and in some instances a color enrichment in shades of red and orange. The color tint used led to the designation of the grounds and building as the "Ivory City." The most imposing building on the grounds was the Cotton Palace, which had a facade 350 feet long and a dome rising to a height of 160 feet, while the floor space was 50,000 square feet. It was connected on either side with the Palace of Commerce and the Palace of Agriculture, two splendid buildings of lesser dimensions but similar architecture, by means of curved colonnades, broken by four exedrae of artistic design on either side. These colonnades and exedrae contained most of the Government exhibits. The three buildings, with colonnades, formed the Court of Palaces, and from an architectural standpoint was the most striking feature of the exposition. The projections and domes, red-tiled roofs and turrets, were in a typically Southern style of architecture. The motif was Spanish-American, with huge masses, simple and strong contour and outlines, with enrichments of terraces and sculpture at various entrances and initial points. In front of the Palace was a court, or *patio*, filled with tropical plants and enriched by fountains, and included the Sunken Garden with its lake. The Administration Building stood at the entrance of the grounds and covered about 15,000 square feet. It was composed of a central tower and two flanking wings placed at nearly right angles, at the extreme end of which were pylons, connected with the main building by a covered way. These covered ways formed the entrances and exits to and from the grounds. The entire length of the building and entrances was more than 400 feet. The central dome and rotunda was 75 feet in diameter, and extended about 40 feet above the roof, to a height of about 75 feet above the ground. The striking feature of this building was a great round balcony, which projected boldly into the grounds. Opposite was the building devoted to Mines and Forestry, which was circular, and was designed after one of the old palaces of Spain. It was one story high, with windows high above the ground, deeply recessed, giving restful, shadowy effects to the general design. In this building were shown the products of the mine and forest, both in the natural and the manufactured state. To the left of the Administration Building, and at the northern end was the Auditorium, capable of seating about 4,000 persons. The outside of the building toward the Court was circular, and the decorations were symbolical of the uses for which the building was designed. The acoustics received considerable attention, and one of the largest organs ever constructed was built for this exposition.

In the Natural Section, to the west of the Administration Building, and on the north side of Lake Juanita, was the Transportation Building, a long, low structure, with a deep roof covered with Spanish tiles, having many arches and columns. The design was massive, though simple, and the entire ornamentation of the building was massed on the gable above and on either side of the entrance, which showed the graceful curves of the Spanish Renaissance style of architecture. Still westward was the Machinery Building, also

on the north side of Lake Juanita. It was likewise long and low, with a *loggia* consisting of many arches and columns, simple yet massive in outline, most of the ornamentation being confined to a central porch, which formed the entrance, and above it a gable presented the picturesque curves of the Spanish Renaissance type. On the south side of the lake, and west of the Administration Building, was the Art Palace, of purely classical design and entirely of brick. It was 140 feet long and 50 feet wide, and the height of the interior walls was 30 feet. A very large skylight, 24 feet wide, extended the entire length of the building, giving ample light to display the art works. Four groups in the Dewey Arch, originally erected in New York city—War, Peace, The Army, and The Navy—adorned the exterior on the east and west. The Negro Building, after architectural features of the Spanish Renaissance order, of a strongly Mexican mission type, was in the western part of the grounds. The building resembled the letter H in general outline, with two wings enclosing an outer court, and contained 12,000 square feet of flooring. The Woman's Building was a good specimen of colonial architecture, and was once the home of William Lowndes, the statesman of South Carolina, and the headquarters of Sir Henry Clinton in the war of the Revolution. It was at the extreme west of the grounds on Ashley river. It was built of

THE AUDITORIUM.

black cypress and cedar, with fine wainscoting and panel walls, and the high mantels and stucco walls of the period. It was of special interest, owing to the large historical collections that were shown in it by the Society of the Colonial Dames.

In the Natural Section were the State buildings, the first of which, after passing the Administration Building, was that erected by Pennsylvania. In general outline it resembled the Administration Building, having the same projecting balcony, and being also in the Spanish Renaissance style of architecture. It was larger, however, being 150 feet long by 80 feet wide, with a half-circular court and piazza 12 feet wide. There were four square towers, on which the staff detail was very elaborate, and the coat of arms of Pennsylvania was above the entrance. It cost \$35,000. The Maryland Building, on the shore of Lake Juanita, was of pure colonial design, with wide piazza, tall columns, and an ample hall. The color effects of the main *loggia* were very rich and fine, and the interior complete down to the smallest detail. It cost \$25,000. The New York Building was of the Spanish Renaissance type, built about a *patio* or open court filled with tropical plants. The corners and main pediments of the building were en-

riched by beautiful columns and cloisters about 30 feet in height, supporting wide overhanging roofs covered with Spanish tile. A wide piazza at the back overhung Lake Juanita, and was shaded by the large live-oaks. Its cost was \$15,000. The Illinois Building was in the colonial style, with a wide and many-columned piazza and moss-green shingled roof. It was in the western part of the grounds, and cost \$25,000. Among the city buildings was that erected by Philadelphia, with a square Independence Hall tower, round dome, and rostral columns, in which was preserved the Liberty Bell, lent to Charleston during the exposition. Cincinnati had a modest building of one story, with a two-story tower, which was surrounded on three sides by an arcaded veranda and covered by a roof of deep-red tile. It contained numerous attractive exhibits, lent by the manufacturers of Cincinnati. Among the minor larger buildings were the buildings devoted to the interests of Cuba, Porto Rico, and Guatemala.

Statuary.—The buildings and grounds of the Charleston Exposition were generously adorned with mural decorations and statuary. The former were in the form of panels, among which were those that decorated the interior of the Auditorium, and were also in the form of gargoyles, such as the striking heads seen above the doors of the Cotton Palace and the Palaces of Commerce and Agriculture. The statuary was placed at conspicuous sites in the grounds, and included six original groups, as follow: The Aztec, by Louis A. Gudebrod; The Indian, by Carl Tefft; The Negro, by Charles A. Lopez; The Colonial, by Oscar Lenz; and The Huguenot, by Miss Elsie Ward, which were in the Court of Palaces; and Mother and Child, also by Miss Elsie Ward, which stood before the Woman's Building. A low balustrade of shells and dolphins around the Sunken Garden, as well as the baby mermaid and dolphins, and the admirable New South just beyond the bandstand on the plaza, were also original groups. Besides these, there were numerous reproductions from the antique and from modern studies. Among them was a reproduction of Macmonnies's Pan, which formed the fountain above the Sunken Garden, and French's Washington on Horseback (which was at the Paris Exposition), which stood on the great plaza in front of the Auditorium. In a little grove near the Woman's Building was the Betrothal, by Amendolz, and on the Art Building the four groups War, Peace, The Army, and The Navy, from the Dewey Arch in New York.

Amusement Features.—These were in the southeastern portion of the grounds, which were designated by the now conventional title of Midway, and included an Eskimo Village, Fair Japan, and Streets of Cairo, as ethnological features. The Cuban-American Theater, Cyclorama of Manassas, Wild West and Mexican Bull-Fight, and Wild-Animal Arena, which were theatrical, while the Moorish Palace and Crystal Palace, Night and Morning, and Palace of Light, were spectacular. In addition to these were the Old Mill, Temple of Fortune, Beautiful Jim Key, and the Ostrich Farm.

Opening Exercises.—Owing to the fact that Dec. 1 fell on Sunday, it was deemed advisable to postpone the opening of the exposition until Dec. 2, although on Dec. 1 exercises appropriate to the day were held, beginning with an invocation by Bishop Capers, of South Carolina, and followed by the singing of a dedication ode by George H. Sasse, of Charleston, set to music by Theodore Saul, and accompanied by the First Artillery Band. Then came addresses by various clergymen, and the benediction was pronounced by Mgr. Quig-

ley. The formal opening began with an imposing parade of military and civic bodies, which escorted the guests to the exposition grounds, after reviewing which the guests assembled in the Auditorium, where the ceremonies began, consisting of an invocation by Rev. Charles S. Vedder and addresses of welcome by F. W. Wagener, president of the Exposition Company, and M. B. McSweeney, Governor of the State. The orator of the occasion was Chauncey M. Depew, who was introduced by Mayor J. A. Smith, and, after reviewing the condition of the Southern States in 1866, said that in improving it the unconquerable and invincible grit and pluck of the American were never more splendidly illustrated, after which he discussed the present conditions in the South, and said that capital and enterprise are rapidly converting the vast pine forests of the South into settlements of thrift, productiveness, and happiness. At the conclusion of the oration, President Wagener, by means of a wire connected with the White House in Washington, sent cordial greetings to the President of the United States, and informed him that the building of the exposition at Charleston had been completed. President Roosevelt responded with "heartly congratulations upon what had been achieved, and my earnest wishes for the complete success of your undertaking. I hope it may prove of great and lasting benefit to our industries and to our commerce with the West Indies." The exposition was then formally declared to be open by the presiding officer.

Exhibits.—The exhibits were classified under 22 divisions, as follow: *Agriculture*.—1. Agricultural and dairy products; 2. Agricultural implements and machinery; 3. Live stock; 4. Foods and their accessories; 5. Horticulture (pomology, floriculture, viticulture). *Forestry, Fisheries, and Mines*.—6. Forestry and forest products; 7. Fish and fisheries; 8. Mines and metallurgy. *Machinery and Electricity*.—9. Machinery; 10. Electricity and electrical appliances. *Transportation Exhibits*.—11. *Good Roads, and Ordnance*.—12. Transportation exhibits and good roads exhibit (railways, vessels, vehicles, good roads exhibit, road-making machinery); 13. Ordnance and munitions of war. *Manufactures and Graphic Arts*.—14. Manufactures; 15. Graphic arts (topography, lithography, steel and copperplate printing, photo-mechanical processes, drawing, engraving, bookbinding). *Liberal Arts, Ethnology, and Archeology*.—16. Liberal arts and education (education, engineering, public works, sanitation, constructive architecture, social economy, music and the drama); 17. Ethnology and archeology. *Collective Exhibits*.—18. State collective exhibits; 19. County collective exhibits; 20. City collective exhibits; 21. Cuba and Porto Rico, and other islands of the West Indies; 22. Philippines and Hawaii; 23. Foreign exhibits. These divisions were again subdivided into groups, of which there were 135, and the groups into classes, of which there were 576. A Jury of Awards was called to the exposition on April 7 to examine the exhibits, and they made awards of diplomas of the grades of gold medal, silver medal, bronze medal, and honorable mention. Selim H. Peabody was chairman of awards.

Closing Exercises.—These occurred on Saturday, May 31, which was appropriately designated as Charleston Day. Business was suspended during the afternoon, and a program was arranged, consisting of a tournament, which was held on the race-track, and prizes were given for the best exhibitions of horsemanship. Later in the afternoon exercises were held in the Auditorium under the direction of Theodore Melchers, chairman of

THE ADMINISTRATION BUILDING.

THE COTTON PALACE AND THE SUNKEN GARDEN.

the Executive Committee. These began with a prayer by the Rev. Charles S. Vedder. Then came addresses by J. Adger Smyth, Mayor of Charleston; F. W. Wagener, president of the exposition; Capt. S. G. Butler, of the United States Marines; Henry E. Dosch, commissioner from Oregon; John F. Ficken, counsel of the exposition; and others; after which resolutions presenting the thanks of the people of Charleston and the State of South Carolina to the exposition officials were offered by Wilson G. Harvey. A military parade,

vernities, learned societies, and the most highly assessed taxpayers. Princes of the royal family, grandees of Spain having 60,000 pesetas of income, captains-general of the army, admirals of the fleet, archbishops, and Supreme Court judges are members by right of birth or of office. There are 80 of these and 100 appointed for life, and the rest are elected for ten years or the duration of the Cortes. Members of the Congress are elected for five years by universal adult male suffrage. The reigning King is Alfonso XIII, born May 17, 1886, son of Alfonso XII and Archduchess Maria Christina of Austria, who was Queen Regent from the King's birth until he came of age on May 17, 1902. The Cabinet constituted on March 6, 1901, was composed as follows: President of the Council, P. M. Sagasta; Minister of Foreign Affairs, the Duke of Almodovar; Minister of Justice and Worship, the Marquis Teverga; Minister of War, Gen. A. Weyler; Minister of Marine, the Duke of Veragua; Minister of Finance, Señor Urzaiz; Minister of the Interior, Señor Gonzalez; Minister of Public Instruction, Count Romanones; Minister of Agriculture, Industry, Commerce, and Public Works, M. Villanueva.

THE MANUFACTURES BUILDING.

terminating in a sham battle, fought on the race-course, brought the exercises to an end. The buildings were closed at dusk, but the Midway continued open until midnight, when taps were sounded, a salute was fired, and the lights were turned out.

Results.—At its close it was conceded that considerable good had been accomplished by holding an exposition in Charleston, but the number of exhibitors was comparatively small, and the attendance light. It was estimated that at least a million persons would visit the exposition, but at its close the returns showed that fewer than half that number had attended. This was due largely to the fact that the white population of Charleston is comparatively small, and of that number many could not afford to visit the exposition as frequently as was expected. It naturally followed, therefore, that there was a deficit at the close of the exposition, which was estimated to be about 30 per cent., and in consequence the Exposition Company went into the hands of a receiver. Subsequently, a bill was introduced into Congress asking for an appropriation of \$160,000 to make good the deficit, and a bill affording relief became a law. At the close of the exposition the City Council adopted a report recommending the purchase of 70 acres of the exposition site, agreeing to pay \$32,500 for it, largely in response to a sentiment that a lasting memorial of the exposition should be had as a suburban park.

Literature.—During the life of the exposition a monthly periodical, entitled *The Exposition*, was regularly issued, and illustrated articles, with the titles of the Ivory City, by T. Cuyler Smith, appeared in *Frank Leslie's Popular Monthly* for March, 1902, and *A Great Southern Exposition*, by James B. Townsend, appeared in the *Cosmopolitan* for the same month. The illustrations in this article were furnished by Edward Block.

SOUTH DAKOTA. (See under UNITED STATES.)

SPAIN, a kingdom in southwestern Europe. The legislative power is vested in the Cortes, consisting of a Senate of 360 members and a Congress of 401 members. Of the Senators half are hereditary, official, and life members, and half are elected by provincial and communal assemblies, uni-

Area and Population.—The area of the kingdom is 197,670 square miles, including ports on the coast of Morocco having an area of 13 square miles and 11,003 inhabitants. The total population of the kingdom at the census of 1897 was 18,089,500, consisting of 8,773,730 males and 9,315,770 females. The non-Spanish elements are about 440,000 speaking the Basque language in the Pyrenees, 60,000 Moors in the south, 50,000 gipsies and a comparatively small number of Jews. The legal population in 1897 was 18,226,040. The population of the chief towns was as follows: Madrid, 512,150; Barcelona, 509,589; Valencia, 204,768; Sevilla, 146,205; Malaga, 125,579; Murcia, 108,408. The number of marriages in 1900 was 161,201; of births, 627,848; of deaths, 536,716; excess of births, 91,132. The number of emigrants in 1900 was 63,020, against 53,862 in 1899.

Finances.—The ordinary revenue for 1900 was 994,818,665 pesetas, and the ordinary expenditure 906,063,503 pesetas. For 1901 the provisional returns are 957,243,491 pesetas for revenue and 930,854,193 pesetas for expenditure. In the estimates for 1902 the revenue is placed at 974,437,749 pesetas, of which 413,470,377 pesetas come from direct taxes on land, trade, mines, incomes from personal property, deeds, mortgages, bonds, Government salaries, etc.; 339,590,000 pesetas come from indirect taxes; 162,820,000 pesetas come from the tobacco monopoly, the lottery, the mint, etc.; 21,025,368 pesetas are revenues from, and 8,350,000 pesetas come from sales of national property; and 29,182,014 pesetas come from the public treasury. The estimates of expenditure for 1902 amount to 971,176,259 pesetas, of which 9,406,849 pesetas are for the civil list, 1,838,086 pesetas for the Cortes, 413,811,806 pesetas for the public-debt charges, 1,456,190 pesetas for courts of law, 71,780,500 pesetas for pensions, 986,883 pesetas for the Council of Ministers, 5,334,662 pesetas for the Ministry of Foreign Affairs, 64,202,655 pesetas for the Ministry of Justice and Worship, 154,506,716 pesetas for the Ministry of War, 35,941,702 pesetas for the Ministry of Marine, 52,578,158 pesetas for the Ministry of the Interior, 43,360,160 pesetas for the Ministry of Education and Fine Arts, 74,375,820 pesetas for the Ministry of Public Works, Agriculture, and Commerce, 19,337,253 pesetas for the Ministry of Finance, 30,259,820 pesetas for collection of taxes, and 2,000,000 pesetas for colonial charges.

The public debt on June 30, 1901, amounted to

9,651,503,304 pesetas, requiring 399,005,177 pesetas for the payment of the annual interest. The state debt consisted of 1,029,296,700 pesetas of external and 7,594,251,135 pesetas of internal debt, on which the interest charges were 41,201,685 pesetas and 321,535,806 pesetas respectively; a treasury debt of 1,027,955,469 pesetas, on which the interest is 25,276,786 pesetas; and various obligations of the treasury of amount not stated bearing 10,990,900 pesetas interest. Included in the state debt are debts of the colonies devolved upon Spain, amounting to 1,175,258,000 pesetas.

The Army.—The military forces consist of a permanent army, an active reserve, and a sedentary reserve. Any Spaniard at the age of twenty may be drawn to serve three years in the permanent army unless he buys exemption by the payment of 1,500 pesetas. The army is organized in 8 corps, of which 2 have 3 divisions, 3 have 2 divisions, and 3 have 1 division. There are, moreover, 3 divisions of infantry in the Balearic Islands, the Canary Islands, and Ceuta, and 1 brigade at Melilla. The peace strength of the regular army in 1900 was 50,273 infantry, 13,498 cavalry, 13,571 artillery, 4,536 engineers, 4,879 administrative troops, 436 royal guards, 15,261 civil guards, and 15,320 carabinieri; total, 117,774 men. The war strength was 132,000 infantry, 17,156 cavalry, 12,166 artillery, 11,027 engineers, and 11,623 administrative troops, etc.; total, 183,972 men. The annual contingent of recruits is about 80,000. The number of depot battalions is being increased, and each reserve battalion is located in a particular district, where active troops and reserves are associated in regimental organization. By this method it is expected that the total fighting strength of the nation can be raised to 1,083,595 men. The troops are armed with Mausers of the model of 1893, having a caliber of 7 millimeters. There are 16,600 horses and 272 guns.

The Navy.—The Spanish navy after the American war had only a single battle-ship left, the Pelayo, of 9,900 tons, with a speed of 16 knots, having 18 inches of armor at the water-line and 19 inches on the barbette turrets, in which are 4 9.4-inch Canet guns, and besides these there are 9 5.5-inch quick-firers and smaller guns. The first-class cruisers Cataluña, Cardenal Cisneros, and Princesa de Asturias, of 7,000 tons and 13,000 horse-power, giving a 20-knot speed, though begun before the war are not yet ready for sea. The Emperador Carlos V, of 9,235 tons, can make 20 knots with engines of 15,000 horse-power and carries a strong armament, consisting of 2 11-inch guns and 10 5.5-inch, 4 4.7-inch, and 2 3-inch quick-firers.

Commerce and Production.—The yield of cereals in 1900 was 2,740,700 metric tons of wheat on 3,568,700 hectares, 1,234,800 tons of barley on 1,389,000 hectares, 553,200 tons of rye on 731,000 hectares, 238,500 tons of oats on 379,200 hectares, and 660,800 tons of corn on 475,800 hectares. Of rice 195,600 tons were grown on 33,750 hectares. Vineyards covering 1,997,046 hectares yielded 28,089,000 hectoliters of wine in 1898 and 1,092,238 hectares of olive-groves produced 2,829,111 hectoliters of fruit. Oranges and hazelnuts are exported, as well as various preparations of fruits. Minor crops are esparto, flax, hemp, and beans. There were 2,046 mines in operation in 1900, producing 8,675,749 tons of iron ore, 2,514,545 tons of bituminous coal, 68,427 tons of anthracite, 91,133 tons of lignite, 2,747,714 tons of copper ore, 131,437 tons of lead ore, 182,016 tons of silver-lead ore, 30,214 tons of quicksilver ore, 86,158 tons of zinc ore, 112,897 tons of manganese ore, 742 tons of silver ore, 64,364 tons of sulfur ore, and 450,

041 tons of salt, the whole valued at 189,137,559 pesetas. The metallic and other products of reduction were valued at 216,446,780 pesetas, including 91,126 tons of pig-iron, 54,307 tons of wrought iron, 144,355 tons of steel, 29,652 tons of copper, 98,189 tons of lead, 74,341 tons of silver lead, 1,095 tons of quicksilver, 2,855 tons of block zinc, 2,756 tons of rolled zinc, and 99,901 kilograms of silver.

The total value of imports in 1899 was 954,156,701 pesetas, and of exports 768,207,934 pesetas. The values of the imports from and exports to different countries in 1899 are given, in pesetas, in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain.....	240,687,682	279,340,901
France.....	144,564,896	213,686,360
United States.....	119,558,539	18,195,777
Cuba.....	21,876,477	73,778,216
Germany.....	64,543,780	25,496,218
Belgium.....	35,349,215	28,913,108
Portugal.....	26,594,170	29,627,197
Russia.....	46,043,435	1,867,944
Italy.....	23,200,446	15,594,073
Argentine Republic.....	24,843,715	13,049,623
Philippine Islands.....	21,181,968	11,658,146
Sweden and Norway.....	21,091,476	2,702,859
Porto Rico.....	9,751,437	13,042,623
Spanish colonies.....	4,544,864	10,919,358
Uruguay.....	2,226,393	5,910,586
Brazil.....	1,060,348	2,009,233

The cotton-mills had 2,614,500 spindles, the woolen-mills 662,000 spindles. The production of raw silk in 1901 was 700,000 kilograms. The output of sugar was 49,027 tons from beets and 29,654 tons from cane in 1900 and in 1901 a total production of 115,000 tons was estimated. The production of the sardine canneries is valued at 15,000,000 pesetas a year.

The value of imports, including specie, in 1900 was 862,396,600 pesetas; of exports, 723,867,883 pesetas.

Dependencies.—The colonial possessions of Spain since the relinquishment of sovereignty over Cuba, the cession of Porto Rico, the Philippine Islands, and Guam to the United States, and the transfer of the other Ladrões and the Caroline and Pelew Islands to Germany, are reduced to the island of Fernando Po and its dependencies, the Rio Muni territory, and the desert coast region of Rio de Oro, south of Morocco. Fernando Po, with Annabon, Corisco, Elobey, and San Juan, has an area of 850 square miles and about 30,000 inhabitants. The Rio Muni territory is about 9,900 miles in extent. The Rio de Oro territory, with the portion of Adrar conceded to Spain in the convention concluded with France on March 29, 1901, has an area of about 100,000 square miles. The convention defines the southern boundary of Spanish territory in this region as running through the middle of the promontory of Cape Blanco to 21° 20' of north latitude, then due east to 14° west of Greenwich, then northwest and afterward northeast to where the meridian 13° west of Greenwich crosses the tropic of Cancer, from which point it runs due north. This delimitation secures for France the salt deposits of Idjil and the districts of Adrar and Temur. The Rio Muni territory extends from Muni to the Campo river and the frontier of Kamerun and inland to 10° 20' east of Greenwich. The Franco-Spanish convention gives the right of preemption to France in case Spain ever desires to sell or part with any of its possessions on the African mainland or any of the islands adjacent to the coast. The total revenue of the colonies for 1902 was estimated at 137,417 pesetas, necessitating a grant of 2,000,000

pesetas from the Spanish treasury to cover their expenses.

Politics and Legislation.—The Minister of Finance in January came into conflict with the directors of the Bank of Spain by proposing to create a separate issue department, with a reserve of gold and silver coin and the loans of the bank to the Government, viz., 150,000,000 pesetas borrowed in 1891 and 900,000,000 pesetas of 2½-per-cent. warrants on account of the war, the note issue to be restricted to 1,500,000,000 pesetas, half of it protected by a metallic reserve, after this war debt is reduced to 300,000,000 pesetas, and half the reserve to be gold coin or bullion. Various amendments were suggested and the minister at last insisted on resigning. The Minister of the Interior made himself unpopular by his treatment of labor strikes at Barcelona, which spread to other places. The Government took no measures to prevent labor troubles, but when a general strike at Barcelona resulted in riot troops were called out and a score of persons were killed. Both ministers offered their resignations on March 12, upon which all the ministers handed theirs to Señor Sagasta. The Queen Regent asked him to form a combination Cabinet, and when he refused she asked Señor Silvela, who also declined to go outside of his party. Leaders of the small groups were consulted, and one or two agreed to undertake to form a coalition Cabinet if the Liberals or Conservatives would agree to be neutral. The leaders of the two historical parties would not depart from the system of party government with full responsibility that was traditional in Spain. Señor Sagasta was therefore commissioned to form a new Cabinet, which was constituted on March 18 as follows: President of the Council, P. M. Sagasta; Minister of Foreign Affairs, Duke of Almodovar; Minister of Justice, Señor Monttilla; Minister of Finance, Señor Rodríguez; Minister of the Interior, Señor Moret; Minister of War, Gen. Weyler; Minister of Marine, Duke of Veragua; Minister of Public Instruction, Count Romanones; Minister of Agriculture, Señor Canalejas. The new Minister of the Interior had to carry out the decree of Sept. 19, 1901, requiring all religious associations excepting those authorized by the concordat to become registered within six months on pain of being dissolved. The ministry proposed to establish a Government department to deal with labor questions. There has been very little protective legislation for working men in Spain, and for this reason the laborers often resort to violence.

The Cortes, having adjourned during the ministerial crisis, met again on April 3. The new bill on bank notes, requiring the Bank of Spain to carry a cash reserve, half in gold, for all over 1,200,000,000 pesetas, was opposed by the bank directors, and also the provision that the bank should derive profits from selling Government securities. The bill stipulated that the debt of the Government to the bank should be cleared off in ten years, and provided for a foreign loan for this purpose, but this the Cortes would not authorize. The high price of food had become a serious question, with meat averaging 3½ pesetas a kilogram. A Government bill suspended the duty on meat and live cattle for six months. The municipalities were asked to substitute other taxes for the *octroi* duties on foodstuffs. In introducing the budget for 1903, showing 591,178,227 pesetas of revenue and 948,661,898 pesetas of expenditure, the Minister of Finance proposed changes in the liquor and sugar duties and in retiring pensions. The decree for closing unregistered religious associations was temporarily suspended pending negotiations with

the Vatican, which contended that all religious orders that the Government had authorized stood on the same footing as those authorized in the concordat. The Government reached a *modus vivendi* with the Holy See, agreeing temporarily to recognize all religious communities, authorized or unauthorized, that apply for civil inscription. The Radical members in the Cabinet were ignorant of this *modus vivendi*, and when it was divulged after the adjournment of the Cortes a Cabinet crisis occurred. There was a truce until the festivities of the enthronement were over. Alfonso XIII on May 17, when he reached the age of sixteen, his legal majority, took over from his mother, the Queen Regent, the powers of government as constitutional King of Spain. On May 28 Señor Canalejas resigned, and on May 31 Suarez Inclan was appointed Minister of Agriculture. The members of the Cabinet agreed on the principles that no religious association can establish itself without previous authorization, to be obtained by means of a law; that religious orders that are established must conform to the general laws regulating instruction and submit to sanitary inspection; that religious orders can not hold land except their place of residence; and that religious orders can be dissolved by unanimous vote of the Council of Ministers for reasons of public order. Señor Canalejas called for the reassembly of the Cortes to consider a bill embodying these principles, but Señor Sagasta and the other ministers did not deem the matter urgent. The religious orders were allowed till June 10 to register. The total number of associations in Spain was 3,115, with 50,933 members, of which 2,586, with 40,188 members, were for women and 529, with 10,745 members, for men. The total number that sought and obtained registration was 2,611, registration being provisional only in the case of 1,410. In the case of 150 it was withheld temporarily pending further examination, and of the remaining 354 most were orders of the concordat requiring no registration. Only 3 communities neglected to apply for registration. An issue of 338,000,000 pesetas of 5-per-cent. redeemable bonds was taken readily in June in Spanish cities at 91½ per cent. A decree was promulgated requiring private schools of all kinds to seek official authorization and to submit to periodical inspection and the laws regarding sanitary arrangements and modes of punishment, and, above all, the proper qualifications in teachers. The schools chiefly affected were those of the religious orders, which would have much to do to conform to the legal regulations if these were enforced. Agricultural laborers struck in some of the provinces, and in many places obtained the higher wages demanded. A fresh Cabinet crisis arose after the meeting of the Cortes in the fall. On Nov. 11 Señor Sagasta presented the resignations of the ministers to the King, who requested him to reconstruct the Cabinet. He endeavored this time to form a concentration Cabinet, containing Democratic elements, but the leaders of groups would give him no assistance. On Nov. 14 a homogeneous Liberal Cabinet was constituted as follows: President of the Council, Señor Sagasta; Minister of Foreign Affairs, the Duke of Almodovar; Minister of Justice, Señor Puigcerver; Minister of Finance, Señor Equilior; Minister of the Interior, Señor Moret; Minister of War, Gen. Weyler; Minister of Marine, the Duke of Veragua; Minister of Public Instruction, Señor Romanones; Minister of Public Works, Amos Salvador. The Premier was violently assailed on account of the change in the ministry. He was accused of bringing it about to please the King. On a vote of censure the min-

isters were sustained on Nov. 21 by 161 votes to 118. The attacks were continued. The ministry was forced to resign, and on Dec. 6 the Conservative leader formed a Cabinet as follows: President of the Council, Señor Silvela; Minister of Foreign Affairs, Señor Abarzuza; Minister of Justice, Señor Data; Minister of Finance, Señor Villaverde; Minister of the Interior, Señor Maura; Minister of War, Gen. Linares; Minister of Marine, Sanchez Toca; Minister of Public Instruction, Alende Salazar; Minister of Public Works, Marquis Vadillo. The sittings of the Cortes were suspended and afterward the Cortes was dissolved.

STRIKE OF THE COAL-MINERS. With the organization of the anthracite miners in Pennsylvania by the United Mine-Workers of America, in 1899, began a situation that led to the strike of 1900. Through the intervention of Senator Marcus A. Hanna and others, the operators made concessions, and trouble for a while subsided. A wage increase of 10 per cent. was continued until April, 1902. A request by the United Mine-Workers for a joint conference for settling a wage scale for the year ending March 31, 1903, was declined by the operators. At Shamokin, March 24, the miners in convention demanded a shorter work-day, a minimum day wage-scale, uniform increase of wages, and the weighing of coal for payments by the amounts mined. They resolved to appeal to the National Civic Federation, and that, in case of adjustment not being made before April 1, only three days' work a week should be allowed, except for keeping the mines in repair. They also made a provisional strike declaration.

Senator Hanna, acting for the federation, vainly endeavored to settle the difficulty, and on May 8 proposals of arbitration were made by John Mitchell, president of the United Mine-Workers, to the presidents of the coal companies, who promptly rejected them and declined to negotiate with Mr. Mitchell or to recognize the union. The position of the operators on the general question had already been indicated by one of their number in the following statement: "There is no reason why the miners should not be satisfied with present conditions. There is no reason why we should make concessions to them. The rank and file of the miners are perfectly satisfied with matters as they are."

On May 15 the strike was officially declared, and about 145,000 men quitted the mines, of whom nearly 120,000 were members of the union, the remainder being ineligible to membership. The most serious labor struggle in the history of the country had now fairly begun. The strikers demanded an increase of 20 per cent. in the pay of miners working by the ton, an eight-hour day for per diem employees without change of wages, payment by weight to be based on a ton of 2,240 pounds, and recognition of their union. The advantage of the strikers lay chiefly in the Pennsylvania law that every miner in the anthracite field must hold a certificate of competence based on not less than two years' experience. Of these, nearly the whole number belonged to the union, and without them the mines could not be worked. The miners had also been saving their money since the previous strike, in anticipation of the present contingency. A proposition to order a sympathetic strike of the bituminous miners was rejected by the convention of United Mine-Workers at Indianapolis, June 18.

Both parties to the controversy maintained a stubborn attitude; and the public, divided in opinion and sympathy, watched them with ordi-

nary interest at first, little knowing how great its own concern would become before the struggle ended. For many weeks the country was filled with rumors of compromise and attempted settlement, of overtures and conferences, which, if ever made or held, led to no visible result. From the first the operators had much to do to keep engineers, firemen, and pumpmen at work. A large number of these, obeying a union order, quitted the mines on June 2 and the following days. In most instances the companies were prepared for such an emergency, and throughout the strike they guarded against the dangers involved; but early in August it was announced that several flooded mines had been abandoned. Attempted resumption of work was usually frustrated by strikers, although some coal was constantly mined. On June 8 the employees of the Delaware, Susquehanna and Schuylkill Railroad refused to handle trains carrying special officers, deputies, or non-union mine-workers, and during the entire strike the moving of coal was impeded by obstruction of the railways.

In June, by direction of President Roosevelt, the Commissioner of Labor, Carroll D. Wright, made a personal investigation, and three months later published a report on the causes of the strike, with suggestions of remedies for conditions in the coal-field. On June 22 Mr. Mitchell renewed his appeal for arbitration.

Many arrests were made for rioting, and prisoners were held for trial. Almost from the beginning there were numerous reports of violence in different localities, destruction of property, dynamiting of colliery buildings and dwelling-houses, beating of non-union miners and others; and in the various conflicts many persons were shot and some were killed. There was loud demand for State protection, and in many quarters Gov. Stone was severely censured for vacillation and delay in calling out the militia. Finally, on July 30, he ordered two regiments to Shenandoah, where rioting and bloodshed had occurred on the 29th. Then, as on other occasions, officials of the United Mine-Workers publicly announced that lawless acts were done in utter disregard of the teachings and principles of their organization and the explicit instruction of its leaders, and called upon its members to do all in their power to suppress lawlessness and to aid the officers to maintain peace and order. The employment of military force greatly irritated the strikers and their sympathizers, many of whom were influential citizens, and their protests and open or secret hostility to the troops made the maintenance of order almost as difficult for the National Guard as it had been for the civil authorities. Yet on the night of July 31 Gen. Gobin, commander of the National Guard, reported that the situation was very quiet. In a few days, however, violence again began to spread, the soldiers themselves in some cases being attacked with stones, and orders were given to them to defend themselves against assault. Similar instructions were afterward issued, and what was called Gen. Gobin's "shoot-to-kill order," which he declared was misconceived in some quarters, aroused discussion all over the country. Sept. 23 a third regiment was ordered by the Governor to join Gen. Gobin. At this time it was declared on the authority of a military officer that two-thirds of the strikers were "ready and anxious to go back to work," and were "only deterred by the odium which would be heaped upon them by their fellows." On the other hand, it was stoutly asserted by Mr. Mitchell and other leaders, who still publicly

deprecated all violence, that the strikers remained firm and united. One of the worst outrages of the strike was the killing of a miner by a gang armed with clubs, because he, a former secretary of his union, had gone back to work. This was on Sept. 25. There were now 4 regiments in the field; on the 29th a fifth was ordered out, and a week later the entire National Guard of the State, with a maximum strength of 10,000 men. The last time the whole division had been on such duty was during the Homestead troubles in 1892. In the order, Oct. 6, calling out the full National Guard the Governor said: "In certain portions of the counties of Luzerne, Schuylkill, Carbon, Lackawanna, Susquehanna, Northumberland, and Columbia tumults and riots frequently occur and mob law reigns. Men who desire to work have been beaten and driven away and their families threatened. Railroad-trains have been delayed, stoned, and the tracks torn up. The civil authorities are unable to maintain order and have called upon the Governor and commander-in-chief of the National Guard for troops. The situation grows more serious each day. The territory involved is so extensive that the troops now on duty are insufficient to prevent all disorder. The presence of the entire division of the National Guard of Pennsylvania is necessary in these counties to maintain the public peace."

Meanwhile, repeated conferences were held and appeals were made to individuals, presidents of the coal and railway companies, strike leaders, and public representatives and officials, by citizens and organizations, with a view to settlement. The operators, including "independents," refused to yield. "So far," said one of the latter on Sept. 16, "as recent attempts at settlement are concerned, every effort, from Senator Hanna's down, has been futile." "The strike will end," declared one of the railroad presidents, "when the men come back of their own accord, and on the terms on which they worked before the strike. In no other manner can this strike be ended." The strike leaders were not less unyielding. A conference on Sept. 13 between Gov. Stone and John Mitchell was apparently fruitless, as were also communications to the Governor from the People's Alliance, which submitted peace plans, and from the People's party of Pennsylvania and the Central Labor Union of Philadelphia, both asking that the State should take and operate the anthracite mines.

Direct appeals had likewise been made to President Roosevelt for his intervention, notably by men representing the business interests of the anthracite region, who addressed him through the Public Alliance of Wilkesbarre. At the conclusion of a conference with the Cabinet, Oct. 1, the President caused to be published copies of the following telegram, which he had addressed severally to George F. Baer, president of the Reading Railway system; W. H. Truesdale, president of the Delaware, Lackawanna and Western Railroad Company; E. B. Thomas, chairman of the board, Erie Railroad Company; Thomas P. Fowler, president of the New York, Ontario and Western Railway Company; R. M. Olyphant, president of the Delaware and Hudson Company, and John Markle:

"I should greatly like to see you on Friday next, Oct. 3, at 11 o'clock A. M., here in Washington, in regard to the failure of the coal-supply, which has become a matter of vital concern to the whole nation. I have sent a similar despatch to Mr. John Mitchell, president of the United Mine-Workers of America."

The conference was held, but nothing was directly effected by it. Mr. Mitchell, in behalf of the miners, offered to submit the questions in dispute to arbitrators chosen by the President. This proposition the operators rejected, refusing to treat with the miners' organization. They called upon the President to use the power of the Government to restore order, and declared that with the protection of Federal troops they could operate the mines. They also offered, if the men returned to work, to submit grievances of individual collieries to judges of district courts of common pleas. On Oct. 6 the Commissioner of Labor, Mr. Wright, gave to John Mitchell the following message:

"If Mr. Mitchell will secure the immediate return to work of the miners in the anthracite regions, the President will at once appoint a commission to investigate thoroughly into all matters at issue between the operators and miners, and will do all within his power to obtain a settlement of those questions in accordance with the report of the commission."

To this proposal the miners did not accede, and the situation became still more critical. A few days later J. Pierpont Morgan, after conferring with the Secretary of War, the mine-operators, and President Roosevelt, offered, Oct. 13, in behalf of the coal companies, to submit to arbitration by a commission to be appointed by the President and to be composed of (1) an engineer officer of the army or navy; (2) an expert mining-engineer, not in any way connected with coal-mining properties; (3) one of the judges of the United States Court of the Eastern District of Pennsylvania; (4) a man of prominence, eminent as a sociologist; (5) a man by active participation in mining and selling coal familiar with the physical and commercial features of the business. Mining was to be resumed immediately upon the appointment of the commission, whose findings should govern the relations between the coal companies and their employees for at least three years. At Wilkesbarre, Oct. 21, the miners in convention unanimously voted in favor of this plan, and declared the strike off. On Oct. 23 mining was resumed at many places, and soon nearly the whole body of strikers were at work. The troops were shortly recalled. Oct. 29 was observed by the miners as "Mitchell day."

During the strike, which lasted more than five months, the miners were enabled to hold out with little suffering by the aid of union assessments and contributions of money from organizations and individuals. But in many parts of the country the effects of the strike were severely felt through scarcity and cost of coal. Even before cold weather the price of anthracite sometimes rose to \$20 a ton, and it was often difficult to get at any price. Dealers in many instances could only supply their customers from day to day. Cities had to suspend ordinances prohibiting the use of soft coal. Thousands of poor persons were glad to buy coal by the pailful, and in spite of the efforts of benevolent societies and individuals to supply them in this manner, when regular dealers could not do so, many suffered at times complete privation of fuel. In some places coal was taken forcibly from railway-cars by crowds of citizens, without interference of the public authorities. Some quantities of coal were imported from Great Britain. The famine continued through the greater part of the winter.

The arbitration commission, promptly named by the President, met in Washington, Oct. 24, with the following membership: Judge George Gray, United States Circuit Court, Carroll D.

Wright, Thomas H. Watkins, Gen. John M. Wilson, Edward W. Parker, E. E. Clark, and Bishop John L. Spalding. Judge Gray was elected chairman. The first conference of the commission with the parties to the controversy was held Oct. 27, and on the 30th the commissioners, at Scranton, Pa., began a personal inspection of the coal-mines and an inquiry into conditions in the anthracite region. The formal hearing opened at Scranton Nov. 14, with John Mitchell as the first witness. He had previously filed with the commission a statement of the miners' case, to which several of the presidents of the coal companies had presented their replies, in which they refused to recognize or enter into any agreement with the miners' union, denied that wages paid were unfairly low, that the hours were unreasonably long, and that miners' children were forced into the breakers, and charged the union with attempting to wreck the mines. On the stand Mr. Mitchell upheld the demands of the strikers in full. He said he would not deprive non-union men of the opportunity to buy necessities of life; that he regarded the boycott as a strike; that he opposed injunctions, and held a contract to be superior to a union constitution. There was no way of punishing a member of his union, he said, except by expulsion. He admitted that miners should work at least eight hours a day, and said they should each earn \$600 a year. He also admitted that many boys worked in mines to support their parents, and wished that the age limit might be raised from twelve to fourteen. Part of the cost of increased wages, he agreed, must be borne by the consumer. He presented figures to show the low wage rates among anthracite miners—40 to 50 per cent. less than those of bituminous miners. He virtually denied the truth of a vast majority of the reports of outrages during the strike. Some of the killing, he declared, was done by Coal and Iron police, and some by non-union men, while some alleged murders were, he believed, accidental deaths. He admitted, however, that of the 14 men killed during the strike only 3 were members of the miners' union. Dynamiting, he intimated, was done by company men to create feeling against the strikers. He denied knowledge of many things for which he had been held responsible, and of many that were matters of current report. To the proposal of a separate union for the anthracite miners he firmly objected. Mr. Mitchell showed himself so skilful under cross-examination that Mr. MacVeagh, attorney for the mining companies, said to him: "You are the best witness for yourself that has ever confronted me."

On Nov. 17 the non-union miners of the anthracite region filed with the commission their demand for increase of wages, and that no limit be put on hours of labor and earning capacity. They vigorously protested against recognition of the United Mine-Workers, recited their own wrongs, and demanded freedom from persecution and the right to sell their labor as they pleased. Subsequently Judge Gray, for the commission, announced that pending the hearing non-union miners were not to be displaced nor interfered with.

Witnesses told of boycotting and violence as the chief weapons of the strikers, of ill-treatment of non-union men, of lack of discipline in the union for prevention of such acts, of a reign of terror in the strike region, the answer on the union side commonly being a denial more or less general. In the latter part of November an attempt was made to reach an understanding

without further action of the commission, but this proved unsuccessful. At this time the "independents" were urging the coal companies to maintain their stand against recognition of the union. This they did, and were charged by the miners' counsel with bad faith in connection with the peace negotiations. Upon the operators' non-recognition of the union, proceedings before the commission were resumed. Several priests of the coal-district testified for the miners. Serious charges were made regarding the treatment of miners by some of the "independents," who endeavored to refute them. There were pathetic accounts of evictions and other hardships.

The Delaware and Hudson Coal Company showed that the average yearly wages of their miners was \$622.68. Other companies made similar exhibits. Evidence was introduced to show that miners as a rule are well paid, better than many skilled laborers, that in the public schools their children suffer no disadvantages as compared with others, and that operators are in favor of keeping children under age out of the breakers, while some miners desire child-labor. Some of the statements as to high wages were afterward discredited.

Recalled for cross-examination, Mr. Mitchell said that he had tried to avert the strike, but acknowledged that he could have prevented it by a veto, and that union men could be punished for offenses by withdrawal of charters or by suspension. Samuel Gompers told of the benefits of union labor, but limited his approval of the boycott. The side of non-union men was presented by witnesses who sustained the charges made in the statement previously submitted, and told of many injuries and outrages. Documentary evidence showed 20 cases of union men found guilty of crimes in connection with the strike. Gen. Gobin testified to violence, terrorism, and outrage on men and women; to efforts of the union to minimize the Shenandoah riot; to attacks upon the troops; and to the utter inadequacy of the soldiers to guard homes and other property and protect workmen. The operators endeavored to show that discontent and trouble were caused by the union, and that before it came into the field the relations of the men and their employers had been satisfactory. The mines, it was said, would have been ruined if pumpmen had generally obeyed the strike order. They denied Mr. Mitchell's charge that they were hindering coal-production, and declared that the union limits the number of laborers and of cars.

An outcome of the strike was the passage in Congress, Jan. 14, 1903, of a bill granting a rebate equal to the amount of duty on all imported coal for a period of one year.

The commission had heard an immense amount of testimony, but had not ended its session at the close of the year.

SUBMARINE BOATS. Only in comparatively recent years have the great nations of the world given serious attention to the submarine boat as a factor in naval warfare. But for many centuries its possibilities have appealed to inventors, and with persevering energy, against almost certain failure, they have accumulated the experience that, with added means and a revival of interest, have enabled us to add another mechanical triumph to the dawn of the twentieth century. The first boat of which anything definite is known was designed by William Bourne in 1604, but never built. Cornelius van Drebbel built "a boat of wood," which was tried in 1624 in the presence of King James I and numerous spectators. It had a capacity for 15 persons, and was moved by

means of 12 oars, which passed through the sides by means of leather stuffing-boxes. The boat, according to the reports, was completely submerged with its whole crew and the air in the boat was "kept pure by means of liquids," a secret that died with the inventor. An Englishman named Day in 1680 remained under the water in his submarine boat at Yarmouth for twelve hours, and came safely to the surface. In his second attempt the boat sank slowly and never was found. The inventor as well as the rest of the crew were drowned, and none of the details of the construction of this craft remain; it is only known that it was similar to the Drebbel boat in the fact that it possessed a double bottom which could be filled with water and had to be pumped out to bring the boat to the surface. Papin and Borelli are mentioned as having invented boats in 1672, and Stapleton in 1693, but nothing is known of these attempts.

At the outbreak of the American War of Independence, in 1775, David Bushnell, of Saybrook, Conn., built a submarine boat that up to that time

means of the screw. The torpedo and screw were then detached from the operator's boat, a clockwork mechanism inside the torpedo being set going at the same time. This clockwork could be set for six, eight, or twelve hours' run, thus allowing the operator ample time to make his escape. The boat was fitted with a rudder (*G*), with water-ballast tank (*O*)—with a valve (*N*) to admit and a pump (*P*) to draw out the water—and was kept stable by fixed ballast (*A*) and a removable lead weight (*B*), which when detached by the operator enabled him to come quickly to the surface at any time. In 1776 it is reported that a Continental officer, Sergeant Ezra Lee, attempted to attach the torpedo to the British ship *Eagle*, then blockading New York harbor. But the attaching screw came in contact with some iron part of the ship's body, and in attempting to get another position under the ship he lost his way under the water and had to discontinue his efforts at daybreak. On his return he feared that he had been discovered by the enemy and therefore disconnected the torpedo from the boat in order to lighten her and increase his speed. An hour after his return the mine exploded. The clockwork in the mine was supposed to start at the moment of detaching and had been set for twelve hours. The assertions made by Lee could never be verified, and it is therefore very probable that in the beginning he had become frightened and had set the torpedo adrift, and then waited at the surface of the water for daybreak.

Robert Fulton, the builder of the first steam-boat, began to experiment with submarine navigation in 1797, and, after interesting Napoleon Bonaparte, then Consul, in the project, he completed, in 1801, his boat, the *Nautilus*. This was crudely cigar-shaped, 21 feet 4 inches long, with a mean height of 6 feet, and was built of wood, sheathed with copper and hooped with iron. On the top was a dome with ports for observation. The keel was a heavy bar of metal, which served to keep the boat in equilibrium. When at the surface it was propelled by a sail; when diving the mast was folded downward, and, with the sail, was stowed in a groove in the top of the ship's body. Under water it was propelled by a screw, which the crew turned by means of a crank, with a multiplying motion. The diving and rising to the surface was effected by the filling or pumping out of water in the ballast-tank, which was built

BUSHNELL'S SUBMARINE BOAT;
VERTICAL LONGITUDINAL SECTION.

was the most perfect that had been invented. It was of wood, shaped like 2 turtle-shells, back to back, floating in the water tail downward, and was about 7½ feet in diameter. It contained air enough to support life for half an hour, and air could be renewed at the end of that time through small ventilators (*L* and *M*) by rising to the surface. The operator was seated in the middle, the seat forming a brace between the two sides, and in this position he had his eyes opposite one of the numerous glass plates in the cover or top of the boat. In front of him was the handle of a screw (*E*), by which the boat was propelled; another (*F*), by which it was raised or lowered; a compass (*D*), marked with phosphorus; a water-gage (*O*), to show the depth, marked with oil and phosphorus; and near him the handles or treadles of various small pumps and levers, by which water and foul air were expelled, the rudder moved, ballast let go, etc. The torpedo—or submarine magazine (*S*), as Bushnell called it—consisted of a block of oak containing a charge of about 150 pounds of powder. This block was on the upper after part of the boat and connected by means of a rope to a screw (*R*), the handle of which was directly in front of the operator. The mode of operation was to move slowly along the surface, with the top just awash, till within a short distance of a vessel at anchor, then to sink, and, coming up underneath the bottom, fasten the torpedo by

FULTON'S NAUTILUS.

in the craft. A rudder was placed at the after and an anchoring device at the forward part of the boat. In June, 1801, the *Nautilus* received a trial in the Seine, at Paris, and then was taken to Brest, where the inventor, with three men, remained an hour under water at a depth of 24 feet. On Aug. 7, 1801, they remained under the water for four hours and twenty minutes by taking a vessel of compressed air with them. He attached a mine to a pontoon and exploded it. Nevertheless the French Government, as well as the English Government, to whom he applied afterward, decided not to follow up his idea.

In the twenty years following 1844 Lodner

Phillips, a shoemaker of Michigan City, Ind., made several successful experiments with boats of his own invention. His fourth and largest boat, built in 1864, was of boiler iron, with iron frames, cigar-shaped, and about 90 feet long. It was provided with water-ballast tanks, which were emptied by compressed air, stored in pipes along the upper side of the vessel. It was propelled by man-power, and, according to report, in it he made many descents, sometimes taking with him his entire family. He endeavored to sell this boat to the United States navy and subsequently to the German navy, but it was refused by both.

The only use of the submarine boat in actual warfare was on the night of Feb. 17, 1864, when the National sloop *Housatonic* was blown up and sunk in the harbor of Charleston, S. C., by the Confederate submarine *David*. This boat was built by McClintock & Howgate in 1863.

"It was about 42 feet long, and was built of boiler-plate. The crew consisted of 8 men, of which 1 man was at the helm, and the other men turned the 2-bladed propeller by means of cranks. The boat was supposed to have attained a speed of 4 knots, and to dive to any depth, and remain there a half-hour with the whole crew in quiet water, although authentic reports of her trials do not seem to agree with this assertion. The idea of the boat was to tow a mine close under the keel of an anchored vessel, and to explode the mine through contact with the bottom of the ship. Lieut. Paine, of the Confederate navy, with 8 volunteers, undertook to attack the Union vessels. While the boat was being prepared the swell of a passing steamboat splashed into the manhole, sinking her. The 8 volunteers were lost, and Lieut. Paine succeeded in getting out, as he was standing at the manhole at the time. After the boat had been raised, Lieut. Paine made another attempt with 8 other volunteers, but the boat ran ashore at Fort Sumter and capsized. On this occasion there were 6 men lost of the crew, and only the commander and 2 men were saved. After the boat was raised for the second time and put into shape, an engineer named Aunley, who had been busy with the reconstruction, attempted a trial trip in Cooper river. While totally submerged his apparatus for getting to the surface must have become deranged, as the boat did not rise again, and it was only recovered three days later. The entire crew were, of course, dead. The next trial was undertaken by Lieut. Dixon, of the Twenty-first Volunteer Regiment. He left the harbor with 8 volunteers on Feb. 17, 1864, and succeeded in destroying the Union sloop *Housatonic*, which lay at anchor in the outward harbor of Charleston. He had somewhat changed his plans, as the attack was not made by means of mines, but was made with a pole torpedo; also the boat was not entirely submerged. During this time the manhole was left open so that the men could breathe more easily. Aboard of the *Housatonic* the boat first gave the appearance of a floating block of wood, and the crew of that vessel only became aware of their danger when it arrived within about 300 feet. They immediately slipped their anchor and started their engine, and called the crew to the guns, but before a shot could be fired—it was about two minutes after the boat had been sighted—the explosion occurred, and the *Housatonic* sank immediately. Of her crew only 5 men were killed; the remainder saved themselves by climbing into the rigging, which projected above the water. The submarine boat, however, did not succeed as well, as the wave caused by the explosion washed into the open manhole,

causing it to sink, and for the last time its entire crew were buried under the waves. The Confederates had lost already 32 men by this trial, while the Federals only lost 5 men, which would not speak very well in favor of the submarine boat."

With the experiments of Wilhelm Bauer, a Bavarian officer of artillery, the first period of submarine-boat building—that of small boats impelled entirely by man-power—came to an end. Bauer finished his first boat late in 1850. It was cigar-shaped, 25 feet long, beam 6 feet, and height 9 feet, built of $\frac{1}{2}$ -inch iron with iron frames and impelled by a large wheel, balanced with weights and geared to the propeller. At its first trial, in the harbor of Kiel, February, 1851, it leaked and sank, and Bauer and his crew of 2 men escaped drowning almost by a miracle. The highly compressed air in the hull forced open the manhole in the top of the vessel and the 3 men were shot to the surface in the air-bubble. In 1855, at the instance of the Russian Government, he built a second and larger boat, 50 feet long and 12 feet at its greatest diameter. The plan was practically the same as that of the first boat excepting that for the 22 tons of iron ballast he substituted water ballast. It took 12 men to drive the boat, and fresh air was supplied by carrying compressed oxygen in flasks, and by a spray of sea water forced into the boat. Experiments with this boat were carried on until 1858, and at one time Bauer is said to have stayed under water with his 12 men for nearly twenty hours, but it was finally rejected by the Russian navy. He afterward attempted to interest the Prussian navy in a scheme for a large submarine boat, but failed to convince the Government of its availability.

In 1863 an American inventor named Alstitt drew plans for a submarine boat that, although it never was constructed, began a new era in the building of such craft. Alstitt proposed to use, when at the surface, an ordinary steam-engine, and when diving, after the smoke-stacks had been sealed, to depend upon electricity for his power. The boat was to carry water ballast and cylinders of compressed air for ventilation during submergence, and thus involved nearly all the essential features of modern submarine construction. About the same time Admiral Bourgois and Constructor Brun, of the French navy, were working out their *Plongeur*, which was launched at Rochefort in May, 1863. It was 140 feet long, 11 feet deep, and 20 feet wide, and had an engine driven by compressed air, which was stored in tanks distributed throughout the vessel, the exhaust of which served the crew for ventilation. Two novel features of the *Plongeur* were the return to the use of the vertical screw in an attempt to control the depth of the dive when water was let into the ballast spaces, and a peculiarly constructed manhole, which was a life-boat set into a depression in the top of the vessel, and connecting with the interior by water-tight doors, and which could be readily detached from the body of the larger boat. It also had a pair of horizontal rudders at the stern. In its trials, owing to its great length, it proved itself very unstable when sailing submerged, and was soon put out of commission.

In 1868 Herr Vogel, of Dresden, had built a boat with an iron shell 16 feet long and 4 feet in depth, driven by a 3-cylinder steam-engine. The boiler was heated by oil fed by gravity to a burner of perforated copper pipe. The diving was to be accomplished entirely by admitting water into the double bottom, and to rise to the surface it was necessary to force this out with a hand-pump. He claimed for his boat that it was able to remain

submerged for three hours, but up to 1872 it appears never to have received an under-water trial.

Drzewiecki, a Russian engineer, built two boats: one in 1877, 13 feet long, driven by treadles, geared to a propeller, and carrying a single man, who by means of water-proof leather gloves communicating with a dome on the top of the boat was supposed to attach mines to the vessel attacked; and another in 1879, 20 feet long, carrying 4 men in addition to the commander. They had the usual water-ballast tanks, and a device of weights operated by chains and sliding the full length of the boat to trim it to the angle desired in diving or rising to the surface. In 1884 he built a larger boat on the same principle, driven by a motor and storage-batteries, which was favorably reported on by the Russian Government.

In 1884 Prof. Joseph Henry Tuck made experiments with a submarine boat, 30 feet long, that contained no essentially new constructional features. It was driven by a dynamo and storage-batteries, and is said to have attained a surface speed of 6 knots. It carried 2 Fish torpedoes, attached one on each side by magnetic claws, that could be operated from the interior of the boat to release the torpedoes at the proper moment. In 1886 Tuck built another boat, which he called the *Peacemaker*, 30 feet long, 8½ feet beam, and 5½ feet deep. She was propelled by a 14-horse-power steam-engine, and attained a surface speed of 8 knots. On either side of the dome and at both ends were water-proof gloves, as in Drzewiecki's boat. She also carried torpedoes in magnetic claws in the same manner as Tuck's first boat. While she made several more or less successful trials, so many faults were found in the principles of her construction that she finally failed to interest the United States navy in carrying on experiments with her.

Waddington, at Liverpool, in 1886, exhibited a boat using electricity as the motive power. It was fitted with 4 vertical propellers, 2 on a shaft, placed in wells, 1 forward and 1 aft of the main compartment of the boat. It also had 2 large horizontal rudders, 1 on each side, amidships, and horizontal and vertical rudders and a screw-propeller aft. The 45-cell storage-battery was of 8-horse power and would develop at the surface a speed of 8 knots for ten hours. There were separate motors for each of the vertical propellers. The end compartments of the boat were receptacles for compressed air for renewing the air of the boat if it became necessary. The surface trials of Waddington's boat were reported satisfactory, but it is not known whether any sub-surface tests were made. In November of the same year a boat designed by Andrew Campbell was tried in the West India Docks, London. It was 57 feet long, had a maximum diameter of 7½ feet and a displacement of 52 tons when fully submerged. It had twin screws driven by 45-horse-power electric motors, and was fitted with an ingenious system for increasing and diminishing the displacement in order to dive or rise to the surface. Four horizontal cylinders, 20 inches in diameter and capable of being pushed out about 20 inches, were placed along each side of the vessel, which, when so pushed out, increased the displacement by about ½ a ton. These projecting cylinders would, of course, be a great detriment to speed at the surface, and there are no reports further than that the scheme was successful in sinking and raising the vessel.

Nordenfelt completed his first boat in 1885. It was 64 feet long, 9 feet beam; and 12 feet deep, with a displacement of 60 tons when totally submerged. At the after-end was a vertical rudder

and the 4-bladed screw propeller, and at the forward end a pair of horizontal rudders balanced by weights. By this device Nordenfelt largely overcame the fore-and-aft unstableness that had bothered his predecessors, and which to-day is not entirely unavoidable. The boat was also fitted with vertical driving propellers, 1 on each side amidships, operated by separate engines. The speed of these propellers was regulated by a complicated mechanism, controlled by a piston acted upon by the pressure of the water outside the boat. The boat was propelled by a 100-horse-power compound surface-condenser steam-engine. When at the surface steam was generated in an ordinary Scotch boiler, using coal as fuel; when diving, superheated steam was drawn from 2 tanks, in the ends of the vessel. There were 3 other compartments: the central one occupied by the crew, and the other 2 for the engines and the boiler. At the surface air was forced into the boat by a small ventilator fan in order to reduce the temperature, when submerged the currents of cold water outside the shell were depended upon for the same purpose. The trials of this boat were more than ordinarily successful, and several of the European countries immediately took an interest in it. Nordenfelt was soon commissioned to build boats for Greece, Turkey, and Russia, and later Great Britain undertook and carried out elaborate experiments with this type. The 2 Greek boats had their official trials in the Bay of Salamis in April, 1886, and while they were accepted, the newspaper accounts of the time would lead one to believe that they fell far short of requirements. The Abd-ul-Hamid and Abd-ul-Medschid were delivered to Turkey in January, 1887. They were 100 feet long and had a displacement of 160 tons, and were impelled by 250-horse-power compound engines. They were fitted with vertical propellers fore and aft, and the horizontal rudders, in addition to being balanced by heavy pendulums, were capable of being controlled from the conning-tower. They each carried 2 torpedoes, forward on the top of the boat. At the trials at Constantinople they succeeded in making 8 knots at the surface and from 4 to 5 knots below. It is a significant and not altogether encouraging fact that in the war of 1897 neither Turkey nor Greece evinced sufficient faith in these apparently powerful vessels to put them into active service. Nordenfelt's last boat was built for Russia, at Barrow, in 1887. It was 125 feet long, 12 feet beam, and had a displacement of 160 tons at the surface, and of 250 tons when submerged. It was fitted with 2 conning-towers, and the upper part was protected by 1-inch plate from machine-gun fire. Its coal capacity was 8 tons, which could be increased to 28 by removal of the water ballast, sufficient for a 1,000-mile run at a speed of from 8 to 9 knots. She was lost in a storm on the Baltic Sea in January, 1888, while on her way to Russia after her trial off the English coast.

The essential feature of the Baker boat, invented by George C. Baker, of Detroit, and for a time under consideration by the United States navy, was its 2 propellers, 1 on each side, amidships, on a transverse shaft running through the center of gravity of the boat. The gear-casings were so fitted, by means of a worm-gear and a sprocket-chain, that the casings could be swung through an angle of 90°, and the thrust developed by their rotation directed at will in a plane at right angles to the shaft. Submergence was effected and maintained by giving the screws a sufficient angle to overcome the buoyancy by the vertical thrust, and at the same time propel her by the horizontal thrust. The boat, which was tried Nov. 26, 1892,

was of wood, covered with canvas and sheet-iron, 46 feet long and 9 feet deep. At the surface it was propelled by a 60-horse-power steam-engine, and when submerged by a 50-horse-power electric motor, fed by 232 storage-cells divided into 4 main batteries, which could be connected singly or together in order to vary the speed of the boat. At the surface the batteries could be charged by converting the motor into a dynamo. Baker made some improvements and experimented through the summer of 1893, but the propellers were so wasteful of power and the boat itself so unstable that it never attained success.

In 1897 Simon Lake, of Baltimore, began the construction of a boat, with which he made very successful trips under water. His boat, christened the Argonaut, was originally intended to assist the work of divers on sunken vessels, and when submerged, to roll on wheels upon the bottom. It was 36 feet long and about 8 feet in diameter. The 30-horse-power naphtha motor drove the propeller when the boat was sailing at the surface and the wheels when on the bottom. Nov. 1, 1902, Lake launched his third boat, the Protector, and the first torpedo-boat of this type, at Bridgeport, Conn. She is 65 feet long, 11 feet wide, and 14 feet deep, and can descend to the depth of 150 feet. She can travel on the surface, or with conning-tower awash, or at any desired depth within the limit of 150 feet, or on the bottom, where a wheel attached to the rudder steers the boat. There is a compressed-air lock which permits of divers leaving the boat while she is submerged. She has a sufficient fuel-carrying capacity to make a continuous run of 1,500 knots on the surface, with a speed of about 10 knots. She is equipped with a storage-battery capacity sufficient for a submerged run of 50 miles on one charge of the batteries, and has means for recharging the batteries without going to the surface. She carries 3 torpedo-explosion tubes, 2 at the bow and 1 in the stern. One of the dangers and difficulties in running submarine boats mid-distance between the surface and the bottom has been to keep them on an even keel. Most of the boats have shown a tendency to dive or tip back, especially when any of the crew shifted weight from one point to another. In the Lake boat this trouble is obviated by the use of hydroplanes, which serve the same purpose in the water as aeroplanes do in the air to keep a flying-machine horizontal. It was the purpose of the inventor after trial trips on Long Island Sound to take the Protector to Washington for the inspection of the Navy Department.

In 1887, and again in 1888, Hovgaard, a Danish naval officer, submitted plans for large submarine boats which have never been followed out. These were to use steam and electricity for power, and to carry a life-boat attachment similar to that of the Plongeur. A boat built after plans by Isaac Peral at the Cadiz Navy-Yard in 1888, was 72 feet long and of about 90 tons displacement, and had 2 screw propellers driven by 30-horse-power motors fed by a battery of 480 storage-cells. It had vertical propellers similar to Nordenfelt's, each driven by a 5-horse-power motor, supplied from an auxiliary battery of 120 cells. It carried a torpedo-tube and had an armored prow.

In the past fifteen years France has expended more in time and money in the investigation of submarine navigation than any other country in the world. Among the first of these more recent experiments were those with the first Goubet boat, launched at Cherbourg in 1889, which made its official trial trips in May and June, 1891. The entire boat (16 feet 4 inches long, 3

feet 3 inches beam, and 5 feet 10 inches depth) was cast in bronze in a single piece. It carried a crew of 2 men, who sat back to back with their heads in the conning-tower and directed the movements of the boat. Under the seat was a receiver of compressed air to renew the air-supply. The propeller was driven by an electric motor, and in case of necessity could be turned by hand. The water-ballast space was divided into small compartments connected by small holes, so that the ballast would not shift suddenly. On either side of the craft were fin keels to increase her stability, and a vertical rod at the bow served as a sight to steer by. This boat was small and the trials did not satisfy the inventor, and he built a second boat 26 feet long, using the same machinery. Boat No. 2 was cast of bronze in 3 pieces, which were joined together by flanges inside. This boat attained a speed of 5 or 6 knots. It carried 7 tons of lead as permanent ballast and had 2 torpedo-tubes.

Of the 2 boats designed for the French Government by Gustave Zédé the Gymnote was built at Toulon under the direction of Constructor Romazotté, and launched in the autumn of 1888. It is 56½ feet long, 6 feet in maximum diameter, and has a displacement when submerged of about 60 tons. The power is supplied by a 52-horse-power electric motor, with a 540-cell storage-battery, which together weigh about 12 tons. The forward and after ends of the boat contain the ballast tanks, which are emptied and filled by an electrically driven pump. She is fitted with vertical and horizontal rudders aft, and carries a torpedo-tube with compressed air-tanks for launching torpedoes. No provision is made for renewal of the air, as with her crew of 5 men she could stay under water for several hours without inconvenience. This boat is said to make an average surface speed of about 8 knots, and with one charging of the batteries to have a radius of action of from 40 to 100 miles. Zédé's second boat, named first La Sirène and after the death of its designer called after him, the Gustave Zédé, is 147½ feet long, 10 feet 10 inches in maximum diam-

THE FRENCH SUBMARINE GYMNOTE. (From Marine Engineering.)

eter, and has a displacement of 260 tons. It is fitted with storage-batteries and a 760-horse-power motor, which according to contract would drive the boat at a maximum speed of 8 knots in the partially submerged condition. The water ballast and the rudders are arranged as in the *Gymnote*, and in addition to the tanks for the torpedo-tubes compressed air is supplied for artificial renewal of the air in the boat. Both these boats have received extensive and thorough trials; the utmost secrecy is preserved in regard to their movements, but it is generally understood that they do not come up to the expectations of their inventor in regard to speed, and that on account of their great proportionate length they are very unstable when sailing submerged. This would seem to have influenced a return to a smaller type of boat, for the *Morse*, built after plans by Romazotté, and launched at Cherbourg, July 8, 1899, is only 118 feet long, 9 feet in greatest diameter, and displaces 146 tons, while the first *Laubeuf* boat was even smaller. The *Morse* derives her power from a 350-horse-power electric motor, and is said to average about 10 knots in the light condition. It can not really be called a submarine boat, as it is only intended to float on the surface almost entirely submerged. *Laubeuf* in his boat designed in 1899 adopted an engine using oil-fuel when at the surface and storage-batteries for submarine work, and thus gained a great advantage over the electrically driven boats, whose radius of action is limited by their necessity of remaining near a central station for recharging the batteries. Most of the later types of boats now under consideration and trial in various countries are based upon this 2-power system.

What Goubet and Zédé did for the development of the submarine boat in France Mr. J. P. Holland, of New York, has perhaps exceeded in the United States, and the acceptance of the first of 6 boats made upon his plans for the United States navy is but the successful culmination of a long series of disappointments. Holland made his first attempt in 1871 with a boat 3 feet by 2½ feet in cross-section and 14½ feet in length. It had a double bottom, a 4-horse-power oil-engine, and carried 1 man. This was followed by a larger craft, 31 feet long and 6 feet in diameter, driven by a 15-horse-power engine, and carrying 2 men. It was fitted with a 9-inch *Zalinski* dynamite-gun. His third boat, 16½ feet long and 2½ feet in diameter, sank, and was irreparably damaged at its first test. The fourth boat, 40 feet in length and about 8 feet in diameter, brought Mr. Holland's invention more prominently into notice than any of his previous craft. On March 3, 1893, Congress authorized the construction of a submarine of the Holland type, and the contract for the hull and machinery was let for \$150,000. This boat, named the *Plunger*, was to have been 84 feet long, with a maximum diameter of 11½ feet and a displacement at the surface of 149 tons and in a submerged condition of 165 tons, and when submerged to have a buoyancy of one-third of a ton, counteracted by 2 vertical propellers. The hull was to be built so strong that it could stand to be immersed to a depth of 75 feet. For sailing on the surface at light draft a water-tube boiler of 9,850 square feet of heating surface, using oil as fuel, supplied steam to 2 triple-expansion engines, each of 600 horse-power, driving the 2 wing propellers, while a third engine of similar construction and developing 300 horse-power drove the middle propellers. When submerged, the engines were to be replaced by a single 70-horse-power electric motor, which

could be connected to either one of the 3 propellers at will. The 2 vertical propellers were likewise to be driven by electric motors. The motors were to receive their current from storage-batteries, which could be charged by a dynamo connected to either engine when the boat sailed at her light draft. Compressed air was also to be carried on board, and used not only for replacing the foul air, but also to force out the water ballast. This boat, however, never was completed, and when she was found to be unsatisfactory the contractors refunded the money advanced upon her, and work was begun upon a second *Plunger*, after improved designs by Mr. Holland, to replace her. The sixth Holland submarine, the *Holland*, was built as a private venture at the Crescent Shipyard, Elizabethport, N. J., and is 53 feet 11 inches in length, 10 feet in diameter, and has a displacement of 74 tons when submerged. When on the surface she is driven by a single-screw, Otto gasoline-engine of 50 horse-power, at a speed of 8 knots an hour. When submerged, she is driven by an electric motor of 50 horse-power. Her armament consists of a torpedo-tube which lies approximately on the longitudinal axis of the vessel and a dynamite-gun which is upwardly inclined and is intended for the discharge of high-explosive shells when the vessel is at the surface. The *Holland* was purchased after trial by the United States Government in 1900 to be used for training seamen, and in experimental tests. Much useful data has been gathered from her which will be incorporated in future vessels. On June 7, 1900, Congress authorized the construction of 6 more submarines of the Holland type. Of these, 2, to be known as the *Grampus* and the *Pike*, have been constructed by the Union Iron Works, San Francisco, Cal., and the other 4, known as the *Adder*, *Moccasin*, *Porpoise*, and *Shark*, at the Crescent Shipyard. The contract price for each of these boats is \$170,000.

The diagram on the next page will show very clearly the construction of these boats and the arrangement of the various parts of their machinery and fighting equipment. They are 63 feet 4 inches over all, 11 feet 9 inches maximum diameter, and displace submerged 120 tons. The motive power consists of a 160-horse-power single-screw, 4-cylinder, Otto gasoline-engine, which is capable of giving the craft a speed of 8 knots on the surface, and a 70-horse-power electric motor, which gives the vessel a speed of 7 knots when awash or submerged. The hull is circular in cross-section and is divided by 2 water-tight bulkheads into 3 separate compartments. There is also a thorough subdivision of the bottom, and every precaution is taken to localize any injury to the hull which might threaten the buoyancy. In the forward compartment is a torpedo-tube for the discharge of 45-centimeter Whitehead torpedoes. The tube is placed with its muzzle in the nose of the craft and its axis inclined somewhat to the longitudinal axis of the vessel. The muzzle of the torpedo-tube is closed by a water-tight door, which can be lifted from within for the discharge of torpedoes. In the same forward compartment are a series of air-flasks, a gasoline-tank of 850 gallons capacity, a compensation tank which will be filled with a sufficient amount of water to compensate for the loss of weight due to the discharge of the torpedo, and one of the trimming tanks. The central compartment contains in its double bottom the main ballast tank and a circular compensating tank between the two sets of batteries. Above the double bottom and below the axis of the vessel are located the storage-batteries. These are charged

GENERAL SECTIONAL PLAN OF THE NEW SUBMARINE, ADDER, MOCCASIN, GRAMPUS, PEKE, PORPOISE, AND SHARK, FOR THE UNITED STATES NAVY.
(From Marine Engineering.)

by the gasoline-engine running the electric motor as a dynamo when the vessel is at the surface. Above the storage-batteries are carried the torpedoes, which are 45 centimeters in diameter by 11 feet 8 inches in length; and in the same compartment are a series of air-flasks, in which air at 2,000 pounds to the square inch pressure is stored. In the rear compartment is the 4-cylinder gasoline-engine, which is rated at from 160 to 190 actual horse-power, at from 320 to 390 revolutions per minute. Its net weight is 1,300 pounds. Its length over all is 9 feet 7 inches, and its total height above the crank-shaft center is 5 feet 6 inches. In these engines, which have given great satisfaction in the Holland, the distribution of the cranks and the timing of the valves and igniters are so arranged that the operations in the 4 cylinders alternate; so that while 1 is on the expansion stroke the other 3 are on the suction, compression, and exhaust strokes respectively. By this arrangement the engine is perfectly balanced and vibration is reduced to a minimum. In the construction of the vessels care has been taken that all portions of the exterior of the hull shall be free from projection of any kind that might be entangled by ropes or other obstacles when submerged. The lines of the vessels have been designed so that there shall be a minimum of resistance when they are running at the surface. The radius of action at the surface is about 400 knots, and the storage-batteries have sufficient capacity for a speed of 7 knots on a four hours' submerged run. Gearing is provided for driving the propeller direct from the gasoline-engine or connecting the engine to the main motor, accommodations being effected by means of suitable clutches. The submersion of the vessel is achieved by means of ballast tanks and a pair of horizontal driving rudders at the stern. For keeping her submerged at desired depths, use is made of the trimming and ballast tanks above described, and it is claimed that the control in this respect is very satisfactory. The air-supply and ventilation are secured by means of compressed air stored in the tanks referred to, while the gasoline vapors from the engines and, indeed, all noxious gases are carefully excluded by suitable devices, while safety-valves are provided to prevent the pressure in the vessel from exceeding that of the atmosphere. Provision is also made for automatic control of the rudders, for the purpose of preventing the vessel from taking excessive angles when diving, or coming to the surface, and also for keeping the boat submerged at the desired depth.

The vessels are controlled from the conning-tower above the working platform, which is protected from the rapid-fire guns of the enemy by 4 inches of Krupp steel.

After the acceptance of the Holland by the United States Government and the order for the building of other and larger craft the Electric Boat Company, which builds and operates the Holland boats, built a smaller craft on the same lines as the Adder, Moccasin, etc., to be used for experimenting. She was about 70 feet long and 20 feet at her greatest diameter, and was named Fulton. After several successful trials, upon one of which her crew spent a night in her in the bottom of Peconic Bay, she left New York on the morning of April 23, 1902, for Norfolk and Washington by the sea route, convoyed by the yacht Mindora and the tug Storm King. At ten o'clock on the following morning, while rounding the Delaware Breakwater, a violent explosion occurred on board, wrecking the interior

and injuring 5 of her crew. The boat had behaved splendidly throughout the trip, making several dives and proving herself entirely seaworthy. The explosion was caused, as determined by the examining board, by hydrogen gas from the storage-batteries that collected in the battery compartments and there ignited. The boat was brought back to New York, and it is the intention of the company to refit her as soon as the regular Government work is completed.

The Adder was the first of the new boats to be completed. In the early part of May, 1902, she was towed, by the way of the Delaware capes and Norfolk, to Washington, and received her first trials in the Potomac below that city. The Moccasin was completed soon afterward, the Grampus made her first trip at San Francisco, Nov. 3, 1902, and the other boats are all nearing completion. The Adder and the Moccasin received their official trials in Peconic Bay, Long Island, from Nov. 11 to Nov. 19, 1902, by a specially appointed Inspection Board, consisting of Capt. Charles J. Train (senior member), Capt. Charles R. Roelker, Commander W. C. Cowles (recorder), Naval-Constructor Joseph J. Woodward, Naval-Constructor S. F. Smith, and Lieuts. W. C. Herbert, W. R. White, and H. H. Caldwell. Capt. Frank T. Cable, with a picked crew, was in command of the boats. For the army Major Arthur Murray, commandant of the school of submarine defense, Capt. C. J. Bailey, of the submarine depot, and Capt. G. F. Landers, instructor in the depot of electricity, mechanism, and mines, all of Fort Totten, watched the tests, which were the severest ever given any battleship intended for the United States navy, with interest in view of the possibilities of the use of the submarine boat as a means of harbor defense. The boats were required to make 12 runs on the surface, under the gas-engine only, over a 1-mile course, half the runs with the tide and half against it. The average speed of 8 knots an hour must be attained on these runs. Awash the boats make 6 runs of a mile with the tide, and an equal number against it, the average speed to equal 7 knots, the gas-engine only being used. In a completely submerged condition the boat carries the crew and 2 observers from the trial board, and no portion of the boat is exposed, but a light mast is carried to show above the surface, so the trial board can observe the times of passing the ranges. On these trials the boats make 4 runs for each of the 3 different speeds over a course of half a nautical mile, 2 with and 2 against the tide, the averaging speed to equal 7 knots. Over a course of 10 knots the vessels were required to make 8 knots an hour on the surface and 7 knots an hour awash. In the torpedo trials the vessels were required to run 2 miles under water and at the finish discharge a torpedo which shall strike a target 150 feet long by 15 feet deep, placed across the course, representing the vitals of a battleship. The vessel was not to rise for observations more than 3 times from the time of starting until the discharge of the torpedo for the duration of each period of observation not to exceed one minute. The endurance trials consisted of a surface run of twelve hours' duration at full speed of 8 knots under the gasoline-engine, and 1 of three hours hermetically sealed under the electric motor at 7 knots an hour.

The Adder made an average speed on the surface of 8.5 knots an hour when running in the light condition, in the awash condition she made an average speed of 8 knots an hour, and when totally submerged her speed was 7.23 knots,

and thereby she exceeded her contract speeds by half a knot on the surface, by 1 knot when awash, and by 0.23 knot when completely submerged. In her trial on Nov. 14 the Adder, after taking position on the course and getting under way, ran for a mile submerged, then turned and returned to the starting-point and fired her torpedo at a mark 150 feet long and 15 feet deep representing the vital part of a battle-ship. The turn was made when she was completely submerged, and in the home run only two observations, lasting thirty seconds each, were taken, one of them soon after the turn, and the other between the half and the quarter-mile flags. After the second observation she remained invisible, with no indication of her whereabouts, except when she fired her torpedo, the course of the torpedo being indicated, as it always is, by the trail of bubbles of compressed air from her engine rising to the surface. The torpedo went a few feet wide of the mark, but it was asserted that the divergence was due to the swerving of the torpedo, and not to faulty aiming from the Adder. In any case, had it been in actual warfare the torpedo would have struck a ship in the same position well within the bow or the stern and would have proved effective. On Nov. 17 the Adder made a submerged run of three hours, and the distance traveled nearly 21 knots. Naval-Constructor Woodward, one of the officers of the Inspection Board, stated that the air, excepting during the last twenty minutes of the run, was perfectly fresh, and even in the latter period it was as fresh as the air on the berth-deck of a battle-ship. Subsequently the engines passed satisfactorily the test of a continuous run of twelve hours' duration. The run was made entirely under the electric motor. The batteries were charged to their capacity of 1,900 ampere-hours, and about 500 amperes an hour were used. At the end of the run the batteries showed a further capacity of about 400 ampere-hours, and the voltage had been reduced from 120 to about 100. Although she was required to run but three hours submerged, it is estimated she could have run almost another hour before exhausting the capacity of her batteries. Reducing the consumption of power, it is estimated that the Adder could have made 125 knots under her electric motor at 3 knots an hour.

At the request of the board a periscope was attached to the boat in some of these tests to try its efficiency. This device, used with much success in the boats of the French navy for ascertaining the position of objects on the surface when the boat carrying it is submerged, consists of a mirror at the top of an iron tube about 15 feet above the deck amidships, its lower end being in the hold of the boat, where the observer stands. The reflection of objects on the surface is conveyed to him by a system of lenses. This iron tube interfered with the trial, for its local attraction threw the compass out of adjustment, and it also retarded the speed of the boat sufficiently to upset slightly the calculations of Capt. Cable while steering under water. In the final report the board recommended invention toward the improvement of this device.

The tests of the Moccasin were equally successful. She exceeded the required speed in both the surface and awash tests, and in her speed trial when submerged she made the remarkable record of 7.28 knots, making her the fastest submarine boat in the world. At her torpedo trial a heavy sea was running, driven by a stiff easterly gale, and the conning-tower looked like a rock awash. Going at full speed, the Moccasin

approached the 2 flags marking the beginning of the mile. A few seconds before she reached them, at 1.25 P. M., she made her dive, and then for more than ten minutes nothing was seen but about 4 feet of the 12-foot mast she carries, with a tiny red flag on top, as it pushed its way through the water; turning at the mile in twenty seconds, she began her return trip over the mile course at the same depth and going as straight as if the helmsman's head had been above the surface of the water. Rising for thirty-five seconds just after the mile-and-a-half mark was passed, Capt. Cable took a peep at the flags marking the place where the imaginary war-ship that he was to destroy was placed. The porpoise-shaped nose of the lit-

The amount of the penalty will be refunded if the other submarine boats exceed the speed requirements.

Of the nations leading in the construction of submarine boats at the close of 1902 France had built or building 44, Great Britain 10, and the United States 7. Norway has adopted the Holland model, and the De Schelde Ship-Building Company, of Flushing, has obtained from the American owners the right to build Holland submarine boats for the Netherlands and Dutch Indies for twenty-five years, including the use of all existing and future patents issued to the American company.

Portugal is negotiating for the Holland boat,

ONE OF THE NEW BRITISH SUBMARINES PASSING NELSON'S FLAGSHIP, VICTORY, IN PORTSMOUTH HARBOR.

the boat came to the surface a few minutes later for a second peep of thirty seconds, and the next time her bow came up it was to fire the torpedo. She pointed fairly between the 2 flags at the end of the mile and about 100 feet away when the torpedo shot out of its tube about 3 feet below the water-line. For some reason the mechanism of the torpedo made it describe a course to the left of the intended mark. That was no fault of Capt. Cable or his crew, for they fired the missile absolutely straight. Those who watched it say that it would have struck a ship even though its flight had been somewhat erratic.

The board, in reporting, Dec. 1, 1902, on the Adder, found that the vessel successfully met the contract requirements and recommended its acceptance by the Government, though it recommended further tests and some minor structural changes. Jan. 10, 1903, it was announced that the submarine torpedo-boat Adder had been accepted by the Government, subject to a penalty of \$960 for failure to comply with certain requirements.

and several other governments have made appropriations for purchase and experiment. Of the British boats, 5 are of the Adder-Moccasin type. The first of these was launched in September, and participated in the naval maneuvers at Portsmouth, and while the officers in charge maintain the utmost reticence as to details, it is generally understood that the tests were satisfactory. Nov. 25, 1902, a new type of boat, the joint invention of Messrs. Vickers Sons & Maxim, who are also building the Holland boats, received its unofficial tests in the Irish Sea. In its speed records it is reported to have exceeded the first of the Holland boats, though no figures have been given out. It is also announced that a company has been formed under the title of the British Submarine-Boat Company which has acquired the patents of the well-known French inventor M. Claude Goubet, 2 submarines already built by him, and all his inventions relating to submarine navigation. In addition, the company has secured the services of M. Goubet, his son, and another

trained assistant, who will henceforth live in England and carry on the work of building Goubet submarines.

When Admiral von Tirpitz was in the United States, serving upon the staff of Prince Henry during his visit, he said that Germany was not ready to set her inventors at work upon submarine boats, preferring to use all her constructive ability in improving her battle-ships and cruisers. Nevertheless, she is giving some thought to the subject, and her first boat was delivered in September, 1902. The details of its construction have been kept secret, but it is understood that it is built after a combination of the plans of the Holland and Goubet types. It is a small boat, about 35 feet in length, and was built in the United States.

France is experimenting, with as nearly absolute secrecy as is possible, with her own inventions, and during the year the Ministry of Marine has given orders for several new types of boat. They also announce the invention of a telescopic periscope that enables them to survey the surface from a depth of 15 meters. The maximum depth permitted by the former instrument was 9 meters.

During the naval maneuvers off Hyères, in August, 1902, on the French Mediterranean coast, the submarine boats Gustave Zédé and Gymnote were sent out from the harbor to attack the fleet representing the enemy. Traveling at a depth of 10 feet below the surface, they reached the fleet and "torpedoed" 3 battle-ships, the crews of which were unaware of the presence of the submarines until the "torpedoing" was done.

SUNDAY-SCHOOL CONVENTION, INTERNATIONAL. The tenth International Sunday-School Convention met at Denver, Col., June 26 to 30. The Rev. B. B. Tyler, D. D., of Denver, was chosen presiding officer for the sessions. The general secretary's report presented a survey of the past three years of Sunday-school work in affiliation with the convention. There were now 85 paid workers in 45 associations. In educational work, 1,300 normal classes had been reported, with 14,000 members, and the organized work was in excellent condition. The organization of the last State, Nevada, had just been completed. More than 8,000 home departments were reported. More than 125,000 members had come into the churches from Sunday-schools during the past year. Statistics were presented showing that there were in the United States 139,520 Sunday-schools, with 1,414,589 teachers and 11,462,414 pupils; in Canada, 10,220 schools, 82,156 teachers, and 685,870 pupils; in all North America, including, besides these, Newfoundland and Labrador, Mexico, the West Indies, and Central America, 152,959 schools, 1,511,188 teachers, and 12,297,405 pupils; and in the whole world, 254,401 schools, with a total membership of 25,856,582 teachers and pupils. A report of the work done in the South under the direction of the late Rev. L. B. Maxwell, field secretary, related to the organization of the international work among nearly 2,000,000 colored people. The Lesson Committee reported that the total expense involved in its last three years' operations had been met by 27 publishing houses, and that for the next triennium \$14,000 had been pledged by individuals and delegations for the international field. An important question was raised as to the system to be followed in the selection of the lessons for the ensuing term of three years. Hitherto one uniform lesson for the whole school had been used and studied in all the schools affiliated with the convention throughout the world; but a conviction had grown up among

many persons interested in Sunday-school work that this was not the wisest plan, and that a graded system of lessons adapted to the age and degree of advancement of different classes of pupils would be preferable, with an elementary series for the younger pupils, advanced courses for the older ones, and lessons like those at present in use for the intermediate classes. A beginner's course had already been tentatively used, satisfactorily, for one year. The report of the Lesson Committee favored the adoption of the graduated system, with the beginner's course, and a course for advanced classes, dealing with the prophetic, epistolary, and apocalyptic parts of the Bible, and was accompanied with the outline of an experimental course for two years. The plan of the committee was not adopted by the convention, except that it authorized the preparation of a series of special primary lessons. It directed that "one uniform lesson for all grades of the Sunday-school shall be selected by the Lesson Committee as in accordance with the usage of the past five lesson committees; provided that the Lesson Committee be authorized to issue an optional beginner's course for special demands and uses, such optional course not to bear the official title of International Lesson. *Resolved*, That at this time we are not prepared to adopt a series of advanced lessons to take the place of the uniform lessons in the adult grade of the Sunday-schools. The Lesson Committee is urged to consider how far a better continuity of Bible study may be secured by alternating at longer intervals—of one or more years—the selections from the Old and New Testaments respectively. *Resolved*, That this convention reaffirm the instructions on the subject of temperance lessons adopted at Pittsburgh and reaffirmed at St. Louis and Boston." A committee was provided for to consider what means should be taken in the various States and provinces to secure the reading of the Bible without comment in the public schools.

Notwithstanding this action, the friends of a graduated series of lessons continued to urge their views, and even to give formal expression to them. The Executive Committee of the Western section of the Presbyterian Alliance meeting at Philadelphia in the later days of October instructed its Committee on Sabbath-Schools and Young People's Societies to select a course of Bible Lessons for advanced classes and present it to the next meeting of the section for consideration; and this committee, at its meeting, Nov. 13, appointed a subcommittee to prepare the course.

The Council of Seventy of the Institute of Sacred Literature in November published a call for a national convention to consider methods for improving the efficiency of Bible teaching in the Sunday-school, the home, the college, and elsewhere. In its resolutions it declared "that the religious and moral instruction of the young is at present inadequate and imperfectly correlated with other instruction in history, literature, and the sciences; that the Sunday-school, as the primary institution for the religious and moral education of the young, should be conformed to a higher ideal, and made efficient for its work by the gradation of pupils, and by the adaptation of its material and method of instruction to the several stages of the mental, moral, and spiritual growth of the individual; and that the home, the day-school, and all other agencies should be developed to assist in the right education of the young in religion and morals."

Assuming that this improvement in religious

and moral instruction could best be promoted by a national organization devoted exclusively to the purpose, the convention was called to assemble in Chicago, under the auspices of the Council of Seventy, in February or March, 1903, for the creation of such a national organization; the convention to consist of members and associate members of the Council of Seventy; invited teachers, ministers, and editors; and invited pastors of churches and superintendents of Sunday-schools.

According to the ninety-eighth annual report of the British Sunday-School Union, 7,043 schools, with 158,104 teachers and 1,500,242 pupils, were affiliated with the union at home; 1,139 schools, with 20,280 teachers and 210,010 pupils, in the Scottish National Sunday-School Union; 802 schools, with 9,600 teachers and 96,951 pupils, in 7 colonial unions; and 6,846 schools, with 10,573 teachers and 273,794 pupils, in the India Sunday-School Union; making, together with the numbers returned by the Buenos Ayres Sunday-School Association, a total of 15,842 schools, 198,648 teachers, and 2,082,008 pupils. The General Benevolent fund had received £4,003, including £1,602 from trade profits; £1,964 had been received for continental and Indian work, and £1,964 for three children's homes and the Teachers' Home of Rest. The enterprises of the union had been greatly expanded, and it was seeking to extend Sunday work abroad as well as at home.

SWEDEN AND NORWAY, two kingdoms in northern Europe, united under the same sovereign since Nov. 4, 1814, but independent of each other in Constitution, government, and laws. Affairs common to both kingdoms are decided by a Council of State composed of Swedes and Norwegians. The throne in each monarchy passes in the order of primogeniture and in the male line to the descendants of Marshal Bernadotte, Prince of Ponte Corvo, who was elected by the Swedish Diet in 1810 to be the heir and successor of Carl XIII, the last sovereign of the house of Holstein-Gottorp. The reigning King is Oscar II, born Jan. 21, 1829, grandson of Carl XIV, the founder of the dynasty, who succeeded his brother Carl XV on Sept. 18, 1872. The heir apparent is Prince Gustaf, Duke of Vermland, eldest son of the King, born June 16, 1858.

Sweden.—The Diet of Sweden, called the Riksdag, consists of a First Chamber, of 150 members, elected for nine years by provincial and municipal assemblies, and a Second Chamber, of 230 members, elected for three years, 80 of them in towns by direct suffrage and 150 in rural districts either directly or indirectly as the majority decide, by natives of Sweden who own land assessed at a value of 1,000 kronor or have for five years farmed land assessed at 6,000 kronor or upward or pay income tax on 800 kronor. The qualified electors in 1899 were 6.7 per cent. of the population, and only 40.3 per cent. of them voted. The Swedish Council of State in the beginning of 1902 was composed of the following members: Minister of State, Baron Fredrik Wilhelm von Otter, appointed Sept. 12, 1900; Minister of Foreign Affairs, Carl Herman Theodor Alfred Lagerheim, appointed Oct. 13, 1899; Minister of Justice, Per Samuel Ludvig Annerstedt, appointed Feb. 5, 1896; Minister of War, Jesper Ingewald Crusebjörn, appointed Oct. 27, 1899; Minister of Marine, Adolf Arnold Louis Palander, appointed May 31, 1901; Minister of the Interior, Julius Edvard von Krusenstjerna, appointed Oct. 6, 1896; Minister of Finance, Count Hans Hansson Wachtmeister, appointed July 16, 1897; Minister of Education and Ecclesiastical Affairs, Nils Ludvig Alfred Claëson,

appointed June 22, 1898; Minister of Agriculture, Albrecht Theodor Odelberg, appointed March 31, 1900; Councilors of State, Dr. K. S. Husberg, appointed July 12, 1900, and Dr. Knut Hjalmar Hammarskjöld, appointed Sept. 25, 1901.

Area and Population.—The census taken on Dec. 31, 1900, shows a total population of 5,136,441, composed of 2,506,436 males and 2,630,005 females. The area and population of the lands, or provinces, into which the kingdom is divided are given in the following table:

LANDS.	Square miles.	Population.
Stockholm, city.....	13	300,624
Stockholm, land.....	3,015	172,852
Upsala.....	2,061	128,863
Södermanland.....	2,631	167,423
Östergötland.....	4,267	279,449
Jönköping.....	4,447	206,086
Kronoberg.....	3,825	159,124
Kalmar.....	4,443	227,825
Gotland.....	1,219	52,781
Blekinge.....	1,164	146,202
Kristianstad.....	2,486	219,106
Malmöhus.....	1,866	408,304
Halland.....	1,900	141,686
Göteborg and Bohus.....	1,948	337,175
Elfsborg.....	4,998	279,514
Skaraborg.....	3,280	241,069
Vermland.....	7,435	254,284
Örebro.....	3,498	194,984
Västmanland.....	2,625	146,271
Kopparberg.....	11,522	217,708
Gefleborg.....	7,614	238,048
Västernorrland.....	9,837	233,211
Jämtland.....	19,712	111,391
Vesterbotten.....	22,754	143,735
Norrbottn.....	40,870	134,769
Lakes.....	3,516
Total.....	172,876	5,136,441

The population of the towns having municipal government and not represented in the Landsting was in 1900 as follows: Stockholm, 300,624; Göteborg, 130,619; Malmö, 60,857; Norrköping, 41,008; Gefle, 29,522.

The Army.—The reorganization of the army approved by the Diet in 1901 will be completed in 1913. The *indelta*, or cantoned troops, will disappear. Every Swede, according to the new law, owes military service from the age of twenty-one for eight years in the first and four years in the second ban of the *Beväring*, and afterward for eight years in the *Landsturm*. The period of service with the colors will be increased from ninety days to one hundred and seventy-two days from 1902 till 1908, and thereafter to two hundred and forty days for infantry, siege- and fortress-artillery, and train, divided into a first period of one hundred and fifty days and 3 recalls for thirty days, and for the other arms a first period of two hundred and eighty-one days and 2 recalls for forty-two days, a total of three hundred and sixty-five days. The marine troops, including the coast-artillery, serve three hundred days in all.

The effective of the Swedish army in 1901 comprised 48 general and staff officers and 233 employees, 27,633 officers and men forming 56 battalions of infantry, 5,269 forming 50 squadrons of cavalry, 3,509 in the field-artillery, 638 in the fortress-artillery, 172 in the Gotland artillery force, 991 forming 9 companies of engineers, and 772 forming 8 companies of train; total, 39,265, comprising 1,954 officers, 691 employees, 1,794 non-commissioned officers, 1,657 musicians, and 33,169 men, with 6,801 horses. There were 683 officers, 80 employees, 450 non-commissioned officers, and 75 musicians, making a total of 1,288, on leave. The strength of the *Beväring* was about 250,000, giving a war effective of 290,553 of all ranks, besides 200,000 men in the 8 classes of the *Landsturm*. The infantry are armed with Mausers

of 6.5 millimeters caliber, the reserve troops with Remingtons of 8 and 12 millimeters, the field-artillery with 8-centimeter Krupps, the horse-batteries with 7-centimeter rapid-fire guns.

The Navy.—The navy of Sweden is intended merely for coast-defense. There are 10 first-class, 4 second-class, and 9 third-class turret-ships, 3 corvettes, 5 torpedo-cruisers, 13 gunboats and despatch vessels, and 15 first-class and 11 second-class torpedo-boats.

Commerce and Production.—The cereal crops in 1900 were 1,849,600 hectoliters of wheat from 75,400 hectares, 5,210,700 hectoliters of rye from 409,700 hectares, 5,210,700 hectoliters of barley from 220,700 hectares, 24,411,400 hectoliters of oats from 820,500 hectares, and 3,993,800 hectoliters of mixed grain from 126,000 hectares. Of beans and peas 858,300 hectoliters were raised on 48,200 hectares; of potatoes, 24,643,900 hectoliters on 157,500 hectares. The live stock on Jan. 1, 1900, consisted of 525,256 horses, 2,583,065 cattle, 1,283,786 sheep, and 810,839 hogs. The quantity of iron ore mined in 1900 was 2,607,925 tons. The production of pig-iron was 518,787 tons; of bar iron, 329,965 tons; the exports of iron ore in 1899 were 1,628,011 tons; of pig-iron, 93,895 tons; of bar iron, 167,847 tons. The quantity of silver-lead ore mined in 1900 was 5,300 tons; of copper ore, 22,725 tons; of zinc ore, 61,044 tons; of manganese ore, 2,651 tons. The production of gold was 88 kilograms; of silver, 1,927 kilograms; of lead, 1,423 tons; of copper, 136 tons. The quantity of coal mined was 252,320 tons.

The total value of imports in 1899 was 504,788,683 kronor, and of exports 358,184,767 kronor. The imports of textile manufactures were 46,738,248 kronor, and exports 1,579,218 kronor; imports of grain and flour were 49,327,777 kronor, and exports 4,850,080 kronor; imports of colonial goods were 38,634,760 kronor, and exports 135,289 kronor; imports of textile materials and yarn were 47,818,471 kronor, and exports 1,252,671 kronor; imports of coal and other minerals were 82,388,362 kronor, and mineral exports 21,421,309 kronor; imports of metal manufactures and machinery were 74,605,197 kronor, and exports 22,585,054 kronor; imports of live animals and animal food products were 23,542,296 kronor, and exports 48,128,649 kronor; imports of hides, hair, and other animal products were 24,459,229 kronor, and exports 4,300,564 kronor; imports of raw and partly manufactured metals were 13,159,371 kronor, and exports 43,513,013 kronor; imports of timber and wood manufactures were 3,751,465 kronor, and exports 178,553,581 kronor; imports of paper and paper manufactures were 4,745,770 kronor, and exports 11,706,764 kronor; imports of other articles were 94,617,737 kronor, and exports 20,158,575 kronor.

Politics and Legislation.—In the session of the Riksdag that opened on Jan. 15 the question of electoral reform created more serious division than that of universal military service in the preceding session. Some years before the Government after much urging had presented a project that went too far for the Right without half satisfying the Left. The Government proposed in the new bill to give one vote to all males of twenty-five years or over who are entitled to vote in their communes and have paid their taxes for two years and two votes to qualified electors who are married or have reached the age of forty years. The committee added provisions requiring the possession of land or an income of 500 kronor. The Socialist-Labor party made demonstrations in favor of universal suffrage and threatened a general strike; which was carried

out on May 15, but lasted only two days. A commission was appointed to consider the subject of a joint Swedish and Norwegian consular service. For the purpose of providing the means to support the new army both chambers passed a progressive income-tax bill requiring each taxpayer to declare his income subject to penalties for a false declaration. All incomes above 1,000 kronor must pay taxes. All the members of the Cabinet resigned on June 28, and on July 5 the former Prime Minister Boström formed a Cabinet as follows: Premier, Herr Boström; Minister of Justice, Herr Berger; Minister of War, Lieut.-Gen. Crusebjörn; Minister of Marine, Rear-Admiral Palander; Minister of the Interior, Herr Westring; Minister of Finance, Herr Meyer; Minister of Public Worship, Carl von Friesen; Minister of Agriculture, Herr Odelberg; without portfolio, Herr Ramstedt. Elections which took place in September for the Second Chamber showed gains for the Left. A commission was appointed in October to draw up a scheme of proportional representation in the Second Chamber.

Norway.—The Norwegian Diet, called the Storting, consists of 114 members, elected for three years, 38 by the towns and 76 by the rural districts. Every Norwegian citizen twenty-five years of age who has lived five years in the country is entitled to vote for electors, 1 to 50 voters in towns and 1 to 100 in rural districts, who elect the representatives to the Storting from among the qualified voters of the district, including themselves, who have reached the age of thirty and have lived ten years in Norway. In 1900 the qualified voters were 19.7 per cent. of the population and 54.2 per cent. of them voted. When the Storting comes together it elects a fourth of its members to form the Lagthing. The other three-fourths form the Odelsting, before which all legislative bills are first laid, and which has the sole right to revise the financial estimates and to impeach ministers, judges, or members of the Storting, who are then tried by the Lagthing reenforced by the members of the highest court, forming the Rigsret. The Lagthing can reject bills passed by the Odelsting, in which case both houses meet in joint session and the matter is decided by a two-thirds vote. Amendments to the Constitution can be enacted in like manner. The Council of State at the beginning of 1902, constituted on Feb. 17, 1898, was presided over by Johannes Vilhelm Christian Steen as Minister of State, who was head of the Department of the Interior and was composed further of the following Councilors of State and heads of departments: Ecclesiastical Affairs and Public Instruction, Vilhelm Andreas Wexelsen; Justice, Ole Anton Qvam; Agriculture, Wollert Konow; Public Works, Jörgen Gundersen Lövland; Finance and Customs, Elias Sunde; Defense, Lieut.-Col. Hans Georg Jacob Stang. The delegation of the Council at Stockholm had the following members: Minister of State, Otto Albert Blehr; Councilors of State, Commodore Christian Sparre and Sören Tobias Arstad.

Area and Population.—Norway has an area of 124,445 square miles, and on Dec. 3, 1900, contained a population of 2,239,880, comprising 1,087,479 males and 1,152,401 females. The area and population of the districts into which the kingdom is divided are given on the next page.

The number of marriages in 1899 was 15,530; of births, 67,013; of deaths, 36,563; excess of births, 30,450. The number of emigrants in 1900 was 10,931, of whom 10,665 emigrated to the United States, 112 to British America, and 164 to other countries.

Finances.—The revenue for the nine months ending March 31, 1900, was 78,827,000 kroner, of which 5,253,000 kroner came from direct taxes, 36,526,000 kroner from indirect taxes, and 24,135,000 kroner from other sources. The expenditures during the same period amounted to 75,933,000 kroner, of which 20,712,000 kroner were for defense, 5,344,000 kroner for debt, 18,569,000 kroner for public works, and 31,278,000 kroner for general purposes of government. For the year ending March 31, 1901, the total revenue was estimated at 99,641,070 kroner, including a cash balance of 3,763,200 kroner and 14,357,113 kroner raised by loan for railroads, telegraphs, and telephones, and expenditure was estimated at the same sum. For the year ending March 31, 1902, the budget balanced at 97,300,000 kroner. Of the revenue the income tax yielded 5,300,000 kroner, customs duties 35,000,000 kroner, the excise tax on spirits, 4,800,000 kroner, the malt tax 4,100,000 kroner, the succession tax 800,000 kroner, stamp 1,170,000 kroner, judicial fees 1,100,000 kroner, mines 449,000 kroner, the post-office 5,300,000 kroner, telegraphs 3,500,000 kroner, state property 4,105,154 kroner, railroads 12,608,600 kroner, miscellaneous sources 7,622,453 kroner, and loans for railroads, telegraphs, and telephones 11,444,793 kroner. Of the expenditures the civil list took 592,032 kroner, the Storting 732,000 kroner, the ministries 1,621,776 kroner, the Church and education 10,089,485 kroner, justice 7,263,929 kroner, the interior 3,709,929 kroner, the post-office, telegraphs, etc., 10,330,330 kroner, state railroads 19,943,174 kroner, roads, canals, and posts, 4,664,176 kroner, finance and customs 4,282,572 kroner, mines 608,150 kroner, amortization of debt 2,591,559 kroner, interest 7,481,357 kroner, the army 13,809,600 kroner, the navy 4,120,000 kroner, foreign affairs 781,158 kroner, miscellaneous expenses 4,678,773 kroner.

The amount of the public debt on March 31, 1900, was 231,064,994 kroner. Rural communes raised 13,377,606 kroner of taxes in 1899 and towns 15,371,137 kroner. A loan of 35,000,000 kroner at 3½ per cent. redeemable in sixty years was obtained from Scandinavian banks in January, 1902.

The Army and Navy.—The land forces of the kingdom are divided into troops of the line, the Landvaern and the Landsturm. Without the consent of the Storting the troops of the line actually under arms must never, even in time of war, exceed 18,000 men. They number about 30,000 men, with 900 officers, and the Landvaern and Landsturm number about 50,000, with 800 officers.

Norway has a small navy for coast-defense consisting of 4 English-built turret-ships, 4 monitors, 31 gunboats, and 31 torpedo-boats.

Commerce and Production.—There were 185,605 hectares under cereal crops in 1900, yielding 102,010 hectoliters of wheat, 1,284,230 hectoliters of barley, 3,401,250 hectoliters of oats, 301,940 hectoliters of rye, and 442,940 hectoliters of mixed grain. The production of peas was 76,680 hectoliters. The potato-crop from 39,122 hectares was 8,640,390 hectoliters. Grain and flour for 51,182,000 kroner were imported in 1899, the value of rye being 20,530,900 kroner. The value of meat imports was 8,223,600 kroner. The value of mineral products in 1899 was 4,642,600 kroner; of furnace products, 1,757,000 kroner. The catch of cod in 1899 was valued at 11,122,000 kroner; herring, 6,636,000 kroner; mackerel, 374,000 kroner; salmon and sea trout, 946,000 kroner; other fish, 4,663,000 kroner; lobsters, 544,000 kroner; oysters, 5,845 kroner; total value of fisheries, 24,291,000 kroner, in addition to which the North Sea mackerel fisheries, the bank fisheries, and the whale, walrus, and shark fisheries brought in 3,400,000 kroner.

The total value of imports of foreign merchandise in 1900 was 310,658,100 kroner. The exports of Norwegian produce was valued at 162,745,100 kroner; foreign exports, 10,201,300 kroner.

Change of Ministry.—The Steen ministry resigned on account of internal differences, and on April 16 and on April 18 Minister of State Blehr formed a new ministry as follows: President of the Council and Minister of the Interior, Herr Blehr; Minister of State at Stockholm, Herr Qvam; Minister of Justice, Herr Arstad; member of the section at Stockholm, Dr. Sigurd Ibsen. The Swedish Government had consented in principle to the separation of the consular representation of the two kingdoms after a contest conducted by the retiring Minister-President for ten years. Sweden still desired a common control over consuls. The Storting in May unanimously resolved to urge the question of the permanent neutrality of Sweden and Norway. A commission was appointed for the reorganization of the Norwegian army.

SWITZERLAND, a federal republic in central Europe. The legislative power is vested in the Federal Assembly, which is composed of the National Council, of 147 members elected for three years by adult male suffrage, and the State Council, of 44 members elected in the cantons, some by the legislative bodies, others by the direct votes of the people. The executive power is vested in the Federal Council, the members of which are elected for three years by the Federal Assembly. The Federal Council elects one of its members to serve for the ensuing year as President of the Swiss Confederation and one to be Vice-President. According to custom the Vice-President is chosen to succeed to the presidency at the next annual election. The Federal Council in the beginning of 1902 was composed of the following members: President of the Confederation and Chief of the Political Department, Dr. E. Brenner, of Basel; Vice-President and Chief of the Department of Posts and Railroads, Dr. Joseph Zemp, of Lucerne; Chief of the Interior Department, M. E. Ruchet, of Vaud; Chief of the Department of Justice and Police, R. Comtesse, of Neuchâtel; Chief of the Military Department, E. Müller, of Bern; Chief of the Department of Finance and Customs, W. Hauser, of Zürich; Chief of the Department of Commerce, Industry, and Agriculture, Dr. A. Deucher, of Thurgau.

Area and Population.—The area of Switzerland is 15,976 square miles. The legal population at the census of Dec. 1, 1900, was 3,315,443. The population present was 3,325,023. In 18 cantons

German is spoken by the majority, in 5 the language is French, in Ticino it is Italian, and in Graubünden, or Grisons, Roumansch is spoken. The population of the Confederation was divided as to language in 1900 as follows: German, 2,319,105; French, 733,220; Italian, 222,247; Roumansch, 38,677. The number of foreigners residing in Switzerland in 1900 was 392,896. The number of marriages in 1900 was 25,538; of births, 98,419; of deaths, 60,572; excess of births, 32,847. The number of emigrants in 1900 was 3,816, of whom 931 came from Bern, 556 from Ticino, 468 from Zürich, 240 from Basel Stadt, 188 from St. Gall, and 1,433 from other cantons. The destination of 3,341 was the United States, while 341 went to South and Central America, 21 to Asia, 17 to Africa, and 16 to Australia.

Finances.—The revenue of the Federal Government for 1902 was estimated at 102,240,000 francs, of which 930,310 francs were derived from real property, 2,108,389 francs from invested capital, 57,100 francs from the general administration, 36,500 francs from the Political Department, 99,900 francs from the Interior Department, 530,400 francs from the Department of Justice and Police, 2,791,100 francs from the Military Department, 225,000 francs from the Department of Finance, 48,000,000 francs from customs, 507,820 francs from the Department of Commerce, Industry, and Agriculture, 134,400 francs from railroads, 39,255,900 francs from the post-office, 9,548,600 francs from telegraphs, and 14,581 francs from miscellaneous sources. The total expenditure was estimated at 108,120,000 francs, of which 4,249,480 francs were for interest and sinking-fund of the debt, 1,131,400 francs for general administration, 683,100 francs for the Political Department, 12,766,541 francs for the Department of the Interior, 551,950 francs for the Department of Justice and Police, 28,552,136 francs for the Military Department, 775,100 francs for the Department of Finance, 5,156,000 francs for collection of customs, 1,485,200 francs for the Department of Commerce, Industry, and Agriculture under the head of industry, 2,860,170 francs for agriculture, 659,900 francs for commerce, 25,900 francs for the Assay Office, 395,000 francs for railroads, 37,047,900 francs for the post-office, 11,744,199 francs for telegraphs, and 36,024 francs for miscellaneous expenses. The debt of the Confederation on Jan. 1, 1901, amounted to 92,424,387 francs, most of it paying 3½ per cent. interest. The Confederation owned real property worth 54,386,865 francs, 31,463,671 francs of securities, works producing profits worth 32,886,011 francs, 20,180,281 francs' worth of stores, 838,309 francs of collectable debts, 38,233,021 francs in special funds, and 8,744,652 francs in the alcohol *régie*, railroads, and cash on hand; total, 186,732,810 francs.

The Army.—Switzerland has a militia system in which schoolboys at the age of eight begin their military exercises, and shooting and other martial accomplishments are prominent among the sports of the people. The cantons maintain the infantry and the main part of the cavalry and artillery. The Federal Government provides for their military training and maintains the cavalry guides, the artillery park, the train, the engineer corps, and the technical, administrative, and sanitary troops. Recruits of education and pecuniary means are selected for the engineers, artillery, and cavalry. Men who do not serve in the army pay a military tax of 6 francs and a supplementary annual tax proportionate to their means up to a maximum tax of 3,000 francs a year. Half the tax goes to the Confederation and half to the cantons. From the age of twenty

to the age of thirty-two the men in the army belong to the Auszug or Élite, then till the age of forty-four to the Landwehr, and after that to the age of fifty to the Landsturm. The Landwehr is divided into 2 bans, the first comprising men between the ages of thirty-two and forty, the second those from forty to forty-four years of age. The annual contingent of recruits for 1900 was 16,234. The number of men enrolled in the Auszug and Landwehr was 252,598, and the number paying the military tax was 292,737. The effective of the Auszug on Jan. 1, 1901, was 114,843 infantry, 4,641 cavalry, 20,113 artillery, 5,507 engineers, 4,940 sanitary troops, 1,444 administrative troops, and 278 cyclists, making a total of 151,766 officers and men; effective of the first ban of Landwehr, 40,840 infantry, 3,433 cavalry, 11,174 artillery, 4,461 engineers, 2,912 sanitary troops, 825 administrative troops, and 89 cyclists, a total of 63,734; second ban of Landwehr, 21,059 infantry, 2,403 artillery, 718 sanitary troops, and 29 administrative troops, a total of 24,209; Landsturm, 44,506 infantry, 2,981 artillery, 108,674 pioneers, 113,762 auxiliaries, 7,441 sanitary troops, and 1,192 cyclists, a total of 278,556, of whom those classed as pioneers and auxiliaries are not provided with arms. Recruits receive instruction for two or three months in the first year, and in succeeding years the cavalry exercise annually for ten days and the other troops for three weeks every second year.

Commerce and Production.—Rye, oats, and potatoes are the chief farm crops, but vineyards and orchards occupy more land, and the mountain pastures are a greater source of wealth than all these. The exports of cheese in 1900 were 273,361 quintals; of condensed milk, 282,986 quintals. There were 124,896 horses, 4,866 mules and asses, 1,340,375 cattle, 219,438 sheep, 354,634 goats, and 555,261 pigs in 1901. The wine produced on 30,448 hectares of vineyards in 1900 was 2,103,255 hectoliters. The production of salt in 1900 was 492,841 quintals; of cement, 571,920 metric tons. The industries of the country are varied and highly developed, including watch-making, jewelry, textile manufacture of many kinds, leather and rubber, wood-making, chemical works, food preparations, metallurgy, paper-making. The quantity of beer brewed in 1900 was 2,166,372 hectoliters. The alcohol *régie* during the year ending Aug. 31, 1901, sold 51,802 quintals of spirits for drinking and 47,208 quintals of methylated spirits. The hotels of Switzerland are 1,896 in number, having a capital of 550,480,000 francs.

The total value of imports for consumption in the country was 1,206,809,617 francs in 1900, and the exports of domestic produce and manufacture were valued at 884,898,771 francs. The total value of effective imports, excluding goods in transit, was 1,217,373,005 francs, and of effective exports 894,991,205 francs. In the special trade of 1900 imports of merchandise amounted to 1,058,944,569 francs, and exports to 818,692,454 francs; imports of coin were 95,699,917 francs, and exports 48,819,071 francs; imports of uncoined precious metals were 52,155,131 francs, and exports 17,387,246 francs. In the merchandise movement the imports of cotton and cotton goods were 80,369,333 francs in value, and exports 167,614,696 francs in value; imports of silk and silk goods 145,154,730 francs, and exports 224,509,565 francs; imports of wool and woollen goods 55,856,338 francs, and exports 18,768,441 francs; imports of flax and linen goods 12,612,505 francs, and exports 1,616,763 francs; imports of metals 104,573,900 francs, and exports 12,453,241 francs; imports of mineral substances 93,027,861 francs, and exports 4,764,241

frances; imports of animals, 43,507,525 francs, and exports 12,162,176 francs; imports of animal products 9,589,795 francs, and exports 12,113,882 francs; imports of leather and boots and shoes 23,758,055 francs, and exports 10,134,823 francs; imports of articles of food and drink and tobacco 272,832,903 francs, and exports 104,029,231 francs; imports of chemicals and drugs 30,912,919 francs, and exports 13,044,356 francs; imports of timber 27,981,819 francs, and exports 5,758,781 francs; imports of clocks and watches 3,482,304 francs, and exports 122,823,277 francs; imports of machinery and vehicles 36,785,185 francs, and exports 49,510,963 francs; imports of oils 11,042,132 francs, and exports 507,198 francs; imports of agricultural products 6,667,079 francs, and exports 532,229 francs; imports of objects of science and art 18,694,459 francs, and exports 9,613,498 francs; imports of paper 8,860,916 francs, and exports 3,403,713 francs; imports of glass and pottery 10,716,977 francs, and exports 1,149,636 francs; imports of fertilizers, etc., 11,769,057 francs, and exports 3,494,327 francs; imports of clothing 29,021,139 francs, and exports 11,269,777 francs; imports of colors 7,473,037 francs, and exports 15,915,096 francs; imports of miscellaneous articles 14,264,621 francs, and exports 13,508,740 francs. Among food-products wheat was imported of the value of 69,701,809 francs and flour of the value of 5,424,473 francs. The exports of cheese were valued at 43,479,205 francs; condensed milk, 26,733,183 francs. The special imports from and exports to the different countries, including uncoined precious metals, were valued in 1900, in francs, as follow:

COUNTRIES.	Imports.	Exports.
Germany.....	35 74	801,573,146
France.....	30 88	109,568,188

Railroads, Posts, and Telegraphs.—The railroads in 1900 had a total length of 2,362 miles, besides which there were 200 miles of rack and cable railroads and tramways. The capital cost of the railroads proper was 1,249,779,489 francs, and of the other lines 37,101,600 francs; total, 1,286,881,089 francs. Receipts in 1899 were 138,097,542 francs, and expenses 79,303,177 francs. The number of passengers carried in 1900 was 64,512,071; freight traffic, 14,226,218 tons; receipts, 126,456,260 francs.

The post-office in 1900 carried in the internal service 93,646,364 letters, 39,002,887 postal cards, 37,176,298 book packets, etc., 987,901 samples, 117,231,417 newspapers, and 2,361,455 parcels, and of foreign matter 21,139,703 letters, 15,857,275 postal cards, 8,561,425 book packets, 935,961 samples, and 1,518,633 parcels. The internal post-office orders amounted to 622,629,803 francs; international orders, 59,778,482 francs.

The State telegraph-lines in 1900 had a length of 4,288 miles, with 13,478 miles of wire, and there were 1,412 miles of railroad and private telegraph-lines, with 8,954 miles of wire. The number of internal despatches was 1,577,974; international despatches, 1,694,371; despatches in transit, 677,817. The telegraph receipts were 3,031,582 francs, and expenses 3,043,952 francs; receipts from telephones were 6,229,857 francs, and expenses 7,115,206 francs. The length of telephone-lines was 8,807 miles, with 82,342 miles of line. The number of conversations in 1900 was 25,626,772.

Politics and Legislation.—The acquisition of the railroads by the Confederation was completed in 1902 and the railroad bonds are being converted into 3½-per-cent. federal bonds. The Federal Council on Aug. 19 issued a decree requiring religious congregations and orders not authorized by law to close in accordance with an article in the Constitution prohibiting the founding of new convents or orders or the reestablishment of such as have been suppressed. In the general election to the National Council on Oct. 26 the Radical-Democratic majority was considerably strengthened. The number of members, owing to the growth of the population, was increased from 147 to 167. For the future it has been decided by a popular referendum that in apportioning 1 seat to 20,000 inhabitants only the Swiss, not the total, population will be reckoned.

TURKEY, an empire in eastern Europe and western Asia. The Government is an absolute monarchy, the laws of which are founded on the Koran. The Sultan exercises supreme civil authority through the Grand Vizier and supreme religious authority through the Sheikh-ul-Islam, whose appointment is made with the concurrence of the Ulema, a body composed of the highest acknowledged exponents of Mohammedan laws and doctrines, summoned by the muftis, who are the expounders of the Koran. The reigning Sultan is Abdul Hamid II, thirty-fourth ruler of the house of Osman and twenty-eighth since the capture of Constantinople in 1453, born Sept. 22, 1842, son of Sultan Abdul Medjid and brother of the deposed Sultan Murad V, whom he succeeded on Aug. 31, 1876. The throne descends to the senior prince born in the harem. The heir appar-

ent is the Sultan's brother, Mohammed Reshad, born Nov. 3, 1844. The Privy Council, or Cabinet, was composed in the beginning of 1902 as follows: Grand Vizier, Kutchuk Said Pasha, appointed Nov. 17, 1901; Sheikh-ul-Islam, Jemaledin Effendi, appointed in September, 1891; Minister of the Interior, Memduh Pasha; Minister of Justice and Worship, Abdurrahman Pasha; Minister of War, Riza Pasha; Minister of Marine, Hassan Pasha; Minister of Foreign Affairs, Ahmed Tevfik Pasha; Minister of Finance, Reshad Pasha; President of the Council of State, Mohammed Said Pasha; Grand Master of Artillery, Mustafa Zekki Pasha; Minister of Evkafs, Galib Pasha; Minister of Education, Zubdi Pasha; Minister of Public Works and Commerce, Zihni Pasha.

Area and Population.—Turkey in Europe has an extent of 65,752 square miles, with 6,086,300 inhabitants; Asiatic Turkey, 650,394 square miles, with 17,545,300 inhabitants; Tripoli and Benghazi, 398,900 square miles, with 1,300,000 inhabitants. The total area is 1,115,046 square miles

and the total estimated population 24,931,600, including only the territories at present under Ottoman administration. The countries under Turkish suzerainty, but no longer subject to the civil or military rule of the Ottoman Government, are Egypt, Bulgaria, Bosnia and Herzegovina, Samos, Cyprus, and Crete, having a combined area of 468,520 square miles and 15,746,379 inhabitants. Constantinople, the capital of the empire, has a population of about 1,125,000; Smyrna, 201,016; Bagdad, 145,000; Damascus, 140,487; Aleppo, 127,149; Beirut, 118,811; Salonica, 105,000.

Finances.—The available revenue of the Turkish Government is estimated at £ T. 13,961,700, and the normal expenditure at £ T. 15,354,000, leaving, unless it is averted by administrative and fiscal reforms, a deficit of £ T. 1,392,300. This estimate does not include the expenses of the external debt nor the revenues surrendered to the Council of the Debt Administration, viz., the Bulgarian, Eastern Roumelian, and Cyprus tributes, the tax on Persian tobacco, and the excise duties. A guaranteed loan of £5,000,000 sterling raised in 1855, loans secured on the Egyptian tribute, the Tumbeki loan of £900,000, and a loan of £5,909,080 raised in 1886 are not included in the debts administered by the international council. The receipts of the Council of Administration from taxes on salt, spirits, fisheries, and silk, stamps, the tobacco tithe and *régie*, and other ceded revenues in 1901 were £ T. 2,189,739. The Eastern Roumelian tribute fell into arrears and part of the Cyprus tribute was kept back till the following year; moreover, some of the ceded revenues declined, so that the receipts fell below those of the preceding fiscal year, at the end of which a reserve fund of £ T. 574,000 had been accumulated. The interest that the Council of Administration has been able to pay hitherto is 1 per cent. With increased receipts it may be raised to a maximum rate of 4 per cent., 20 per cent. of the amount received being set aside for amortization. The total amount of the Turkish debt outstanding on July 1, 1901, was £ T. 133,939,003, not including the war indemnity to Russia, of which £ T. 24,513,000 were still due, and £ T. 50,000 due to individual Russians, nor the Damascus Railroad debt of £ T. 273,494.

The Army.—The Nizam, the Redif, and the Mustahfiz of the Ottoman army correspond to the active army, the Landwehr, and the Landsturm in other countries where conscription obtains. Recruits have to serve, the infantry three years, the cavalry and artillery four years in the Nizam with the colors, and three or two years respectively in its reserve, or they are assigned at once to the reserve and are drilled from six to nine months and one month annually in succeeding years. Any conscript after three months of active service in the Nizam can obtain an indefinite furlough by paying £ T. 50. After the Nizam period is past the soldiers belong four years to the first and four years to the second ban of the Redif, and then six years to the Mustahfiz. Christians and Jews pay an annual military tax of 30 piasters for every male. Nomadic Arabs escape conscription, and many of the Kurds as well, but these are being enrolled, in Armenia, Kurdistan, and Mesopotamia, in a mounted militia, the *hamadiéh* cavalry, under their tribal chiefs. The *nizam* and Redif infantry have been armed with Mausers, the European regiments with the small-bore rifle of 7.65 millimeters, the Asiatic troops with one of 9.5 millimeters. There are 7 *ordus*, or army corps, drawn from as many military regions, with headquarters at Constantinople, Adrianople, Monastir, Erzinjan, Damascus, Bagdad, and Sanaa in

their numerical order. The Seventh Corps is not recruited in Yemen, where few loyal troops can be raised, but mainly among the Turks of Asia Minor, who furnish some troops for the garrison of Tripoli and European Turks the rest. The effective of the Turkish army in 1901 was as follows: 583,200 infantry, in 648 battalions; 55,300 cavalry, in 202 squadrons; 55,720 artillery, with 1,356 guns; and 7,400 engineers, in 39 companies; total, 700,620 men. The war effective is computed at 1,500,000 men.

The Navy.—The principal ships of the Turkish navy are the Hamidieh, of 6,700 tons; the Mesudieh, of 9,000 tons; and the barquette cruiser Abdulkader. A contract was signed in 1901 for the construction of a new cruiser in the United States.

Commerce and Production.—The cultivated area in the Turkish Empire is about 44,000,000 acres. Forests cover 21,000,000 acres, but they are being rapidly diminished. About 1,000,000 hectoliters of wine are made annually, of which 160,000 hectoliters are exported. Silk and silk-worm eggs are exported. The production of oil of roses in 1901 was about 2,600 kilograms. The export of raw silk in the fiscal year 1901 was 443,244 kilograms; of silk waste, 176,905 kilograms; of twisted silk, 151,482 kilograms; of cocoons, 133,975 kilograms; salt, 35,223 metric tons.

Navigation.—The number of vessels entered and cleared at Constantinople from and for foreign ports in 1900 was 10,787, of 10,277,272 tons, of which 3,169, of 410,289 tons, were sailing vessels and 7,618, of 9,866,983 tons, were steamers. Of the vessels 6,056, of 723,312 tons, were Turkish; 2,661, of 4,220,648 tons, were British; and 2,323, of 1,589,851 tons, were Greek. The total number of vessels entered and cleared during the year was 14,394, of 10,475,735 tons. The number entered and cleared at all Turkish ports in 1898 was 173,739, of 34,653,457 tons. The merchant marine in 1900 comprised 2,205 sailing vessels, of 141,055 tons, and 177 steamers, of 55,983 tons.

Railroads, Posts, and Telegraphs.—The length of railroads in 1900 was 2,980 miles, of which 1,267 were in European Turkey and 1,713 miles in Asia Minor. A railroad from Konia to Bagdad and Koweit is planned by a German syndicate, one from Damascus to Aleppo by French capitalists, one is being built with British capital from Damascus to Haifa, and one is projected by the Turkish Government from Damascus to Medina and Mecca.

The Turkish post-office during 1898 forwarded 11,880,000 letters and postal cards and 2,583,000 samples and printed enclosures in the domestic and 6,046,000 letters and postal cards and 3,363,000 samples and printed enclosures in the international service.

The telegraphs have a length of about 23,440 miles, with 38,400 miles of wire. The receipts amount to £869,700 and expenses to £324,280 a year.

The Island of Thasos.—Mehemet Ali, the first Viceroy of Egypt, received from the Sultan Selim I, as a reward for services rendered in Arabia, the island of Thasos, in the *Ægean*. It is a place of great strategical value, because it commands the entrance to the Dardanelles. The island has been administered by the Egyptian Wakf, and its revenues are devoted to the maintenance of a school of Mohammedan theology. The Turkish Government has contended that only the usufruct was granted, while Egyptian authorities hold that there was a cession of territory. The Egyptian Government has collected only

£ T. 7,000 taxes from the island and has supplemented this with an equal amount in order to keep up the religious institution. In 1902 the Egyptian commissary levied a goat tax, not merely in order to add to the revenue, but to preserve the trees which the multitudes of goats were destroying. The people refused to pay the tax, and when it was enforced they resisted. There was a fight in which many persons were wounded. The Sublime Porte therefore ordered the incorporation of the island as a new district in the vilayet of Salonica. A Turkish administrator appeared with gendarmes and law officials and assumed jurisdiction and control. The Khedive sent the director of the Wakf to enforce his rights of property and administration, but he was not successful in doing so. The English authorities thereupon offered the Khedive their support, but their intervention was declined.

Political Disturbances.—There was more unrest among the Christian populations of the Turkish Empire in 1902 than there had been for some years before, and a corresponding ferment was started among neighboring Mohammedan peoples. The financial embarrassment of the Central Government rendered any attempt at reorganization or reform impossible, and that embarrassment was increased by the mobilization of troops for the prevention of rebellion. The restraining influence of the Austro-Russian accord alone kept the Macedonians from a general open revolt, and caused a split among the Macedonians themselves, the majority of whom lost faith in Bulgarian aid, since Bulgaria was held in restraint by Russia, and planned a spontaneous movement for the creation of an autonomous Christian state within the Turkish Empire. The Albanians showed some tendency to break loose from Turkey and set up a separate Mohammedan state. Italians and Austrians were secretly busy in Albania endeavoring to foster their respective national interests and influence. The ill treatment of Servians by Albanians prompted Russia to establish a consulate in the country to watch over the safety of the Slav inhabitants. Neither Greece nor Servia would engage in a national propaganda in Macedonia, and the Bulgarian propaganda relaxed, although the revolutionary desires of the Macedonians were keener than ever. The Armenians put forward their national aspirations once more. They held a congress in Brussels, and afterward revolutionary outbreaks occurred at Mush and Sasun, which were rigorously repressed. The United States minister succeeded in getting from the Porte indemnities for the American schools and missions that were destroyed by the Turks in the Armenian outbreak of 1895. The Gregorian patriarch obtained an *trade* recalling the exceptional laws under which the Armenians have suffered ever since by convincing the Sultan that the masses of the Armenians are loyal to his rule. Until the *Hintchak* and other secret societies bred a revolutionary spirit among the Armenians they were the most favored race next to the Turks in the whole empire and were known distinctively as the loyal community. The Arabs betrayed their characteristic aversion to Turkish rule that is always manifested when the resources of Stamboul are crippled. A difficulty arose with Italy regarding piracy in the Red Sea. The Italian Government notified the Porte that if this was not stopped it would take measures itself to do so. An ultimatum was sent to the Arab authorities, and when it expired on Nov. 5 the Italian squadron sunk the pirate dhows of the island of Midi and the Turkish troops captured the chiefs, two old

Turkish cruisers having been repaired and sent to Yemen with troops to accomplish this purpose. The French Government took similar steps to protect its commerce. An English gunboat bombarded Balhof, the chief of that town having plundered a British ship that was wrecked on the coast. Koweit, at the head of the Persian Gulf, has been taken under the protection of Great Britain, and the Vali of Busra was thwarted in his efforts to reestablish Turkish authority over this stronghold, important for naval purposes and also a more commanding position in the Arabian peninsula than the rugged promontory of Aden, where Great Britain has extended its territory up to the edge of effective Turkish occupation, whereas in central Arabia effective Turkish possession is impossible without a military effort that the Porte has not the means of making at present. The Sheik of Koweit has been aided before in asserting his independence, and with British aid he has successfully defied the Turks, although Busra was made a separate vilayet in 1884 for the purpose of organizing Turkish rule in this part of Arabia. The Wahabis in the interior are supplied from Koweit with the means of maintaining their rebellion against the Turks, while British war-ships are kept at Koweit to forbid the landing of a Turkish force to subdue the rebellious Sheik Mubarakh. The position of the latter, however, can only be made secure by the constant presence of a British naval force ready to protect him against rival claimants. One of these, Ibn el Rashid, Emir of Nejd, attempted in September to attack him by land and water, and the British naval authorities intervened to save him. The British Government called upon the Porte to punish the Emir of Nejd, but the Vali of Busra did nothing. The dhows in which a part of the attacking force came were captured by British sailors, one of whom was killed. Germany has permission to extend the Bagdad river to Koweit, which lies at the mouth of the Tigris, and is unwilling that England by means of intrigues with Arab chiefs shall establish territorial claims in this part of Arabia, and British claims are not yet recognized by Russia or any of the powers. The Turks took more active measures for the suppression of piracy. The British alone have encouraged the rebellious Arabs in their revolts against Turkey and question the sovereign rights of the Sultan over the peninsula, compelling him to keep an army corps in Yemen and one on the other side of Arabia. Turkish sovereignty is not questioned in the holy places. The extension of the British protectorate over the part of Yemen lying behind Yemen was obtained by aiding a few rebellious tribes in their resistance to Turkish authority. The Sultan of Makalla and Chahar is desirous of setting up an independent kingdom, and if the British give him effective support they may establish a protectorate over a large part of Yemen, where their interests do not come into conflict with those of other powers as directly as in the Persian Gulf. Two commissions have been sent to delimit the British sphere in the Hinterland of Aden, and neither reached a definite conclusion of the matter. The Turkish Government will not admit the British extensions, which have been accompanied by the demolition of Turkish fortifications and the British authorities are content to leave the question open. In the Gulf of Aden, pending the negotiation of a more definite arrangement, the Porte agreed with Great Britain to maintain the *status quo* and not to attempt to land troops for the subjugation of the Sheik of Koweit.

The Vali of Busra established direct Turkish dominion over a great part of Nejd to guard against any extension of British claims such as those over the federated rebel tribes behind Aden. The Turkish Government consented to the passage of 4 Russian torpedo-boats up the Dardanelles into the Black Sea. These vessels carried no arma-

ment, and by this means they technically evaded the clause in the treaty of Berlin by which the straits were neutralized, which condition was imposed by England and the other powers not merely to safeguard Turkey, but also to prevent the development of Russian naval power in the Mediterranean Sea.

U

UNITARIANS. The reports of the American Unitarian churches for 1902 give them 540 ministers, 452 societies, and 71,000 members.

The annual meeting of the American Unitarian Association was held in Boston, Mass., May 27. The Rev. Samuel A. Eliot, D. D., presided. The report of the secretary showed that the names of 97 new life members had been enrolled; that 12 new churches, 21 preaching stations, and 27 ministers had been added during the year, 15 of the ministers having been received from various orthodox denominations; services had been resumed at 8 places, and missionary preaching had been maintained during the summer months at 8 points. The president of the association had visited 84 churches and the secretary 95 churches; and reports of similar labors were received from district and state secretaries. The gifts for capital account or increase of endowment amounted to more than \$60,000. Among them were gifts of \$10,000 to establish the James Walker fund, in memory of Dr. James Walker, the secretary of the first meeting called to establish the association, and one of its original directors; and \$24,000 as a memorial fund of Dr. Ezra Stiles Gannett, the first secretary of the association. Considerable attention had been given to missionary work among Spanish-speaking peoples. Tracts had been printed in Spanish and mailed to persons in Mexico and Cuba; and work had been instituted on the plan of the post-office mission; but no intention existed at present to undertake the establishment of Unitarian churches in Cuba. The work of special committees on investigating the condition of country work, on retiring allowances for ministers, on the sources of the Unitarian ministry, on non-sectarian education, and on plans for new church buildings was mentioned. The budget of the treasurer for 1902-'03 provided for the expenditure of \$91,500, income from the churches and from the various funds of the association.

A resolution was passed placing the association on record as condemning all such evils as the employment of children under twelve years of age in factories in the Southern States, and as favoring protective legislation in their behalf. A memorial was adopted to be presented to the President of the United States and the two houses of Congress, expressing deep concern "for a just, honorable, and humane settlement of our difficulties with the people of the Philippine Islands," asking that such prompt and efficient measures be taken as might "replace the present methods of coercion with a policy of conciliation and good will," and pledging support to the President "in his expressed desire to secure for the people of the Philippine Islands 'self-government after the fashion of really free nations.'" The committee appointed to confer with the Universalists reported progress, the organization of the joint commission of Unitarians and Universalists, and its first regular meeting Jan. 20, 1902, and was continued. The annual meetings of the Unitarian Sunday-School Association, the Unitarian Historical Society, and the National Alliance (Women's) were held in con-

nection with the meeting of the association. The reports of the National Alliance concerned the post-office mission, the study class, missions in the South, local missions, student aid, tours of secretaries, and other work aiming at cooperation in every possible way with the American Unitarian Association.

The annual meeting of the British and Foreign Unitarian Association was held in London, May 20. The report opened with a reference to the successful "International Council of Unitarians" that was held in 1901; it mentioned the publication of several volumes and the circulation of leaflets, which had reached very high figures; the increase of correspondence with inquirers; the foundation of a new church at Auckland, New Zealand; the work in Scotland, carried on chiefly by the aid of the McQuaker bequest; and the progress of the work in India, attended by a keen demand for literature. The grants in aid to congregations had amounted to £2,030. The education bill was condemned because its tendency was believed to be to perpetuate and intensify denominationalism, and the association declared that "the state ought in education to concern itself not with the desires of churches and sects, but with the needs and rights of citizens, and that the community which pays should appoint not less than two-thirds of the management." The Postal Mission and Unitarian Workers' Union held its fourteenth annual meeting. The presidential address was delivered by Mr. W. Blake Odgers, K. C.; the president-elect, the Rev. R. A. Armstrong, spoke on *The Principles of Unitarian Christianity as Distinguished from its Doctrines*; and other addresses were delivered on the importance of preaching truth in the common life, Unitarianism and Humanism, and *The Causes which have Retarded the Effectiveness of the Unitarian Churches*. The report of the National Unitarian Temperance Association showed a small but steady advance in the number of members and of affiliated societies.

UNITED EVANGELICAL CHURCH. The statistical reports of this Church for 1902 give it 501 ministers, 820 churches, and 63,390 communicant members. The bishops, in their quadrennial address to the General Conference in October, represented that the net gain in members for four years had been 4,200. During the same period 27,279 conversions had been reported, and 29,842 accessions by confession of faith. The gain in itinerant preachers in four years had been 75, while the number of local preachers, 214, remained exactly the same. The contributions during the quadrennium had been \$261,668 for missionary purposes, \$77,295 for other conference collections, \$117,412 for Sunday-school work, \$710,371 for preachers' salaries, and \$508,641 for building and repairing churches and parsonages; in all, \$1,675,387. One hundred and thirty-six churches and 88 parsonages had been added, and the total valuation of church property—\$2,751,207—had increased \$804,908, or 41 per cent.; but there were still 159 organized congregations without a church building. Of the educational institutions, Central

Pennsylvania and Albright Colleges had been united into one, called Albright College, and Dallas Seminary, Oregon, had become Dallas College. The per capita missionary contributions had increased from 70 cents in 1898 to \$1.13, or 61 per cent. The report of the statistical secretary gave the following percentages of gains during the past four years: In membership, 7.2; in preachers, itinerant and local, 11.7; in organized congregations (three years), 5.4; in Sunday-schools (present number 887), 13.1; in average attendance on the same (53,710), 6.2; in Keystone League Christian Endeavor Societies, 2.4, with a small decrease in active membership; in Women's Missionary Societies (231), 37.5; in active membership of the same, 37.1; in Young People's Missionary Societies (33), 120, and 120 per cent. in their membership; in mission bands (123), 36.6, and 61 per cent. in their membership; in aggregate circulation of periodicals, 16.4; in missionary collections—conference treasury, 34.6; general treasury, 109; in average missionary contribution per member, 60; in average salary of preachers (\$537), 10.3; in average contribution per member for preachers' salaries (\$3.17), 18.2.

The Board of Church Extension reported to the General Conference that its receipts for four years had been \$1,649, and its expenditures \$2,179. Six churches had been aided during the time. The receipts for the past year had been \$449.

The total volume of business of the publishing house at Harrisburg, Pa., for the past year had been \$65,754, showing an increase of \$3,228 over the previous year. The net profit for the year had been \$3,981.

The charitable society had received \$2,402 and expended \$31 in four years, and returned its resources on Oct. 1, 1902, as \$3,330. A by-law of the society provides that none of the income arising from its revenues or investments shall be distributed till the fund amounts to \$10,000.

The receipts of the Missionary Society for the year ending Oct. 1 had been \$21,366, and the expenditures \$20,872. The Conference Missionary Societies had received \$40,109, and expended \$53,741. The Woman's Missionary Society had received \$13,703 and expended \$10,138. The amount of the foreign mission fund—\$3,905 having been added during the year—was \$9,742; and the receipt of \$49 for the First Church in China was acknowledged. The quadrennial statement made by the society to the General Conference gave the total receipts for four years as \$254,142, and the expenditures as \$253,721. The appropriations for 1902-'03 amounted to \$66,600.

The General Conference met at Williamsport, Pa., Oct. 9. The report on education gave accounts of the three higher institutions—Albright College, Myerstown, Pa.; Western Union College, Le Mars, Iowa; and Dallas College, Dallas, Ore.; and embodied a declaration, which was adopted by the conference, that the demand upon the Church is imperative to furnish its youth the opportunity for thorough education in its own institutions, and under the guidance and influence of men and women of its faith. Regulations were adopted for the government of the theological institutions and theological departments in schools, prescribing that all the members of the Boards of Trustees controlling such departments shall be members in good standing of the United Evangelical Church; that each teacher shall be likewise a member of the Church, and shall, before he enters upon his office as a teacher and each successive year thereafter before the opening of the school year, sign a declaration promising "to uphold the doctrines, discipline, and polity of the United

Evangelical Church, as set forth in its discipline and established usages, and to teach nothing not in perfect harmony with, or subversive of, said doctrines, discipline, and polity," so long as he remains in connection with the institution.

Provision was further made for dealing with teachers offending against these rules, and each theological school was made amenable to the annual conferences under whose control it stands, to which it was required to report. A post-graduate course of study for preachers was adopted. A new article on church extension was adopted for insertion in the Discipline, contemplating the reorganization of the society on such a basis as shall enlist the entire Church in its work. The election of a corresponding secretary of the Missionary Society was recommended, he to be without salary except such compensation as may be given him for actual service in canvassing the Church. The interest of the conference was expressed in the newly established mission at Changsha, China; the purchase of property there was advised; the establishment of a medical service as soon as practicable recommended; and the establishment of a training-school in connection with the mission work was directed. All forms of Sabbath desecration were discountenanced and condemned, and all ministers and members of the Church were urged to keep constantly in mind the great importance of maintaining and perpetuating the sacredness of the Lord's Day. Resolutions on moral reform and temperance took cognizance of the various current aspects of temperance action and discussion and the standard of personal purity, emphasized the importance of steadfast adherence to the rule of the Church on divorce (for adultery only), and expressed opposition to all monopolies injurious to healthy competition. The interests and organization of Sunday-schools and Christian Endeavor Societies were recognized in resolutions embodying suggestions as to their conduct. A complete change of bishops was effected, the Rev. H. R. Hartzler, D. D., editor of the English official newspaper, The Evangelical, and the Rev. William F. Heil being chosen to that office, while Bishop W. M. Stanford was elected editor of The Evangelical and Bishop Rudolf Dubs editor of the Zeitschrift, the German official organ. The conference directed that one of the bishops should live in the East and one not farther east than Chicago.

UNITED STATES OF AMERICA, a federal republic in North America. The legislative power is vested in the Congress, consisting of the Senate and the House of Representatives. There are 90 Senators, 2 from each State, elected by the State Legislatures for six years, one-third being renewed every second year. The House of Representatives has 357 members, elected in the congressional districts, into which the States are divided on the basis of the population shown in the last preceding decennial census, for two years by the ballots of all persons qualified to vote in State elections, in most States by universal adult male suffrage. Each House of Congress is the judge of the elections, returns, and qualifications of its own members. No person holding office can while continuing in office be a member of either House. Senators must be thirty years of age, citizens of the United States for nine years, and residents of the States in which they are chosen. Representatives must be twenty-five years of age, citizens for seven years, and residents of the States from which they are elected.

The executive power is vested in the President of the United States, who is commander-in-chief of the military and naval forces, can lay before Congress projects of legislation, is empowered to

make treaties, subject to the ratifying vote of two-thirds of the Senate, has power to veto acts of Congress, which can be passed over the veto by a two-third majority in each House, commissions the officers of the army and navy, and appoints the civil officials of the Government, subject to confirmation by the Senate. The Vice-President is *ex officio* President of the Senate, and in case of the death, resignation, or removal of the President he succeeds to the powers of the latter during the remainder of the term. The President and Vice-President are elected for four years by colleges of electors chosen in each State in such manner as the Legislature prescribes, which is in every State by popular suffrage, their number in each State being equal to the number of Senators and Representatives of the State in Congress. It has become the custom of political parties to nominate in national convention their candidates for President and Vice-President, and the electors, chosen in each State on a collective ticket, are accustomed to vote solidly for the candidates designated by their party beforehand. Thus the election of the President and Vice-President is effected in reality, though not in form, by the direct vote of the nation. The presidential term is four years. Powers not delegated by the Constitution to the Federal Government are reserved to the States. Congress has power to legislate in matters of and pertaining to Federal taxation, treaties, and other dealings with foreign powers, the army, the navy, to a certain extent the militia, foreign and interstate commerce, the postal service, coinage, weights and measures, and crimes against the United States. Every State has an elected Governor at the head of the executive and a Legislature composed of two Houses, both elective. The revenues of the State governments are derived from direct taxes on real property or on both real and personal property, while Congress is forbidden in the Constitution to levy direct taxes save in proportion to population. Personal and property rights, the civil and criminal law, education, the public health, charities, the control of corporations, are matters of State legislation.

The President of the United States for the term ending March 4, 1905, is Theodore Roosevelt, of New York, born in 1858, who was elected Vice-President in 1900 and succeeded to the presidency on the death of President William McKinley, Sept. 14, 1901. The Cabinet at the beginning of 1902 was composed as follows: Secretary of State, John Hay, of Indiana, appointed in 1898; Secretary of the Treasury, Lyman Judson Gage, of Illinois, first appointed on March 5, 1897; Secretary of War, Elihu Root, of New York, appointed on July 21, 1899; Secretary of the Navy, John Davis Long, of Massachusetts, first appointed on March 5, 1897; Secretary of the Interior, Ethan Allen Hitchcock, of Missouri, appointed in January, 1899; Postmaster-General, Charles Emory Smith, of Pennsylvania, appointed on Dec. 18, 1901; Attorney-General, Philander Chase Knox, of Pennsylvania, appointed on April 5, 1901; Secretary of Agriculture, James Wilson, of Iowa, first appointed on March 5, 1897.

On Jan. 9, 1902, Gov. Shaw of Iowa was appointed Secretary of the Treasury on the resignation of Secretary Gage. Leslie Mortimer Shaw was born in Morristown, Vt., Nov. 2, 1848, went to Iowa with his parents when a child, entered Cornell College in that State at the age of twenty-three, earned his living while studying, read law, practised in Denison, became president of the banks of Denison and Marietta, was drawn into politics by the currency issue in 1896, in the following year was elected Governor, was nominated

by acclamation and reelected, and was serving his second term when called into the Cabinet.

On Jan. 9, 1902, Henry C. Payne, of Wisconsin, was appointed Postmaster-General. He was born in Ashfield, Mass., Nov. 23, 1843, was educated at Shelburne Falls Academy, went to Milwaukee in 1863, was cashier in a dry-goods store at first, became active in the commercial development of electricity and in syndicating electric railroads and telephones, and was also an energetic political leader and manager in his State, served as postmaster of Milwaukee for ten years, and was a delegate to the National Republican Conventions in 1888 and 1892.

On April 29, 1902, William H. Moody, of Massachusetts, succeeded Mr. Long as Secretary of the Navy. He was born in Newbury, Mass., Dec. 23, 1853, graduated at Phillips Academy, Andover, in 1872, and at Harvard in 1876, studied and practised law, was district attorney for the Eastern District of Massachusetts from 1890 to 1895, was first elected member of Congress for the Sixth District of Massachusetts in 1895, and was a member of the House when he received his appointment.

Area and Population.—The land area of the States and Territories is 2,939,000 square miles, exclusive of the Indian Territory, which has 31,000 square miles, and Alaska, which has 631,000 square miles, and the Territory of Hawaii, which has an area of 8,640 square miles, making the total area 3,507,640 square miles, which does not include Territories belonging to but not a part of the United States—the insular possessions, Porto Rico, with an area of 3,600 square miles; the Philippine and Sulu Islands, having an area of 114,000 square miles; Guam, having an area of 200 square miles; and Tutuila and Manua, in the Samoan group, which, with smaller islands, have an area of 79 square miles; bringing the total area under the American flag up to 3,625,519 square miles. The States and Territories, according to the census of 1900, have a population of 75,602,515, exclusive of 392,060 in the Indian Territory, 63,592 in Alaska, 154,601 in Hawaii, and 91,219 soldiers, etc., abroad, increasing the total to 76,303,387, which the population of the insular possessions not incorporated in the United States increases further to 85,271,730. The population of the North Atlantic division, comprising Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania, total area 162,065 square miles, had in 1900 a population of 21,046,695, compared with 17,406,969 in 1890; Delaware, Maryland, the District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida, forming the South Atlantic division of States, area 268,620 square miles, had 10,443,480, compared with 8,857,922; Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas, grouped as the North Central division, area 753,550 square miles, had 28,333,004 inhabitants in 1900, against 22,410,417 in 1890; the South Central division, comprising Kentucky, Tennessee, Alabama, Mississippi, Louisiana, Texas, Oklahoma, and Arkansas, area 579,215 square miles, had 13,687,987, against 10,989,959 at the former census; and Montana, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Idaho, Washington, Oregon, and California, constituting the Western division, area 1,175,550 square miles, had 4,091,349 in 1900, compared with 3,102,269 in 1890.

The number of cities of 25,000 or more inhabitants in 1900 was 159, having increased from 124 since 1890, and the number of people living in

such cities was 19,694,625, having increased from 14,855,489. The population living in cities of 200,000 inhabitants and upward increased between 1890 and 1900 from 8,879,105 to 11,795,809, and the number of such cities increased from 16 to 19, notwithstanding the merger of Brooklyn and Long Island City in New York; cities of between 100,000 and 200,000 increased in number from 12 to 19, and their combined population from 1,808,656 to 2,412,538; cities of from 50,000 to 100,000 inhabitants increased from 30 to 40, and their population from 2,067,169 to 2,709,338; cities of between 25,000 and 50,000 increased from 66 to 81 and their population from 2,100,550 to 2,776,940. The total increase of population in the 159 cities was 4,839,136, which was 82,426 less than the increase between 1880 and 1890, when the population of these same cities grew from 9,933,927 to 14,855,489. The average annual rate of increase in the earlier period was 4.95 per cent. and in the later period 3.25 per cent. The rate of increase in the 19 cities having over 200,000 inhabitants in 1900 was 3.28 per cent. per annum between 1890 and 1900, compared with 4.06 per cent. between 1880 and 1890; the absolute increase was 2,910,704, against 2,567,452 in the former census period. The increase in the 19 cities of the second class was 3.33 per cent. per annum from 1890 to 1900, compared with 7.92 per cent. from 1880 to 1890. The rate for the 40 cities of the third class was 3.10 per cent. in the later period, against 5.10 per cent. between 1880 and 1890. In the 81 cities of the fourth class the average annual gain between 1890 and 1900 was 3.22 per cent., against 6.87 per cent. between 1880 and 1890.

Of the total population of 76,303,387 in 1900 resident in the States and Territories 39,059,242 were males and 37,244,145 females. The native-born population was 65,843,302, and the foreign-born 10,460,085, comprising 10,250,063 whites and 210,022 of colored races. Of the native-born 33,329,130 were males and 32,514,172 females; of the foreign born 5,730,112 were males and 4,729,973 females. Of the total population 66,990,802 were whites, comprising 34,349,021 males and 32,641,781 females, and 9,312,585 were colored, comprising 8,840,789 of African race, 119,050 Chinese, 85,986 Japanese, 137,242 Indians taxed, and 129,518 untaxed Indians. Of the total colored population 4,710,221 were males and 4,602,364 females. Of the negroes 4,393,221 were males and 4,447,568 females; of the Chinese 111,054 were males and 7,996 females; of the Japanese 71,386 were males and 14,600 females; of the 266,760 Indians 137,242 were males and 129,518 females. Of the white population 56,740,739 were native born, of whom 28,803,188 were males and 27,937,551 females; and of the native whites 41,053,417, comprising 20,934,099 males and 20,119,318 females, were born of native parents, and 15,687,322, comprising 7,869,089 males and 7,818,233 females, of foreign parents. The increase between 1890 and 1900 of the total population was 13,233,631, or 21 per cent.; of the total males, 6,744,179, or 20.9 per cent.; of females, 6,489,452, or 21.1 per cent.; of the native-born population, 12,081,637, or 22.5 per cent.; of foreign born, 1,101,994, or 12.4 per cent.; of the white population, 11,824,618, or 21.4 per cent.; of the colored population, 1,409,013, or 17.8 per cent.; of the native white population, 10,710,634, or 23.3 per cent.; of native whites born of native parents, 6,538,967, or 18.9 per cent.; of native whites born of foreign parents, 4,171,667, or 36.2 per cent.; of foreign whites, 1,113,984, or 12.2 per cent.; of negroes, 1,352,001, or 18.1 per cent.; of Japanese, 71,587, or 497.2 per cent. The Chinese decreased 7,728, or 6.1 per cent. The Indian population

shows a decline of 6,847, or 2.5 per cent. The percentage of males was 51.2 and of females 48.8 in both census years. The proportion of native born to the whole population rose from 85.2 per cent. in 1890 to 86.3 per cent. in 1900, while the foreign born descended correspondingly from 14.8 per cent. to 13.7 per cent. The proportion of whites advanced from 87.5 to 87.8 per cent., and the colored declined from 12.5 to 12.2 per cent. The percentage of native whites rose from 73 to 74.4 per cent., but that of native whites born of native parents declined from 54.7 to 53.8 per cent. of the total population, while the proportion of native whites born of foreign parents increased from 18.3 to 20.6 per cent.

The proportion of foreign whites in the population declined from 14.5 to 13.4 per cent., the ratio of negroes to the whole from 11.9 to 11.6 per cent., and of Indians from 0.4 to 0.3 per cent. The population of each State and Territory in 1900, divided as to sex and as to nativity, is given in the following table:

STATES AND TERRITORIES.	Males.	Females.	Native born.	Foreignborn.
Alabama.....	916,764	911,988	1,814,105	14,582
Alaska.....	45,872	17,720	50,981	12,661

Total.....	39,059,242	37,244,145	65,843,302	10,460,085

The total number of persons of school age, from five to twenty years of age inclusive, was 26,110,788 in 1900, of whom 21,573,492 were under eighteen and 4,537,296 from eighteen to twenty. Of the total 22,490,211 were whites and 3,500,194 negroes. Excluding 217,523 persons in Alaska, Hawaii, and Indian Territory, and on Indian reservations, the number of school age was 25,893,265, of whom 24,689,118 were native born and 1,204,147

foreign born; 14,775,476 were native whites of native parents, 6,371,221 native whites of foreign parents, 1,193,443 foreign whites, and 3,553,125 colored, of whom 3,485,188 were of African descent; 12,972,994 were males and 12,920,271 females. The number of males of voting age was 21,329,819, of whom 16,227,285 were native born and 5,102,534 foreign born; 19,036,143 were whites, of whom 10,636,898 were native whites of native parents, 3,466,721 native whites of foreign parents, and 4,932,524 foreign whites; 2,065,589 were persons of African descent; 2,326,295 were illiterates.

The negro, Chinese, Japanese, and Indian population in 1900 in the different States and Territories was as follows:

STATES AND TERRITORIES.	Negroes.	Chinese.	Japanese.	Indians.
Alabama.....	827,307	58	3	177
Alaska.....	198	3,116	265	29,536

Total.....	8,840,789	119,050	85,986	266,760

The density of population in 1900 was 35.5 to the square mile in Alabama, 0.1 in Alaska, 1.1 in Arizona, 24.7 in Arkansas, 9.5 in California, 5.2 in Colorado, 187.5 in Connecticut, 94.3 in Delaware, 4,645.3 in the District of Columbia, 9.7 in Florida, 37.6 in Georgia, 23.9 in Hawaii, 1.9 in Idaho, 86.1 in Illinois, 70.1 in Indiana, 12.6 in the Indian Territory, 40.2 in Iowa, 18.0 in Kansas, 53.7 in Kentucky, 30.4 in Louisiana, 23.2 in Maine, 120.5 in Maryland, 348.9 in Massachusetts, 42.2 in Michigan, 22.1 in Minnesota, 33.5 in Mississippi, 45.2 in Missouri, 1.7 in Montana, 13.9 in Nebraska, 0.4 in Nevada, 45.7 in New Hampshire, 250.3 in New Jersey, 1.6 in New Mexico, 152.6 in New York, 39.0 in North Carolina, 4.5 in North Dakota, 102.0 in Ohio, 10.3 in Oklahoma, 4.4 in Oregon,

140.1 in Pennsylvania, 407.0 in Rhode Island, 44.4 in South Carolina, 5.2 in South Dakota, 48.4 in Tennessee, 11.6 in Texas, 3.4 in Utah, 37.6 in Vermont, 46.2 in Virginia, 7.7 in Washington, 38.9 in West Virginia, 38.0 in Wisconsin, and 0.9 in Wyoming. The center of population in the United States in 1900 was in 30° 9.5' of north latitude and 85° 48.9' of west longitude, 6 miles southeast of Columbus, Ind., having shifted in ten years from 39° 11.9' of north latitude and 85° 32.9' of west longitude, 20 miles east of Columbus, Ind. In 1880 it was in 39° 4.1' of north latitude and 84° 39.7' of west longitude, 8 miles west by south from Cincinnati, Ohio; in 1870 it was in 39° 12' of north latitude and 83° 35.7' of west longitude, 48 miles east by north from Cincinnati, Ohio; in 1860 it was in 39° 0.4' of north latitude and 82° 48.8' of west longitude, 20 miles south of Chillicothe, Ohio; in 1850 it was in 38° 59' of north latitude and 81° 19' of west longitude, 23 miles southeast of Parkersburg, W. Va.; in 1840 it was in 39° 2' of north latitude and 80° 18' of west longitude, 16 miles south of Clarksburg, W. Va.; in 1830 it was in 38° 57.9' of north latitude and 79° 16.9' of west longitude, 19 miles west southwest of Moorefield, W. Va.; in 1820 it was 39° 5.7' of north latitude and 78° 33' of west longitude, 16 miles north of Woodstock, Va.; in 1810 it was in 39° 11.5' of north latitude and 77° 37.2' of west longitude, 40 miles northwest by west from Washington, D. C.; in 1800 it was in 39° 16.1' of north latitude and 76° 11.2' of west longitude, 18 miles west of Baltimore, Md.; in 1790 it was in 39° 16.5' of north latitude and 76° 11.2' of west longitude, 23 miles east of Baltimore, Md. The population of the United States has grown from 3,329,214 in 1790 to 5,308,483 in 1800, 7,239,881 in 1810, 9,633,822 in 1820, 12,866,020 in 1830, 17,069,453 in 1840, 23,191,876 in 1850, 31,443,321 in 1860, 38,558,371 in 1870, 50,155,783 in 1880, 62,622,250 in 1890, and 76,303,387 in 1900.

Immigration.—The number of immigrants in 1902 was 648,743, of whom 493,262 landed at New York, 39,679 at Baltimore, 39,465 at Boston, 17,175 at Philadelphia, 5,271 at San Francisco, and 53,891 came through other ports. Of the total number 242,679 were laborers, 80,562 farm laborers, 69,913 domestic servants, 10,369 tailors, 8,895 carpenters, 8,168 farmers, 7,242 merchants, 6,465 mariners, 6,402 shoemakers, 4,920 miners, 4,691 masons, 4,542 dressmakers, 3,721 clerks, 3,274 bakers, 2,937 professional men, 4,042 of other occupations, and 153,159 of no occupation and dependent persons. The skilled workers numbered 79,768. Of the immigrants, 178,372 were Italians, 171,989 Austro-Hungarians, 107,347 Russians, 30,894 Swedes, 29,138 Irish, 28,304 Germans, 17,484 Norwegians, 14,270 Japanese, 13,575 English, 8,104 Greeks, 7,196 Roumanians, 6,233 European Turkish, 5,660 Danes, 5,307 Portuguese, 4,711 West Indians, 3,117 French, 2,577 Belgians, 2,560 Scotch, 2,344 Swiss, 2,287 Dutch, 1,649 Chinese, 975 Spanish, 851 Servians and Bulgarians, 763 Welsh, 709 Mexicans, 636 Canadians, 384 Australians, 337 South Americans, 305 Central Americans, 187 Asiatic Turkish, 126 Philippine Islanders, 93 East Indians, 56 Pacific islanders, 37 from Africa, 9 Hawaiians, 37 Europeans not specified, 36 Asiatics from various countries, and 94 from other countries.

Education.—In the year ending June 30, 1901, the number of enrolled pupils in the common schools of the United States was 15,603,451, being 20.20 per cent. of the total population; average daily attendance, 10,692,091; number of teachers, 430,004. The private elementary schools had 1,261,672 pupils; public high schools and acad-

emies, 558,740; private academies, 177,260; State universities and colleges, 36,201; private universities and colleges, 79,070; public professional schools, 10,360; private professional schools, 50,804; State normal schools, 43,372; private training-schools for teachers, 20,030; city evening schools, 203,000; private business colleges, 110,031; reform schools, 25,327; public deaf and dumb schools, 10,849; private schools for deaf and dumb, 494; public schools for feeble-minded, 11,149; private schools for feeble-minded, 468; Government Indian schools, 23,077; schools in Alaska, 3,356; private orphan asylums and other benevolent institutions, about 15,000; private kindergartens, about 95,000; art, music, elocution, cookery, etc., about 50,000. In both private and public graded schools and universities the total number of persons receiving instruction was 17,841,560; in special educational institutions, 17,862,780. The professional schools comprised 150 theological seminaries, with 988 professors and 7,567 students, of whom 181 were women; 100 law schools, with 1,106 professors and tutors and 13,642 students, of whom 170 were women; 123 medical schools, with 3,876 lecturers and instructors and 24,199 students, besides 21 homeopathic colleges, with 639 professors and 1,812 students; 57 dental colleges, with 1,184 instructors and 8,308 students; 58 schools of pharmacy, with 522 instructors and 4,429 students; 448 training-schools for nurses, with 11,599 students; and 12 veterinary schools, with 189 instructors and 461 students. An order was issued by the War Department in August providing for military instruction in the colleges and schools. Any school, college, or university that will undertake to maintain 100 of its scholars under military instruction will have one of the 100 officers of the United States army detailed for the purpose to instruct the students in the same way as soldiers of the regular army, and the Government will furnish rifles and ammunition and a limited number of field-guns for practise in firing.

The Army.—The legal strength of the United States army as fixed by the act of Congress approved on Feb. 2, 1901, is 15 regiments of cavalry, 750 officers and 12,620 enlisted men; 30 batteries of field and 126 companies of coast-artillery, 651 officers and 17,742 enlisted men; 30 regiments of infantry, 1,500 officers and 25,345 enlisted men; 3 battalions of engineers, 1,282 enlisted men commanded by officers detailed from the corps of engineers; and the staff corps, Military Academy, Indian scouts, recruits, etc., 2,877 enlisted men. The total enlisted strength is 59,866 and the number of officers on the active list is 3,820. There were 100 officers and about 5,000 men in the Philippine native scouts and a Porto Rican regiment with 31 officers and 554 men, both bodies since disbanded. The army in the Philippines has been reduced from 40,000 to 17,000 men. The army act limits the enlisted strength of the United States army to 100,000 men. Recruits must be between eighteen and thirty-five years of age, of good physique, of good character, temperate, not less than 5 feet 4 inches in height, between 120 and 190 pounds in weight for infantry and under 165 pounds for cavalry and field-artillery, and able to speak and write English.

The National Guard of the States and Territories at the end of 1902 had 1,791 general and staff officers, 4,951 cavalry, 6,671 artillery, and 96,808 infantry. These numbers include 151 Indian Territory militia, 495 Hawaiian National Guards, 48 Guam volunteers, 600 Porto Rican militia, and 73 Samoan volunteers. The State appropriations amount to the annual sum of

\$2,839,150. The number of militia authorized is 183,596. The total population liable to military service is 8,727,500.

The Navy.—The United States navy, completed and building or authorized, consists of 19 first-class battle-ships, 1 of the second class, 10 armored cruisers, 6 double-turret monitors, 4 single-turret monitors for harbor defense, 5 old monitors with low freeboard, 1 ram for port defense, 23 protected steel cruisers, 4 unprotected steel cruisers, 12 unarmored steel gunboats, 5 light-draft gunboats, 6 unarmored composite gunboats, 1 despatch boat, 1 dynamite cruiser, 1 training-ship, 16 destroyers, 36 twin-screw torpedo-boats, 8 submarine boats, 22 steam-vessels of the old navy, 13 wooden sailing vessels, 40 steam-propellers, 21 gunboats under 500 tons captured from Spain, and 5 auxiliary cruisers, 23 yachts, 16 colliers, and 11 special vessels purchased during the Spanish War; total number of vessels, 310, of which 223 were fit for service at the end of 1902, while 24 were not fit for sea service and 63 were not yet built or not completed. The newest battle-ships, costing from \$3,000,000 to \$4,000,000 apiece, have a displacement of 15,000 or 16,000 tons, engines of 16,000 to 19,000 horse-power, a speed of 18 or 19 knots, and carry 4 12-inch, 8 8-inch, and 12 6-inch guns in the main battery, the last rapid-firing, and in the secondary battery 12 3-inch, 12 three-pounder, 8 one-pounder, and 2 3-inch field, 2 machine, and 6 automatic quick-firers. The Connecticut and Louisiana, of 16,000 tons, will have 7-inch breech-loaders instead of 6-inch rapid-fire guns in the main battery and the auxiliary armament will consist of 20 3-inch rapid-fire, 12 semi-automatic three-pounder, 2 field, and 8 machine guns. The armored cruisers, which cost as much as the battle-ships, have been increased in size to 14,500 tons in the latest development, with engines of 23,000 horse-power, giving a minimum speed of 22 knots, and their armament has usually been 4 8-inch breech-loaders and 14 6-inch quick-firers in the main battery and 18 3-inch, 12 three-pounder, and numerous smaller guns. The Tennessee and Washington, authorized by Congress on July 1, 1902, will have the most powerful armaments of any cruisers, with the best protection, and a cruising radius of 6,500 miles at 10 knots and 3,100 miles at 22 knots. The hull will be protected by a 5-inch belt tapering at stem and stern to 3-inch thickness and extending from 5 feet below the water-line to the upper deck, while the guns will be protected at the base with 6-inch bulkheads uniting with the barbettes to form a citadel. The armored deck will be 1½ inch on top and 3 and 4 inches on the slopes. The armament will consist of 4 10-inch guns in balanced turrets within 7-inch barbettes, 16 6-inch quick-firers, four of them on the main deck in armored casemates, the others in a broadside battery on the gun-deck, 22 3-inch quick-firers on the broadside of both decks, 12 semiautomatic three-pounders and 2 one-pounders, 2 quick-firing one-pounders, 3 field-guns, and 8 machine and automatic guns. For the quick-firing battery 7 rounds can be served every minute.

The United States navy is manned by 1,346 commissioned officers, 461 warrant officers, and 25,258 men. The marine corps consists of 212 officers and 6,000 men.

Pensions.—There were drawing pensions on July 1, 1902, 4 widows and 4 daughters of soldiers of the Revolutionary War; 1 survivor and 1,317 widows of soldiers of the War of 1812; 903 survivors and 3,320 widows of soldiers who fought in the early Indian wars; 6,828 survivors and

8,017 widows of soldiers of the Mexican War; 277,965 army invalids, 87,046 army widows, 634 army nurses, 4,360 navy invalids, and 2,263 navy widows pensioned under the general laws on account of services after March 4, 1861; 426,118 army invalids, 148,201 army widows, 15,953 navy invalids, and 6,977 navy widows pensioned under the act of June 27, 1899; and 6,282 army invalids, 2,727 army widows, 329 navy invalids, and 127 navy widows of the war with Spain; total number of pensioners, 999,446. The amounts paid out during the year in pensions were \$136,742,567 to 994,751 pensioners in the States and Territories, \$11,845 to 86 pensioners in the insular possessions, and \$646,329 to 4,695 pensioners outside of the United States.

Patents.—During the year ending Dec. 31, 1901, there were 43,973 applications for mechanical patents, 2,361 for design patents, 2,410 for trade-marks, 1,064 for registration of labels, 233 for registration of prints, and 115 for reissues of patents. The number of patents issued was 27,292; reissued, 81; trade-marks registered, 1,928; labels, 878; prints, 878. The number of patents that expired was 19,147. There were 8,360 applications allowed that awaited the payment of fees, and 4,111 were forfeited for non-payment. There were granted under international treaties 1,045 patents to Germans, 986 to Englishmen, 376 to Canadians, 306 to French citizens, 156 to Austro-Hungarians, 56 to Swiss citizens, 55 to Scots, 54 to Belgians, 53 to Swedes, 37 to Italians, 35 to Victorians, 29 to Russians, 25 to Irishmen, 25 to New Zealanders, 20 to citizens of New South Wales, 20 to Norwegians, 19 to Netherlanders, 11 to Mexicans, 9 to Transvaalers, 8 to South Australians, Argentinians, and Queenslanders severally, and 37 to other foreigners.

Public Lands.—Out of a total surface of 1,809,539,849 acres in the United States and Alaska 1,119,910,456 acres had been surveyed up to June 30, 1902, and 689,629,384 acres remained unsurveyed, including 368,100,311 acres in Alaska, mountain areas, unsurveyed lakes and rivers, private land claims, unsurveyed school lands and Indian and other reservations. The area of surveyed public lands vacant and subject to entry and settlement on July 1, 1902, was 391,979,307 acres, and of unsurveyed lands 591,976,169 acres; total, 893,955,476 acres. During the fiscal year railroad selections amounted to 4,848,846 acres; road selections, 156,132 acres; State selections, 2,508 acres. No lands were entered under the homestead and timber-culture acts. The forest reserves covered 4,909,880 acres in Alaska, 6,740,410 acres in Arizona, 8,784,009 acres in California, 3,113,180 acres in Colorado, 4,147,200 acres in Idaho, 7,427,320 acres in Montana, 208,902 acres in Nebraska, 3,258,080 acres in New Mexico, 57,120 acres in Oklahoma, 4,596,760 acres in Oregon, 1,177,120 acres in South Dakota, 1,029,760 acres in Utah, 7,036,000 acres in Washington, and 7,690,024 acres in Wyoming.

Commerce and Production.—The total value of foreign merchandise imported into the United States during the year ending June 30, 1902, was \$903,320,948, compared with \$823,172,165 in 1901. The total value of domestic exports was \$1,355,481,861, compared with \$1,460,462,806. Of the imports the value of \$56,366,711 was brought in cars and other land vehicles, \$102,188,002 in American vessels, and \$744,766,235 in foreign vessels. Of the domestic exports the value of \$115,967,630 was carried in land vehicles, \$81,083,527 in American vessels, and \$1,158,430,704 in foreign vessels. The total value of exports, domes-

tic and foreign, the foreign exports amounting to \$26,237,540, was \$1,381,719,401; total foreign trade in merchandise, \$2,285,040,349, compared with \$2,310,937,156 in 1901 and \$2,244,424,266 in 1900. Of the domestic exports in 1902 the value of \$851,460,312 represents agricultural, \$39,075,999 mining, and \$403,890,763 manufactured products, the proportion being 62.81, 2.88, and 29.80 per cent. respectively. The total value of imported merchandise free of duty was \$396,818,871 and of dutiable merchandise \$506,502,077. The values of the various articles and classes of merchandise imported in the fiscal year 1902 were as follow: Chemicals, drugs, and dyes, free of duty, \$3,748,670; coffee, \$70,982,155; cotton, unmanufactured, \$11,712,170; fruits, including nuts, \$8,883,426; furs and fur-skins, undressed, \$9,787,013; hides and skins, other than fur-skins, free of duty, \$40,532,579; india-rubber and gutta-percha, crude, \$25,652,977; paper stock, crude, \$2,770,255; silk, unmanufactured, \$42,635,351; textile grasses and fibrous vegetable substances, free of duty, \$28,437,136; tin, \$19,461,850; wood, unmanufactured, free of duty, \$7,578,065; breadstuffs, \$2,034,357; chemicals, drugs, dyes, and medicines, dutiable, \$23,974,952; cotton, manufactures of, \$44,460,126; earthen, stone, and chinaware, \$9,680,156; flax, hemp, jute, unmanufactured, \$3,108,826; flax, hemp, jute, manufactures of, \$38,070,205; fruits, including nuts, etc., \$12,647,099; furs, manufactures of, \$5,836,588; glass and glassware, \$6,013,963; hides and skins, other than fur-skins, dutiable, \$17,474,039; iron and steel, manufactures of, \$26,488,295; jewelry and precious stones, \$19,778,934; leather, and manufactures of, \$11,377,785; metal, metal compositions, etc., dutiable, \$6,223,383; silk, manufactures of, \$32,640,242; sugar and molasses and confectionery, \$56,142,016; tea, \$9,390,128; tobacco leaf, \$15,211,671; tobacco, manufactures of, \$2,494,822; vegetables, \$7,039,835; wines, \$8,921,138; wood and manufactures, dutiable, \$16,867,534; all other dutiable articles, \$130,625,913; all other articles free of duty, \$144,274,460; total merchandise imports, \$903,320,948.

The values of the exports of merchandise, the produce and manufacture of the United States in 1902 were as follow: Agricultural implements, \$16,286,740; animals, \$44,871,684; books, maps, engravings, \$3,997,977; breadstuffs, \$213,134,344; carriages, horse-cars, and cars, \$9,872,516; chemicals, drugs, dyes, and medicines, \$13,288,218; clocks and watches, \$2,144,490; coal, \$20,765,461; copper ore, \$2,601,697; copper, manufactures of, \$41,218,373; cotton, unmanufactured, \$290,651,819; cotton, manufactures of, \$32,108,362; fibers, vegetable and textile grasses, \$4,575,219; fish, \$6,563,199; fruits, including nuts, \$8,719,344; furs and fur-skins, \$5,030,204; hops, \$1,550,657; iron and steel, and manufactures of, \$98,552,562; leather, and manufactures of, \$27,798,323; naval stores, \$11,733,562; oil-cake and oil-cake meal, \$19,943,198; oils, animal, \$910,697; oils, mineral, crude, \$6,084,818; oils, refined or manufactured, \$66,218,004; oils, vegetable, \$15,308,633; paper, and manufactures of, \$7,312,030; paraffin and paraffin wax, \$8,858,844; provisions, comprising meat and dairy-products, \$199,861,378; seeds, \$8,027,824; sugar and molasses, \$3,237,329; tobacco, unmanufactured, \$27,103,990; tobacco, manufactures of, \$5,668,853; vegetables, \$2,546,287; wood, and manufactures of, \$47,779,848; all other articles, \$82,506,670; total, domestic merchandise, \$1,355,481,861.

The imports of raw sugar were 3,031,915,875 pounds, valued at \$55,061,097; of hides and skins, 326,124,103 pounds, valued at \$58,006,618; of coffee, 1,091,004,252 pounds; of rubber and gutta-

percha, 67,790,069 pounds; of wool, 166,576,966 pounds, valued at \$17,711,788; of tin in bars, blocks, and pigs, 79,352,356 pounds; of tobacco, 29,428,837 pounds; of tea, 75,579,125 pounds; of raw cotton, 98,715,680 pounds; of cacao, 51,379,396 pounds, valued at \$6,656,504; of bituminous coal, 1,941,422 tons, valued at \$5,310,456; of cement, 423,844,160 pounds, valued at \$1,478,451; of lead, 206,750,967 pounds, valued at \$4,632,770; of rice, 157,658,894 pounds; of bristles, 2,013,109 pounds; of malt liquors, 3,751,511 gallons. The value of woollen manufactures imported was \$17,384,463; copper and copper manufactures, \$10,968,948; live animals, \$4,624,531; feathers, artificial flowers, etc., \$5,110,921; paper and paper manufactures, \$4,223,125; distilled spirits, \$4,445,154; books, maps, engravings, etc., \$4,133,215; spices, \$3,685,249; bristles, \$2,047,331; toys, \$4,023,676; hats, bonnets, and materials, \$3,050,478; hair, \$2,055,536; art works, \$3,516,536; rice, \$2,926,921; bristles, \$2,047,331; cork, \$2,464,934; clocks and watches and parts, \$2,460,324; malt liquors, \$1,880,348; fertilizers, \$2,426,758.

The exports of corn were 26,636,552 bushels, valued at \$16,185,673; of wheat, 154,856,102 bushels, valued at \$112,875,222; of wheat flour, 17,759,203 barrels, valued at \$65,661,974; of anthracite coal, 1,570,490 tons, valued at \$7,117,809; of bituminous coal, 5,400,694 tons, valued at \$13,647,652; of copper ore, 25,076 tons; of raw cotton, 3,500,778,763 pounds; of apples, 459,719 barrels, valued at \$1,628,886; of hops, 10,715,151 pounds; of oil-cake and oil-cake meal, 1,648,093,619 pounds; of animal oils, 2,121,661 gallons; of crude mineral oil, 133,536,800 gallons; of paraffin and paraffin wax, 173,583,203 pounds; of beef products, 451,987,178 pounds, valued at \$8,858,844; of hog products, 1,337,315,909 pounds, valued at \$40,719,626; of oleomargarine, 144,267,342 pounds, valued at \$12,856,490; value of other meat products, \$11,529,151; value of dairy-products, \$7,104,770; exports of clover-seed, 7,256,573 pounds, valued at \$594,733; of distilled spirits, 2,956,889 proof gallons, valued at \$3,011,894; of starch, 28,183,967 pounds, valued at \$656,705; of sirup and molasses, 17,777,253 gallons, valued at \$2,465,031; of refined sugar, 7,213,050 pounds, valued at \$292,715; of raw tobacco, 301,007,475 pounds. Exports of brass and brass manufactures were \$1,930,810 in value; fertilizers, \$6,256,035; earthen and stone wares, \$600,798; glass and glassware, \$1,960,106; glucose, \$2,319,286; explosives, \$2,082,381; hay, \$2,580,622; india-rubber manufactures, \$4,032,100; scientific instruments, \$5,389,476; malt liquors, \$1,290,062; marble, stone, and manufactures, \$1,761,696; musical instruments, \$3,694,143; soap \$1,630,938; wool and woolen goods, \$1,525,826; fish, \$6,563,199; watches and clocks, \$2,144,490.

The values of imports and exports of the different ports of the United States for the year ending June 30, 1902, were as follow: Baltimore, imports \$22,825,281, exports \$80,532,512; Boston and Charlestown, imports \$71,921,436, exports \$102,404,304; Brunswick, imports \$33,097, exports \$7,338,808; Charleston, imports \$1,590,078, exports \$5,857,364; Detroit, imports \$3,469,077, exports \$18,053,055; Galveston, imports \$969,246, exports \$96,722,066; Mobile, imports \$3,714,371, exports \$12,503,556; New Orleans, imports \$23,763,480, exports \$134,486,863; Newport News, imports \$4,311,348, exports \$33,504,830; New York, imports \$559,936,879, exports \$490,361,395; Norfolk and Portsmouth, imports \$390,345, exports \$7,088,335; Pensacola, imports \$406,052, exports \$14,466,928; Philadelphia, imports \$47,750,342, exports \$80,383,403; Portland, Me., imports \$1,194,

899, exports \$14,325,018; Puget Sound, imports \$11,970,799, exports \$33,788,821; San Francisco, imports \$35,102,981, exports \$38,183,756; Savannah, imports \$571,682, exports \$41,525,428; Wilmington, N. C., imports \$258,808, exports \$11,102,171.

The amount of trade with each foreign country in the year ending June 30, 1902, can be seen in the following table:

COUNTRIES.	Imports.	EXPORTS.	
		Domestic.	Foreign.
Austria-Hungary....	\$10,150,601	\$5,913,462	\$253,665
Azores and Madeira..	19,373	351,851	4,667

The imports into the United States from Cuba were \$34,694,684, and exports to Cuba \$25,100,453; imports from Porto Rico were \$8,297,422, and exports to Porto Rico \$6,861,917; imports from Hawaii were \$24,700,429, and exports to Hawaii were \$19,000,000; imports from the Philippines were \$6,612,700, and exports to the Philippines were \$5,251,867. The total exports show a decrease of over 7 per cent. from those of 1901. Exports of farm-products fell off most heavily. The decrease in corn exports was nearly \$50,000,000; in iron and steel manufactures, nearly \$19,000,000; in copper, \$2,000,000. The exports of manufactured goods fell off from \$412,000,000 to \$403,750,000, but apart from iron and steel and copper goods there was an increase of \$12,500,000. The demand for railroad and structural steel goods was so strong in the United States that there was no surplus for export, and the imports of iron and steel increased from \$17,750,000 to \$27,000,000. In the general imports there was a great increase in materials for manufactures, such as cotton, wool, silk, fibers, tobacco, hides, rubber, wood, tin, copper, and chemicals, and the increase in quantities was larger than in values. While exports to Europe fell off considerably, there was an increase in the exports to Asia, Oceania, and Africa. Exports to China increased from \$10,500,000 to \$24,750,000; to Japan, from \$19,000,000 to \$21,500,000. The exports to all Asiatic countries have risen from \$19,750,000 in 1890 to \$64,000,000; to Oceania, from \$16,500,000 to \$34,250,000.

The imports of American gold coin in the year ending June 30, 1902, were \$3,870,320; of foreign gold coin, \$12,838,592; of gold bullion, \$10,496,745; of gold in ore, \$24,815,597. The imports of American silver coin were \$518,397; of foreign silver coin, \$3,731,544; of silver bullion, \$6,931,678; of silver in ore, \$17,050,635. The exports of gold coin were \$9,370,841; of gold bullion, \$37,204,010; of gold in ore, \$186,587; of silver coin, \$209,291; of silver bullion, \$45,685,325; of silver in ore, \$76,633. The total gold imports were \$52,021,254; exports of domestic gold were \$46,761,438, and of foreign gold, \$1,807,512. The total silver imports were \$28,232,254; the exports of domestic silver were \$45,971,249, and of foreign silver \$3,761,141.

The production of corn in the United States in the census year 1900 was 2,105,102,516 bushels; of wheat, 522,229,505 bushels; of oats, 809,125,989 bushels; of barley, 58,925,833 bushels; of rye, 23,795,927 bushels; of buckwheat, 9,566,966 bushels; of hay, 50,110,906 tons; of potatoes, 210,926,897 bushels; of rice, 285,750,000 pounds; of hops, 208,000 bales of 180 pounds; of flaxseed, 20,086,000 pounds; of hemp, 11,750,630 pounds; of sweet potatoes, 42,526,696 bushels; of peanuts, 11,964,957

pounds; of apples, 175,397,626 bushels; of peaches, 15,433,623 bushels; of pears, 6,625,417 bushels. The number of farm animals on Jan. 1, 1900, was 13,537,534 horses, value \$603,969,442; 2,086,127 mules, value \$111,717,092; 16,292,360 cows, value \$514,812,106; 27,610,054 oxen and other cattle, value \$689,486,260; 41,883,065 sheep, value \$122,665,916; total value, \$2,212,756,578. There were 5,739,657 farms on June 1, 1900, of which 5,537,731 had buildings. The total acreage was 841,901,546, of which 414,793,191 acres were improved and 426,408,355 acres unimproved. The total estimated value of farm property was \$90,514,001,838; value of land improvements, \$13,114,422,056; value of buildings, \$3,660,198,191; value of implements and machinery, \$761,261,550; value of live stock, \$3,078,050,041; value of farm-products in 1899, \$4,739,118,752; value of products fed to live stock, \$974,941,046; value of products not fed to live stock, \$3,764,177,706; expenditure for labor, \$365,305,921; expenditure for fertilizers, \$54,783,757; number of farms worked by owners, \$3,713,371; number rented for money, 759,920; number rented on shares, 1,273,366. The number of farms worked by white persons was 4,970,129; by negroes, 746,717. There were about 11,000,000 dairy cows in 1899, producing 1,430,000,000 pounds of butter, an average of 130 pounds, of the total value of \$257,400,000, at an average price of 18 cents a pound; 1,000,000 cows producing 300,000,000 pounds of cheese, worth, at 9 cents a pound, \$27,000,000; and 5,500,000 cows producing an average of 380 gallons of milk, 2,090,000,000 gallons altogether, worth, at 8 cents a gallon, \$167,200,000; total value of dairy-products, \$451,000,000, besides calves and the skim milk, buttermilk, and whey for feeding stock, which were worth enough to make the total \$500,000,000. The exports of butter in 1902 were 10,333,007 pounds to Great Britain, value \$1,924,408; 206,582 pounds to Germany, value \$32,080; 696,067 pounds to Canada, value \$140,545; 140,428 pounds to Cuba, value \$30,526; 1,311,313 pounds to Brazil, value \$164,407; total quantity, 16,002,169 pounds, value \$2,885,609. The cheese exports were 25,107,421 pounds to Great Britain, 4,235 pounds to Germany, 354,889 pounds to Central America, and 1,124,347 pounds to the West Indies; total quantity, 27,203,184 pounds, value \$2,745,597. The number of hogs packed during the year ending March 31, 1902, was 30,395,000. The exports of hams for the year ending June 30, 1902, were 227,653,232 pounds, value \$25,222,744; of bacon, 383,150,624 pounds, value \$35,449,797; of pork, 160,067,949 pounds, value \$13,770,026; of lard, 556,840,222 pounds, value \$52,375,864. The wool-clip in the fiscal year 1901 was 288,636,621 pounds; imports, 32,865,844 pounds of clothing and 67,127,159 pounds of carpet wool, making a total of 103,583,505 pounds; exports, 3,790,067 pounds; retained for consumption, 388,430,059 pounds. The domestic production in 1902 was 302,502,328 pounds. The cotton-crop of 1902 was 10,701,453 bales averaging 487 pounds. The consumption of the United States and Canada was 4,539,018 bales and the exports to Europe were 6,440,787 bales; total, 10,979,805 bales. The consumption of United States mills was estimated at 4,037,000 bales. There were 21,559,000 spindles in operation, one-fifth of the total number in the world. The number of spindles in Southern mills increased from 1,500,000 in 1890 to over 5,000,000 in 1900. The sugar-crop in 1902 was 310,000 tons of cane-sugar in Louisiana and 163,126 tons of beet-sugar. The consumption of the United States in 1901 was 1,932,330 tons refined from imported sugar, including 300,070 tons from Hawaii, 66,279 tons

from Porto Rico, and 5,100 tons from the Philippines; 17,977 tons manufactured from imported molasses; 292,150 tons from domestic cane-sugar; 124,859 tons from domestic beet-sugar; and about 5,000 tons of maple-sugar; total consumption, 2,372,316 tons.

The area of irrigated lands in Colorado, California, Montana, Utah, Wyoming, Idaho, Nevada, Oregon, New Mexico, Washington, and Arizona in 1900 was 7,093,629 acres irrigated from streams and 169,644 acres from wells. The irrigation systems cost \$64,289,601 to construct. The value of irrigated crops was \$84,433,438, including hay valued at \$34,834,966, cereals valued at \$14,338,326, vegetables valued at \$9,627,491, and orchard fruits valued at \$8,920,409. The number of farmers raising tobacco in 1899 was 308,317. The crop covered 1,101,483 acres, an increase in ten years of 58.4 per cent., and the total production was 868,163,275 pounds, an increase of 77.8 per cent. The value of the crop was \$56,993,003. The average crop was 788 pounds per acre, the average price 7 cents per pound. The imports of tobacco in 1902 were 29,829,512 pounds, valued at \$17,708,189. The exports were 315,575,309 pounds, valued at \$32,772,849. The production of fermented liquors in 1901 was 46,614,258 barrels. The production of distilled spirits was 128,568,201 gallons, including 26,209,804 gallons of bourbon whisky, 18,263,709 gallons of rye whisky, 10,775,117 gallons of alcohol, 1,724,589 gallons of rum, 1,636,200 gallons of gin, 30,228,804 gallons of pure neutral spirits, 4,047,602 gallons of fruit brandy, and also including high wines and miscellaneous spirits. The importation of malt liquors in the fiscal year 1902 was 1,190,406 gallons in bottles and 2,553,106 gallons in casks; total value, \$1,880,348. The importation of still wines in casks was 3,300,026 gallons; of still wines in bottles, 397,818 dozen; of sparkling wines, 335,256 dozen; total value, \$8,921,138. The production of wine in the United States in 1900 was 24,306,905 gallons, of which 14,620,000 gallons were produced in California, 2,528,250 gallons in New York, 1,934,838 gallons in Ohio. The importation of brandy in 1902 was 316,311 gallons, and of other spirituous liquors 1,909,812 gallons; total value, \$4,445,154. The consumption of malt liquors in 1901 was 1,390,127,379 gallons, of which 1,254,653,009 gallons were domestic and 3,596,382 imported. The consumption of domestic wines was 24,002,439 gallons, and of imported wines 4,788,710 gallons. The consumption of domestic fruit brandy was 1,078,389 gallons; of other domestic spirits, 100,066,821 gallons; of imported spirits, 1,941,629 gallons.

The mineral products of the United States in the calendar year 1901 reached a total value of \$1,092,224,380, against \$1,064,408,321 in 1900. The value of pig-iron was \$242,174,000; of bituminous coal, \$236,201,899; of anthracite coal, \$112,504,020; of copper, \$86,629,266; of gold, \$80,218,800; of silver, \$77,126,382; of petroleum, \$66,417,335; of stone, \$55,615,926; of natural gas, \$27,067,500; of lead, \$23,280,200; of cement, \$15,786,789; of brick clay, \$13,800,000; of zinc, \$11,265,760; of mineral waters, \$7,586,962; of salt, \$6,617,449; of limestone for iron flux, \$4,659,836; of clay, other than brick, \$2,591,332; of aluminum, \$2,238,000; of quicksilver, \$1,382,305; of antimony, \$542,020; of nickel, \$3,551. The coal production was 225,759,980 tons of bituminous and 67,538,536 tons of anthracite; total, 293,298,516 tons. The production of pig-iron was 16,132,408 metric tons; of raw steel, 13,689,173 metric tons. The production of petroleum was 63,363,929 barrels, equal to 138,445,430 gallons. The exporta-

tion of crude oil in 1902 was 133,536,800 gallons; of naphtha, benzene, and gasoline, 23,498,479 gallons; of illuminating oil, 842,829,070 gallons; of lubricating oil and heavy paraffin, 76,035,611; total, including residuum, 1,106,208,470 gallons. The production of copper in 1900 was 254,460,713 pounds in Montana, 144,227,340 pounds in Michigan, 115,403,846 pounds in Arizona, 29,639,987 pounds in California, 18,504,726 pounds in Utah, 7,826,949 pounds in Colorado, 6,918,122 pounds in the Eastern and Southern States, and 12,536,850 pounds in other States and Territories.

The production of zinc was 111,794 long tons. The production of rock phosphate was 1,490,358 long tons, valued at \$5,354,022; of iron ore, 28,887,479 long tons, valued at \$49,256,245; of zinc white, 46,500 short tons, valued at \$3,720,000; of sulfuric acid, 98,000 short tons, valued at \$2,293,200; of manganese ore, 638,795 long tons, valued at \$1,644,117. The production of aluminum was 7,150,000 pounds; of antimony, 5,298,000 pounds; of copper, 597,443,212 pounds; of ferromanganese, 291,461 long tons, value \$16,589,960; of lead, 270,700 short tons; of nickel, 6,700,000 pounds. The production of metals from foreign ores and bullion in 1901 was 102,645,963 pounds of copper, valued at \$16,536,285; 1,730,856 ounces of gold, valued at \$35,776,794; 22,260 tons of lead, valued at \$1,927,716; 8,664,614 pounds of nickel, valued at \$4,037,710; and 45,410,085 ounces of silver, valued at \$27,850,005; total value, \$86,128,490. The total value of domestic ores and minerals was \$723,348,715; of metals, \$490,279,923; of secondary products, \$73,068,974; total, \$1,372,826,102. The number of establishments manufacturing iron and steel products in 1900 was 669, having a capital of \$590,530,484, employing 222,607 persons who earned \$120,836,338 in wages, turning out 29,507,860 tons of products worth \$804,034,918 from material costing \$522,431,701. The gold production in 1902 was 3,805,500 ounces, valued at \$78,666,700, exceeding that of any other country.

Shipping and Navigation.—The number of registered vessels in 1902 was 24,273, of which 7,727 were steamers and 16,546 sailing vessels. There were 332 steamers, of 455,017 tons, and 858 sailing vessels, of 418,218 tons, 1,190 vessels in all, of 873,235 tons, engaged in foreign trade and 7,386 steamers of 2,718,049 tons, and 14,130 sailing vessels, of 2,140,665 tons, 21,516 vessels in all, of 4,858,714 tons, engaged in the coasting-trade. The aggregate registered tonnage was 5,797,902 tons on June 30, 1902, having increased from 4,068,034 tons in 1880 after a previous decline from 5,299,175 tons in 1860. The iron and steel tonnage built in 1902 was 280,362 tons, of which 270,932 tons were steamers and 9,430 tons sailing vessels and barges. The number of new vessels of all kinds built was 1,491, of 468,833 tons, of which 581, of 97,698 tons, were sailing vessels; 579, of 308,180 tons, were steamers; 44, of 4,539 tons, were canal-boats; and 287, of 58,416 tons, were barges.

The Post-Office.—The number of post-offices in 1902 was 76,215; total length of mail-routes, 507,540 miles. Of the post-offices 4,743 were presidential and 71,472 fourth-class. About 8,000,000 pieces of mail-matter are handled annually. The number of domestic money-orders issued in 1902 was 40,474,327, of the total amount of \$313,551,279; international money-orders, 1,311,111, of the amount of \$22,974,473.

Telegraphs and Telephones.—The Western Union Telegraph Company in 1902 had 196,115 miles of poles and cables, with 1,029,984 miles of wire. The number of offices was 23,567. The number of messages sent during the year was 69,374,883; receipts were \$28,073,095, and expenses

\$20,780,766. The average toll per message was 25.7 cents.

The American Telephone Company on Jan. 1, 1902, had 823,193 miles of wire on poles, 17,947 miles on buildings, and 4,200 miles of submarine wire. The total length of wire was 1,729,619 miles. The number of exchanges was 1,411; branch offices, 1,594; number of circuits, 592,467; number of stations, 1,020,647; number of employees, 40,864. The number of instruments was 2,525,606. The number of conversations was over 2,425,000,000 during the year, an average of 7,531,761 a day. The long-distance telephone system had 14,886 miles of poles and cable and 198,684 miles of wire.

Railroads.—The length of railroads in the United States as estimated by the Interstate Commerce Commission was 197,237 miles in 1901, including 1,162 miles of unofficial lines. The increase in the year was 3,892 miles. The number of miles operated in 1901 is estimated at 195,886. The capital stock of the railroads was \$5,978,796,249; bonded debt, \$6,035,469,741; gross earnings, \$1,612,448,826 in 1901; net earnings, \$520,294,727; interest paid, \$261,645,714; dividends, \$156,887,283. The railroad mileage in 1902 is estimated at 195,886 miles, with 70,105 miles of second track and sidings; total length of track, 265,992 miles. The cost of railroads and equipment was \$10,717,752,155, besides \$1,976,518,412 invested otherwise. Including unfunded debt, sinking-funds, and current accounts, the total stock and liabilities amounted to \$12,926,900,521, while assets were figured at \$13,308,029,032, giving a surplus of \$381,068,511. On 194,974 miles operated in 1901 were carried 600,485,790 passengers and 1,084,066,451 tons of freight. Receipts from passengers were \$360,710,686; from freight, \$1,126,267,652; from miscellaneous sources, \$125,478,488. The surplus earned during the year after paying interest and dividends was \$111,308,194.

Foreign Relations.—The ratifications of the Hay-Pauncefote treaty, signed at Washington Nov. 18, 1901, were exchanged on Feb. 21. On Jan. 22, 1903, a convention was signed at Washington by Secretary Hay and the Colombian *Chargé d'Affaires*, Tomas Herban, relative to the Completion of the Panama ship-canal by the United States pursuant to the act of Congress approved June 28, 1902. The Colombian Government authorizes the new Panama Canal Company to sell to the United States its rights and properties and its shares in the Panama Railroad, the Republic of Colombia reserving its shares in the new French company, for which it will receive their full nominal value. The United States shall have the exclusive right for the term of one hundred years, renewable at the option of the United States for periods of similar duration to construct, operate, and protect the maritime canal, with or without locks, such canal to be of sufficient depth and capacity for vessels of the largest tonnage and greatest draft now engaged in commerce, and such as may be reasonably anticipated, and also the same rights for the construction, operation, and protection of the Panama Railroad and of railway telegraph and telephone lines, canals, dikes, dams, and reservoirs and such other auxiliary works as may be necessary. To enable the United States to exercise the rights and privileges granted by this treaty the Republic of Colombia grants the use and control, for the term of one hundred years, renewable at the option of the United States, of a zone of territory along the route of the canal 5 kilometers in width on either side thereof, measured from its center line, including therein the necessary auxiliary canals, not exceeding in

any case 15 miles from the main canal, and other works, together with 10 fathoms of water in the Bay of Limon in extension of the canal, and at least 3 marine miles from mean low-water mark from each terminus of the canal. This grant shall not include the cities of Panama and Colon, except so far as lands and other property therein are now owned by or in possession of the canal or railroad company, shall be neutral territory, and the United States shall continue to guarantee their neutrality and the sovereignty of Colombia. In furtherance of this provision there shall be created a joint commission by the governments of Colombia and the United States that shall establish and enforce sanitary and police regulations.

The rights and privileges granted to the United States shall not affect the sovereignty of the Republic of Colombia over the territory within whose boundaries such rights and privileges are to be exercised. The United States freely acknowledges and recognizes the sovereignty and disavows any intention to impair it in any way whatever or to increase its territory at the expense of Colombia or of any of the sister republics in Central or South America, but, on the contrary, it desires to strengthen the power of the republics on this continent and to promote, develop, and maintain their prosperity and independence. The Republic of Colombia authorizes the United States to construct and maintain at each entrance and terminus of the proposed canal a port for vessels, with suitable lighthouses and other aids to navigation, and the United States is authorized to use and occupy within the limits of the zone fixed by this convention such parts of the coast-line and islands adjacent as are necessary for this purpose, including the construction and maintenance of breakwaters, coaling stations, docks, and other appropriate works. The United States will give attention to works of drainage along the line of the canal in order to prevent the invasion of epidemics, will organize hospitals, and will supply the towns of Panama and Colon with the necessary aqueducts and drainage-works in order to prevent their becoming centers of infection on account of their proximity to the canal. The Republic of Colombia agrees that it will not cede or lease to any foreign Government any of its islands or harbors within or adjacent to the Bay of Panama, nor on the Atlantic coast of Colombia between the Atrato river and the western boundary of the Department of Panama, for the purpose of establishing fortifications, naval or coaling stations, military posts, docks, or other works that might interfere with the construction, maintenance, operation, protection, safety and free use of the canal. In order to enable Colombia to comply with this stipulation, the Government of the United States agrees to give Colombia the material support that may be required in order to prevent the occupation of said island and ports, guaranteeing there the sovereignty of Colombia. The Republic of Colombia includes in the grant the privilege to control rights conferred upon it by the waters of Chagres river and other streams, lakes, and lagoons, to raise and lower the levels of the waters and to deflect them, and to impound any such waters and to overflow any lands necessary for the due exercise of such grants and rights to the United States, and to rectify, construct, and improve the navigation of any such rivers, streams, lakes, and lagoons. All damages caused to private landowners by inundation or by the deviation of watercourses or in other ways arising out of the construction or operation of the canal, shall in each case be appraised and settled by a joint commission. The ports leading to the canal, in-

cluding Panama and Colon, shall be free to the commerce of the world, and no duties or taxes shall be imposed except upon merchandise destined to be introduced for the consumption of the rest of the Republic of Colombia, or upon vessels touching at the ports of Colon and Panama and which do not cross the canal. There shall not be imposed any taxes upon the canal, the vessels that may use it, or property and effects appertaining to the canal or railroad nor contributions of a personal character upon individuals in the service of the canal. The United States shall have authority to protect and make secure the canal, as well as railways and other auxiliary works and dependencies, and to preserve order and discipline among the laborers and other persons who may congregate in that region, and to make and enforce such police and sanitary regulations as it may deem necessary to preserve order and public health and to protect navigation and commerce from interruption or damage. The Republic of Colombia may establish judicial tribunals within said zone, which shall have exclusive jurisdiction of all controversies between citizens of the Republic of Colombia or between citizens of any foreign nation other than the United States.

Subject to the general sovereignty of Colombia over said zone, the United States may establish judicial tribunals thereon, which shall have jurisdiction of all controversies between citizens of the United States and between citizens of the United States and citizens of any foreign nation other than the Republic of Colombia; and of all controversies growing out of or relating to the construction, maintenance, or operation of the canal, railway, and other properties and works. The United States and Colombia engage jointly to establish judicial tribunals, which shall have jurisdiction of all controversies between citizens of the United States and citizens of Colombia, and between citizens of nations other than Colombia or the United States; and also of all crimes, felonies, and misdemeanors committed within said zone, and of all questions of admiralty arising therein.

The two governments shall agree upon the laws and procedure which shall govern this tribunal, and also shall make adequate provision by agreement for the capture, detention, and delivery within said zone of persons charged with the commitment of crimes, felonies, or misdemeanors within and without said zone. The works of the canal, the railways, and their auxiliaries are declared of public utility, and in consequence all areas of land and water necessary for the construction, maintenance, and operation of the canal and the other specified works may be expropriated in conformity with the laws of Colombia. The indemnities awarded by a joint commission for such expropriation shall be borne by the United States, but the appraisal of said land and the assessment of damages shall be based upon their value before the commencement of the work upon the canal.

The canal, when constructed, and the entrance thereto shall be neutral in perpetuity. The Government of Colombia shall have the right to transport over the canal its vessels, troops, and munitions of war at all times, without paying charges of any kind. This exemption is to be extended to the auxiliary railroads for the transportation of persons in the service of the Republic of Colombia or of the Department of Panama, or of the police force charged with the preservation of public order outside of said zone. The United States shall have full power and authority to establish and enforce regulations for the

use of the canal, the railways, and the entering ports and auxiliary works, and to fix rates of tolls and charges thereof.

The Republic of Colombia renounces the participation to which it might be entitled, in the future earnings of the canal under the concessionary contract and all other claims of a pecuniary nature arising under concessions, and confirms and grants to the United States all the rights and property which otherwise would belong to Colombia at or before the expiration of the title and interest which it now has in the lands, and rights which might by lapse of time, forfeiture, or otherwise, revert to the republic.

If it should become necessary at any time to employ armed forces for the safety or protection of the canal, or of the ships that make use of the same, or the railways and other works, the Republic of Colombia agrees to provide the forces necessary for such purpose according to the circumstances of the case, but if the Government of Colombia can not effectively comply with this obligation, then, with the consent of or at the request of Colombia, or of the local authorities, civil or military, the United States shall employ such force as may be necessary for that sole purpose; and as soon as the necessity shall have ceased will withdraw the forces so employed. Under exceptional circumstances, however, on account of unforeseen or imminent danger to said canal, railways, and other works, or to the lives and property of the persons employed, the Government of the United States is authorized to act in the interest of their protection without the necessity of obtaining the consent beforehand of the Government of Colombia; and it shall give immediate advice of the measures adopted for the purpose stated, and as soon as sufficient Colombia forces shall arrive to attend to the indicated purpose those of the United States shall retire.

The Government of the United States agrees to complete the construction of the preliminary works necessary, together with all auxiliary works, in the shortest time possible; and within two years from the date of the exchange of ratifications the main works of the canal properly shall be commenced, and it shall be opened to the traffic between the two oceans within twelve years from that date. In case, however, that any difficulties or obstacles should arise in the construction of the canal the Government of Colombia will prolong for twelve years more the terms stipulated. But in case the United States should, at any time, determine to make such canal practically a sea-level canal, then such period shall be extended for ten years further. As the price or compensation for the right to use the zone granted in this convention, together with the proprietary right over the Panama Railroad, and for the annuity of \$250,000 gold, which Colombia ceases to receive from the railroad, as well as in compensation for other rights, privileges, and exemptions granted to the United States, and in consideration of the increase in the administrative expenses of the Department of Panama, the Government of the United States binds itself to pay Colombia the sum of \$10,000,000 in gold on the exchange of ratifications, and also an annual payment during the life of this convention of \$250,000 in gold, beginning nine years from that date. If Colombia shall hereafter enter as a constituent into any other Government or into any union or confederation of States, so as to merge her sovereignty or independence in such Government, union, or confederation, the rights of the United States under this convention shall not be in any effect lessened or impaired.

The joint commission referred to shall be established as follows: The President of the United States shall nominate two persons and the President of Colombia shall nominate two persons, and they shall proceed to a decision; but in case of disagreement of the commission an umpire shall be appointed by the two governments, who shall render the decision. All decisions by a majority of the commission or by the umpire shall be final.

A dispute with Russia regarding the seizure of 4 American sealing vessels by a Russian war-vessel in Bering Sea was referred before the constitution of The Hague Court of Arbitration to Dr. Asser, the Dutch jurist, but the award was given under the sanction of The Hague Tribunal. The vessels were chased and seized by the Russian cruiser, and the American seamen were compelled to work. The seizures were made without warning, and were not afterward confirmed by any court of maritime jurisdiction. The Russian Government acknowledged that in two cases its naval authorities were at fault, and the arbitrator awarded \$38,750 and \$1,488 respectively, with interest at 6 per cent. from September, 1892. In the other cases, in which \$101,336 and \$150,720 were claimed, the Russian Government contended that the seizure of the vessels and the imprisonment of Capts. Lewis and White were legal, as they were guilty of illegal sealing in Russian territorial waters. The American delegate, Herbert Peirce, said the United States Government claims rights in Bering Sea and adjacent waters and will admit jurisdiction only over territorial waters, extending a marine league from the coast, unless a different rule is fixed by treaty, and in such case the treaty binds only the parties to the agreement. M. Komaroff, the Russian delegate, claimed for Russia by custom a wider extent of territorial waters and also the right to chase and capture beyond territorial waters vessels guilty of unlawful fishing within the territorial waters. The arbitrator upheld the position taken by the United States that the right of seizure extends only to the limit of territorial waters, one marine league from shore, and condemned Russia to pay respectively \$28,688 with interest from 1892 and \$32,444 with interest from 1893. The indirect claims for the prospective catch of the illegally detained vessels was disallowed.

The United States Government failed to reach a *modus vivendi* with Great Britain with regard to pelagic sealing before the season of 1902. It was proposed in Congress to kill off the seal herd on Pribilof Islands. On Jan. 24, 1903, a convention was signed by Secretary Hay and the British ambassador, Sir Michael Herbert, for the reference of the Alaska boundary dispute to a tribunal of 6 impartial jurists, 3 to be selected by the United States and 3 by Great Britain, all questions at issue, including the final award, to be decided by a majority vote of the tribunal. The tribunal shall consider in the settlement of the matter the Anglo-Russian boundary treaty of Feb. 28, 1825, and the treaty of March 30, 1867, between the United States and Russia, by which Russia ceded Alaska to the United States.

In interpreting the treaty of 1825 the tribunal shall decide what is intended as the point of commencement of the boundary-line, what channel is the Portland channel, what course should the line take from the point of commencement to the Portland channel, to what point on the fifty-sixth parallel is the line to be drawn from the head of the Portland channel, and what course should it follow between those points.

The tribunal will decide whether—in extending the line of demarcation northward from this point, following the crest of the mountains parallel with the coast until its intersection with the one hundred and forty-first degree of longitude west of Greenwich, subject to the condition that if the line should anywhere exceed the distance of 10 marine leagues from the ocean, then the boundary should be formed by a line parallel to the sinuosities of the coast and distant therefrom not more than 10 marine leagues—it was the intention and meaning of the convention of 1825 that there should remain in the possession of Russia a continuous fringe or strip of coast on the mainland not exceeding 10 marine leagues in width separating the British possessions from the bays, inlets, and havens of the ocean extending from the point on the fifty-sixth parallel to the intersection of the line with the one hundred and forty-first meridian. If this question should be decided in the negative, and in the event of the summit of the mountains being found to be in places more than 10 marine leagues from the coast, the tribunal shall decide whether the *lisière* which was to belong to Russia should be measured from the mainland coast of the ocean, strictly so called, along a line perpendicular thereto, or if not, whether it was the intention of the convention that, where the mainland coast is indented with deep inlets forming part of the territorial waters of Russia, the *lisière* was to be measured from the line of the general direction of the mainland coast or from the line separating the waters of the ocean from the territorial waters of Russia or from the heads of the inlets. The tribunal shall also decide what, if any exist, are the mountains referred to as situated parallel with the coast that are declared to be the eastern boundary. When the high contracting parties shall have received the decision of the tribunal on the questions submitted, which decision shall be final and binding, they will each appoint one or more scientific experts who shall proceed together to lay down the boundary-line in conformity with the decision. Should there be a failure by a majority of the members of the tribunal to agree upon any of the points submitted, or should a majority agree upon only a part of the questions, they will report to their respective governments.

The first case submitted to The Hague Arbitration Court since its institution was a dispute between the United States and Mexico on a question of the endowments of Catholic missions in California. While California was a part of Mexico President Quesada in 1842 seized a fund that was created for the support of Californian missions, promising to pay an annuity to the clergy, who received it as long as California belonged to Mexico, but after its annexation to the United States the missions of Lower California received their share, while the clergy of Upper California, when they claimed from the Mexican Government the continuance of their stipends, were referred to the United States Government. The question was once decided by arbitration, but Mexico, dissatisfied with the award, paid only the exact sum awarded, and has not since continued the payments, holding that the Pious fund, as it is called, is a purely Mexican fund that should be used only for the benefit of the Mexican Church. On May 22, 1902, Secretary Hay and Dr. Manuel de Azpiroz, the Mexican minister, signed a convention for the reference of the question to the decision of The Hague Tribunal. The United States chose as arbitrators Sir Edward Fry and Prof. Martens,

one an English, the other a Russian juriconsult; Mexico chose Senator Guarnaschelli, an Italian, and M. de Savornin Lohman, a Dutch member of the court. Judge Guarnaschelli being unable to accept, M. Asser was appointed by the Mexican Government. The 4 members met at The Hague on Sept. 1 and chose Dr. Matzen, a Danish jurist, as umpire. The Pious fund originated in 1697, and consisted of money collected in Mexico to enable the Jesuits to carry on their missionary labors in the two Californias. After the expulsion of the Jesuits from Spanish dominions in 1768 the property of the fund was confiscated by the Government, but it was provided that it should remain subject to the charges imposed by the original donors. The Dominicans took over the Jesuit missions in Lower California, the Franciscans those in Upper California, and both the Spanish Crown and the Mexican Republic kept the promise to the Church until the property was seized in the exigencies of the Mexican treasury, when an undertaking was given that 6 per cent. interest would be paid in perpetuity on the full value. This pledge was kept likewise. The Franciscans established 21 missions, which occupied the sites of the principal cities of California. About twenty years after the cession of Upper California to the United States a treaty was concluded with Mexico for the settlement of claims of Mexican citizens against the United States and of United States citizens against Mexico. Each Government appointed an arbitrator, and the arbitrators chose Sir Edward Thornton, British minister at Washington, to be umpire. The arbitrators having disagreed in the matter of the Pious fund, the umpire decided that it amounted to \$1,435,033, and that half belonged to the clergy of the State of California. He accordingly condemned Mexico to pay interest at 6 per cent. on half the total sum for twenty-one years, amounting to \$904,070 up to Feb. 2, 1869, the date at which the umpire's jurisdiction ended. This was paid in instalments from 1877 to 1890, but the interest that has accrued since 1869 has not been paid, although the claim of the Californian bishops has been urged repeatedly by the State Department at Washington. In the new treaty of arbitration the judges were asked to decide three questions: First, whether the claim was, in consequence of the decision of Sir Edward Thornton, *res adjudicata*; second, if not governed by that principle, whether it was just; third, if the decision went against Mexico, in what currency should it be paid. Mexico held that the principle of *res adjudicata*, which was acknowledged to be applicable in international law, as it is in the civil law of most European countries, did not apply in this case because Sir Edward Thornton had no jurisdiction to make his award; and, in case it was found that he had, because his award did not cover the present claim. The Tribunal decided that Sir Edward Thornton had jurisdiction to make his award, and that, as the principles and evidence on which it was based were identical with those governing the present claim, the matter was *res adjudicata*. The full amount of the claim, which is \$1,420,689, was awarded to the United States for the benefit of the bishops of California, the claimants in behalf of the Church. The court decided that this could be paid in Mexican currency. The Mexican Government was, moreover, directed to pay in perpetuity the annual sum of \$43,051. The court was opened on Sept. 15 and the award was made on Oct. 14. In the dispute with Germany regarding Samoa the decision of King Oscar of Sweden was against the United States. (See SAMOA.)

Sir Robert Bond, Premier of Newfoundland, arranged a reciprocity convention with Secretary Hay in September, 1902. He negotiated a convention with Secretary Blaine in 1900, but the British Government withheld ratification at the request of the Dominion Government in order that Canada might have an opportunity to effect a similar arrangement. If Canada failed to secure this within a reasonable time the Newfoundland Government received an assurance that the Imperial Government would not withhold its consent longer to an arrangement it might make for the advantage of Newfoundland. The principle of the Bond-Blaine convention was free bait for free fish. It provided for the admission of Newfoundland dried codfish into the United States free of duty on condition that American vessels engaged in the deep-sea fisheries for cod, haddock, halibut, etc., on the Grand Banks and adjacent waters may freely buy bait, consisting of herring, caplin, and squid, caught in the Newfoundland inshore fisheries. At present American fishermen obtain bait in Newfoundland under a *modus vivendi* arranged in 1888 by paying an annual license fee of \$1.50 a ton, taxing each ship from \$120 to \$200 a year. In 1901 in Newfoundland waters 76 American vessels baited and supplied Newfoundland bait to probably as many more at Gloucester. During the winter herring can be obtained nowhere else. The Canadians, who can not be restricted in any way from baiting in Newfoundland, being British subjects, desire the same reciprocity with the United States for fishery products that the Newfoundlanders do. The supply of bait, however, in Canadian waters is so limited or inaccessible that at least two-thirds of the Dominion fishermen obtain theirs in Newfoundland. Except for the *modus vivendi* the New England fishermen would find it as difficult to fish on the banks as the French do, who as foreigners can only get bait by smuggling. The French by the treaty of Utrecht, made in 1713, have the right to trawl in the territorial waters of the west and the northeast coasts of Newfoundland. Americans by the treaty of Washington, made in 1818, have equal rights on the west shore and also are entitled to frequent the southwest coast. All these shores are remote and the inshore fishery rights are valueless for the bank fishermen. The catch of American fishermen on the Newfoundland banks is in value about \$4,000,000 a year, only 10 per cent. of the total fisheries of the United States and not more than half the catch of the Canadian fishermen, those of the maritime provinces who wish to obtain free entry for their fish into the United States to compete with the New England fishermen. The Newfoundlanders threaten no serious competition. They depend on their inshore fisheries, and what cod they cure after their fashion by drying it after it is pickled in the wind and sun. Of this peculiar product 35,000 quintals is exported to the United States, valued at \$150,000 paying a duty of $\frac{1}{2}$ cent a pound. The Newfoundlanders would like to have the duty on their salt cod removed in the United States and Porto Rico, and on salt herring, of which American vessels took away 200,000 barrels in the winter of 1901, and on other fishery products. The Bond-Hay convention goes much further to meet their wishes than the Bond-Blaine convention. It offers to admit free of duty all fishery products, except fresh fish, and also crude minerals. If it is ratified by both parties Newfoundlanders can market in the Atlantic cities not only dry fish, but green fish, in which state, simply packed in the holds of the schooners with salt

between, cod is preserved by the New England fishermen, and by the fishermen of New Brunswick and Nova Scotia, and is liked best by the American consumers. For these new concessions Newfoundland agrees to admit certain American foodstuffs and other articles at the same fixed rates of duty that are imposed on Canadian products of the same kinds, and if the duties are made lower for Canada or any other country the United States while the convention remains in force also will have the benefit of the reduction.

An American, Capt. A. A. Rosehill, laid claim to Marcus Island, whence a Japanese colony ships guano, dried fish, stuffed birds, and feathers. His claim to the island being disputed, he fitted out an expedition at Honolulu for the purpose of taking forcible possession of the guano deposits there. The Japanese minister notified the Government at Washington that Japan claims the island as one of the Bonin group, in which it was officially included in 1898. Japan sent a cruiser with a diplomatic official to defend her claim, and this official bore a message from Washington to Capt. Rosehill, warning him to offer no forcible opposition. The American claimant landed on the island in 1889, and finding it uninhabited, raised the American flag, and put up a monument where he deposited a record of his claim to the island. In 1901 he filed a bond at Washington such as is required to perfect a legal claim to a guano island under American protection. Meanwhile Japanese had come, and finding the island unoccupied had shipped away guano, and in 1896 formed a permanent settlement of about 20 souls. Capt. Rosehill arrived on July 30, but sailed away again on receiving the message from the Japanese officer. The Japanese have long known the island, and since 1879 their fishermen have visited it. The American discoverer filed a claim at Washington against the Japanese Government for possession of the island and indemnification for the guano taken away.

Finances.—The receipts of the Government for the fiscal year ended June 30, 1902, exceeded the expenditures by \$91,287,375. The excess for the preceding year was \$77,717,984. There was a net decrease in the revenues of about \$15,000,000, the principal items of change being a decrease of \$35,000,000 on account of internal revenue, due to the repeal of war-taxes, and an increase of nearly \$16,000,000 for customs. Another increase was more than \$10,000,000 from postal revenues.

There was a net decrease of expenditures of \$38,776,495, the chief items of decrease being \$2,300,000 for refunding excess of customs deposits, \$2,500,000 for deficiency in postal revenues, \$4,900,000 for the twelfth census, \$1,800,000 for public buildings, \$4,600,000 for improving rivers and harbors, \$16,500,000 for the quartermaster's department, and \$6,300,000 for the subsistence department of the army. There was a decrease in the annual interest on the public debt of \$3,234,934.

The principal items of increased expenditure were as follow: Rebate of tax on tobacco, \$3,000,000; refunding to States expenses incurred in raising volunteers, \$1,000,000; increase of the navy, \$4,600,000; Bureau of Equipment of the naval establishment, \$1,000,000; general account of advances Navy Department, \$2,000,000.

Of the excess of revenues for the year, \$70,410,000 were expended in the purchase of bonds and other securities applied to the sinking-fund. With the exception of the two years 1880 and 1881, this is the largest expenditure on account of the sinking-fund since it was established in 1869. The premium paid on bonds purchased for the sinking-fund amounted to \$14,339,000.

Detailed receipts and expenditures for 1902, compared with those for 1901, are as follows:

The gross gold in the Treasury at the close of the calendar year was \$616,750,218, which is the largest amount of gold ever held by the Treasury. This colossal holding never has been approached by any nation except Russia, which accumulated \$598,000,000 a few years since during the effort to establish the gold standard in that empire. The cash balance at the close of the calendar year,

available for ordinary expenditure, was \$211,681,177, of which \$150,556,000 was held in United States national-bank depositaries, and the remaining \$61,000,000 was in the Treasury vaults. A great growth in the use of depositary banks has taken place during the past five years. The number of such banks increased from 165 in 1897 to 700 at the close of 1902, and in that time their holdings of public funds increased from about \$15,000,000 to \$150,000,000. The following tables show the assets and liabilities of the Treasury for the years ended Dec. 31, 1901 and 1902:

ASSETS.	YEAR ENDING DEC. 31,	
	1902.	1901.
Gold coin and bullion.....	\$314,750,216	\$240,797,508
Silver dollars or bullion.....	494,324,351	496,718,314
United States notes.....	2,722,299	5,514,530
Treasury notes (1890).....	74,850	150,323
National-bank notes.....	15,535,945	10,433,450
Balances in national-bank de- positaries.....	150,556,054	112,053,534
Gold certificates.....	37,634,630	33,788,080
Silver certificates.....	4,646,343	8,594,103
Bonds and interest checks paid.....	15,003	678,188
Minor coins and fractional notes.....	638,530	333,294
Subsidiary silver coins.....	6,333,550	6,914,367
Total.....	\$1,339,956,731	\$1,219,631,731

LIABILITIES.	YEAR ENDING DEC. 31,	
	1902.	1901.

National-bank redemption account.....	..	42,169,933	35,038,908
Fractional notes.....	..	6,972,594	6,974,493
Total.....	..	\$964,933,043	\$966,550,547

There were also outstanding at the close of the calendar year \$346,681,016 in United States notes, commonly called greenbacks, and \$24,053,000 Treasury notes of 1890. Under the operation of the act of March 14, 1900, the Treasury notes are gradually being retired, their place being taken by silver certificates as rapidly as the bullion purchased under the act of 1890, for which Treasury notes were issued, is coined into silver dollars.

There was a material decrease in the coinage of the mints, particularly gold coinage. At the same time there has been a corresponding increase in bullion. The cause for the decrease in coinage is due largely to the fact that operations were suspended at Philadelphia while the change was being made from the old to the new mint building

in that city. The following table shows in detail the coinage of the year, compared with 1901:

DENOMINATIONS.	1902.	1901.
Double-eagles.....	\$35,697,380	\$32,800,330
Eagles.....	5,233,150	51,300,850
Half-eagles.....	5,337,630	14,333,115
Quarter-eagles.....	334,330	100,300
Louisiana Exposition gold dollars.....	75,060
Total gold.....	\$47,134,330	\$99,035,715
Standard silver dollars.....	\$18,180,777	\$34,398,550
Half-dollars.....	4,454,723	4,541,435
Quarter-dollars.....	4,617,539	3,674,575
Dimes.....	2,736,073	2,650,345
Total silver.....	\$30,089,107	\$35,265,495
Five-cent nickel.....	\$1,574,080	\$1,344,105
One-cent bronze.....	673,737
Total minor.....	\$2,247,736	\$2,000,505
Total coinage.....	\$79,471,173	\$136,301,715

The following table shows the amount of money in circulation Jan. 1, 1903, compared with the same date in 1902:

CHARACTER OF MONEY.	AMOUNT IN CIRCULATION JAN. 1,	
	1902.	1901.
Gold coin (including bullion in Treasury).....	82	\$335,374,550
Gold certificates.....	78	377,997,080
Standard silver dollars.....	54	73,330,965
Silver certificates.....	83	449,433,592
Subsidiary silver.....	60	33,051,034
Treasury notes of 1890.....	95	33,433,737
United States notes.....	83	341,163,533
National-bank notes.....	51	349,656,375
Total.....	\$2,346,700,501	\$2,350,627,900

Jan. 1, 1903, the circulation per capita was \$29.43, against \$28.69 for Jan. 1, 1902.

The Supreme Court.—Oliver Wendell Holmes, of Massachusetts, was appointed Associate Justice in place of Horace Gray, deceased, and took his seat on the bench Dec. 8, 1902.

The number of cases docketed and pending at the beginning of the October term, 1901, was 732, of which 377 were disposed of during the term. The number actually considered by the court was 375, of which 168 were argued orally and 126 were submitted on printed arguments. Among the cases of general interest decided were the following:

Controversy between States.—The court, in an opinion delivered by Chief-Justice Fuller, April 7, 1902, overruled the demurrer of the State of Colorado in the case of *Kansas vs. Colorado*. The case involved the right of Colorado to appropriate for purposes of irrigation the waters of Arkansas river, which Kansas sought by an original action to restrain on the ground that the stream flows through Kansas and the people of the latter State are injured by Colorado's appropriation of the water. Colorado contested the jurisdiction of the court in the case and filed a demurrer. The court held that the case is one in which it can properly assume jurisdiction, and the next proceeding will be for Colorado to answer the bill of complaint.

Insolvent National Banks.—The case of *Studebaker vs. Perry*, receiver of the National Bank of Kansas City, involved the question whether the Comptroller of the Currency, acting under the national banking laws, can validly make more than one assessment upon the shareholders of an

insolvent national banking association. The court held that several assessments could be legitimately made if necessary.

Statutory Construction.—*Rodgers vs. United States*, decided April 7, 1902. This was a suit brought by Admiral Rodgers of the navy to recover money claimed to be due under the law known as the navy personnel act, approved March 3, 1899. The Court of Claims decided the case in favor of the United States, and the Supreme Court affirmed that decision. Section 7 of the act referred to abolished the rank of commodore, at least as far as respects the active list of the line of the navy, and lifted those in that rank to that of rear-admiral. It is a canon of statutory construction that a later statute, general in its terms and not expressly repealing a prior special statute, will ordinarily not affect the special provision of such earlier statute.

Patent Cases.—In the case of *Excelsior Wooden Pipe Company vs. Pacific Bridge Company*, decided May 5, 1902, the question of jurisdiction was involved, and interesting dictums were pronounced. If a suit is brought to enforce or set aside a contract, though such contract be connected with a patent, it is not a suit under the patent laws, and jurisdiction of the Circuit Court can only be maintained upon the ground of diversity of citizenship. It is sometimes difficult to determine whether the action be upon the patent or upon a contract.

The case of the *Carnegie Steel Company vs. Cambria Iron Company* was for recovery of damages for infringement of a patent for a "method of mixing molten pig metal." The decision was in favor of the Carnegie Company, but a dissenting opinion was delivered by Mr. Justice White, in which the Chief Justice, Mr. Justice Harlan, and Mr. Justice Brewer united. Their judgment was that the decision of the court tended "to put the patentee in a position where, without invention on his part, and without the possession by him of lawful letters patent, he is allowed to exact tribute from the steel and iron making industry, whenever those engaged in such industry desire to increase their plants or to more conveniently and satisfactorily conduct their operations, so as to keep pace with the natural evolution of modern industrial development."

Extradition Treaty with Prussia.—The case of *Terlinden vs. Ames* was an extradition proceeding involving the status of the Kingdom of Prussia since its incorporation into the Empire of Germany. Terlinden, a citizen of Prussia, was apprehended in Chicago, where the German authorities made application under our treaty with Prussia of 1852 for extradition for an offense committed in Prussia. The proceeding was resisted on the ground that the absorption of Prussia had had the effect of nullifying the treaty. Application was made for a writ of *habeas corpus*, which was denied by the lower courts. The Supreme Court sustained the lower courts in their action. Treaties may be terminated by the absorption of powers into other nationalities and the loss of separate existence; but as the German Government had recognized this treaty, and the Executive Department of our Government had acted in the same direction, it was held not to be within the province of our courts to interfere.

Treaty with Russia.—*Tucker vs. Alexandroff*, decided Jan. 6, 1902. This case presented an important international question. Alexandroff, assistant physician in the Russian navy, came to this country from Russia as a member of the crew of the *Variag*, a Russian cruiser under con-

struction at Philadelphia. He deserted, renouncing his allegiance to the Emperor, and declared his intention of becoming a citizen of the United States. He was arrested, charged with desertion, and committed to prison, subject to orders of the Russian vice-consul or commander of the cruiser. The United States District Court, upon a hearing on a writ of *habeas corpus*, ordered his discharge, and the Circuit Court of Appeals affirmed the decision. The Russian vice-consul at Philadelphia appealed the case, and the Supreme Court decided that, under the treaty with Russia, Alexandroff should be surrendered to the Russian Government. Although the *Variag* was still upon the stocks when Alexandroff arrived in Philadelphia, before he deserted she had been launched, and thereby became a ship in the legal sense. Chief-Justice Fuller and Justices Harlan, White, and Gray dissented. They held that the *Variag* was not, at the time Alexandroff deserted, a Russian ship of war in the sense that the authorities could take affirmative action to enforce the jurisdiction of that country over the men intended to become part of her crew.

New York Transfer Tax.—*Orr vs. Gilman*, decided Jan. 6, 1902. This was the case of a transfer tax imposed under the laws of the State of New York, under the following circumstances: David Dows, Sr., died in 1890, leaving a will containing a power of appointment to his son, David Dows, Jr., which will was duly admitted to probate. David Dows, Jr., died in 1899, leaving a will, in which he exercised the power of appointment given to him in the will of his father, and appropriated the property, which was the subject of the power, among his 3 sons. The New York State law of 1897 provided that when a person exercised a power of appointment derived from any disposition of property, such appointment, when made, shall be deemed a transfer taxable in the same manner as though the property to which such appointment related belonged absolutely to the donee of the power. It was argued that the grandchildren acquired vested rights under the will of David Dows, Sr., and that it was not competent for the State, by an enactment passed in 1897, to exact a tax on the property that passed to the grandchildren under the will. The court held that the subject was one of State law, and must follow the construction put upon the law by the State courts; and that it was not in conflict with the provisions of the federal Constitution.

Federal Legacy Tax.—In *Eidman, collector, vs. Martinez, administrator*, decided March 17, 1902, a test case on the application of the federal legacy tax law to estates of persons domiciled abroad, it was held that no tax is imposed upon the passing of any legacy or distributive share arising out of the personal property of a non-resident alien, who dies without the United States, leaving a will made and executed at his foreign domicile pursuant to the laws thereof, by which he gives his property to a non-resident alien legatee; or, in case of an intestate whose property, by the laws of his foreign domicile, passes to his son, also a non-resident alien, and who leaves certain property within the United States exceeding \$10,000 in value.

In *Moore, collector, vs. Ruckgaber, executor*, decided on the same date, it was held that the personal property of a non-resident testatrix, actually located within the United States at the time of her death, is deemed not to have a *situs* in the United States for the purpose of levying a tax. The transmission or receipt of personal property of the non-resident testatrix was held

not subject to legacy tax under the act of June 13, 1898.

The sections of that act (now repealed) imposing a legacy tax did not apply to deceased persons domiciled abroad who left property by will executed in this country.

Carrier's Liability.—The *Kensington*, decided Jan. 6, 1902. The *Kensington*, a steamer running between Antwerp and New York, took on board at Antwerp as passengers Mrs. and Miss Bleecker, the wife and daughter of a United States naval officer. Their baggage was totally destroyed on the voyage, on account of bad storage. One of the conditions printed on the ticket provided that the company should not be liable for baggage beyond 250 francs for each passenger, unless an increased value was declared and an additional sum paid. It was held in the United States District Court that the stipulation as to the value of the baggage was valid, and judgment was rendered against the company for 250 francs in favor of each of the above-named passengers, which was affirmed by the Circuit Court. The Supreme Court reversed the decision, and allowed actual damages with interest. Exemptions limiting carriers' responsibility for the negligence of themselves or their servants are unjust and unreasonable, and such conditions are in conflict with public policy. One of the conditions provided that all questions arising were to be settled according to the law of Belgium, which authorized the conditions, the contract having been made in that country; but such a contract can not be enforced in this country in violation of the rule of public policy adopted by our courts.

Bankruptcy Law.—In the case of the *Hanover National Bank vs. Moyse*, decided June 2, 1902, the court, in an opinion delivered by Chief-Justice Fuller, decided the national bankruptcy law of 1898 to be constitutional. The court held that to be valid a bankruptcy law must be uniform throughout the United States, and further, that it is uniform "when the trustee takes in each State whatever would have been available to the creditors if the bankrupt law had not been passed." The general operation of the law is uniform, although it recognizes the local law in the matter of exemptions. The opinion said: "Congress may prescribe any regulations concerning discharge in bankruptcy that are not so grossly unreasonable as to be incompatible with fundamental law; and we can not find anything in this act on that subject which would justify us in overthrowing its action."

Interstate Commerce Commission Overruled.—In the case of the *Interstate Commerce Commission vs. the Chicago, Burlington and Quincy Railroad Company* the right of the commission to reduce the terminal rate made by the railroads in Chicago on cars containing live stock was involved. The opinion affirmed the decision of the Circuit Court of Appeals, which refused to carry into effect the order of the commission reducing the rate from \$2 to \$1 per car. The court said: "Being constrained to the conclusion that the order of the commission was not sustained by the facts upon which it was predicated, we can not enter into an investigation of the facts, even if it be conceded the record is in a condition to enable us to do so, in order that new and substantive findings of fact may be evolved upon which the order of the commission may be sustained. It follows that the decree of the Circuit Court of Appeals refusing to command compliance with the order of the commission was right and must, therefore, be affirmed."

Privacy of Telegrams.—The case of the *United States vs. Edward A. Mosely*, secretary of the Interstate Commerce Commission, involving the right of the commission to withhold from the auditing officers of the Government copies of telegrams sent by it, was decided in Mr. Mosely's favor. The opinion was handed down by Justice McKenna.

Exclusion from the Mails.—The case of the *American School of Magnetic Healing vs. McAnulty*, postmaster at Nevada, Mo., decided Nov. 17, 1902, involved the right of the Post-Office Department to refuse to deliver mail to the school, on the ground of fraud. The act of the Postmaster-General was declared invalid. The statute was only intended to cover cases of actual fraud in fact. Justices White and McKenna dissented.

Courts-Martial.—In an opinion delivered in the case of *McClaghry vs. Deming*, May 19, 1902, it was held that an officer in the volunteer service can not be tried for a crime by a court-martial composed of officers of the regular army. The invalidity of the court-martial can be raised on a hearing on *habeas corpus*. The Chief Justice and Justice McKenna dissented.

Stanton Carter vs. McClaghry was a *habeas corpus* proceeding, instituted to bring before the court the case of Oberlin M. Carter, formerly a captain in the Engineer Corps of the army, serving a term of imprisonment in the Leavenworth Penitentiary under the sentence of a court-martial. Carter was tried and convicted and was sentenced to be dismissed from the army and pay a fine of \$5,000, and to be imprisoned in the penitentiary for five years. The principal point made was that, having paid the fine and been dismissed from the army, he could not be imprisoned in the penitentiary without punishing him twice for the same offense. The court held that he had been convicted under separate charges of distinct offenses, for which the court-martial was empowered to punish him. The rule was reiterated, that civil tribunals will not revise the proceedings of courts-martial, except for the purpose of ascertaining whether they had jurisdiction of the person and of the subject-matter, and whether, though having such jurisdiction, they have exceeded their powers in the sentences pronounced.

Exclusion of Aliens.—*Fok-Yung-Yo vs. United States*, decided May 5, 1902. This case related to the privilege of transit of Chinese persons across the territory of the United States, and raised an inquiry as to the power of the judiciary to interfere with the action of the executive authorities of the Government in such matters. The conclusions of the court were as follow: The power to exclude or expel aliens is vested in the political departments of the Government, to be regulated by treaty or by act of Congress, and to be executed by the executive authority according to such regulations, except so far as the judicial department is authorized by treaty or by statute, or is required by the Constitution, to intervene. And this is true of the privilege of transit. By the treaty between the United States and China, of 1894, the privilege of transit across the territory of the United States could only be enjoyed subject to such regulations of the Government of the United States as might be necessary to prevent the privilege from being abused. Under existing regulations the action of the collector of customs in refusing transit can not be interfered with by the courts. Justices Brewer and Peckham dissented.

Tax on Merchandise Brokers.—*Stockard vs. Morgan*, decided April 7, 1902. This case raised

the question of the validity of the Tennessee statute providing for the collection of a privilege tax on merchandise brokers. It was held that the statute violated the interstate commerce clause of the Constitution, and the decision of the Supreme Court of Tennessee was reversed. When the tax is applied to an individual within the State, selling the goods of his principal, who is a non-resident of the State, it is in effect a tax upon interstate commerce, and the fact is not altered by calling the tax one upon the occupation of the individual residing within the State while acting as the agent of a non-resident principal.

Illinois Antitrust Statute.—*Connolly vs. Union Sewer-Pipe Company*, decided March 10, 1902. This case grew out of the sale of pipe by the pipe company to Connolly and others, who, after securing it, declined to make payment on the ground that the company was an illegal combination for the restraint of trade under the common law and was a combination in violation of the Sherman antitrust law, and, further, a violation of the antitrust law of the State of Illinois. The latter law was declared invalid. The ninth section of the statute declares that "the provisions of the act shall not apply to agricultural products or live stock while in the hands of the producer or raiser," thereby excepting the articles named under certain conditions from the operation of the statute. This clause the Supreme Court held to be class legislation and void, and the whole act was considered to fall with this clause. An antitrust law to be constitutional must apply indiscriminately to all combinations. The State has the power by appropriate legislation to protect the public morals, the public health, and the public safety; but if, by their necessary operation, its regulations looking to either of these ends amount to a denial to persons within its jurisdiction of the equal protection of the laws, they must be deemed unconstitutional and void. Mr. Justice McKenna filed a dissenting opinion.

Illinois Mine Law.—*St. Louis Consolidated Coal Company vs. Illinois*. This case involved the constitutionality of the Illinois statute providing for the inspection of mines. The law was attacked on the ground that it required an inspection only of mines employing more than five miners, and that it gave a discretion to the inspectors to determine how many times a year a mine should be inspected, and also what fees within certain limits should be charged for inspection. The court affirmed the decision of the Illinois Supreme Court and held the law to be valid.

Illinois Statute against dealing in Futures.—In the case of *Booth vs. Illinois*, decided March 3, 1902, the Supreme Court upheld the validity of the Illinois statute against dealing in options on grain or other commodities. Under that law, attempts to corner the market, to influence it by spreading false reports, or contracts to buy or sell at a future time grain or other commodities are punishable by fine or imprisonment. Booth, a grain and provision broker, was indicted for violation of the statute and was convicted in the lower courts, and the case was appealed to the Supreme Court on the ground that it was repugnant to the fourteenth amendment of the Constitution. Justice Harlan, in delivering the opinion of the court, said: "The statute here involved may be unwise. But an unwise enactment is not necessarily for that reason invalid. It may be, as suggested by counsel, that the steady, vigorous enforcement of this statute

will materially interfere with the handling or moving of vast amounts of grain in the West, which are now disposed of by contracts or arrangements made in the Board of Trade in Chicago. But these are suggestions for the consideration of the Illinois Legislature. The courts have nothing to do with the mere policy of legislation." Justices Brewer and Peckham dissented.

Kentucky Constitution affecting Interstate Commerce.—*Louisville and Nashville Railroad Company vs. Eubank*, decided Jan. 27, 1902. This case involved a section of the State Constitution of Kentucky prohibiting a greater charge for short than for long hauls on railroads, and its validity when the larger haul was beyond the State limits. Eubank alleged that he paid 25 cents a hundred pounds for transporting tobacco from Franklin, Ky., to Louisville, 134 miles, while only 12 cents was charged for transporting it from Nashville to Louisville, 50 miles farther. It was held that the section in question was invalid so far as it was made applicable to or affected interstate commerce, the power of regulating which belongs to Congress exclusively. Justices Brewer and Gray dissented.

Foreign Insurance Companies.—The case of *Nutting vs. Massachusetts*, decided Jan. 13, 1902, involved the constitutionality of the law of that State prescribing penalties upon brokers or others who negotiate or make contracts in the State of Massachusetts with insurance companies that are not permitted to do business in the State. The decision upheld the State law as not in conflict with the federal Constitution. A State has the undoubted power to prohibit foreign insurance companies from making contracts of insurance, marine or other, within its limits, except upon such conditions as the State may prescribe, not interfering with interstate commerce. A contract of marine insurance is not an instrumentality of commerce, but a mere incident of commercial intercourse. The State, having the power to impose conditions on the transaction of business by foreign insurance companies within its limits, has the equal right to prohibit the transaction of such business by agents of such companies, or by insurance brokers, who are to some extent the representatives of both parties.

Street-Railway Fare.—*Detroit vs. Detroit Citizens' Street Railway Company*. The decision in this case was that the ordinance enacted by the city government of Detroit arbitrarily reducing street-car fares to three cents was without binding effect. The decision was based upon the fact that a previous ordinance had fixed the fares at five cents, such ordinance being in the nature of a contract. Justice Peckham, in delivering the opinion of the court, said: "It is a contract which gives the company the right to charge a rate of fare up to the sum of five cents for a single passenger, and leaves no power with the city to reduce it without the consent of the company."

State Quarantine Regulations.—*Compagnie Francaise, etc., vs. Louisiana State Board of Health*, decided June 2, 1902. An action was brought against the Louisiana Board of Health for damages by the owners of a French steamer that sought to land passengers in New Orleans in 1898, but was refused. The passengers and cargo were from foreign ports free from any infectious disease, but there was a quarantine in force at New Orleans against yellow fever, and the Board of Health, acting under the State law, prohibited the entry of all persons from infected or uninfected ports, for an indefinite period. The law was sustained as not repugnant to the Con-

stitution nor in conflict with treaties, but a dissenting opinion by Justices Brown and Harlan held that such a law was not a proper exercise of the police power of the State, as interfering with foreign or interstate commerce and in conflict with the Constitution and our treaties with foreign nations.

Colorado's Stock Quarantine.—The court sustained the constitutionality of the stock quarantine law of Colorado, in the case of *Reed vs. Colorado*. The law prohibits importation of cattle or other live stock into the State from points south of the thirty-sixth parallel of latitude, between April and November, unless they bear bills of health. The law was attacked as unconstitutional and also as antagonistic to the interstate commerce law and the animal industry law, but the court held the law to be valid.

State Tax Laws.—The case of the *Cleveland Trust Company vs. Landes*, involved the method of levying taxes on the shares of a corporation under the Ohio statutes. The opinion sustained the State law, affirming the decision of the court below. What the Constitution or statutes of a State require as to taxation must be left to be decided by the Supreme Court of the State.

Traveler's Insurance Company vs. Connecticut.—Decided May 5, 1902. This case involved the constitutionality of the laws of Connecticut in regard to taxation of stock held by non-residents in a local corporation. The law was sustained, and the difficulty of adjusting a system of perfect equality in taxation was stated. Mere inequality in the results of a State tax law is not sufficient to invalidate it.

Oleomargarine.—The *Capital City Dairy Company vs. Ohio*. This case, decided Jan. 6, 1902, involved the constitutionality of the statutes of Ohio regulating the manufacture and sale of oleomargarine. The decision affirmed the decision of the Supreme Court of Ohio, and sustained the validity of the State laws.

New Hampshire Law.—The case of *Collins vs. New Hampshire* involved the constitutionality of the New Hampshire law that forbids the coloring of oleomargarine yellow. The judgment of the Supreme Court of New Hampshire was affirmed by an equally divided court. The provision in question, therefore, remains in force.

Stamp Tax on Drashop Bonds.—*United States vs. Ambrosini*. Under the laws of the State of Illinois and the ordinances of the city of Chicago, it is necessary for a person making application for license as a saloonkeeper to file with the city collector a bond. The case of the *United States vs. Ambrosini* involved the question whether such bonds were subject to a stamp-duty under the war-revenue act of 1898. The case was decided in favor of the Government in the lower court. It was taken to the Supreme Court, where a decision was rendered, holding that such bonds were not taxable by the United States. The court said: "The legislation was enacted in the exercise of the police power for the safety, welfare, and health of the community, and it is conceded that that power is a power reserved by the States, free from federal restriction. The general principle is that as the means and instrumentalities employed by the General Government to carry into operation the powers granted to it are exempt from taxation by the States, so are those of the States exempt from taxation by the General Government."

Insurance Cases.—*Northern Assurance Company of London vs. Building Association*. Where a policy of insurance provides that notice of prior or subsequent insurance must be given by indorse-

ment upon the policy or by other writing, such provision constitutes a condition the breach of which will void the policy. Parol evidence is inadmissible to contradict or vary the terms of a valid written instrument. The subject of waiver by agents was considered.

The decision in the case of *Lewis vs. the Iowa Insurance Company*, delivered Dec. 8, 1902, established a rule in regard to notes given for the payment of life-insurance policies. Many policies are issued, the insured giving a note or notes for the payment of the first premium, the notes bearing a stipulation that in default of payment when due the policy shall cease and determine. In some States it has been held that default of payment terminated the policy. In others it has been held that the company must pay the face of the policy, deducting, in case of default of payment of premium note, the amount thereof with interest. The Supreme Court held that the policy lapsed on default of payment of the note.

Knight Templar and Mason's Life Indemnity Company vs. Jarman involved what is known as the suicide statute of Missouri. It was held that the policy must be paid in case the insured committed suicide while insane, notwithstanding it contained a provision of avoidance in case of suicide whether the party was sane or insane.

Burt vs. the Union Central Life Insurance Company, decided Dec. 22, 1902. The question of the effect of murder upon a life-insurance policy when issued upon the life of the murderer was passed upon in this case. William E. Burt was insured. His policy was made payable to his wife, and, in case of her death, to his executors. Burt's wife died, and he was charged with her murder, and was found guilty and executed. The heirs of the estate made an effort to collect upon the policy, but the insurance company resisted payment. The court affirmed the decision of the Court of Appeals, holding the policy invalid, on the ground that to sanction payment under the circumstances would be contrary to public policy. "It can not be that one of the risks covered by a contract of insurance is the crime of the insured. There is an implied obligation on his part to do nothing to wrongfully accelerate the maturity of the policy. Public policy forbids the insertion in a contract of a condition which would tend to induce crime, and as it forbids the introduction of such a stipulation, it also forbids the enforcement of a contract under circumstances which can not be lawfully stipulated for."

ALABAMA, a Southern State, admitted to the Union Dec. 14, 1819; area, 52,250 square miles. The population, according to each decennial census since admission, was 127,901 in 1820; 309,527 in 1830; 590,756 in 1840; 771,623 in 1850; 964,201 in 1860; 996,992 in 1870; 1,262,505 in 1880; 1,513,017 in 1890; and 1,828,697 in 1900. Capital, Montgomery.

Government.—The following were the State officers in 1902: Governor, William D. Jelks; Secretary of State, Robert P. McDavid; Auditor, Thomas L. Sowell; Treasurer, J. Craig Smith; Attorney-General, Charles G. Brown; Superintendent of Education, John W. Abercrombie, who resigned to become president of the State University, and was succeeded July 1 by Harry C. Gunnels; Commissioner of Agriculture, Robert R. Poole; Adjutant-General, William W. Brandon; State Examiner of Public Accounts, John T. Gorman; State Tax Commissioner, Harvey E. Jones; Railroad Commissioners, John V. Smith, W. C. Tunstall, A. E. Caffee; President of the Board of Convict Inspectors, J. M. Carmichael; Director of the State Department of Archives and History,

Thomas M. Owen; Agent for the Sale of Swamp Lands, W. M. Byrd; Chief Mine Inspector, J. de B. Hooper; Chief Justice of the Supreme Court, Thomas N. McClellan; Associate Justices, Jonathan Haralson, John K. Tyson, Henry A. Sharpe, James R. Dowdell; Clerk, Robert F. Ligon, Jr. All are Democrats.

By the terms of the new Constitution, which now goes into effect, the term of State officers is four years; and the Legislature will meet once in four years, on the second Tuesday in January; it will meet in 1903.

Finances.—The balance on hand in the treasury Oct. 1, 1901, was \$501,359.34. The receipts to the close of business July 28 were \$2,809,260.71; the disbursements, \$2,407,448.04.

The revenue collected by the Tax Commissioner in 1901 from escaped taxes, taxes from undervaluations, and delinquent licenses, amounted to \$156,873.69.

The valuation of the State for 1902 amounts in round numbers to \$294,000,000, an increase of about \$9,000,000. The taxable property in 1901 amounted to \$284,622,937.

The bonded debt, according to the report for 1901, is \$9,357,600; the interest on it is \$448,680.

Poll-Taxes.—The law requires a poll-tax of \$1.50 to be paid before Feb. 1. No provision is made for collecting it if delinquent; the penalty is the loss of the delinquent's vote. It is estimated that 90 per cent. of the negroes of voting age under forty-five have been disqualified by failure to pay the \$1.50 poll-tax this year. The reduction of the white vote has also been great. The total number of white males in Alabama of voting age is 232,294, and of these 139,000 are subject to poll-tax. Not less than 42,000 of them failed to pay the tax, and consequently are not qualified to vote. Persons who failed to pay the \$1.50 poll-tax this year may reinstate themselves as electors next year by paying \$3, and the next year by paying \$4.50, and so on.

Education.—In the Annual Cyclopædia for 1901 were given the figures of literacy of the voters of the State. Further census bulletins give the whole number of illiterates in the State as 443,590; and the percentage of persons between the ages of ten and fourteen who were able to read and write in 1900 as 71.11. This is an advance on the percentage for 1890, which was 64.50; but only two States—South Carolina and Louisiana—stand lower. These figures afford a measure of the efficiency of the public schools. The enrolment in the schools in 1901 was 344,426; the average attendance was 158,976. The amount expended from the general school fund gave \$1.42 per capita on the basis of the whole number of children of school age, and \$2.76 per capita for those actually enrolled. This does not include the poll-tax or the funds appropriated by municipalities. In a table showing the average monthly wages paid to teachers in the various States, Alabama is credited with \$32.04 to male teachers—3 States standing lower; and \$25.35 to female teachers, North and South Carolina alone showing a lower average.

The fifteenth annual commencement of the Troy Normal College took place in May with a graduating class of 12.

The enrolment at the Alabama Polytechnic Institute, at Auburn, Oct. 18, was 400, the largest number ever in attendance at one time.

In April the Medical College at Alabama graduated a class of 13 in medicine and 7 in pharmacy.

The Southwest Alabama Agricultural School, at Evergreen, began its fall term in September with 9 teachers and 113 pupils.

The following paragraphs are from the report of the principal of the Tuskegee Normal and Industrial Institute, Booker T. Washington:

"The number of students enrolled during the year covered by the report was 1,384, and the average attendance has been 1,218. These students have come from 30 States and Territories, and from 5 foreign countries. No one has been admitted under fourteen years of age; 1,337 of the whole number have boarded and slept on the grounds. The number which I have given does not include the pupils in 'the Children's House,' which is a primary school for the children in the neighborhood, and at the same time serves as a model and training school for normal students. Neither does it include the 121 students in the night-school in town, nor the 18 students in the afternoon cooking-school in the town of Tuskegee; nor the thousands of colored men and women who are being reached and helped through the Tuskegee Negro Conferences. In all the departments, religious, academic, and industrial, 112 officers and instructors and assistants of various kinds have been employed.

"If we add the number of persons in the families of our instructors to the number of students and teachers, it is safe to say that we have constantly upon or near our school-grounds a colony of 1,500 people. A large proportion of these families reside in small, neat cottages owned by themselves or by the school, and the object-lesson they afford is most valuable to the students and to our people in this part of the State.

"Up to the present time there have grown out of the Tuskegee Institute at least 12 schools of considerable size—I mean institutions above the grade of common public schools. One of these, the Snow Hill Industrial Institute, at Snow Hill, Ala., has 300 students, 25 teachers, 14 buildings, and property valued at \$3,000.

"Since my last report there have been received into our treasury from all sources and for all purposes \$341,401.09. Of this amount \$126,864.29 have been used for current expenses, \$46,788 have been added to the permanent endowment fund, and \$150,203.95 for the permanent improvement of the plant. The present indebtedness of the school is \$5,887.52. The endowment fund amounts to \$299,759.02."

In regard to the training the report says: "Industry after industry has been added, as there was a natural demand for them, until at the present time the students receive training in 34 industries. You will get some idea of the volume of the industrial work accomplished by the students when I add that since my last report they have made 2,128,000 bricks alone."

Soldiers' Home.—Land for a home for Confederate veterans has been given by J. M. Falkner at Mountain Creek, about 27 miles from Montgomery. Lumber and other materials have been given as well as money by various firms and individuals, and some of the smaller buildings are already erected. A plan has been adopted for marking the logs of the headquarters building with brass plates bearing the names of veterans, for each of whom \$10 are paid to the fund for the home. A book of record will be kept, giving a biographical sketch of each veteran for whom a memorial log is named.

Banks.—A bulletin issued in September by the Treasury Department, shows that 16 new national banks were established in Alabama in the period between March 14, 1900, and Aug. 31, 1902. Six of these banks have a capital of less than \$50,000 each, and the other 10 more. The combined capital is \$777,500.

Convicts.—By the report of July 1 it was shown that there were then 1,866 State convicts, of whom 1,476 were leased to contractors, and 390 were worked on the State farms or kept at the State prisons. The net profits from the department for the year ending Sept. 30 were \$98,885.61. On Jan. 1, 1903, a new system in regard to the leasing of convict labor will go into operation. The conditions as regards the treatment of convicts by contractors have been much improved in the past two years. Some of these conditions were described in the Annual Cyclopædia for 1901. This year one of the inspecting physicians reported that the mines at Coalburg, where many were employed, were totally unfit for the compulsory working of men. "On April 1, 1899, there were 559 convicts confined there. Between that time and April 1, 1902, 1,676 convicts have been received, making a total of 2,235. Of this number 100 have died, 87 from disease and 13 from accident and other causes." After this report the contracting company removed the convicts to a better location. But henceforth the prisoners will be under the direct supervision of State officials.

At the Boys' Industrial School, also known as the East Lake Reformatory, established in 1900, there were at the beginning of the year 52 boys in residence. The receipts for the year were \$16,445.34, and the expenditures \$15,813.23. Boys are employed in printing, shoe, and carpenter shops and on the farm; military drill is given and each boy has a half-day's work in school.

Crime.—The biennial report of the Attorney-General, which covers the two years ending Sept. 30, 1902, shows that 13,388 criminal cases were disposed of in Alabama in that period. The figures in the report show that 61 per cent. of these cases resulted in conviction.

More cases against prisoners charged with carrying concealed weapons were disposed of than for any other offense. In the two years 1,349 concealed-weapon cases were disposed of.

Militia.—The report of the Adjutant-General shows the strength of the National Guard to be nearly 3,000. There is 1 battalion of artillery with 3 batteries, 17 officers, and 171 enlisted men and non-commissioned officers; 1 squadron of cavalry, consisting of 4 troops, with 14 cavalry officers and 187 non-commissioned officers and enlisted men; and 3 regiments of infantry with 153 officers and 2,197 men; there is also a complete hospital corps with 40 men and an ambulance.

Lawlessness.—Two "race riots" were reported this year, one at Jasper, March 26, the immediate occasion of which was the whipping of 2 negroes by white men on a charge of stealing. The other took place at Littleton, 25 miles from Birmingham, Oct. 19. It arose, according to the despatch, from a white man being pushed from a railroad trestle by a negro woman. In the fight that ensued 2 negroes were seriously shot, 1 white man was fatally wounded, and another was missing and supposed to be dead.

A negro was lynched near Troy, March 24, charged with assault on a little white girl. From testimony taken afterward it appeared that the charge was false, having originated with a woman who sought revenge on the negro for having given evidence against her in a suit for slander, and several alleged lynchings were arrested.

A negro resisting arrest near Tusculumbia, April 6, on a charge of obtaining goods on false pretenses, killed 2 men and fatally wounded 5 others. The negro had fortified himself in a small cabin, and 3 houses were burned before he was forced out and shot.

A mulatto who had attempted an assault on a

young lady was captured and hanged by a mob near Cocoa in July.

At or near Opelika, Nov. 3, a negro field-hand entered the house of his employer, intending robbery, and attacked the farmer's wife and daughter, mortally wounding one and leaving both for dead. On being identified by the daughter, he was lynched by a crowd of men.

Three men who were convicted of taking part in the lynching of Robert White in July, 1901, were pardoned unconditionally by the Governor in June. One had been sentenced to life imprisonment, the others to ten years each. They had been led to take part in the crime by the exaggerated statement of the white man with whom White had quarreled, who said that White had attempted to murder him and his family. This man is under sentence of ten years' imprisonment.

Railroads.—The State is credited with 102.97 miles of new track built in 1901. The official assessment of railroad property in the State for 1902 shows a total of \$50,519,520, against \$50,253,750 in 1901.

Products and Industries.—Following are the figures of Secretary Hester's report on the cotton-crop of 1901-'02, relating to Alabama: The commercial crop, 1,200,000 bales, against 1,000,000 bales the year preceding; consumption in mills of the State, 198,011 bales, an increase of 33,654 bales; number of mills, 58; looms, 13,051; spindles, 653,440; consumption in pounds of lint-cotton, 94,995,017; average weight of bales, 479.75 lbs.

The census report on cotton-seed manufacture in 1900 gives the figures for Alabama: Cotton-seed, 172,093 tons; cost, \$2,019,085; products, \$2,952,254.

The capital in flour and grist mills in 1900 was \$1,047,961, and the product \$3,310,757. The capital in saw and planing mills was \$13,020,183, and the product \$12,867,551.

According to the census there are 223,220 farms in Alabama, valued at \$134,618,183. Farm implements are valued at \$8,675,900; and live stock at \$36,105,799—a total of \$179,399,888 invested in agriculture. Acreage in farms, improved, 8,654,991; unimproved, 12,030,436; total, 20,685,427. Percentage of improved land to unimproved 41.8, an increase of 3 per cent. in the last decade.

The number of farms shown in this census is over five times as great as in 1850 and 41.5 per cent. greater than in 1890, but the average size of farms is less than one-third the size of farms in 1850. This shows an increase in the number of farmers and naturally an increase in the agricultural development of the State.

The output is given as follows: Animal products, \$18,196,689; crops, \$73,190,720; total, \$91,387,409—a value which exceeds the total of 1889 by 38 per cent.

Other items are: Number of white farmers, 129,137; colored farmers, 94,083; white owners, 69,823; colored owners, 11,123; white part-owners, 8,686; colored part-owners, 2,871; white cash tenants, 18,118; colored cash tenants, 56,212; white share tenants, 30,855; colored share tenants, 23,689; average acreage of white farmers, 123.6; of colored farmers, 50.2; value of farm property cultivated by white farmers, \$123,481,529; by colored farmers, \$46,918,253.

The value of manufactured products in 1900 was \$82,793,804; in 1890 it was \$51,226,605.

The output of coal in 1901 is given at 9,078,677 tons; in 1891 it was 4,759,781 tons.

The shipments of pig-iron from the Anniston district for the year ending June 30, 1902, amounted to 225,164 tons, and of cast-iron pipe 38,957 tons; those from the Birmingham district were

respectively 842,809 and 79,453 tons. The total shipments from the Southern field in the first half of the year aggregated 987,716 tons, of which 904,014 tons were pig-iron and steel and 83,702 tons were cast-iron pipe.

Labor.—A strike took place in the mines of the Tennessee Coal, Iron, and Railroad Company in the Birmingham district, involving about 4,500 men. It arose from the refusal of about 70 of the miners to allow the assessment for the anthracite strikers to be withheld from their wages. The company held that it could not collect the assessments against the protest of the men, and a strike was ordered Oct. 1. It was settled Oct. 15.

Mobile.—The celebration of the bicentennial of the founding of Mobile, the first capital of Louisiana, at Twenty-seven-Mile Bluff, on Mobile river, began Jan. 22 with a grand civic parade and the placing of a tablet in honor of the brothers Iberville and Bienville. The inscription on the bronze memorial tablet on the stone base of the colonnades supporting the portico of the county court-house is as follows: "1902. To the Glory of God. Erected in Honor of the Illustrious Brothers Lemoyne Bienville and Lemoyne Iberville, who Founded Mobile, the First Capital of Louisiana, 1702." The exercises of the second day were held at the site of Fort Louis de Mobile. On the site of the old fort the granite shaft unveiled bears this inscription: "Erected by the People of Mobile, Jan. 23, A. D. 1902, to Commemorate the Two Hundredth Anniversary of the Founding Here of Fort Louis de la Mobile by Pierre Lemoyne Sieur d'Iberville and Jean Baptiste Lemoyne Sieur de Bienville."

Alexander City.—This little place of 1,500 inhabitants was practically destroyed by a fire in June, the loss reaching by estimate \$750,000, which was not nearly covered by insurance.

Congressional Appropriations.—For improvement of waterways wholly or partly in Alabama, Congress made the following appropriations: Mobile harbor, \$300,000; Alabama river, \$20,000; Black Warrior, Warrior, and Tombigbee rivers, \$374,000; Tombigbee, \$20,000; Choctawhatchee river, \$16,000; Chattahoochee river, \$100,000; Coosa river, \$35,000. A survey was ordered to be made of the Coosa and Alabama rivers with a view to determining the advisability of securing 6-foot navigation in them and the probable expense; also the advisability of further prosecuting the present project for locks and dams in the Coosa river.

The amount for the public buildings at Anniston was raised from \$50,000 to \$75,000; and that for the post-office and court-house at Montgomery from \$185,456 to \$250,456.

Political.—State officers were elected this year in November, the time of the State election having been changed. In view of the general demand in the Democratic party for the nomination of candidates for State offices by a general primary instead of by convention, the State Committee, at its meeting in July, ordered such a primary by a vote of 15 to 12; the date was fixed at Aug. 25. If a second primary were necessary, it should be held Sept. 15; and if a third, Sept. 29. There had been some sentiment in favor of making it a general white primary; but the action of the committee limited the right to vote to white Democrats.

Gov. Jelks was a candidate for renomination, and opposed to him was ex-Gov. Johnston. The candidates for other offices were: For Lieutenant-Governor, Russell M. Cunningham, Charles E. Waller; Secretary of State, J. Thomas Heflin,

Frank N. Julian, J. L. Tanner; State Treasurer, J. Craig Smith; State Auditor, T. L. Sowell; Attorney-General, James E. Cobbe, Alex. M. Garber, Alex. Troy, Massey Wilson; Superintendent of Education, Thomas L. Bulger, Chappell Cory, John G. Harris, Isaac W. Hill; Commissioner of Agriculture, R. R. Poole.

At the primary, Aug. 25, Gov. Jelks received a majority of 25,746 out of a total of 89,236 votes polled. For the office of Attorney-General a second primary was needed to decide between Messrs. Garber and Wilson; and for Superintendent of Education Messrs. Harris and Hill also would have entered the second had not Mr. Harris withdrawn. The ticket as finally fixed was: For Governor, William D. Jelks; Lieutenant-Governor, R. M. Cunningham; Secretary of State, J. Thomas Heflin; Treasurer, J. Craig Smith; Auditor, Thomas L. Sowell; Attorney-General, Massey Wilson; Superintendent of Education, Isaac W. Hill; Commissioner of Agriculture and Industries, R. R. Poole.

The State Executive Committee of the Republican party met in Birmingham Aug. 2 and called a convention to meet there Sept. 16 to nominate a full State ticket. The most important action of the committee was the adoption of the following resolution:

"Resolved, That only those shall be recognized and permitted to participate in the State and county conventions and be at meetings who are duly qualified voters under the new Constitution of Alabama."

The effect of this is to make the Republican party in Alabama a white man's party, as under the new Constitution of the State the negroes are practically all disfranchised.

No negro's name appeared upon the report of the Committee on Credentials for the convention, which was adopted, although on the list of delegates from more than one county there were names of negroes when the credentials were given to the subcommittee for action.

The platform of the convention as reported reaffirmed the Philadelphia platform, favored "the organization of labor for its legitimate protection and the enactment of laws for the peaceable and fair settlement by arbitration of disagreements as they may arise between organized capital and labor," favored child-law legislation relating to work in cotton-mills, condemned "the spirit which seeks to arouse the prejudice of the people against the railroads," and advocated the "enactment of laws so regulating the railroads as to adequately protect the interests of the people, but is opposed to any drastic measures." The platform then approved "the wisdom of the Dingley tariff law," urged a continuance of that policy, and expressed confidence in the administration of President Roosevelt.

When this was read there were loud cries of "No! No!" This opposition is understood to have had its origin in the action of the President in removing William Vaughan, retiring Republican State chairman, from the office of United States District Attorney for North Alabama for alleged neglect of duty.

After the reading of the platform, J. A. W. Smith offered a substitute, the same as the original report, except that it omitted all reference to an indorsement of President Roosevelt for renomination. The substitute was vigorously debated, and the convention was thrown into turmoil. Finally the roll was called, and the substitute was defeated, 158 to 146. The platform as originally reported was finally adopted, including the indorsement of President Roosevelt for the nomi-

nation in 1904. The majority for adoption was large.

The ticket follows: For Governor, J. A. W. Smith; Lieutenant-Governor, Charles P. Lane; Attorney-General, W. H. Armbricht; Secretary of State, J. H. Karter; Auditor, T. B. McNair; Treasurer, H. Lee Brown; Superintendent of Education, J. C. Fonville, Crenshaw County; Commissioner of Agriculture, T. B. Morton.

The Prohibitionists met Aug. 13 and adopted a platform in accordance with the party principles. The ticket was: For Governor, W. D. Gay; Lieutenant-Governor, H. L. Martin; Secretary of State, T. D. Witherspoon; State Treasurer, R. O. Simpson; Commissioner of Agriculture and Industries, Dabney Palmer; State Auditor, C. D. Alverson; Superintendent of Education, O. E. Comstock; Attorney-General, W. W. Whiteside.

These names did not, however, appear on the official ticket filed by the Secretary of State.

At the election Gov. Jelks's vote was 67,760, against 24,423 for Smith. The entire Democratic ticket was successful, including the candidates for Congress. The Legislature is almost entirely Democratic.

In May an organization called "the Colored Man's Suffrage Association" was formed for the purpose of fighting the new Constitution of Alabama in the courts, and subscriptions were taken for a fund of \$2,000 to be used for this purpose. Steps had already been taken to test the suffrage provision by an action brought in the name of a negro who made affidavit that he was denied the right to register, though complying with all the qualifications exacted by the Constitution. He asserts that he was denied the right because he is a negro, and invokes the fourteenth and fifteenth amendments in support of his contention.

In December negroes from all parts of the State met at Selma to form a colored Republican party. Resolutions were adopted indorsing the action of President Roosevelt in not recognizing the "Lily White" branch of the party in Alabama. An address was issued to the negroes of the State, advising them to appeal to the Democrats to allow them to register.

ALASKA, a Territory of the United States, in the extreme northwestern part of the North American continent. It was ceded by Russia to the United States in a treaty concluded March 30 and proclaimed June 20 1867, in consideration of the payment of \$7,200,000. The population, according to each decennial census, was 33,426 in 1880; 32,052 in 1890; and 63,592 (whites, native born 21,709, foreign born 8,798; Indians, 29,536; negroes, 168; Chinese, 3,116; Japanese, 265) in 1900. Its area according to the census of 1900, is 590,884 square miles, including a strip, known as Southeast Alaska, 600 miles long, bounded south by Dixon Sound and Portland Channel, and east by the summit line of the mountains parallel to the coast; and where such a line is at a greater distance than 10 marine leagues (34½ statute miles), by a line drawn parallel to the windings of the coast, which shall never exceed 10 marine leagues therefrom. The position of the boundary of this southeastern extension is now a matter of dispute between Great Britain and the United States.

Government.—The temporary seat of Government is at Sitka, formerly the Russian capital. The following were the officials of the Territory in 1902: Governor, John G. Brady. *Ex-officio* Secretary, William L. Distin. United States Land Office—Surveyor-General, William L. Distin, Sitka; Register, John W. Dudley, Juneau; Receiver, T. M. Mullan, Juneau. Department of

Agriculture—Special Agent, C. C. Georgeson, Sitka. Superintendents—Fred. E. Rader, Sitka; H. P. Nielsen, Kenai; T. W. Neal, Copper Center. Bureau of Education—Agent, Sheldon Jackson; Assistant Agent, William Hamilton; Superintendent of Schools, W. A. Kelly. Internal Revenue, John Cameron, Deputy Collector, Juneau.

Banking.—The only national bank in Alaska is the First National Bank of Juneau. Its condition at the close of business Dec. 10, 1901, was: Resources—loans and discounts, \$45,524.20; United States bonds, \$87,500; stocks, securities, etc., \$7,359.08; banking-house, furniture, and fixtures, \$2,480; due from national banks, \$4,464.62; due from State banks and bankers, \$9,046.43; due from reserve agents, \$13,079.08; checks and other cash items, \$10,100.33; total specie, \$41,796.05; other resources, \$10,119.81; total resources, \$231,469.60. Liabilities—capital stock, \$50,000; surplus and undivided profits, \$2,641.88; national bank-notes outstanding, \$4,370; dividends unpaid, \$62.50; individual deposits, \$99,659.12; United States deposits, \$53,419.28; deposits of United States disbursing officers, \$21,316.82; total liabilities, \$231,469.60. On Nov. 25, 1902, the liabilities were: Capital stock, \$50,000; surplus and undivided profits, \$4,060.71; national bank-notes outstanding, \$2,870; dividends unpaid, \$1,120; individual deposits, \$133,929.13; United States deposits, \$24,763.72; deposits of United States disbursing officers, \$50,236.28; total liabilities, \$266,979.84. Resources—loans and discounts, \$68,927.15; United States bonds, \$87,500; stocks, securities, etc., \$17,121.70; banking-house, furniture, and fixtures, \$2,300; due from national banks, \$2,432.06; due from State banks and bankers, \$25,518.24; due from reserve agents, \$16,616.35; checks and other cash items, \$637.71; total specie, \$39,536; other resources, \$6,390.63; total resources, \$266,979.84.

Commerce and Navigation.—Alaska forms a single customs district of the United States, with Sitka as its port of entry. The following are classed as subports of entry: Dyea, Eagle City, Wrangel, Mary Island, Juneau, Kodiak, Unalaska, Cook Inlet (Homer), Orca, St. Michael Island, Skagway, Unga, Karluk, Kechikan. In the fiscal year ending June 30, 1901, 15 sailing vessels, of 6,040 tons, and 298 steam-vessels, of 191,664 tons, were entered by the district of Alaska, of which 7 sailing vessels, of 5,519 tons, and 179 steam-vessels, of 128,768 tons, were American; during the same period 8 sailing vessels, of 1,845 tons, and 261 steam-vessels, of 164,678 tons, were cleared, of which 1 sailing vessel, of 1,332 tons, and 149 steam-vessels, of 102,031 tons, were American. During the fiscal year ending June 30, 1902, 15 sailing vessels, of 3,870 tons, and 292 steam-vessels, of 188,471 tons, were entered, of which 6 sailing vessels, of 3,136 tons, and 180 steam-vessels, of 123,504 tons, were American; during the same period 11 sailing vessels, of 775 tons, and 226 steam-vessels, of 149,386 tons, were cleared, of which 3 sailing vessels, of 235 tons, and 131 steam-vessels, of 93,253 tons, were American.

The total values of exports for the fiscal year ending June 30, 1901, were gold, \$1,800; merchandise, \$2,534,318, of which \$2,018,104 represents the value of domestic products and manufactures and \$516,214 that of foreign products and manufactures. The imports were: Gold (from British Columbia), \$15,816,907; merchandise, \$557,992. The total value of exports for the year ending June 30, 1902, were: Gold, \$806,817; merchandise, \$2,612,021, of which \$2,537,325 represents the value of domestic products and manu-

factures and \$74,696 that of foreign products and manufactures. The imports were: Gold, \$16,666,344; merchandise, \$511,830.

These figures are for the foreign commerce alone, and do not include the values of merchandise shipped to and from the United States.

The total value of domestic merchandise imported into Alaska from the United States during the six months ended Dec. 30, 1902, was \$3,318,079, and of foreign merchandise \$4,771; the total value of imports from foreign countries was \$307,993. Of the exports to the United States during the same period, the value of foreign merchandise was \$34,408, the value of domestic merchandise \$9,775,193; of the exports to foreign countries, the value of foreign merchandise was \$10,583, of domestic merchandise \$1,236,463. The total values of gold and silver coin and bullion exported from Alaska to the United States during the same period were: Domestic \$3,279,255, foreign \$10,653,286; the total value of gold and silver imported from the United States was \$100,863.

Manufactures.—The bulletin of manufactures of the United States Census of 1900 gives the following comparative statistics of manufactures for Alaska:

ITEMS.	1890.	1900.
Number of establishments.....	10	68
Capital.....	\$105,727	\$3,600,409
Salaried officials, clerks, etc.....	8*	89
Salaries.....	\$3,549*	\$117,480
Average number of wage-earners.	78	2,363
Men sixteen years and over....	78	2,363
Wages.....	\$18,635	\$1,395,709
Miscellaneous expenses.....	\$5,253	\$170,334
Cost of materials used.....	\$30,198	\$1,785,776
Value of products, including custom work and repairs.....	\$58,440	\$4,260,984

* Includes proprietors and firm members, with their salaries; not included for 1900.

Of 45 establishments reporting in 1900, using 1,962 horse-power, 1,078 was derived from 49 steam-engines, 597 from 14 water-wheels, and 287 from 11 electric motors. Of 9 establishments reporting in 1890, using 451 horse-power, 290 were derived from 7 steam-engines, and 161 from 3 water-wheels.

Mineral Resources.—The final estimate of the Director of the Mint, based upon the receipts at San Francisco, Seattle, and the Selby Refinery, places the total output of gold from Alaska for the ten months ended Nov. 1, 1902, at \$18,870,075, of which \$5,008,980 came from the Nome district, and the remainder from the Yukon districts, the Canadian Klondike, and southeastern Alaska. This is more than \$4,000,000 in excess of the Alaska output for the calendar year 1901, the figures for that year being \$14,675,675. In the output for the ten months is included \$250,000 expected to arrive from the Klondike before Jan. 1, and \$1,350,000 expected from Nome.

The Seward peninsula continues to be the objective point for placer-mining, and with improved methods its phenomenal yield is increasing rather than diminishing, as was predicted for the Nome workings in their early days. New workings have been opened up in every direction and are yielding in paying quantities. The rich discoveries in the Forty-Mile district have attracted many miners from the Klondike country. The distributing point for this district is a new camp called Wickersham, after the judge of the district. According to the estimate of the Governor the miners at the head waters of the Koyukuk river, a tributary to the Yukon from the northward, cleaned up \$500,000 during the season. The new placer-mines in the vicinity of

Rampart have shown rich deposits. Rampart offers especial advantages as a distributing point on account of its possibilities in agriculture and stock-raising. Good claims have been worked in the region north and south of the sixty-fourth parallel and immediately west of the one hundred and forty-first meridian. Here is a vast field for the hydraulic miner, but transportation is too expensive for him to do much on an extensive scale. Placer discoveries of great importance have been found on tributaries of Copper river. Those on the Chitochina have been worked more than two years. The Nazina river, a branch of the Chittyna which flows into the Copper from the east, has attracted marked attention. Mining is going on in the north part of Kenai peninsula, and a fairly prosperous season is reported. The Porcupine district, near the boundary-line up Chilkat river from Haines, has made a good showing. One hydraulic plant has been running several years in Silver Bow basin, near Juneau.

The chief production of gold from quartz-mines is in southeastern Alaska, where several companies operate large and expensive workings, the great 300-stamp mill of the Alaska-Treadwell mine near Juneau being the largest of its kind in the world. The Treadwell Company operates 2 mills—1 with 300 stamps and 1 with 240. The Alaska United Company operates 2 mills—1 with 120 and the other with 100 stamps—while the Alaska-Mexican Company operates 1 mill with 120 stamps.

Preliminary work has been begun near Juneau on one of the largest and longest mining tunnels in the world. The tunnel will be about 10,000 feet long and will extend from the beach south of Juneau into the mountains to tap claims in the Silver Bow basin.

Much interest has been manifested in the copper prospects of Alaska. There are large deposits of ore on Prince of Wales island, at Ellamar, on Prince William Sound, and on Latouche island. A great deal is being taken out, and efforts are being made to interest capital in the exploitation of this industry.

Finds of cinnabar, platinum, tin, iron, and diamonds are also reported, and the extensive deposits of gypsum on Clearwater Bay, Chatham Straits, are receiving attention. Analysis shows it to be 98 per cent. pure and the vein is 75 feet wide, traceable on the surface 700 feet.

Coal of good quality is found in the Territory. Admiralty island has the most valuable field so far discovered. Important discoveries are reported to have been made in 1902 of large veins and fine quality on the mainland across from Kayak island. Kenai peninsula is nearly all coal land. There is coal on the Tanana, and in several places on the Yukon.

Oil has been discovered on Comptrollers Bay, where a well has been driven several hundred feet, and there is a flow of a fine grade of oil. The field is large. Oil has also been found in the region around Lake Iliamna on the Alaska peninsula.

Fisheries.—The canning industry was represented in 1901 by 30 companies and individual packers, with 55 canneries and 12 salteries, capitalized at \$22,000,000. The plants were valued at \$12,000,000; number of salmon taken, 31,000,000; output, 2,029,269 cases of 48 1-pound cans each, and 18,942 barrels, in all about 100,000,000 pounds of salmon. The value of the salmon pack was estimated at \$6,928,167. The total value of the catch of codfish in the same year amounted to less than \$150,000. Some halibut was taken,

and there is a small trade in salted herring; but no figures are given. The purchase value of the salmon pack for 1902 was \$7,200,000. Several hatcheries are in operation, and it is the desire of the cannery owners to cooperate with the Government in preserving the fish, but the hatcheries are mostly in the hands of men little skilled in such work, and have not proved very satisfactory. The United States revenue-cutters Perry and Rush were in Alaskan waters during the season to enforce the fishery laws, and many complaints of violations were prosecuted. The Oil and Guano Company, at Killisnoo, has closed its first season and reports a ready market for its product.

The value of the products of the whale fishery brought into the United States from Alaska during the fiscal year ending June 30, 1901, was \$61,147, of which \$56,873 represents the value of 18,662 pounds of whalebone or baleen and \$4,274 of other products.

Sealing.—The Pribilof Islands are the breeding-place of the fur-seals which inhabit the Pacific Ocean. They were considered a part of Alaska and included in the cession by Russia. They were the breeding-place of the fur-seals when discovered by the Russians in 1786, and a Russian company was formed for the purpose of taking the skins of these animals, and continued its operations up to the time of the transfer of the islands to the United States in 1867. In 1889 a contract was made with the North American Commercial Company, fixing the rental of the lands at \$60,000 and a tax upon each skin at \$9.62½. Under this lease, as construed by the Supreme Court of the United States, rental is now paid at the rate of 60 cents for each skin taken. The Governor of Alaska reports 19,000 seals taken on St. Paul and 3,304 on St. George island in 1902. At the contract price, with the rental, the total revenue would be \$274,676.05.

In February, 1902, Collector J. W. Ivey issued orders to his deputy at Unalaska closing the port to Canadian vessels presumably engaged in violating the laws in regard to pelagic sealing, and forbidding the sale to them of supplies. His action did not meet with the approval of the Government at Washington, and upon his refusal to withdraw the order he was removed from office.

Timber.—In a proclamation dated Aug. 20, 1902, President Roosevelt set aside as the Alexander Archipelago Forest Reserve the group of islands in southeastern Alaska known by that name. This new reservation, the first in Alaska, embraces Prince of Wales island and the smaller islands seaward thereof, Zarembo, Kupreanof, and Kuiu islands, and Chichagof island and the smaller islands to the seaward thereof. The islands have not been surveyed and their exact area is unknown. They contain, according to Lieut. G. T. Emmons, who made an investigation of the forest resources of Alaska, the most valuable timber in Alaska. The reservation of the islands from settlement, entry, or sale by the Government is not to be construed to deprive any *bona fide* inhabitant of any valid right he may possess either under the Russian treaty of 1867 or under any act of Congress relating to Alaska. However, much dissatisfaction has been demonstrated, particularly by the miners of Prince of Wales island, and the Governor, in his report for 1902, urges great care in the administration of this reserve.

Agriculture.—Agricultural experiment stations were maintained during 1901 and 1902 at Sitka, at Kenai, on Cook inlet, and at Rampart, in the Yukon valley. In the investigations spe-

cial attention was paid to the agricultural possibilities of the Yukon valley. At Rampart rye seeded in the autumn of 1900 wintered perfectly and ripened early in August 1901. Barley sown in the spring of 1901 was harvested in August. Vegetables were successfully grown at the Holy Cross Mission and at other points in the Yukon valley. Prof. Georgeson, the agent in charge of the Alaska experiment stations, reported that while he was at the Holy Cross Mission in the second week of August, 1901, "the mission was supplied from its own garden with new potatoes, cauliflower, cabbage, and other vegetables." The following from the annual reports of the Secretary of Agriculture will further show the extent of the work and the success with which it is meeting: "At Sitka the experiments with cereals, forage crops, and vegetables were continued, and several varieties were successfully grown. A log silo was also built there and filled with native grasses in September, 1900, of which Prof. Georgeson says: 'The experiment was an entire success. Our work oxen were fed exclusively on silage from Nov. 10 to May 1, and only when they were worked were they fed grain in addition. They ate the silage with relish throughout and were maintained in good condition. There was no greater loss of silage by waste than always occurs in preserving green forage.' At Kenai experiments with cereals and vegetables have been continued, with considerable success. Fall-seeded wheat survived the winter of 1900-'01 in fair condition. Besides the experimental work at Sitka, Kenai, and Rampart, seeds have been distributed to over 400 persons living in different parts of Alaska. In 1902 the distribution of seed of hardy varieties of vegetables, cereals, and grasses was continued and extended, seed having been sent to 750 addresses. The efforts made by the department to aid the residents of Alaska in their agricultural work by distributing improved varieties of seeds have produced beneficial results. The natives are learning to cultivate gardens."

The season of 1902, according to the Governor's report, was wet in southeastern Alaska and dry in the western and northwestern parts. The rye planted in the fall of 1901 at the experiment farm at Sitka matured well and was harvested in August, 1902, and the yield was good. Flax sown in the spring matured seeds and good fiber. The vegetable gardens for the most part were a success. The yield of potatoes was good and the quality all that could be desired. The crop of wild apples around Sitka was the most abundant known. Many gathered them in quantities for jelly and marmalade. The native berries were plentiful, and those who cultivated the raspberry, currant, and gooseberry have been well rewarded for their labors.

Army, Navy, etc.—Alaska is part of the Department of the Columbia, at present commanded by Brig.-Gen. George M. Randall. The following stations are maintained in the district: Fort Davis, Nome, reservation, 282 acres; Fort Egbert, Eagle, reservation, 25,200 acres; Fort Gibbon, Tanana, reservation, 74,560 acres; Fort Liscum, Valdez, reservation, 650.89 acres; Fort St. Michael, reservation, 40,320 acres; Camp Skagway; and Camp Haines. The force at Fort Liscum under Major W. R. Abercrombie have been engaged during the year in making the trans-Alaskan military road, which is now completed from Port Valdez to the Tanana river, 265 miles. The signal-corps, under the direction of Gen. A. W. Greely, has completed the telegraph-line from St. Michael via Unalaklit, Kaltag, Nulato, Nahcatalin,

Birches, Fort Gibbon, to Rampart. (See Telegraph.)

The navy has a permanent marine post at Sitka and on Japonski island, and the Bureau of Equipment and of Yards and Docks have built a wharf and coal sheds. Here also are a shell house and a powder magazine. The Marine-Hospital Service maintains a hospital at Dutch Harbor. In the fiscal year ended June 30, 1901, 11 patients were treated in the hospital and treatment was furnished 59 out-patients; in the year ended June 30, 1902, 12 patients were treated in the hospital, and there were 62 out-patients.

In 1902 the United States Revenue-Cutter Service had 6 boats in service about Alaska. The Bear was used in the transportation of reindeer from Siberia. The Thetis went to the relief of the Portland and Jeanie, which left Seattle for Cape Nome in the latter part of April and were caught in the ice-pack and carried into the Arctic Ocean. They carried besides several hundred persons, passengers and crews, hundreds of tons of mining machinery and provisions. They were caught in the pack June 4, and June 17 were sighted by the steam-whaler Belvidere, the Thetis lying by, 80 miles north of Cape Prince of Wales in the Arctic Ocean. The 2 boats were locked in the ice, almost within speaking distance of each other, in imminent danger of being crushed. The provisions of both gave out and they were forced to broach their cargoes. They finally succeeded in breaking out, and on July 1 reached Nome with all on board well.

The Manning was on patrol duty at the Seal Islands, and the Perry and the Rush inspected the canneries. The McCulloch surveyed for a harbor on one of the Aleutian chain west of Dutch Harbor. These vessels also provide transportation for the various court officers on their rounds.

The Lighthouse Service has hitherto been very incomplete. Alaska is not a district of itself and is visited but once a year by the tenders Columbine and Manzanita. At present only 2 lighthouses are in operation, both in southeastern Alaska, and 2 others, 1 in Clarence Strait and another in Unimak pass, are nearing completion.

Telegraph.—Gen. Greely, Chief Signal-Officer of the Army, announced the completion of the military telegraph-lines between Fort Egbert, Eagle City, and Fort Liscum, near Valdez. This line brings in direct telegraphic communication with the rest of the world the Copper river country and the Alaskan coast along Prince William Sound. The telegraphic outlet from Fort Egbert is by a signal-corps wire, connecting the Canadian Telegraph line at the international boundary, whence a wire stretches through Dawson to Ashcroft, on the Canadian Pacific Railway. The line from Fort Egbert to Fort Liscum, 425 miles long, was built by almost inconceivable effort and hardship through an uninhabited country, along rough and almost impassable trails. All wire, insulators, and other line material, as well as food for men and forage for animals, were either dragged hundreds of miles by sleds in midwinter or carried by packs on the backs of mules.

Education.—The educational work of Alaska is under the direct supervision of the Rev. Sheldon Jackson, D. D., the United States General Agent of Education for Alaska. The following table shows the location of the public schools, the race under instruction, and the total enrolment and average monthly attendance for the

school year extending from September, 1900, to May, 1901:

SCHOOLS.	Enrolment.	Average attendance—April.
Sitka:		
No. 1 (whites).....	48	25
No. 2 (natives).....	121	12
Juneau No. 2.....	75	11
Douglas:		
No. 1 (whites).....	95	68
No. 2 (natives).....	37	12
Fort Wrangel:		
No. 1 (whites).....	68	28
No. 2 (natives).....	80	11
Jackson.....	88	12
Haines.....	46	..

Sitka Industrial School:		
Schoolroom No. 1.....	70	30
Schoolroom No. 2.....	81	35

The small average attendance was due to two epidemics—pneumonia in arctic Alaska and smallpox in southeastern Alaska—that caused much sickness and a great many deaths, particularly among the natives.

The appropriation for 1900-'01 was \$30,000, and was disbursed as follows: Salaries of officials, \$4,865; salaries of teachers, \$18,392.38; supplies, \$4,542.36; fuel and lighting, \$869.05; repairs, \$521.41; rent, \$180; traveling expenses, \$546.25; freight, \$34.95; balance, \$48.60. The expense per capita of enrolment was \$17.78.

In addition to the schools established by the United States Bureau, most of the missions to Alaska maintain schools teaching general and industrial branches.

The Sitka Training-School reports as follows: "Pupils—boarding, 150; day, 5; teachers, 15; salaries, \$6,949.91; current expenses, \$7,995.89; repairs, etc., \$997.03; total, \$15,939.83. Tuition received, \$805.75." The Sitka Hospital reports as follows: "Physician in charge and 2 nurses. More than 1,500 patients have been treated in the hospital and at the ranches, and a large number of successful operations have been performed. Smallpox was epidemic, and physicians, nurses, and teachers acted heroically in caring for the sufferers." Following is the report upon education in Alaska for the year ending June 30, 1902, from the annual statement of the United States Commissioner of Education, embodying the terms and some of the practical workings of the new provision for educational funds, which superseded the regular annual appropriation for public schools in March, 1901: "This bureau has maintained the past year, outside of incorporated towns, 27 public schools, with 33 teachers and an enrolment of 1,741 pupils. . . . 'An Act making further provision for a civil government for Alaska, and for other purposes,' approved June 6, 1900, section 460, chapter xlv, Part II (31 Stat. L., 330), provides a tax on business and trade in the form of a license. In section 203, chapter xxi, Part V, said act, provision is made whereby 50 per cent. of said license money collected in incor-

porated towns shall be turned over to the treasury of said towns for school purposes. By an amendment to the above section 203, approved March 3, 1901, it was provided that 50 per cent. of all license moneys that may hereafter be paid for business carried on outside incorporated towns in the district of Alaska shall be set aside to be expended, within the discretion and under the direction of the Secretary of the Interior, for school purposes outside incorporated towns in said district."

Under the provision of the license law there has been received from March 3, 1901, to June 30, 1902, for education in Alaska, outside of incorporated towns, \$35,882.41. This fund was disbursed as follows: Salaries of officials, \$5,066.12; salaries of teachers, \$17,192.54; supplies, \$2,420.64; fuel and lighting, \$995.40; repairs, \$204.53; rent, \$369.85; traveling expenses, \$201.40; freight, \$27.24; balance, \$9,404.69.

Reindeer.—The appropriations for the introduction of domestic reindeer into Alaska were in 1901 and 1902 \$25,000 for each year. The expenditures were, in 1901: Salaries, \$10,430.37; supplies for stations, \$2,724.90; coal for revenue-cutter Bear, \$2,202.57; for 428 reindeer, \$5,617.50; other expenses, \$4,017.53; balance, \$7.13. In 1902: Salaries, \$2,810.03; supplies, \$4,498.44; transportation of deer, including transportation charges on 428 deer bought in 1901, \$11,546.55; other expenses, \$2,971.59; balance, \$3,173.39.

The following table shows the annual increase, together with the number of deer imported since 1900:

ANIMALS.	1900.	1901.	1902.
Total from previous year.....	2,538	2,792	4,022
Fawns surviving.....	756	1,130	1,591
Purchased during summer.....	29	500	80
Total, Oct. 1.....	3,323	4,412	5,643
Losses.....	531	390
Carried forward.....	2,792	4,022

From the first purchase of reindeer, in 1891, when 16 were bought as an experiment, 1,320 reindeer have been procured in Siberia and delivered in Alaska. From these, 4,462 fawns have been born.

The most noteworthy event in 1901, and one of the most important in the history of the reindeer movement, was the securing of deer from the region back of Ola, Siberia, to cross with existing herds.

The reindeer are rapidly becoming a source of profit to their owners. The Cape Prince of Wales herd has become so large as to allow a limited number of the deer to be killed for food. The deer bring from \$60 to \$100 each in the neighboring mining-camps for butchering, the proceeds of the sale supplying the herder families with clothing and household appliance. Trained deer sell to the miners for \$150 each for freighting and driving. Many of the Lapps are also employed as drivers. In the winter of 1900-'01 the herders at Cape Prince of Wales received \$600 in gold for freighting with their reindeer to the mining-camps. This applies in a limited way to all the stations, and in a short time the sale of extra males from the herds will more than pay the annual expenses of the stations. During the winter of 1901-'02 even a larger number of deer were used by the miners to carry provisions and supplies, and the mail was carried regularly from Nome to Kotzebue Sound by reindeer teams. In December, 1900, reindeer teams from the Eaton station relieved 3 construction parties of United

States troops, aggregating 110 officers and men, who had been snowed in at Kaltag, on the Yukon river, and after removing their camp 50 miles to a place of safety, carried a supply of provisions to them from St. Michael. These deer also transported telegraph-poles and supplies and provisions for the men engaged in building the telegraph-line between Norton Sound and the Yukon river. At the same time teams from the Teller station were employed for a military expedition to relieve the destitution of the natives in the neighborhood of Kotzebue Sound.

The rapid increase of the number of deer has necessitated the adoption of a system of branding similar to that used in the Western United States, whereby the owners may distinguish their property. The marks are placed upon the ears of the animals.

Late in 1901 it was reported that the Russian Government had prohibited the further exportation of reindeer from Siberia. Upon the inquiry of the Bureau of Education through official channels permission was granted for the purchase of 300 deer in the summer of 1902, with the condition that the reindeer should be paid for in coin instead of barter goods as formerly. When the revenue-cutter Bear reached Baroness Korfig Bay the natives had large herds to sell; but when they learned that the ship carried no flour, calico, tobacco, or other things for which they were accustomed to trade, never having had any money in circulation and being unacquainted with its value, they refused to sell, and only 30 deer were secured.

The Nome Conspiracy.—Jan. 6, 1902, the United States Circuit Court of Appeals, in San Francisco, fined Judge Arthur H. Noyes, of the Second District of Alaska, \$1,000 for contempt of court, and sentenced District-Attorney Joseph K. Wood and his assistant, C. A. A. Frost, to four months and one year imprisonment respectively. While the case was tried solely on the charge of contempt, the defendants having refused to answer the mandates of the court, it was the outgrowth of the conspiracy entered into by Judge Noyes, Alexander McKenzie (who was convicted in February, 1901), and others in Nome in the summer of 1900, where, by the appointment of McKenzie as receiver, they took over all the most valuable mining-claims in Nome, and refused to restore them or to respect the injunctions of the higher court. Upon the findings of Attorney-General Knox, Feb. 23, 1902, after reviewing the charges, President Roosevelt dismissed Judge Noyes from office Feb. 25, 1902.

ARIZONA, a Territory of the United States, organized Feb. 14, 1863; area, 113,020 square miles. The population, according to each decennial census since the organization, was 9,658 in 1870; 40,440 in 1880; 59,620 in 1890; and 122,931 in 1900. Capital, Phoenix.

Government.—The following were the Territorial officers in 1902: Governor, N. O. Murphy, succeeded in July by Alexander O. Brodie; Secretary, Isaac T. Stoddard; Auditor, William F. Nichols; Treasurer, T. W. Pemberton, resigned and succeeded in August by I. M. Christy; Attorney-General, C. A. Ainsworth, resigned and succeeded in August by E. W. Wells; Adjutant-General, H. F. Robinson; Superintendent of Education, R. L. Long, resigned in July, succeeded by Nelson G. Layton; Geologist, W. P. Blake; Surveyor-General, Hugh H. Price; Veterinarian, J. C. Norton; Chairman of Live-Stock Sanitary Board, A. C. McQueen; Surgeon-General, M. M. Walker; Board of Equalization, R. N. Fredericks, Michael Ohl, M. P. Freeman, resigned and succeeded by

Frank H. Parke; Game Commission, W. L. Pinney, T. S. Bunch, Eugene Allison; Chief Justice of the Supreme Court, Webster Street, succeeded March 21 by Edward Kent; Associate Justices, Richard E. Sloan, Fletcher M. Doan, George R. Davis; Clerk, Lloyd Johnston, succeeded by Shelby M. Collum.

The Territorial Legislature meets biennially in January of the odd-numbered years; the session is limited to sixty days. The Council has 12 members and the House 21.

Finances.—The biennial report of the Auditor for 1901-'02 shows that Territorial warrants have been drawn to the amount of \$585,521.09, and that the floating indebtedness of the Territory is now \$119,839. The total valuation of the taxable property of the Territory is \$39,083,177.57, an increase of \$229,343 over the valuation of 1901. The rate of taxation, which was 1.17 that year, was reduced in 1902 to 13 and a fraction. The counties pay on their indebtedness annual interest aggregating a little more than \$65,000.

Bonds for \$30,000 were issued this year for the purpose of making a Territorial exhibit at the St. Louis Exposition. Territorial bonds were redeemed as follow: Insane asylum 7 per cents., \$20,000; University 7 per cents., \$7,000. The net indebtedness of the Territory is \$1,065,461.90, a decrease of \$5,388.17.

Education.—The census reports show the number of illiterates in the Territory to be 27,307. The percentage of persons between ten and fourteen years of age able to read and write was 79.62 in 1890 and 77.79 in 1900. The number of inhabitants that speak no English is 29,911. Another table shows the monthly wages of male teachers in the Territory to be \$73.23, and of female \$63.17.

There are about 23,000 children of school age; the average expenditure for each is \$15.11.

A class of 18 was graduated at the Tempe Normal School in June. A girl's dormitory is in process of construction, to cost, with its furnishings, \$12,000.

Last winter the State Board of Education of California, upon examination of the quantity and quality of the work at the Tempe Normal School, officially recognized the latter as on a par with their own normal schools.

The university graduated 3 women in the literary course, and 6 men in the department of mining engineering. All the men in the institutions are taking either this course for a degree or the shorter course in mining and assaying.

Banks and Loan Associations.—The report of the Bank Examiner at the close of the year shows that there were 16 incorporated Territorial banks, 6 building-and-loan associations organized under the laws of the Territory, and 7 national banks. Some of the Territorial banks since the matter for the report was gathered have been converted into national banks. Great gains are shown in the business of both the Territorial banks and the building-and-loan associations. The resources of the former have increased within a year from \$3,918,806 to \$4,675,032.33. The operations of the building-and-loan associations have been increased from \$588,369.45 to \$701,472.09. The increase of deposits in banks, both Territorial and national, have been for the last two years as follows: For 1901, \$6,225,480.86; for 1902, \$7,015,087.98. Of the total increase of \$789,607.12, \$632,390.07 has been in Territorial banks and \$157,217.05 in national banks.

Railroads.—In 1901 new tracks aggregating 85.04 miles were laid in the Territory. The Santa

Fé, Prescott and Phoenix has been improved by the construction of what is known as the Hell Cañon Cut-Off. It is shorter than the old line by 3 miles; the maximum north-bound ascending grade is 1½ per cent., against 3 per cent. on the old line. The most notable feature of the Hell Cañon Cut-Off is that of the Hell Cañon viaduct, crossing a deep cañon, which, to the time this improvement was conceived, was considered practically impassable. The viaduct is a fine steel structure, 645 feet in length, and crosses the cañon at an elevation of 165 feet.

The total railroad and Pullman car valuations this year amounted to \$4,998,434.32. This is an increase over the valuation last year of \$175,405.41, which, however, did not include the El Paso and Southwestern.

Corrections.—About 300 convicts are confined in the Territorial prison at Yuma. No satisfactory solution of the convict-labor problem has yet been found.

A reform school for boys and girls has been built near Benson, with grounds comprising 40 acres. It is of tufa, has 30 rooms, and cost \$25,000. It will be ready for occupancy after the next session of the Legislature.

Irrigation.—The greater part of the irrigated land of the Territory is in the Salt river valley. The total expanse of the fully irrigated land in Arizona is 185,396 acres. In the past ten years 545 miles of canals have been constructed, at a cost of \$1,500,000. Artesian water is used to a limited extent in the San Pedro and Gila valleys, near Benson and Safford. A new corporation has acquired the Peoria Canal property, near Gila Bend, on which \$1,000,000 has been spent. The dam is to be rebuilt and about 80,000 acres of good land reclaimed. The Government has spent \$13,000 for new ditches on the Pima Indian reservation.

Around Yuma the main interest concerns the Imperial Canal, which heads near by, on the California side of Colorado river. The new Rockland Canal, north of Yuma, will irrigate 10,000 acres. About 100 horse-power will be developed on the Ludy Canal, west of Yuma, to be used in pumping water to higher line lands.

An organization has been formed to secure the construction of the proposed Tonto creek storage-dam on Salt river, near Phoenix, under the general irrigation act of Congress. The dam was to be 210 feet high, and the cost of the entire enterprise is estimated at \$2,000,000, and it is to impound 840,000 acre feet of water. The engineers are considering plans for building the dam 40 feet higher, impounding 1,400,000 acre feet of water.

The unique feature of the whole enterprise is the scheme for development of electric power. A canal will be dug, heading at the upper end of the reservoir site, capable of carrying the minimum flow of the river. This force will be utilized in generating electric power to be used in making the necessary cement from materials close at hand, for running all the huge construction machinery that will be used in the building of the dam and in the operation of the head-gates, and later, when all is finished, it will be cabled to the valley and employed in raising the underground supply.

Products and Industries.—Arizona has 314 manufacturing establishments, with a capital of \$10,157,000, employing an average of 3,268 wage-earners, and paying per annum in wages \$2,369,065. The value of the annual product is \$21,315,189. This classification includes copper-smelters. The principal wealth of the Territory lies now in

the copper-mines; Arizona stands third in the production of copper, only Michigan and Montana standing above it. Since the great decline in the value of silver and the shutting down of the Tombstone mines the production of the white metal in the Territory has decreased, until now it represents only about 6 per cent. of the total mineral output, even the gold production being three times as great. From a statement by the director of the mint, it appears that the gold product in 1901 amounted to \$4,083,000 in value, and the silver to \$1,687,440. The greatest mining center of the Territory is Bisbee, near the Mexican line.

A scheme has been formed to mine or quarry the ice in the caves near Flagstaff. The main, or best-known ice-cave, lies at the head of Clark's valley, 17 miles southwest of Flagstaff.

The culture of date-palms has been undertaken at the experiment station south of Tempe. Trees imported two years ago are doing well, and another load from Egypt was received at the station this year.

Lands.—The court that had the disposition of private land claims passed upon 18. The total area claimed was 11,326,108.04 acres; the total confirmed, 121,187.50; the total rejected, 11,204,920.54. Among those rejected was the famous Peralta grant, amounting to 10,467,456.18 acres.

The United States Geological Survey is examining the forest reserves. The total area of the San Francisco mountain reserve is 795,360 acres. The Black Mesa reserve comprises 1,658,880 acres.

Political.—The candidates for the office of delegate in Congress at the November election were Robert E. Morrison, Republican, and J. F. Wilson, Democrat. Wilson was elected by a vote of 9,716 to 9,239 for Morrison.

ARKANSAS, a Southern State, admitted to the Union June 15, 1836; area, 53,850 square miles. The population, according to each decennial census since admission, was 97,574 in 1840; 209,897 in 1850; 435,450 in 1860; 484,471 in 1870; 802,525 in 1880; 1,128,179 in 1890; and 1,311,564 in 1900. Capital, Little Rock.

Government.—The following were the State officers in 1902: Governor, Jefferson Davis; Secretary of State, John W. Crockett; Auditor, T. C. Monroe; Treasurer, H. C. Tipton; Attorney-General, George W. Murphy; Commissioner of Lands, J. W. Colquitt; Superintendent of Education, J. J. Doyne, succeeded by J. H. Hinemon; Commissioner of Mines, Manufactures, and Agriculture, Frank Hill, succeeded by H. T. Bradford; Railroad Commissioners, Jeremiah G. Wallace, Felix M. Hanley, Abner Gaines; Adjutant-General, Charles Jacobson; Geologist, John C. Branner; Chief Justice of the Supreme Court, Henry G. Bunn; Associate Justices, Simon P. Hughes, Carroll D. Wood, Burrill B. Battle, James E. Riddick; Clerk, P. D. English. All are Democrats.

State officers are elected on the first Monday in September in the even-numbered years, and serve two years. The Legislature meets biennially the second Monday in January in the odd-numbered years. The session is limited to sixty days.

Finances.—The report of the Auditor for the two years ending Sept. 30, 1902, says: "The public debt of the State has been reduced to a minimum, and will very soon be wiped out entirely, with the exception of the funding bonds held by the permanent school fund, amounting to \$1,118,500. Exclusive of these bonds, the present indebtedness of the State consists of \$137,500 of the funding bonds of 1891, of which sum \$102,500 is in the permanent endowment fund of the University of Arkansas, and the remainder, 35 bonds

of \$1,000 each, is held by private individuals. These bonds are being gradually retired. The act approved May 3, 1901, calling in for redemption the old outstanding bonds, provided that all such bonds not presented within six months from the date of call made by the Treasurer should be forever barred, null and void. Of the 22 bonds shown by the records to be outstanding, only 7 were presented and redeemed. The Auditor estimates the ordinary expenses of the State government for the next two years at about \$1,000,000.

The total value of property in the State, as assessed for taxation, is about \$224,000,000.

Education.—From the census reports on illiteracy in the States it appears that Arkansas has 190,655 illiterates. The percentage of persons from ten to fourteen years of age who were reported able to read and write was 77.89 in 1890 and 83.80 in 1900. Eight of the States and Territories were below Arkansas in the list in 1890, and nine in 1900.

The school population this year was 495,368; the State apportionment of funds was \$539,951.12, giving a per capita of \$1.09. The monthly salary paid to male teachers is given as averaging \$38.50; to female, \$36.50.

The State University graduated a class of 22, June 19. In the medical department 11 were graduated in April. At the opening in September about 500 students were enrolled. The university shops were destroyed by fire in the autumn, at a loss variously estimated at \$20,000 to \$50,000, without insurance.

Charities and Corrections.—A report of the State Lunatic Asylum, submitted in July, covers the period from Dec. 1, 1900, to July 1, 1902. The number Dec. 1, 1900, was 622; admitted, 235; discharged, 213, of whom 68 had recovered, 67 improved, 10 unimproved, 2 eloped, 2 were found not to be insane, and 61 died, leaving 644 remaining. The average cost of maintenance per capita for a month was \$4.49, officers and employees included.

At the School for the Blind there were 169 inmates March 31. The cost of maintenance for one month was \$4.40 per capita, including teachers and employees, 235 in all. Four students were graduated in June.

There were 208 pupils remaining at the Deaf-Mute Institute April 30. The average for sustenance for one month when the whole number, including employees, was 294, was \$4.12. New buildings have been constructed for both the Blind and Deaf-Mute Institutes.

At a meeting of the Penitentiary Board in November it was decided to buy a plantation in Lincoln County for a convict farm. It comprises about 11,000 acres, of which 2,400 are in cultivation. It is 28 miles below Pine Bluff, at a bend of Arkansas river, and has 7 miles of river front. The price was \$140,000. The Governor was the only member of the board opposed to the purchase; he announced that he would send a message to the Legislature advising that it be canceled.

Militia.—In a report to the adjutant-general of the United States army in June it was stated: "1,694 militia have been regularly organized, uniformed, and in actual service of the State during the year ending June 30, 1902; that the average attendance at drills and parades during the year was, to the best of our knowledge and belief, on an average semiweekly for the 25 companies of infantry, monthly for the 2 companies of cavalry." The Government allotment to the State for militia supplies was \$42,000. In Novem-

ber the Guard consisted of 2 regiments and 7 separate companies—31 companies in all—of infantry, a battalion of cavalry, and a battery of light-artillery. In June the adjutant-general demanded the resignation, which was tendered, of Harry H. Myers, nominee of the regular Republicans for Governor as lieutenant-colonel and judge-advocate general of the State Guard. The demand, it is understood, was based upon Myers's speech in accepting the Republican nomination for Governor, when he referred to Gov. Jefferson Davis, the Democratic nominee and commander of the State Guard, as a "human windmill and bombastic dictator."

Railroads.—The number of miles of new railroad-track laid in 1901 was 155.91. The annual report of the Railroad Commission, rendered in September, 1902, says: "Encouraging progress has been made in the construction and extension of railroads running into practically new and undeveloped sections of the State. The White River Railroad, a branch of the Missouri Pacific system, is being built from a point north of Batesville up White river in the direction of the zinc-fields of northeast Arkansas. The St. Louis and North Arkansas Railroad has been extended from Eureka Springs to Harrison, a distance of some 45 miles, and the construction is being pushed, with Marshall as the present objective point. The Ozark and Cherokee Central Railway, the Fort Smith Western Railroad, the Arkansas and Choctaw, and the South Missouri and Arkansas, have also made considerable progress in construction."

The annual meeting of the Association of Southern Railroad Commissioners was held at Hot Springs in October. A resolution was adopted "asking the national Congress to pass an act requiring federal courts to treat all cases arising under and by virtue of laws creating railroad commissioners, whether State or interstate, wherein the public interests are involved, as 'preference cases,' and as such they be entitled to be placed at the head of the docket and to be speedily and promptly heard."

Insurance.—A statement showing the sums paid by life-insurance companies in the cities and towns of the State gives a total of \$949,433. In the same year the fire companies received \$1,258,878 in premiums, and paid losses amounting to \$717,838.

Congressional Appropriations.—For improvement of rivers in the Arkansas district, Congress appropriated as follows: Upper White, \$270,000; Arkansas, \$110,000; lower White, \$22,000; Black, \$21,700; Current, \$6,900; St. Francis and l'Anguille, \$9,000; Cache, \$2,000. The total mileage of the rivers of the Arkansas district is 1,571. For repairing the Government levee near Walnut Bend and extending it to Wheel Ridge \$90,000 was appropriated. Provision was also made for public buildings at Hot Springs, Fort Smith, Batesville, and Harrison.

Products and Industries.—The coal-product of the State in 1901 was valued, according to the bulletin of the United States Geological Survey, at \$2,033,193; the number of tons was 1,784,136.

A great deposit of liquid asphalt is being opened up in Pike County. Beneath it has been discovered a stratum of fullers' earth.

About 3,000 persons are engaged in the pearl industry in the vicinity of Newport. Two steamboats and barges are employed in transporting the mussel-shells on White river.

The amount of capital invested in the lumber industry increased between 1880 and 1900 from \$1,067,840 to \$21,727,710.

The capital in grist and flour mills in 1900 was \$1,183,052; the value of the product, \$3,708,709.

The number of farms in the State in 1900 was 178,694; the value, \$135,182,170; total value of farm property, \$181,416,001; number engaged in agriculture, 340,994; farm-products, \$79,649,490.

The estimate of the average yield of corn to the acre in 1902 was 20.9; in 1901 it was 8.1; the mean of the average of the past ten years was 17.3.

The cotton-crop of 1901-'02, according to Secretary Hester's report, was 820,000 bales, against 762,000 the year next preceding. The consumption in mills of the State was 2,463 bales. The whole number of spindles was 14,588; number of looms, 150; of mills, 4.

The cotton-seed product was 190,015 tons; the cost, \$2,245,710; the products, \$3,188,812.

The number of commercial failures in the State the first half of the year was given as 152, with liabilities of \$795,380. In the corresponding months of 1901 there were 116, with liabilities of \$611,009.

Early in the year measures were taken to collect relief for the sufferers by the drought in the northern part of the State in 1901.

Court Decisions.—The Supreme Court has sustained the act of the Legislature of 1901 authorizing cities of the first class to pass vehicle tax ordinances. The tax was resisted on the ground that it was unconstitutional and void "in this, that it is either an attempt by the Legislature to authorize said cities to impose or levy a direct tax upon wheeled vehicles as property, in excess of the amount limited by the Constitution and in violation of its provisions relating to taxation, or is an attempt to create out of the common right to use vehicles a privilege and thereupon to tax the same."

The act "to suppress the illegal sale of liquors, and to destroy the same when found in prohibited districts" was attacked, but was pronounced constitutional by the Supreme Court.

Hot Springs.—In the annual report of the Secretary of the Interior much attention is given to the Hot Springs reservation. It says in part: "The success of the Hot Springs as a health resort since the assumption of supervisory control by the Government in 1878 has been remarkable. The increase in patronage has been constant year by year. During this period of twenty-four years the superintendent estimates that a total of 650,000 people have visited Hot Springs for health and recreation; the patronage of the year just ended was 65,000.

The reservations, including the mountainous districts known as North mountain, Sugar Loaf mountain, and West mountain, together with Hot Springs mountain, were forever reserved from sale and dedicated to public use as parks. These reservations, with Whittington Avenue reserve, comprise in all 911.63 acres.

Little Rock.—The local chapter of the Daughters of the Confederacy last winter entered an emphatic protest against any presentation of the play Uncle Tom's Cabin in the capital city.

Pardons.—The Governor, having been induced to grant a pardon for remission of a fine by a petition on which, as was afterward found, about 100 names were forged, including those of the sheriff, the clerk, and the prosecuting attorney, issued a proclamation directing that in future "the applicant or his attorney shall deposit petition for pardon with the circuit clerk of his county fifteen days, subject to the inspection of the general public."

The Governor gained considerable notoriety in

May by granting a pardon to a negro convict in the Penitentiary on condition that he should become a resident of Massachusetts within thirty days. The negro had been convicted in 1900 of assault with intent to kill, and sentenced to three years in the prison.

Lawlessness.—Lynchings have been reported this year at or near Foreman, Tomberlin, Magnolia, Stephens, and Forest City. All the negroes lynched were accused of assaults upon women or girls; one, who murdered his victim, was burned at the stake.

In October a company of the State militia was called out to aid the sheriff to keep order at El Dorado, where great excitement had been caused by a tragic affray in which 3 men were killed and 3 wounded, 1 fatally. The fight was the culmination of a feud arising from the shooting of a man by an officer whom he attacked for having arrested him.

Political.—The Democratic primaries for the choice of candidates for United States Senator, members of Congress, and State and local officials were held March 29. The candidates for the office of United States Senator were ex-Gov. James P. Clarke and Senator James K. Jones; for Governor, Jefferson Davis and E. W. Rector. Clarke and Davis were chosen by large majorities. The State convention met at Little Rock, June 11. The resolutions recognized the Kansas City platform "as the declaration of the national Democracy upon national questions until supplanted by action of a succeeding national convention; denounced trusts and the Dingley tariff; favored the building of the Nicaragua Canal by the Government; an appropriation for the Louisiana-Purchase Exposition; laws for protection of labor; a new State-House; enlargement of the powers of the Railroad Commission and of the Interstate Commerce Commission; the establishment of a reform school; and better provision for the insane. Following is the ticket: For United States Senator, James P. Clarke; Governor, Jefferson Davis; Secretary of State, J. W. Crockett; Attorney-General, George W. Murphy; State Treasurer, H. C. Tipton; Superintendent of Public Instruction, J. H. Hinemon; Auditor, T. C. Monroe; Associate Justice Supreme Court, B. B. Battle; Land Commissioner, F. E. Conway; Railroad Commissioners, J. W. Phillips, B. B. Hudgins, J. E. Hampton; Commissioner of Mines, Manufactures, and Agriculture, H. T. Bradford.

The Republicans were divided into two factions, known as the "regulars" and the "insurgents." Both held conventions at Little Rock, June 26. The "regulars" nominated Harry H. Myers for Governor. Other nominations were: For Secretary of State, Charles T. Duke; Auditor, John L. Smith; Treasurer, Joseph Berger; Attorney-General, Charles F. Cole; Land Commissioner, W. H. Conine; Superintendent of Public Instruction, Robert L. Floyd; Commissioner of Mines, Manufactures, and Agriculture, F. S. Baker; Associate Justice of the Supreme Court, Charles C. Waters. The resolutions commended the national policy of the party at some length. On State affairs they favored an exhibit at St. Louis, equal taxation, and salaries for justices of the peace and prosecuting attorneys. The Democratic party was condemned for its failure to suppress trusts, to invite industries into the State by providing for them reasonable exemption from taxation for a limited period; for its abandonment of the work upon the new State-house, after its site had been chosen, the foundation laid, and thousands of dollars of the public moneys laid out thereon; for its partizan man-

agement of the State charitable boards in restricting their membership wholly to the Democratic party; for its partizanship applied even to the public schools, by which none but Democrats need aspire to the responsible position of school director; for its failure to provide a railroad commission which affords any protection to the people of the State; for failure to establish a reform school, to provide for the destitute insane outside the county jails, and to pass an efficient fellow-servant law; for "its vacillating and corrupt management of the State Penitentiary, by which monopolies are fostered, first, by entering into contracts for hiring out convicts at prices totally inadequate, and then seeking to dishonorably repudiate the contracts; and for its repeated refusal to change the law so that the minority party might have one judge and one clerk of its choice at each voting precinct in the State, thereby insuring an honest return of all the votes cast." Payment of the poll-tax was made a prerequisite to voting in the Republican primaries.

The "insurgents" nominated Charles D. Greaves for Governor. No nominations were made for other offices. The following was the most distinctive among the resolutions: "The control of these State organizations has been in the hands of a member of the national Republican Committee for no purpose of success in local or other elections in this State, but for the sole control of federal patronage and the aggrandizement of the few in control. We earnestly request that the President and his Cabinet officers refuse to recognize such organizations, which have so unworthily represented the Republican party of this State."

The Prohibitionists assembled in convention at Little Rock, June 25, nominated George H. Kimball for Governor, and adopted a platform in accordance with their principles. The concluding declaration was: "We declare our belief that existing conditions in other political parties in this State make it impossible that self-respecting citizens, and particularly Christian men, should continue to support them and the men and measures for which they ask the votes of the people."

The Ex-Slaves Association nominated Rev. R. D. Campbell, their president, for Governor; but the nomination did not appear on the official ballot. The State election, held Nov. 1, resulted in the success of the Democratic candidates. The vote for Governor stood: Jefferson Davis, Democrat, 77,354; H. H. Myers, Republican, 29,256; C. D. Greaves, Independent, 8,345; George H. Kimball, Prohibitionist, 4,791.

A proposed amendment to the Constitution empowering the Legislature to place its members on a salary instead of the per diem system now in vogue was carried by a majority of 1,616 votes. The law now in effect gives the members of the Legislature \$6 per day and their railroad mileage. The constitutional limit of the Legislature is sixty days, but for many years past the sessions have been prolonged to double that time.

The question of license was voted upon, about 46 of the 75 counties giving a majority against. The State Senate will be entirely Democratic; the House will have 2 Republicans.

CALIFORNIA, a Pacific Coast State, admitted to the Union Sept. 9, 1850; area, 158,360 square miles. The population, according to each decennial census since admission, was 92,597 in 1850; 379,994 in 1860; 560,247 in 1870; 864,694 in 1880; 1,208,130 in 1890; and 1,485,053 in 1900. Capital, Sacramento.

Government.—The following were the State officers during the year: Governor, Henry T. Gage;

Lieutenant-Governor, Jacob H. Neff; Secretary of State, Charles F. Curry; Comptroller, Edward P. Colgan; Treasurer, Truman Reeves; Attorney-General, Tiley L. Ford; Surveyor-General, Martin J. Wright; Superintendent of Public Instruction, Thomas J. Kirk; Superintendent of State Printing-Office, Alfred J. Johnston; Adjutant-General, W. H. Seaman; Insurance Commissioner, E. Myron Wolf; Commissioner of Labor, F. V. Meyers; Railroad Commissioners, E. B. Edson, C. S. Laumeister, N. Blackstock; Board of Equalization, Alexander Brown, R. H. Beamer, Thomas O. Toland, Lewis H. Brown; Commissioners of the Supreme Court, Wheaton A. Gray, James A. Cooper, N. P. Chipman, George H. Smith, and John Haynes; Building and Loan Commissioner, Frank H. Gould; Bank Commissioners, John Markley, A. W. Barrett, B. D. Murphy; Chief Justice of the Supreme Court, William H. Beatty; Associate Justices, T. B. McFarland, C. H. Garroute, R. C. Harrison, Walter Van Dyke, F. W. Henshaw, Jackson Temple (who died Dec. 25); Clerk, George W. Root.

The State officers hold office four years and are elected in November of the even-numbered years between presidential elections. The Legislature meets biennially in January of odd-numbered years, and the session is limited to sixty days.

Valuations.—The assessed valuations of property in the State, as given in the Comptroller's official report for this year, amount to \$1,290,750,465, made up as follows: Value of real estate, \$690,974,783; improvements, \$284,226,533; personal property, \$200,164,171; money and solvent credits, \$50,572,275; railroads, \$64,812,603. The rate of State taxation is .382 cents on each \$100 of valuation.

The original assessed value of mortgages is \$145,521,044 and the assessed value of university and other State mortgages is \$1,424,513. The total indebtedness of the counties of the State is \$3,175,942.75, of which \$3,088,900 is funded and \$87,042.75 is transient or floating debt.

The aggregate valuation shows a gain of \$49,044,662 over the preceding year and \$18,081,339 of this increase is represented in the enhanced value of real estate and new improvements. The next greatest gain is in the assessed value of railroads, which is \$15,691,118 greater than for 1901. Money and solvent credits show an increase of \$4,614,278, and mortgages are \$3,820,020 less in amount than for the previous year. The indebtedness of the counties was reduced \$157,290.25 during the year, while the total funded debts of the counties was decreased by \$135,500. Of the 57 counties in the State, 16 are free of debt, 11 have debts under \$20,000 and only 11 owe in excess of \$100,000. The largest single county debt is \$410,355, owed by Sacramento County, and the smallest is \$2,000, owed by Del Norte, and the same amount is owing by Ventura. The total outstanding debt of San Francisco city and county is only \$250,000. Although the outstanding financial obligations of the counties show substantial reductions, there has been no backwardness in public improvements.

Education.—The State has two great universities, the Leland Stanford Junior University, at Palo Alto, Santa Clara County, the wealthiest institution of learning on the continent, and the University of California, a State institution, at Berkeley, Alameda County. This year the magnificent memorial chapel at the Stanford University was completed, at an expense of over \$300,000. It is of yellow sandstone, to match the other college buildings in the great quadrangle, and is

considered one of the most ornate pieces of architecture, as well as one of the handsomest houses of worship, on the Pacific coast. It is presided over by the Rev. Richard Heber Newton, formerly of New York city, and the regular Sunday and weekly services are undenominational. The attendance at the university was more than 1,600 during the year, and about twice that number have been in attendance at the University of California at Berkeley. Among the other institutions may be mentioned California College (Baptist), at Highland Park, Oakland; University of the Pacific (Methodist), at San José; Mills Seminary, at Seminary Park, Alameda County; Wilmerding School and the Cogswell Polytechnic School, both at San Francisco; Santa Clara College, at Santa Clara. The elegant country mansion of the late James C. Flood, with extensive grounds and conservatories, at Menlo Park, San Mateo County; the Mark Hopkins Institute of Art, in San Francisco; the recently completed affiliated colleges near Golden Gate Park, San Francisco, and the Lick Observatory on Mount Hamilton, near San José, are all part of the property of and under control of the University of California.

Mining.—Although mining was less prominent in the industrial activities of the State during the last decade, the annual output of precious metals and minerals is still very large. In 1902 the production of gold amounted to \$17,124,941, and since the discovery of the metal at Sutter's Mill in January, 1848, the State has contributed more than \$1,500,000,000 to the golden wealth of the world. For value of output, California stands second among the States of the Union. The commercial value of silver mined in 1902 is stated at \$480,793. Much activity in prospecting for copper is in evidence in Siskiyou, Trinity, Fresno, Santa Clara, San Luis Obispo, San Bernardino, and other counties. A discovery of a large and rich body of copper ore was recently reported from the neighborhood of the Almaden quicksilver-mine in Santa Clara County, and although the development now in progress has not yet been advanced to fully determine the value of the deposit, it is known to be very extensive and of a high grade. The copper-producing era in California began to assume large proportions in 1897 when the output was 13,638,626 pounds, valued at \$1,540,666. No satisfactory estimates can be found at the present writing of the volume and value of the copper production of 1902, for the reason that the operations of the chief producer, the Mountain Copper Company, in Shasta County, have been twice disturbed during the year, once by fire and lately by labor troubles. The output of the Bullyhill mines has been large and has made its mark in helping to swell the production of the year, which those best informed assert to be fully \$7,000,000 in value. California is the only State that produces asphalt, and the output for 1902 is 26,000 tons, valued at \$338,000. There are about 50 varieties of metals and minerals in the State of commercial value, all of which are being profitably worked.

Fuel Oil.—Crude oil is coming rapidly to the front as a leading product of the State, and it is now being utilized for steam generation in every section where transportation facilities permit its being laid down profitably. The record for 1902 shows unprecedented progress. The number of producing wells is 2,152, and the production for the year was 13,692,514 barrels. Owing to lack of transportation facilities, 424 producing wells were capped and not being pumped at the close of the year. The depth of producing wells ranges from 200 feet at Summerland to 2,540 feet at Fullerton. The Southern Pacific Railroad Company has

504 locomotives burning oil for fuel. These locomotives consume 600 barrels each a month. The Santa Fé Railroad Company is also converting its locomotives to oil-burners. In 1902 280 engines operating between San Francisco and Winslow, Arizona, were oil-consumers. Two years ago there was not a steamer burning oil; now there are 112 using it for fuel. The Standard Oil Company has its new pipe-line from the southern oil-fields near Bakersfield to Point Richmond on the eastern shore of San Francisco Bay, nearly completed, and it will be in operation early in 1903.

Banking.—The State has 321 banks, of which 191 are commercial, 61 savings, 49 national, and 20 private. All but the national banks are under the jurisdiction of the State Board of Bank Commissioners, which calls for detailed reports at irregular intervals two or three times each year. The aggregate resources of the banks in the State on Aug. 23, 1902, the date of the last official report, was \$494,678,597.30. This represents a gain of \$65,754,716.21 in twelve months, in comparison with the official statement of Aug. 17, 1901. Classified, the banking resources include the following items: Bank premises, \$8,199,162.96; other real estate, \$15,540,532.12; stocks, bonds, and warrants \$112,122,208.85; loans on real estate, \$116,489,606.06; loans on stocks, bonds, and warrants, \$38,303,603.84; loans on grain and other securities, \$14,512,682.97; loans on personal security, \$88,746,692.52; money on hand, \$33,504,414.34; due from banks and bankers, \$62,416,956.22; other assets, \$4,862,737.42. The paid-up capital of all the banks in the State amounts to \$52,699,044.38, and the total due depositors in all banks is \$368,594,780.09. In San Francisco there are 9 savings-banks, and the deposits aggregate \$138,193,443.38. The current rate of interest for loans on real-estate security is $5\frac{1}{2}$ to 6 per cent. per annum, the banks paying the mortgage taxes. The annual allowance of interest on deposits by the savings-banks is $3\frac{1}{2}$ to $3\frac{3}{4}$ per cent. The resources of the 19 commercial banks in San Francisco amount to \$104,237,334.30, and the total due depositors aggregates \$63,798,854.67. There was a large increase in the business of the State in the last four months of the year. The month of December, 1902, showed the heaviest clearings for any one month in the history of the city, the total being \$136,571,697.04. The deposits in all the banks of the State are \$248.22 per capita of the population.

Agriculture.—The farming interests of the State had a very prosperous year, and remunerative prices ruled almost continuously. The wheat-crop was not up to expectations in quantity, but the quality was excellent and the prices obtained were the highest in four years next preceding. The total yield was 21,072,366 bushels. As during the two previous years, the shortage in production was in the southern portion of the State, the yield in central and northern California being bountiful. The value of the crop, however, was about \$16,500,000. The crop of barley was a little over 19,000,000 bushels, but the higher prices brought the value up to \$10,000,000. The production of corn and oats was light, the yield of the former being about 1,000,000 bushels and of the latter something over 2,000,000 bushels. Rye is grown very sparingly, and 350,000 bushels is a liberal estimate for the total yield. The price of rye was the highest in many years, choice lots selling at \$1.15 a cental. The crop of beans was larger than usual, the total being about 115,000,000 pounds, of which 40,000,000 pounds were Limas.

Hop-growers had one of the best years in the history of the industry. The production was bountiful, the total being 55,000 bales or about

10,500,000 pounds, the price ranging from 20 to 26 cents a pound.

The output of beet-sugar for the year is variously estimated at 80,000 to 85,000 short tons, 3 of the 8 refineries not furnishing statistics of their production. The crop of beets was large, and the yield of sugar ranged from 213 to 258 pounds to each ton of beets. The laboratory percentage of sugar in beets varied from 14.19 to 16.43 per cent., according to locality.

The best estimates on the production of honey place the year's crop at 3,750,000 pounds. This was below expectations, but the scarcity of spring rains in the blooming time throughout southern California caused the deficiency.

The wool-clip was about 18,000,000 pounds. This is a fair average for the past few years, and the prices generally realized by growers have been remunerative.

The rainfall at San Francisco in the season of 1901-'02 was 18.98 inches, a little less than in the preceding season. Northward it was greater, being 51.96 inches at Eureka, in Humboldt County; and southward there was a gradual decrease until at San Diego the total was only 6.16 inches.

Horticulture.—The yield of nearly all fruits was in excess of that of the preceding year, and generally the prices were more satisfactory to growers. Shipments by rail of deciduous fruits to the Eastern States aggregated 7,141 car-loads, of which 2,011 cars were pears, 1,777 peaches, 1,033 grapes, 1,478 plums and prunes, 222 apricots, 245 cherries, and the remainder miscellaneous. New York city took 1,475 car-loads, Chicago 1,301, Boston 745, Minneapolis 419, Philadelphia 295, and Pittsburg 278. These were the leading centers of distribution, although 10 other cities took over 100 car-loads each, and as many more over 50 car-loads each. The shipments of the year were the largest in the history of the business. The shipments of oranges and lemons for the citrus season, which begins Nov. 1, aggregated 19,180 car-loads of 350 boxes each. Of this total, 1,836 car-loads were lemons.

The prune-crop was a fair average, the estimated yield being 150,000,000 pounds. The export demand was steady, but prices were rather low until the end of December, when there was a sharp advance. A feature of the year's trade was heavy shipments to Europe.

Raisin-growers had a large yield and realized good prices. The crop was about 96,000,000 pounds, the largest for any one year since 1894.

The walnut-crop was larger than usual, and the quality was excellent, the total yield being 17,000,000 pounds. The crop of almonds was also large, the total being 5,600,000 pounds.

The viticultural interests had a very favorable season and the yield of wine, 40,000,000 gallons, was the largest for several years. Of this total, 26,000,000 gallons were dry wines and 14,000,000 gallons sweet wine. The wine-grape growers realized the highest prices paid in many years, in some sections as high as \$34 a ton being paid at the wineries for some fine varieties. In the season 350,000 tons of grapes were crushed for wine-making. The best trade estimates place the brandy production at 5,000,000 gallons.

The pack of canned fruits is slightly less than for the previous year, the total being 2,250,000 cases, each case containing 2 dozen 2½-pound cans.

Dairying.—This industry has made rapid improvement during the past few years, and while the annual output is still far short of the requirements, the production of the last year shows a large increase. The coast counties—Humboldt, Marin, Sonoma, and San Mateo—are still in the

lead as producers, but the greatest recent growth is now in Santa Clara, Fresno, Stanislaus, San Joaquin, Kings, Merced, and other of the interior counties. Santa Clara County leads in the production of cheese, the best in the State being produced in the southern part of the county. As in all other States, the business of butter-making is being transferred to creameries. In 1897 California produced 10,866,646 pounds of butter by creamery process and 13,280,549 by dairy methods. In 1902 21,593,021 pounds of creamery butter were produced, while the dairy-product was only 9,935,741 pounds. The dairy-product of the year 1902 was valued at \$18,323,556, classified as follows: Value of 31,528,762 pounds of butter, \$7,541,792; value of 6,503,441 pounds of cheese, \$702,371; value of 146,690 cases of condensed milk and cream, \$564,758; value of milk and cream consumed, \$6,236,555; value of calves from dairy cows, \$1,568,040; value of hogs produced on dairies and creameries, \$1,710,040. A dairy-school is connected with the State University at Berkeley, where instruction is given in modern and scientific methods.

Manufactures.—The natural resources of California are numerous and extensive, but the high cost of fuel has always been a barrier to the development of manufactures. The rapid increase in the production of crude oil and the installation of electric-power plants have so cheapened the generation of power that in the past two years the increased output of manufactured commodities has been enormous. Two years ago the annual output for the State was \$302,874,761, as shown by the census. Statistics based on advices from various parts of the State show that the production of 1902 was more than \$400,000,000, San Francisco's share being \$150,000,000. The output of Los Angeles is about \$30,000,000 a year; Oakland, \$11,000,000; San José, \$8,000,000; Sacramento, \$11,000,000; and Stockton, \$6,000,000. There are a dozen smaller cities which produce about \$1,000,000 worth of commodities each year. San Francisco's factories embrace almost every line of mechanical endeavor, and the bringing of electric power, generated by the rushing streams of the Sierra Nevada mountains, enabled more small factories to begin operations in 1902 than ever in the city's history.

Electric Power.—With the single exception of New York, where electric power generated at Niagara Falls is transmitted to many towns, no State in the Union possesses such extensive electric plants and transmission facilities as California. The principal electric-power plants now in operation in the State are the Bay Counties Power Company, which has absorbed several smaller plants in the north central counties, producing in the aggregate 30,000 horse-power; the Standard Electric, producing 13,333 horse-power; the San Joaquin Electric, producing 2,500 horse-power; the Truckee River Company, producing 2,800 horse-power; the Power Development Company, of Bakersfield, producing 2,500 horse-power; the Mount Whitney Company, producing 1,500 horse-power; and the Butte County Electric Company, producing 1,500 horse-power.

The long-distance record at present for any continuous length of time was made in September, 1902, when the Standard Company's lines from Oakland to Stockton, via Mission San José, were harnessed to the bay counties' lines, making thus a continuous line covering 225 miles. In October, 1902, San José and Redwood City were also connected, and the total distance was made 240 miles. This is the world's record for distance. Electrical engineers who have carefully investigated the wa-

tershed of the Sierra Nevada mountains estimate that on the western slope alone at least 1,000,000 horse-power is available within reach of San Francisco Bay, and this estimate is based on a transmission distance of only 200 miles.

Seven amendments to the Constitution of the State were adopted by vote, Nov. 4, 1902. These amendments, in brief, are described as follow:

1. To permit the Legislature to levy a special tax for the support of high schools and technical schools.

2. To permit the Legislature to divide the State into game districts and make different laws for each district.

3. To exempt from taxation all bonds issued by the State of California or by any city and county, municipality, school district, reclamation or irrigation district.

4. To permit cities to adopt their charters by a majority of the votes cast thereon at any election, to reduce the number of votes necessary to amend a charter from three-fifths of the electors to a majority voting thereon at any election, and to permit voters, by a petition of 15 per cent. of their number, to propose amendments to city charters.

5. Making eight hours a day's work on public work, whether done under public employment or by contract.

6. To permit the use of voting-machines in localities designated by the Legislature and the local authorities.

7. To permit the Legislature to appropriate money for the construction of State highways.

COLORADO, a Western State, admitted to the Union, Aug. 1, 1876; area, 103,969 square miles. The population was 194,327 in 1880; 412,198 in 1890; and 539,700 in 1900. Capital, Denver.

Government.—The following were the State officers in 1902: Governor, James B. Orman, Democrat; Lieutenant-Governor, David C. Coates, Populist; Secretary of State, David A. Mills, Populist; Treasurer, J. N. Chipley, Silver Republican; Auditor, Charles W. Crouter, Democrat; Adjutant-General, G. F. Gardner, Populist; Attorney-General, Charles C. Post, Democrat; Superintendent of Public Instruction, Helen L. Grenfell, Democrat; Chief Justice of the Supreme Court, John Campbell, Republican; Associate Justices, Robert W. Steele and William H. Gabbert; Clerk, H. G. Clark.

The State officers are elected in even-numbered years, the term beginning in January of odd-numbered years. The Legislature holds biennial sessions, beginning in January of odd-numbered years, limited to ninety days.

Agriculture.—Colorado is rapidly developing its agriculture and stock resources. The total value of farm property in 1900, as returned to the Census Bureau, was \$161,000,000. The value of farm machinery was \$4,746,765, and of live stock \$49,954,311. For the year 1899, the last of the decade, the value of the products from ranch and range was \$33,000,000, which exceeded the products of the year 1889 by \$20,000,000, and was a gain of 151.6 per cent. in ten years. The percentage of income upon investment in Colorado farms for 1899 was 16 per cent.

Beet-Sugar Industry.—In the great agricultural contest held in the West in 1901 Colorado led in the beet-sugar industry, winning the first prize in the contest against California and Utah. The results make an impressive showing of Colorado's capacity as a sugar State. No place in the world has produced so large a yield of rich beets to the acre as was raised in Colorado. The largest yield of beets reported was 78,624 pounds,

net weight; of dressed beets grown on one acre, by D. V. Burrell, of Rocky Ford, a little more than 39 tons. The next largest was 74,396 pounds, net weight; of dressed beets from one acre, raised by J. W. Bellew, also at Rocky Ford. This crop yielded nearly 5 tons of refined granulated sugar from one acre. Mr. Bellew received the grand prize of \$200 in gold. The difference between the results obtained by ordinary methods in Colorado and the prize-winning methods is shown by the following comparison:

RESULTS.	Ordinary methods.	Prize-winning methods.
Average (pounds) beets per acre.....	26,000	54,800
Average per cent. of sugar.....	15.0	16.6
Gross sugar (pounds) an acre.....	3,900	8,698
Refined granulated sugar, an acre.....	2,925	6,594
Average purity coefficient.....	81.0	81.7
Average receipts for crop.....	\$28.50	\$125.88
Average cost of production.....	42.50	44.00
Average profit per acre.....	16.00	80.78

The average yield of prize winners in California in 1901 in the contest was 21 tons of beets per acre, in Utah 20 tons, in Nebraska 13 tons. The average yield of sugar-beets for the United States is less than 10 tons per acre.

The State has 4 large factories, which paid more than \$1,250,000 to the beet-growers in 1901.

Government Land.—In July, 1902, the Department of the Interior decided to withdraw from settlement temporarily 432 square miles of Colorado land, pending the decision of the Government officials upon two matters. In Morgan County 44 miles were withdrawn, while a decision is reached about the establishing of a reservoir there; 388 miles of land in Larimer County are withdrawn, while the department considers whether or not to include it within the Medicine Bow forest reserve. It is not the intention of the Government to take this land out of the settlement lands permanently, but to prevent any entries being made upon it until all matters of this kind shall have been settled, thus avoiding confusion and disappointments.

Irrigation.—On March 1, 1902, the United States Senate passed a bill for the irrigation of public lands in Colorado and other Western States, setting aside special funds in the Treasury, derived from the sale of public lands in the States mentioned, to be used in the examination and survey for, and the construction and maintenance of, irrigation works.

In the year important work was done in Colorado in conjunction with the Agricultural College and the State engineer, in order to ascertain by measurements how much water is already used for irrigation in the State, and the value of crops on irrigated lands along the Arkansas river and on the western slope about Grand Junction.

Reservoir building is rivaling canal building in its expenditures and is a great improvement over the latter in the profits received from the investment. In the Poudre valley there are 27 of these reservoirs, and in the Big Thompson 34. In one of these valleys the reservoirs hold enough water to cover all the land irrigated to a depth of 4 inches; in the other to a depth of 6 inches, and furnish two-thirds of the water-supply for the last half of the year. The Windsor reservoir has a surface area of 700 acres and a capacity of 13,744 acre-feet. Its first cost was \$50,000, and it is now valued at \$300,000. The Tom Wood reservoir furnishes water for 600 acres. It cost originally \$2,000, and it now furnishes \$2,000 worth of water to irrigators each year. Lake

Loveland is the largest reservoir in these two valleys. It cost \$125,000. Its ownership is divided into 300 shares, which are now worth \$1,000 each, making the value of the reservoir more than twice its original cost. The largest reservoir in Colorado is at Twin Lakes, on the Arkansas. It has a surface area of 2,600 acres and a capacity of 89,066 acre-feet. The value of this reservoir to the farmers along the Arkansas river is greatly increased because this has proved one of the most favored regions for growing sugar-beets. Another important reservoir on the Arkansas river is the Koen, near Great Bend, Kan. When completed it will have an area of more than 60 square miles and will hold when full 496,875 acre-feet of water, enough to cover 250,000 acres to a depth of 2 feet.

The tenth National Irrigation Congress opened at Colorado Springs Oct. 6, 1902. The matter of a proposed merger of the National Irrigation Congress with the Transmississippi Congress came up early in the session, and it was decided to postpone the vote on the consolidation for one year. Chief-Hydrographer Newell, of the United States Geological Survey, and Elwood Mead, of the Department of Agriculture, addressed the convention. Mr. Newell in a short speech rehearsed the history of the irrigation law and told how the carrying out of its provisions was vested entirely in the hands of the Secretary of the Interior. He then narrated how the provisions could be carried out to the effect that at the beginning one or two extensive schemes of reservoirs and canals would be selected for immediate building. The selection of these would depend largely on how much of the entire cost the settlers under these improvements would be able in time to refund to the treasury.

The bulletin of the Census Bureau for 1902 says that in the last decade Colorado has advanced to the front rank of irrigated States, surpassing California in extent of land under irrigation, but remaining second in number of irrigators and value of irrigated crops. The total number of acres of irrigated crops in Colorado is 1,300,840, and there are 310,431 acres of irrigated pasture land. The present value of irrigated land in the State is estimated at \$28,568,552, an average of \$40.77 per acre.

Development of the Old Ute Reservation.

—The Gurley Investment Company, of Denver, has entered into arrangements with Eastern capitalists for the immediate completing of the large irrigation plant in the southern part of Montrose County, and the northern section of San Miguel County, embracing an area of 120,000 acres. The new project insures the building of 60 miles additional of a canal of large dimensions, with laterals and side ditches 75 miles in extent; the carrying up of the two great reservoir systems, partially completed, which, when finished, will impound more than 22,000,000,000 cubic feet of water; the bridging of the Naturita creek cañon, a fine water plant for domestic purposes; the erection of a beet-sugar factory of 700 tons daily capacity; a large canning factory and other industrial enterprises. The waters of the Seven Beavers will be conducted over the entire area, the present canal system will be greatly enlarged to carry several times its present capacity, and the general work of construction will be carried out on a large scale.

The La Sal Mining Company has shipped more than 3,500 tons of their higher grade silver and copper ores to the Boston and Colorado Reduction Works, the tonnage having netted more than \$250,000 above railroad and smelter charges. Im-

mense bodies of lower grade ores lie in great dumps from these mines, but the wagon transportation of 75 miles to the railroad, with a fixed tariff of \$18 a ton, keeps the owners from placing it in the market.

Coal.—In the year 1902 there was unusual activity in the investigation of Colorado coal-fields, in the known as well as the unknown sections, but more especially in the region soon to be opened in northwestern Colorado by the Denver and Salt Lake Railway, now in process of construction. Experts have made extended surveys in many directions, and have reported the existence of coal in great quantities.

In the federal report for 1900 Colorado is credited with an output of 5,244,364 tons of coal in that year, the average price per ton at the mine being stated at \$1.12, or a total of \$5,858,036 when ready for shipment. At the average selling price, \$4 a ton, the 1900 output would mean \$21,000,000.

According to the census returns for 1900, Colorado contains approximately 18,100 square miles of anthracite, bituminous, and lignite-bituminous coal. A conservative estimate places the workable area in Colorado at about 50 per cent. of the total area occupied by the coal-bearing formations; and the available coal, on the 50-per cent. basis, is estimated by the Government experts at 33,897,800,000 tons. The magnitude of these figures will be appreciated when it is recalled that the total area of Pennsylvania is 45,928 square miles, and that the coal area in that State does not exceed 12,774 square miles, while the coal area of all Great Britain is but 9,000 square miles.

New Industry.—A new packing plant was opened in Denver in the autumn of 1902, which is expected to make that city a distributing point for range cattle and a market for fat stock as well as for feeders. This plant will not only give employment to hundreds of men, but it is likely to stimulate the stock business of the whole State and to provide a convenient market for the stock-raisers of Colorado, Wyoming, Utah, and New Mexico, and all the territory of which Denver is the natural center. The new plant has a capacity of dressing 800 cattle, 1,000 sheep, and 1,000 hogs daily.

A new device for the branding of cattle has been invented by A. A. Phipps, of Denver, Col., and adopted at the Denver Union Stock-Yards. The new branding-iron is a self-heating arrangement. The handle is a hollow tube wherein gasoline is held. On the end of the tube is an air-pump to force the gasoline down and assist in generating a gas to heat the brand on the other end. This brand is made of copper, and is heated from the inside. Tests for speed as compared with the old way have been made, and have resulted in branding at the rate of more than 100 head an hour.

New Mint.—On May 21, 1902, a bill was passed in Congress appropriating \$200,000 to \$300,000 to erect a new mint building in Denver.

Home for Helpless Poor.—Winfield Scott Stratton, the millionaire mine-owner and builder, who died Sept. 14, 1902, at his home in Colorado Springs, left provision in his will for a free home, in some town in El Paso County, Colorado, to be built for the maintenance of worthy poor persons living in Colorado who are without means of support, and who are unable by reason of old age, extreme youth, sickness, or infirmity to earn a livelihood. The building is to be called the Myron Stratton Home, in memory of the father of the deceased millionaire.

Political.—At the State election in November the Republican candidates were elected as follows: Governor, Joseph H. Peabody; Lieutenant-Governor, W. A. Haggatt; Secretary of State, James Cowie; Treasurer, Whitney Newton; Auditor, John A. Holmberg; Adjutant-General, G. F. Gardner; Attorney-General, N. C. Miller; Superintendent of Education, Helen L. Grenfel. The vote on Governor was: Republican, 87,512; Democrat, 80,217. The vote for the other tickets was small.

CONNECTICUT, a New England State, one of the original thirteen, ratified the Constitution Jan. 8, 1788; area, 4,900 square miles. The population, according to each decennial census, was 237,946 in 1790; 251,002 in 1800; 261,942 in 1810; 275,148 in 1820; 297,675 in 1830; 308,978 in 1840; 370,792 in 1850; 460,147 in 1860; 537,454 in 1870; 622,700 in 1880; 746,258 in 1890; and 908,355 in 1900. Capital, Hartford.

Government.—The following were the State officers in 1902: Governor, George P. McLean; Lieutenant-Governor, Edwin O. Keeler; Secretary of State, Charles G. R. Vinal; Treasurer, Henry H. Gallup; Comptroller, Abiram Chamberlain; Attorney-General, Charles Phelps; Adjutant-General, George M. Cole; Insurance Commissioner, Edwin L. Scofield, resigned, and succeeded June 1 by Theron Upson; Railroad Commissioners, Washington F. Wilcox, William O. Seymour, O. R. Fyler; Auditors, W. A. Riley, J. P. Bree; Highway Commissioner, James H. McDonald; Labor Commissioner, Harry E. Back; Fish and Game Commissioners, G. T. Matthewson, E. H. Geer, R. G. Pike; Shell-Fish Commissioners, G. C. Waldo, Christian Schwarz, Seth Sanford; Tax Commissioner, Andrew F. Gates; Forester, Walter Mulford; Fire Marshal, John A. Rusling; Commissioner of the School Fund, Carnot O. Spencer; President of the Board of Charities, Henry H. Bridgman; Commissioners of Banking, C. H. Noble, G. F. Kendall; Commissioner of Building Associations, M. C. Webster; Dairy Commissioner, John B. Noble; Cattle Commissioner, Heman O. Averill; Entomologist, W. E. Britton; Factory Inspector, G. L. McLean; Board of Mediation and Arbitration, F. T. Ives, G. A. Parsons, G. L. Smith, all of whom resigned in October; Chief Justice of the Supreme Court of Errors, David Torrance; Associate Justices, Samuel O. Prentice, Frederic B. Hall, Simeon E. Baldwin, William Hamersley. The last two mentioned are Democrats, the other judges and the elected State officers are Republicans. Clerk of the Court, George A. Conant.

The term of the State officers is two years, except that of the Attorney-General, which is four years. Elections are held in November of the even-numbered years. The Legislature meets biennially in the following January; the session is not limited as to length.

Finances.—Following is the statement of the receipts and expenditures of the State treasury for the year ending Sept. 30, 1902: Military commutation tax, \$55,278.10; mutual fire-insurance companies, \$12,060.01; mutual life-insurance companies, \$310,402.98; railroads, steam, \$984,918.37; railroads, street, \$238,922.50; non-resident stock, \$141,131.35; savings-banks, \$445,721.77; miscellaneous receipts, \$49,338.37; interest of school-fund transferred, \$110,524.21; avails of courts and forfeited bonds, \$52,115.10; national aid to soldiers' homes, \$50,960.38; express companies, \$11,446.98; telegraph and telephone companies, \$19,676.45; insurance commissioner, \$108,666.16; sundry taxes and receipts, \$68,021.96; inheritance tax, \$335,734.96; investment tax (on notes, bonds, etc.), \$147,641.88; interest on deposits in banks, etc.,

\$31,611.70; total yearly receipts, \$3,275,112.23; total yearly expenditures, \$3,113,687.57; funded debt, less civil list funds in the treasury, \$1,091,402.10. The expenditures include \$468,000 paid for State bonds redeemed and canceled.

The grand list of the State for October, 1901, is given as \$649,571,791, a decrease of \$44,628,371 from the amount of the preceding year. This decrease, which is only apparent, is owing to a change in the law regarding the assessment of stock of banks, national banking associations, trusts, insurance, investment, and bridge companies.

The expenses of the Constitutional Convention were \$24,362.81.

Among other items in the general expense account are the following: Salaries and expenses in executive offices, \$39,314; judicial expenses, \$401,324.99; board of prisoners in county jails, \$100,977; State Capitol and grounds, \$64,407; common schools, \$483,623; State normal schools, \$57,864; State Prison, \$55,876; Connecticut School for Boys, \$61,123; Connecticut Industrial School for Girls, \$44,676; State paupers, \$8,388; humane institutions, \$469,490; sick and wounded soldiers, \$94,600; National Guard, \$148,884; Highway Commission, \$129,428; interest on State bonds, \$65,360; State bonds purchased, \$468,000.

Education.—The number of illiterates in the State, according to the census table of 1900, was 42,973.

The number enrolled in the public schools in 1901 was 155,228, an increase of 3,963. The average number of days the schools were in session was 189.01; the number of schools, 1,532; value of school property, \$10,837,695.27; average monthly wages of male teachers, \$88.68; of female, \$44.40. The total revenue for public schools was \$2,969,396.54. The attendance at the New Britain Normal School was 251; at Willimantic, 110.

At the 166 parochial and private schools 31,190 pupils were registered, of whom 3,368 were over sixteen years of age; the average attendance was 23,475, and the number of teachers 867.

The enrolment at Yale in 1902 was 2,725, not including the summer school of forestry or the enrolment in the regular teachers' courses.

Charities and Corrections.—The report of the State Board of Charities for the fiscal year 1902 has the following items: The institutions visited are 90 in number, and include the State Prison, 11 county jails, the reform and industrial schools, 14 institutions for the insane, including private sanitarium, schools for the feeble-minded, the deaf and the blind, 18 hospitals, the 8 county temporary homes for children, and 30 private homes and asylums for children and old people. Besides these there are reports and statistics of the care of the town poor in all the 168 towns in the State, of which 90 maintain almshouses.

The expense to the State for the maintenance and supervision of these institutions was \$660,073; in 1901 it was \$681,034.

The amount expended by the State for building operations was \$193,100, compared with \$142,000 in 1901.

The average number of inmates at the State Hospital for the Insane was 2,192. Twelve private sanatoria for mental and nervous diseases are visited by the board, and a diversity of conditions is found in their equipment and general management. The number of insane persons under restraint in the State is estimated at 3,000, being distributed as follows: State hospital, 2,200; Hartford Retreat, 160; private asylums, 290; in town almshouses, 350.

The School for Imbeciles, at Lakeville, is car-

ing for the largest number of inmates in its history.

At the Industrial School for the Blind increased activity in the working departments is reported, the number of blind residents being 30. The kindergarten for blind children gives evidence of comfort and good order.

The records of the county temporary homes for dependent and neglected children show 348 children committed to their care during the year. The number of children placed in family homes was 306, and the number remaining in the county homes on Sept. 30 was 742.

The report of the directors of the prison gives the average daily census of convicts as 500, against 490 for the year preceding. The mortality rate, 9.94 to the 1,000, was smaller than the ratio for the State at large, and the lowest for a long period.

The earnings from convict labor, surpassing those of any previous year, aggregated \$53,878. During the past eight years the revenues from this source have steadily expanded. Supplementary revenues of \$3,191 from other sources increased the total income of the prison to \$57,069, which was more than 75 per cent. of the total cost of maintenance.

Militia.—The strength of the National Guard is 2,961 officers and men. The net gain in the year is 16. In the past year 2 companies of coast artillery have been organized. The military enrolment of the State, January, 1902, showed 112,761 men enrolled, 108,784 liable to military duty in case of war, 28,662 exempt for legal causes, and 84,099 liable to pay a military commutation tax of \$2 each a year. The disbursements of the several military departments of the State were \$138,114.81.

Railroads.—The gross earnings of the steam railroads in the year ending June 30, 1902, were \$45,125,648.70, compared with \$41,761,906.26 for the previous year. The passenger revenue was \$18,275,183.82 and the freight revenue \$22,088,944.40, the balance being the revenue from other sources. The gross earnings per mile run were \$1.99. The operating expenses of the year were \$32,627,503.35, being an increase of \$3,234,327.70 over that of the previous year, almost equaling the increase in earnings. The operating expenses per mile run were \$1.44.

Of the 421 injuries to passengers, employees, trespassers, and others, 125 were fatal, only 1 to a passenger. The amount of taxes paid was \$2,480,526.12, which is \$15,104.77 in excess of the amount paid for the previous year. The amount of taxes paid to the State was \$984,918.37. The entire amount paid for taxes is about 5½ per cent. of the gross earnings. The length of main line and branches in Connecticut is 1,013.35 miles, the length of the second track 248.55 miles, and the length of the third and fourth tracks 84.88 miles. There are also 489.90 miles of sidings.

When the street-railway companies began to report to the commissioners, seven years ago, there were 317 miles of street tracks; there are now 517. The capital stock was then \$8,604,240, compared with \$23,571,248 now. The earnings were then \$2,232,051.37; they were this year \$3,937,771.46. The amount of taxes paid then was \$76,522.34; the amount paid now is \$244,768.88.

Banks.—The deposits in the 90 savings-banks Oct. 1, 1902, amounted to \$203,522,225.98, an increase in a year of \$10,273,316.75. The whole number of depositors is 444,407, an increase of 18,819. The average amount due each depositor is \$457.96, an increase of \$3.89 for each depositor. The total assets amount to \$214,892,897.49, a gain

over last year of \$10,466,052.81. The State banks had total assets of \$10,862,446.98. The liabilities were \$10,862,446.98, the principal items being: Capital stock, \$2,240,000; surplus, \$439,850; undivided profits, \$547,250.18; and deposits, \$7,484,578.72.

The trust companies had assets of \$15,160,824.10.

The number of State banks reporting was 8. The number of trust companies was 16.

Life-Insurance.—The premiums of all life companies doing business in the State increased from \$309,303,947 in 1900 to \$337,911,766 in 1901. The increase of the Connecticut companies was \$1,180,546; of others, \$18,908,211; of industrial companies, \$8,519,061. Payments for death claims and to endowment policy-holders increased \$14,024,471.

The total of the admitted assets of all companies showed a gain from \$1,701,204,685 to \$1,858,241,350, and the Connecticut companies alone showed an increase from \$164,021,504 to \$171,674,653.

The insurance increased, for the Connecticut companies, from 277,719 to 294,283 policies, and in amount from \$544,067,128 to \$574,590,791.

Highways.—About 133 miles of roadway were improved in one year under the old appropriation of 1899-1900, amounting, with the sums contributed by the towns, to \$466,000. Since 1895 about 500 miles have been improved, with the aid of the State.

Industries and Products.—Of the dairy interests of the State Commissioner Noble says: "We have 26,948 farms in this State, valued at \$97,425,069. The value of our farm-products in 1899 was \$28,276,948. Of this amount \$6,178,000 worth was fed to live stock on the farm. All farm property, including land, buildings, implements, and live stock, was valued, June 1, 1900, at \$113,305,580. The oleomargarine made in the State amounted in 1901 to 10,786,302 pounds.

The pole-rot in 1901 caused a loss to the tobacco farmers of the State estimated at about \$1,000,000. Experiments with the shade-grown Sumatra tobacco have been successful.

The Labor Commissioner's report gives the following items in regard to manufacturing interests in 1901: Eighty-seven concerns erected 92 additions and new factories. This stands in comparison with 245 manufacturing buildings and additions erected the twelve months previous by 173 parties. These expansions have occurred in 36 of the 168 towns, against 59 the year previous. From Jan. 1, 1901, to Oct. 30, 1901, 93 strikes and 3 lockouts were chronicled. Only one-third were failures. The totals show that 11,250 employees were involved in the strikes and that the resulting loss of time was 250,168 working days, which meant a loss of wages to the amount of \$375,252. In 684 establishments 104,256 persons employed received an average of \$441.53 each in earnings, while the daily earnings per person were \$1.50 a day.

The Putnam House.—A deed conveying the historic Putnam cottage to the Israel Putnam House Association was passed at Greenwich Nov. 25, the consideration being \$7,125. The association received a charter from the last Legislature for the purpose of taking possession of this property, which consists of a house and 1 acre at the top of Putnam's Hill on the Boston Post Road. The house will be used as a museum by the local chapter of the Daughters of the American Revolution.

Derby.—A memorial library given to the city by Col. and Mrs. H. H. Wood in memory of their son, Harcourt Wood, was dedicated Dec. 27.

Farmington.—At Farmington, Oct. 28, a building erected as a memorial to Miss Sarah Porter, of the Farmington School, was opened and presented with appropriate exercises.

Simsbury.—A chapel in memory of Adelbert S. Hay was given by his father and mother to the Westminster School at Simsbury and dedicated Nov. 1.

Kensington.—A free library presented to Kensington by Henry Peck, of Waterbury, was dedicated Nov. 5.

Hartford.—A new hospital for consumptives, built on the crest of Newington mountain, an auxiliary to the Hartford Hospital, was opened in May.

Waterbury.—This city was devastated by two fires in February, with the loss of about 100 business buildings, involving from \$4,000,000 to \$5,000,000.

New Milford.—A fire at New Milford, May 5, entailed a loss of \$500,000 to \$700,000.

Constitutional Convention.—This convention, called by a vote of 47,317 for to 26,745 against it, met in Hartford, Jan. 1, with 168 delegates, 1 from each town. It was in session more than four months, adjourning May 15. A special election, held June 16, to decide whether the Constitution framed by the convention should be accepted, resulted in its rejection. The vote was very light; while the vote for President in 1900, the largest ever cast in the State, aggregated 180,118, and the registered vote of the State was 207,762, only 31,374 voters expressed their will in regard to the proposed Constitution—10,250 for its adoption and 21,124 against.

The interest in the work of the convention centered on its action in the matter of representation. The existing Constitution was framed in 1818, and has been modified by 30 or more amendments, which, however, did not materially change the system of town representation. The act providing for the convention provided that delegates should be chosen on the basis of town representation instead of that of population, thus giving the small towns the same control that they have in the Legislature. No radical change in the principle of apportionment was therefore to be expected.

Political.—The Republican State Convention was held in Hartford, Sept. 17. Gov. McLean had declined to be a candidate for another term, and Abiram Chamberlain, the Comptroller, was nominated for Governor. The other nominations were: For Lieutenant-Governor, Henry Roberts; Secretary of State, Charles G. R. Vinal; Treasurer, Henry H. Gallup; Comptroller, William E. Seeley; Attorney-General, William A. King; Congressman at Large, George L. Lilley.

The resolutions approved the policy of the President and favored his renomination; opposed a general revision of the tariff; favored the reelection of Senator Platt; favored also measures in the interests of labor and supervision of trusts; thanked Gov. McLean for his able administration; and said further:

"We pledge the Republican party at the coming session of the General Assembly to a fair and equitable readjustment of the senatorial districts in accordance with the constitutional amendment passed by 2 Republican Legislatures and last year ratified by the people at the polls.

"We declare our faith in the historic town system of Connecticut, but, recognizing the natural desire of the populous towns for increased representation in the house, we believe that changes, which shall preserve the fundamental features of the present system and at the same time satisfy all reasonable demands, should be effected, and

that they can be accomplished by the regular process of constitutional amendment."

The Democrats met in convention in New Haven Sept. 25 and nominated the following: For Governor, Melbert B. Cary; Lieutenant-Governor, E. Kent Hubbard, Jr.; Secretary, Arthur B. Calkins; Treasurer, Philip Hugo; Comptroller, Edward G. Kilduff; Attorney-General, Noble E. Pierce; Representative at Large, Homer S. Cummings. The platform as reported was in part as follows:

"We have no sympathy with the Republican policy of fostering and protecting monopolies by legislation and at the expense of the people. We believe that the prices of beef, coal, and other necessities of life have been raised through illegal combinations and by means of special privileges conceded to monopoly by the party in power, and we therefore demand the immediate repeal of all tariffs on trust-produced articles so as to prevent monopoly under the plea of protection. We also demand the most stringent enforcement of all legislative laws against trusts and the passage of such new laws as are required to supplant and give potency to existing statutes. We demand publicity as to the affairs of corporations engaged in interstate commerce and the enactment of laws requiring all such corporations, before doing business outside of the State of their origin, to show that they have no water in their stock and that they are not designed to monopolize any branch of business or the production of any articles of merchandise."

Reciprocity with Cuba was favored and an immediate reduction of the tariff on Cuban imports urged. Other planks protested against the granting of ship subsidies, favored the election of United States Senators by popular vote and demanded legislation to prevent "government by injunction."

The State Prohibition Convention opened Sept. 9 in New Britain. Nominations were made as follows: For Governor, Robert N. Stanley; Lieutenant-Governor, Myrton T. Smith; Secretary, Leon M. Barnes; Treasurer, Oliver G. Beard; Attorney-General, John J. Copp; Comptroller, William Ingalls; Congressman at Large, Frederick G. Platt.

By the result of the election the Republicans were continued in control of the State government.

The summary of the vote for Governor was: Chamberlain, Republican, 85,338; Cary, Democrat, 69,330; Stanley, Prohibition, 1,436; Wheeler, Socialist, 2,804; Oatley, Social Labor, 777.

The Socialist vote was considerably larger than in former elections.

On joint ballot the Republicans will have 205 in the Legislature and the Democrats 74.

Waterways.—Congress at the last session appropriated the following sums for improving the waters of the State: New London harbor, \$25,000; New Haven harbor breakwater, \$44,000; Milford harbor, \$15,000; certain harbors between the Housatonic and the New York line, \$44,000; Branford harbor, \$5,000; Pawcatuck river, \$9,000; Thames river, \$15,000; Housatonic river, \$10,000; Connecticut river, below Hartford, \$30,000.

DELAWARE, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 7, 1787; area, 2,120 square miles. The population, according to each decennial census, was 50,096 in 1790; 64,273 in 1800; 72,674 in 1810; 72,749 in 1820; 76,748 in 1830; 78,085 in 1840; 91,532 in 1850; 112,216 in 1860; 125,015 in 1870; 146,608 in 1880; 168,493 in 1890; and 184,735 in 1900. Capital, Dover.

Government.—The following were the State officers in 1902: Governor, John Hunn; Lieuten-

ant-Governor, Philip L. Cannon; Secretary of State, Caleb R. Layton; Treasurer, Martin B. Burris; Auditor, Purnal B. Norman; Attorney-General, Herbert H. Ward; Insurance Commissioner, George W. Marshall; Adjutant-General, I. P. Wickersham; Chemist, T. R. Wolf; President Board of Pilot Commissioners, Alfred D. Poole—all Republicans; Chancellor, John R. Nicholson, Democrat; Chief Justice, Charles B. Lore, Democrat; Associate Justices, Ignatius C. Grubb and William H. Boyce, Democrats, and W. C. Spruance and James Pennewill, Republicans; Clerk, William Virdin, Democrat.

The term of the State officers is four years. They are elected at the time of the presidential elections. The Legislature meets biennially in January of the odd-numbered years; the session is limited to sixty days.

Finances.—The Auditor's estimates of receipts and expenditures in 1901 were respectively \$482,558 and \$341,005. The assets of the State were given as \$1,118,509, and the liabilities as \$769,750.

Education.—By the census of 1900 it is shown that there are 17,531 illiterates in the State. The percentage of persons from ten to fourteen years of age able to read and write was 95.49 in 1900; it was 90.96 in 1890.

The State College, at Newark, which had 114 students in May, graduated a class of 15 in June. As a result of the suspension of 6 students in May for participation in hazing a freshman, about 100 students went out on strike.

The average monthly salaries paid to teachers in 1900 were, for men \$36.60, and for women \$34.08.

Waterways.—The following sums were appropriated by Congress for improvements to the waters of the State: For Delaware river—New Jersey, Pennsylvania, and Delaware—\$600,000; for Appoquinimink, Murderkill, and Mispillion rivers, \$15,000; for Smyrna river, \$15,000; for Wilmington harbor, \$50,000, not more than \$25,000 to be used until arrangements have been made to dispose of the sewage of the city so as to prevent the filling of the channel.

Products and Industries.—Statistics of manufactures of all kinds were given in the Annual Cyclopædia for 1901. Others for special branches of manufacture have been published since. The capital invested in cotton manufactures, exclusive of cotton small wares, in 1901 was \$484,858; the number of looms was 738; the value of products, \$372,089.

Delaware ranked ninth in the list of leather-producing States in 1890, and sixth in 1900. Delaware has 5 establishments for the making of butter and cheese, with a capital of \$19,085 in 1890, and 22 (21 creameries and 1 cheese factory), with a capital of \$85,155, in 1900. The value of the products was \$124,780 in 1890 and \$252,890 in 1900.

The statistics of the ship-building industries are: Establishments, 11 in 1890 and a similar number in 1900; capital, \$1,745,213 in 1890 and \$2,226,811 in 1900; salaried officials, clerks, etc., 43 in 1890 and 97 in 1900; salaries of officials, clerks, etc., \$98,174 in 1890 and \$124,010 in 1900; average number of wage-earners, 1,759 in 1890 and 2,031 in 1900; wages, \$800,977 in 1890 and \$992,449 in 1900; miscellaneous expenses, \$69,819 in 1890 and \$122,267 in 1900; cost of materials used, \$836,979 in 1890 and \$1,594,918 in 1900; value of products, including repairing, \$2,044,313 in 1890 and \$3,004,366 in 1900.

Delaware has 2 iron and steel ship-building establishments. In 1900 they built 13 iron and steel vessels, valued at \$1,908,399.

Following are the figures on the manufacture of flour: Establishments, 56, with a capital of \$1,127,592, in 1890, and 83, with a capital of \$1,017,508, in 1900.

The value of the products was \$1,675,040 in 1890 and \$1,165,800 in 1900.

The reports of the shipments of fruit over the railroads in the summer of 1902 showed estimates of 2,351,460 baskets of peaches and 362,345 baskets of pears.

Political.—The factional contest in the Republican party in the State continued through the year, notwithstanding attempts that were made to bring about a compromise. The regular Republicans proposed to the Union Republicans, the supporters of J. E. Addicks, that each faction should submit to the other the names of 10 men, any one of whom they would be willing to support, the other faction to make their choice, and thus secure 2 Republican Senators. The regulars submitted a list of 10 men of Kent and Sussex Counties, agreeing to support any one of them who should be the choice of the Union Republicans, provided the latter would submit a similar list of men of New Castle County, and agree to support that one of them who should be preferred by the regulars. This proposition was rejected by the Union Republican State Committee, which suggested a caucus of the Republican members of the General Assembly, to be participated in by members of both factions and the selection by each of a candidate of its choice, to be voted for by all the members in open session. It was desired to have a special session of the Legislature called. This proposal was rejected. The one faction was determined on "Addicks or nobody," the other on "nobody rather than Addicks." They held separate State conventions, each naming a candidate for member of Congress, but uniting on the candidates for Treasurer and Auditor, thus causing the election of the Democratic candidate for Congress. William M. Byrne, District Attorney for the State, resigned that office to become the candidate of the Union Republicans for Congress, and after his defeat he was reappointed to the federal office by the President.

The Regular Republican Convention met in Dover, Aug. 19, and selected the following ticket: For Representative in Congress, Dr. L. Heisler Ball; Treasurer, Martin B. Burris; Auditor, Purnal B. Norman. The greater part of the platform was in approval of the national policy of the party. On State affairs the following declarations were made: "We demand State legislation looking to a complete and comprehensive system of auditing the accounts of all State, county, and hundred officials, to the wise and systematic improvement of the public highways under county road engineers, and to identical methods of conducting elections in all the counties."

"We favor a free and untrammelled ballot, and we pledge ourselves to the repeal of the clause of the State Constitution requiring the payment by the voter of any money as a qualification for exercising the right of an elector."

"We favor legislation providing salaries for all State officers. We also favor better facilities and higher efficiency in our schools, and we desire that colored children should enjoy greater educational opportunities."

The ticket of the Union Republicans, whose convention was held in Dover, Sept. 2, was: For Representative in Congress, William Michael Byrne; Treasurer, Martin B. Burris; Auditor, Purnal B. Norman. On State affairs the platform expressed satisfaction with the present ad-

ministration; demanded legislation for good roads, and for protection of workmen operating complicated machinery; declared in favor of permanent registry of voters, and salaries for county officials; and said further: "That the interstate commerce law ought to be rigidly and impartially enforced, so that shippers of goods over a shorter haul should not be discriminated against in favor of a shipper of goods over a longer haul. We demand that the anthracite coal-mines of the country, which are at present closed, shall be opened and operated and coal supplied to the people at a fair and reasonable price therefor, and we believe that the owners of said mines, having devoted them to a public use, have granted to the public an interest in such use, and must, to the extent of the use, submit to be controlled by the public for the common good; that this public interest in said mines demands that they be immediately opened and operated; and that this interest is one that should be protected and conserved by the courts of the country."

The Democratic Convention, which was held in Dover, Sept. 17, nominated the following ticket: For Representative in Congress, Henry A. Houston; Treasurer, Joseph H. Hossinger; Auditor, J. Thomas Lowe. An unsuccessful effort was made to include in the resolutions one reaffirming the principles of the Kansas City platform. Following is a part of those adopted:

"We favor the earliest possible completion of the inland waterway, liberality to our schools, the creation of good roads, the encouragement of competing lines of transportation by legislation favorable to electric railways and steamer lines, and believing the time has come when the condition of our State treasury under the operation of laws enacted by Democrats while in control of our Legislature warrants it, we favor abolishing all State taxes on merchants, manufacturers, and similar licenses."

"We favor a permanent system of registration and abolishing the registration fee of \$1 as a prerequisite to voting."

The Prohibitionists, in convention in May, named George W. Todd for Representative in Congress, John H. H. Kelly for Treasurer, and H. B. Hitch for Auditor.

The Republican candidates for Treasurer and Auditor were elected. The vote for Treasurer was 20,705 for Burris to 16,652 for Hossinger. The Democratic candidate, Houston, was elected to Congress by 16,396 against 8,028 for Ball, Regular Republican, and 12,998 for Byrne, Union Republican. The Prohibition candidate had 569 votes, and the Social-Labor 216.

The Legislature will have 30 Republicans on joint ballot to 21 Democrats.

FLORIDA, a Southern State, admitted to the Union, March 3, 1845; area, 58,680 square miles. The population, according to each decennial census since admission, was 87,445 in 1850; 140,424 in 1860; 187,748 in 1870; 269,493 in 1880; 391,422 in 1890; and 528,542 in 1900. Capital, Tallahassee.

Government.—The following were the State officers during the year: Governor, William S. Jennings; Secretary of State, H. Clay Crawford; Treasurer, James B. Whitfield; Comptroller Alonzo C. Croom; Attorney-General, William B. Lamar; Superintendent of Public Instruction, William N. Sheats; Adjutant-General, J. Clifford R. Foster; Commissioner of Agriculture, Benjamin E. McLin; State Chemist, R. E. Rose; State Auditor, W. V. Knott; Railroad Commissioners, H. E. Day (resigned; R. Hudson Burr appointed), J. L. Morgan, J. M. Bryan; State Health Officer, Dr. Joseph Y. Porter; Board of Health, E. M. Hen-

dry, Horace E. Simpson, M. D., N. B. Broward; Chief Justice of the Supreme Court, R. F. Taylor; Associate Justices, Milton H. Mabry (succeeded by W. A. Hocker), Francis B. Carter; Supreme Court Commission, W. A. Hocker, J. G. Glen, E. C. Maxwell. The Supreme Court Commission was abolished in November by law, and three additional justices of the Supreme Court appointed, as follow: Evelyn C. Maxwell, Thomas M. Shackelford, Robert S. Cockerell. Supervisor of Convicts and Convict Camps, Robert F. Rogers.

The term of the State officers is four years. They are elected in November of the years of the presidential elections. The Legislature meets biennially on the first Tuesday after the first Monday of April of the odd-numbered years. The session is limited to sixty days.

Valuations.—The assessed valuation on property of all kinds for 1901 was \$97,551,192.17, an increase of \$864,238 over the assessed valuation for 1900. The following data are given by the Comptroller in his last report: Number of acres, 25,567,728; number under cultivation or improved, 1,117,697; valuation of improvements (exclusive of town or city lots), \$36,400,470; valuation of town and city lots with improvements thereon, \$23,660,288; aggregate value of real estate, \$60,060,758. Number of horses, asses, and mules, 57,174; number of cattle, 493,941; number of sheep and goats, 114,343; number of swine and dogs, 212,571. Full cash value of all animals, \$5,239,958; value of personal property other than animals, \$12,604,864. Aggregate value of real estate, \$60,060,758; aggregate value of personal property, \$17,844,822; aggregate value of railroads and rolling-stock, \$19,383,481.77; aggregate value of telegraph-lines, \$262,130.40. Taxes for State purposes, \$487,808.96; taxes for county purposes, \$1,265,879.66; school subdistrict taxes, \$70,744.16. State license tax (not included in State tax), \$201,043.77.

Banks.—On Jan. 1, 1902, 25 incorporated banks were doing business under the laws of Florida. At the close of business on December 31, 1901, their assets amounted to \$6,149,852.82, an increase over the assets of Jan. 1, 1901, reported as \$4,773,016.11, of \$1,376,836.75. Five of the State banks are savings-banks or have savings departments. On Jan. 1, 1902, these reported assets of \$2,632,928.31. The following figures indicate the condition of the banks of the State on Jan. 1, 1902: The resources were: Loans and discounts, \$3,590,298.93; overdrafts, \$93,014.51; stocks, securities, judgments, etc., \$382,116.80; due from private banks, \$4,527.44; due from incorporated banks, \$1,069,093.90; banking-house furniture, \$173,780.18; other real estate and mortgages, \$195,949.20; checks and other cash items, \$84,236.56; cash in bank, \$556,835.34; total, \$6,149,852.86. Liabilities: Capital stock paid in, \$832,200; surplus, \$194,095.11; undivided profits, \$143,350.59; dividends unpaid, \$815; individual deposits, \$4,492,741.28; demand certificates of deposit, \$38,091.75; notes and bills rediscounted and other liabilities, \$197,198.44; time certificates of deposit, \$197,724.40; certified checks, \$13,559.20; cashier's checks outstanding, \$2,055.29; due to incorporated banks, State or national, \$38,021.80; total, \$6,149,852.86.

Insurance.—The last statement of the Treasurer gives the number of insurance companies authorized to do business in Florida as 80. Of these 50 were fire-insurance companies, 12 life-insurance companies, and 18 miscellaneous (accident, marine, surety, boiler, plate-glass, etc.). The aggregate losses of the fire-insurance companies in 1901 were \$3,990,080.45, and the receipts for the same

period \$939,080.77, a loss for the year of \$3,050,999.68. Twelve life-insurance companies report losses in 1901 as \$385,383.66; receipts as \$1,040,363.48, a profit for the year of \$654,979.82. Eighteen miscellaneous companies report losses of \$37,948.47, receipts as \$78,138.80, a profit of \$40,190.33. The heavy loss of the fire-insurance companies was owing to the great conflagration at Jacksonville, May 3, 1901, when a large part of the city was destroyed, causing a total loss of from \$12,000,000 to \$15,000,000.

Railroads and Telegraphs.—The last report of the Florida Railroad Commission gives the following figures: Railroad mileage for the year ending Feb. 28, 1902, 3,466.45 miles, divided as follows: Main track, 2,774.35 miles; branches and spurs, 403.19 miles; yard tracks and sidings, 288.91 miles. The valuation of railroad property assessed for taxation was \$18,925,178.16; capital stock and bonds of roads, \$70,330,201.05. Gross earnings for the year ending June 30, 1901, \$9,179,133.85; operating expenses, \$6,915,296.32; income from operation, \$2,263,837.53. Gross earnings for the year ending June 30, 1902 (with the exception of 4 smaller roads that have not reported) are \$10,079,802.23; operating expenses, \$7,481,648.24; net earnings, \$2,598,153.99.

The assessed valuation for the telegraph-lines of the State was \$261,134.20; length of telegraph-lines assessed, 1,566.32 miles, ranging from 3 to 55 wires to each pole.

Education.—The report of the Superintendent of Public Instruction for the school year ending in 1902 gives the following data: Total enrollment of students, 112,384; number of white students, 69,541; negroes, 42,843; white males, 35,374; white females, 34,167; negro males, 20,000; negro females, 22,843; average daily attendance during the year of both races was 76,104; of whites, 46,284; of negroes, 29,881. The average number of days of schooling was: Both races, 49; whites, 55; negroes, 41. The number of teachers employed was 2,799, divided as follows: Whites, 2,129, of whom 623 were men and 1,506 women; negroes, 670, of whom 276 were men and 394 women. The highest monthly salary paid to white men was \$150, to white women \$90; to negro men \$100, and to negro women \$50. The average salary was \$35.57; to white men \$44.49, to white women \$35.44; to negro men \$29.89, to negro women \$28.78. The amount paid to all teachers was \$569,733.33. The value of all property used for school purposes was \$1,066,904; value of buildings owned by county boards, \$646,482; value of grounds owned by county boards, \$783,861.

The Florida School for the Deaf and Blind had enrolled for the school year ending June 30, 1902: Whites, 47; negroes, 26. White deaf boys, 15; white deaf girls, 22; total, 37. White blind boys, 6; white blind girls, 4; total, 10. Negro deaf boys, 13; negro deaf girls, 7; total, 20; negro blind boys, 4; negro blind girls, 2; total, 6.

The Legislature appropriated \$12,000 for its support during the year ending June 30, 1902. Additional appropriations of \$4,700 were made for building and other expenses. The expenditures for the year were \$15,493; the balance in the treasury, June 30, 1902, was \$1,700.

Corporations.—In the first six months of 1902 54 corporations were chartered by the State of Florida. The capital stock represented by these companies aggregates \$4,734,000.

Manufactures.—The United States Government statistics give the following figures: Value of manufactured products in 1890, \$18,222,890; in 1900, \$36,810,243. Number employed in man-

ufacturing in 1890, 13,199; in 1900, 34,230. Wages paid in manufacturing enterprises in 1890, \$5,918,614; in 1900, \$10,683,038. Value of farm-products in 1890, \$12,086,330; in 1900, \$18,309,104.

Phosphate.—According to statistics furnished by the United States Geographical Survey, Florida, since 1894, has been the chief State in the production of phosphate rock. In 1888 the number of tons mined was 2,813; in 1894 it was 589,174; in 1901 it was 751,996.

Claims and Appropriations.—Two events of importance to Florida were the passage by Congress of the Florida Indian War claim against the United States Government, which the Florida delegation to Congress had for forty-four years vainly tried to collect; and the appropriation of nearly \$3,000,000 by Congress for Florida rivers and harbors. The Indian War claim amounted to more than \$1,000,000. The improvements in the principal ports of the State insured by the appropriation made by Congress will greatly increase their commercial importance.

Political.—On July 15, 1902, Florida held its first primary election for the nomination of candidates to be voted for at the regular election in November. A second primary was held on Aug. 12 to determine the nomination where no one candidate received a majority vote. Candidates for the United States Senate, 2 Railroad Commissioners, Supreme Court Justice, State Comptroller, for the First and Second Congressional Districts, for the new Third Congressional District, Secretary of State, candidates to represent all of the counties in the State in the lower house in the Legislature of 1903, and to represent half of the counties in the Senate, as well as a large number of county officials, were voted for by the Democratic party. No negro and no white man other than a Democrat was allowed by law to take part in this Democratic primary election. The entire State ticket nominated by the primary was of course Democratic. All the candidates nominated by the primary were elected in November. One Republican member of the lower house was elected. The Republicans did not nominate any State ticket.

Two constitutional amendments were voted for in November: one providing for three additional Supreme Court justices, and one providing for an additional judicial circuit. Both amendments were carried.

Penitentiary.—On Jan. 1, 1902, Florida had 921 convicts in its care. In 1902 449 were received and 38, who had escaped, were recaptured. In the year 226 convicts were discharged on expiration of their sentences, 40 were pardoned, 78 escaped, 6 were committed to the insane asylum, and 2 were released by order of court. On Dec. 31, 1902, the convicts numbered 1,033. Of the convicts received in 1902, 12 were of foreign birth, and 437 were native-born. Their ages varied from eleven years to sixty years, the largest number being committed between the ages of nineteen and thirty-one. Of these convicts, 36 were white, 35 being males and 1 female; 413 were negroes, 399 being males and 14 females. Forty-nine were committed for murder, 55 for attempt at murder, 65 for grand larceny, and 55 for entering with intent to commit misdemeanor.

Finances.—The Treasurer's report of the general revenue fund for 1902 shows a balance in the treasury on Jan. 1, 1903, of \$228,074.19. The receipts in 1902 amounted to \$809,074.19, the principal sources of revenue being as follow: General license tax, \$202,742.24; insurance-company tax, \$57,546.11; State taxes, \$232,594.52. The debt of the State on Jan. 1, 1903, was \$1,032,500, divided as follows: Bonds in State school fund,

\$650,100; bonds in Agricultural College funds, \$135,800; bonds in seminary funds, \$98,600; bonds in the hands of outsiders, \$148,000. Total funds on hand Dec. 31, 1902, amounted to \$1,092,458.26. Of this \$692,946 was the Indian War claim fund, appropriated and paid by the Congress of the United States in 1902 after pending nearly fifty years. The bonded debt of the State consists of \$764,800 of 6-per-cent. bonds, and \$267,700 of 3-per-cent. manuscript bonds issued to the 3 educational funds of the State. In 1873 \$925,000 of 6-per-cent. State bonds were issued, to mature Jan. 1, 1903. The sinking-fund has taken up \$160,200 of these bonds. This leaves \$764,800 of them outstanding, and of these \$616,800 are held by the 3 educational funds of the State as investments, and \$148,000 are held by individuals and will be paid on presentation. The \$267,000 of 3-per-cent. manuscript bonds held by the educational funds of the State were issued in place of a like amount of 7-per-cent. bonds, which were held by these funds and which matured Jan. 1, 1901.

Charities.—The State Hospital for the Insane reports that in 1902 286 new patients were admitted, the whole number treated in the year being 926. In that year 108 were discharged as cured, 13 as improved, 4 as unimproved, 1 as not insane. One hundred and two died in the year.

GEORGIA, a Southern State, one of the original thirteen, ratified the Constitution Jan. 2, 1788; area, 59,475 square miles. The population, according to each decennial census, was 82,548 in 1790; 162,868 in 1800; 252,433 in 1810; 340,985 in 1820; 516,823 in 1830; 691,392 in 1840; 906,185 in 1850; 1,057,286 in 1860; 1,184,109 in 1870; 1,542,180 in 1880; 1,837,353 in 1890; and 2,216,331 in 1900. Capital, Atlanta.

Government.—The following were the State officers in 1902: Governor, Allen D. Candler; Secretary of State, Philip Cook; Treasurer, Robert E. Park; Comptroller-General, William A. Wright;

Attorney-General, Boykin Wright; Adjutant-General, J. W. Robertson; Commissioner of Education, G. R. Glenn; Commissioner of Agriculture, O. B. Stevens; Geologist, W. S. Yeates; Chemist, J. M. McCandless; Pension Commissioner, John W. Lindsey; Entomologist, W. M. Scott; Librarian, Carlton J. Wellborn; Railroad Commissioners, Spencer R. Atkinson, J. Pope Brown, and G.

Gunby Jordan; Prison Commissioners, J. S. Turner, C. A. Evans, and Thomas Eason; Chief Justice Supreme Court, Thomas J. Simmons; Associate Justices, Samuel Lumpkin, Hal Lewis, Andrew J. Cobb, William A. Little, and William H. Fish; Clerk, Z. D. Harrison; Court Reporters, George W. Stevens and John M. Graham—all of whom are Democrats.

Early in 1902 Joseph M. Terrell resigned as Attorney-General to enter the gubernatorial race. He was elected. Boykin Wright was appointed by Gov. Candler to fill the unexpired term of Attorney-General Terrell, and, at the autumn elec-

JOSEPH M. TERRELL,
GOVERNOR OF GEORGIA.

tion, John C. Hart was elected Attorney-General for the full term of two years. The Legislature in the autumn of 1902 abolished the office of Special Attorney for the Western and Atlantic Railway, which, up to that time, had been held by Edward T. Brown. Mr. Justice Henry T. Lewis resigned from the Supreme Court bench in 1902, and Judge John S. Candler, who was presiding officer of the Stone Mountain Judicial Circuit, was elected to succeed him. Prof. Merritt was elected to succeed W. R. Glenn as State School Commissioner.

The term of the State officers elected by the people is two years. They are elected the first Monday in October of even-numbered years. The Legislature is elected for two years, and, until 1903, met annually on the fourth Wednesday in October for a session of fifty days. In the autumn of 1902 a law was passed changing the time of sessions to the fourth Wednesday in June, and the new Legislature will have 3 sessions, the last 2 occurring in June, 1903, and in June, 1904.

Finances.—The balance in the treasury Oct. 1, 1901, was \$730,722.10, while the receipts for the fiscal year from Oct. 1, 1901, to Sept. 30, 1902, were \$3,886,163.21. The disbursements for the year amounted to \$4,105,705.10, leaving a balance in the treasury Oct. 1, 1902, of \$511,180.21. The Governor was authorized to borrow \$200,000 during the year to cover casual deficiencies, but it was only necessary to secure \$150,000. The money was borrowed in New York at 3 per cent.

The bonded debt of the State on Jan. 1, 1903, amounted to \$7,631,500. On that date \$100,000 of bonds was retired. The law requires that this amount of bonds shall be retired the first of every year, and \$100,000 is raised by special tax levy for this specific purpose. The yearly interest charge against the State is \$325,800. For years there has been in the treasury an amount, which, on Jan. 1, 1903, was \$122,073.65, arising from the sale of public property, which, according to a decision of the Supreme Court of the State, may now be used to pay interest on the bonded debt. The Legislature in December, 1902, took the necessary steps authorizing the Treasurer to use this fund in the manner named.

The State owns the Western and Atlantic Railroad, which runs from Atlanta to Chattanooga, Tenn., 137 miles, and is estimated to be worth about \$12,000,000. This property was leased for twenty-five years by the Nashville, Chattanooga and St. Louis Railroad. As rental for the road the State receives yearly \$420,012. The State also owns 186 shares of stock of the Georgia Railway and Banking Company, valued at \$20,700, and 440 shares of stock of the Southern and Atlantic Telegraph Company, indorsed by the Western Union Telegraph Company, valued at \$10,000.

Valuations.—The value of all the taxable property in Georgia for 1902 was \$467,310,646, which was an increase over 1901 of \$10,755,749. The increase in railroad property amounted to \$3,657,676. To the assessed value of corporate property returned to the Comptroller-General for taxes (\$56,893,466) should be added the estimated value of that portion of this class of property which by law is exempt from an ad valorem tax, which, at a conservative estimate of the Comptroller-General, is worth about \$22,000,000. The increase in assessments for 1902 was not as large as in the previous year.

In 1902 the negroes of Georgia returned \$15,188,069 of property for taxation. This was a decrease of \$441,742 compared with the same returns for the previous year. In 1901, however, there was a large increase in tax returns on property owned

by negroes in the State. In 1902 the value of manufactures amounted to \$23,494,371, which was an increase over 1901 of \$4,499,407. The value of merchandise was \$24,104,341, an increase of \$224,487 over 1901. There was also an increase of \$477,045 in iron works, while the increase in shipping and tonnage was \$203,909.

In the autumn of 1902 the Legislature passed a law making the franchises of all public utility corporations subject to taxation at the same rate as other property owned by those concerns.

Railroads.—In 1902 there were 6,035.32 miles of railroad in Georgia, against 5,816.80 miles in 1901. The gross earnings of the roads for the year ending June 30, 1902, were \$24,952,768.87, an increase of \$1,706,543.35 over 1901. The operating expenses for the same period were \$17,638,014.23, and the net earnings were \$7,314,754.64. In 1901 the net earnings of Georgia railroads were \$6,862,573.19.

Insurance.—From the reports of the insurance companies licensed to do business in Georgia, it appears that the fire companies received in premiums in 1902 \$3,002,651.29, and paid losses amounting to \$1,379,395.60; life companies received \$4,251,762.08, and paid losses amounting to \$1,639,984.28; assessment life companies received in premiums or assessments \$275,370.23, and paid on losses \$54,275.95; and miscellaneous companies received in premiums \$355,940.37, and paid losses amounting to \$183,792.66. These receipts represent gross premiums. The business, as a whole, showed an increase over the business of 1901 of about 12 per cent. The State's revenue from the business done in 1902 amounts to \$107,954.76, against \$95,648 in 1901.

Appropriations.—For 1902 the appropriations were as follow: Academy for the Blind, \$20,000; College for Negro Youth, at Savannah, \$8,000; contingent fund, \$10,075.36; contingent fund for Supreme Court, \$1,280.55; State Insane Asylum, \$290,000; expense fund for trustees of the asylum, \$2,152.73; geological fund, \$7,300; printing fund for Geological Department, \$982.59; Georgia Normal and Industrial School, \$22,900; horticultural fund, \$4,927; insurance on public buildings, \$25,903.91; North Georgia Agricultural and Mechanical College, \$10,009.75; prison fund, \$120,081.60; public printing fund, \$26,551.46; public building fund, \$17,847.80; publishing Supreme Court reports, \$5,475.32; reprinting Supreme Court reports, \$9,954.15; School for the Deaf, \$25,000; public school fund, \$1,574,172.02; Georgia School of Technology, \$40,000; Soldiers' Home fund, \$15,000; for new building for the home, \$19,500; special incidental appropriations, \$1,410.87; State Normal School, \$21,300; State University, \$8,000; expense fund for trustees of the university, \$478.64; disabled soldiers' pensions, \$189,035; indigent soldiers' pensions, \$362,340; indigent widows' pensions, \$78,180; widows' pensions, \$193,260. In addition to the regular appropriations, \$84,952.81 was expended on new buildings for the State Insane Asylum at Milledgeville; \$26,000 was set aside for buildings for the State University at Athens; the civil government cost \$129,898.61; \$500 was spent on an exhibit of Georgia minerals for the Charleston Exposition, and the legislative pay-rolls amounted to \$70,626.

Banks.—The year 1902 was prosperous with the banks in Georgia. In the twelve months 23 new State banks were chartered. The aggregate paid-in capital of State banks for the year was \$9,712,787. In the past few years many small banking concerns have been established in the more prosperous agricultural districts, and all are reported as in excellent condition. Data prepared and on

file in the Treasurer's office shows that the farmers are the heaviest class of depositors. The following is an itemized statement of the condition of the banking institutions of the State in 1902: The resources were: Loans, \$36,687,500.63; overdrafts, \$217,176.01; bonds and stocks, \$2,377,381; real estate, furniture, and fixtures, \$1,857,341.30; due from banks and bankers, \$4,945,350.71; cash on hand, \$2,823,757.86; other items, \$82,569.13; total, \$48,991,076.64. The liabilities were: Capital paid in, \$9,712,787; surplus and net profits, \$4,289,094.49; due banks and bankers, \$2,086,864.27; due unpaid dividends, \$14,991; due depositors, \$27,767,347.52; rediscounts, \$1,336,958; bills payable, \$3,726,402; other items, \$56,632.36; total, \$48,991,076.64.

Education.—The State School Commissioner in his annual report issued in September, 1902, gives the total enrolment in the public schools of the State at 502,887. The State fund for school purposes was \$1,538,955.17, an increase of \$33,828.17 over 1901. The total enrolment in the common schools was 439,645, and that of the local schools was 63,242. This was a total increase of 10,370 for the common schools and 8,132 for the local schools. The average attendance in the common schools was 265,388, and the expenditure per capita of enrolment in those schools was \$3.42, an increase of 36 cents over 1901. The cost per capita in the local school system was \$11.33, a decrease of 31 cents compared with 1901.

The amount of the school fund received by common schools was \$1,265,824.40, an increase of \$12,268.29 over 1901, while the amount of State funds received by local systems was \$239,117.46, an increase of \$40,152.73 over 1901. The amount raised by local taxation for school purposes was \$139,433.89. In 1902 334 new schoolhouses were built in the State at a cost of \$246,380. Nearly all these are in country districts, and most of the money for the schoolhouses was raised by the people of the community in which the houses were located.

The number of children in Georgia of school age according to the last census was 660,870. There are 7,700 schools in the common-school system, an increase of 658 in one year, and 368 in the local-school system, an increase of 60. The number of teachers in the common-school system is 9,180, and those of the local-school system number 1,339. The average yearly salary paid to teachers in the common-school system is \$129.35. Of every 100 children of school age in Georgia, 45 are black and 55 are white, and the blacks now get only about 20 per cent. of the school fund.

It is the general belief that the greatest stumbling-block in the way of the negro's education in the State is the lack of negro teachers capable of doing justice to other members of their race. More than \$5,000 is distributed to negro schools from the Slater educational fund, while the Peabody fund gives \$6,000 to white schools and \$1,500 to negro schools in the State. The amount invested by philanthropic people of the North in institutions for the higher education of the Georgia negro is estimated to be more than \$2,000,000. All the schools of like character for whites in the State are not worth anywhere near that sum.

Manufactures.—In 1902 there was a great increase of manufacturing industries in the State. New cotton-manufacturing plants were established, and the aggregate value of these was \$23,494,371, against \$18,994,964 in 1901. A cement plant was established at Hartwell, and more than \$1,000,000 was expended on it. At Columbus several cotton factories were built, to be operated by power supplied by Chattahoochee river, while

an electric lighting and power plant, upon which about \$1,800,000 was expended, was established on the same river near Atlanta.

The war in China seriously interfered with the cotton factories of the State, which, up to that period, had been sending large quantities of cotton goods to the markets of the East. Since the trade has been resumed much new machinery has been installed, so that the cotton factories of the State are now able to turn out a fine grade of goods. With the markets of the East closed, Georgia goods were forced into competition with the cotton goods of the New England States and suffered by the comparison.

In some of the principal cities of Georgia companies have been organized for the manufacture of almost all kinds of goods. Large furniture factories are in operation in different sections, and the goods are being sent to the Northern and Western markets.

Agriculture.—The farmers are giving more attention to the cultivation of grain and vegetables, while the orchard interests have grown to a remarkable degree. Many thousands of young peach-trees were set out in 1902. The farmers are planting less cotton, and cultivating those crops for which there is an ever-increasing demand. Peaches and other fruits that flourish in the Georgia climate are being grown in large quantities on the very fields that, a short while ago, were white with cotton. In Crawford County alone 10,000 young peach-trees were planted in the autumn of 1902, while in Jones County 15,000 were set out. Farmers in Habersham and Elbert Counties planted between 20,000 and 25,000 young peach-trees in each of those counties.

In certain sections of the State large vineyards are in operation, and the making of domestic wines is fast becoming one of the chief paying industries in Georgia. In 1902 the pecan industry took on new life, and thousands of small trees were planted. A silk-growers' association was formed in the autumn of 1902 in Atlanta, composed of members from a great many districts of the State. A silk-mill, with a capital of more than \$1,000,000, is in course of erection at Tallulah Falls.

Only within the past few years have the farmers of Georgia turned their attention to the raising of tobacco for the market, and in this they have proved very successful. Heretofore nearly all the large farms had tobacco-crops, but it was raised mainly for local consumption. Truck-farming received a new impetus in 1902, and considerable land, especially near the larger cities, was devoted to raising vegetables for the market.

Pensions.—In Georgia there are 4 classes of pensioners, as follow: Indigent Confederate soldiers, widows of Confederate soldiers, disabled and diseased Confederate soldiers, and indigent widows of Confederate soldiers. The number of pensions paid, of all classes, in 1902 was 13,975, an increase of 2,387 over 1901. The amount of money paid out to pensioners was \$822,695, an increase of \$127,310. The State began to pay pensions in 1889, and the first rolls contained the names of 2,994 who received, in the aggregate, \$158,790. The first pensions paid were to disabled and diseased soldiers, and it was not until 1893 that pensions were allowed to widows of soldiers. In 1896 indigent soldiers were added to the rolls, and in 1902 pensions were paid to indigent widows of soldiers. Since the pension system was established in Georgia the State has paid to pensioners \$6,753,820. In his annual report, dated Oct. 2, 1902, the Commissioner of Pensions said: "The pension system established by this State will soon be costing the people \$1,000,000 annually; and

it is impossible to administer that system properly and disburse this large sum of money without some way of ascertaining who those are that are entitled to it. The pension rolls, under existing laws, are being burdened with men who never saw the enemy, and, in many instances, deserters. Another great need is to provide by law for the appointment of official examiners of all applicants for pensions not local in character, and pay them for their work."

Prisons.—The prison system in force in the State is that of leasing out the convicts to mine-owners, lumber-mills, turpentine-farms, and, in fact, to any persons who offer bids for their hire. From the hire of the convicts in 1902 the State received \$202,329.25. On Oct. 1, 1902, the number of convicts in the Georgia Penitentiary was 2,351, consisting of 252 white men and 5 white women, 1,978 negro men and 80 negro women, an increase of 70 during the year. There were 1,074 convicts who could read and write, 184 who could read only, and 1,057 wholly illiterate. The number of deaths in the year was 67, against 75 in 1901, the rate being 2.3 per cent. A farm is operated by the Prison Commission near Milledgeville, where the women, children, and old, infirm, and diseased male convicts are sent. The cash income from the farm was \$19,331.93, while the actual money paid out for farm purposes was \$32,719.48. In February, 1902, the Prison Commission purchased 314 acres adjoining the farm.

There were 2,221 misdemeanor convicts undergoing punishment in county chain-gangs, of which 103 were white men, 5 white women, 2,010 negro men, and 103 negro women. Thirty-two of these chain-gangs, with an aggregate of 965 convicts, were worked for private individuals, says the Prison Commission, in most instances contrary to the law. Thirty-three chain-gangs, with an aggregate of 1,256 convicts, were worked on public works.

The State leases its convicts for a term of five years, receiving about \$100 a year per capita. The contractors, in many instances, have sublet these convicts, receiving as high as \$250 per capita.

Military.—The State troops consist of about 5,000 men, organized into 5 regiments of infantry of 12 companies each, 1 regiment of cavalry of 10 troops, 1 battalion of heavy artillery of 4 companies, 2 battalions of light artillery, 1 naval battalion of 2 companies, 1 battalion of negro troops composed of 7 companies of infantry, and 1 light battery of artillery. Each company's minimum strength is 40 men, and the average is about 60 men. The infantry are armed with the Springfield rifle, caliber 0.45; the cavalry with 0.45-caliber carbines; the negro troops with 0.50-caliber Springfield rifles. The naval militia is equipped with 0.45-caliber Lee rifles. The heavy artillery is armed and equipped as infantry. One light battery is armed with 2 3.2-inch-caliber breech-loading cannon. The other light batteries are armed with the muzzle-loading cannon. No camp has been held under State auspices since 1897, owing to lack of funds.

The new military law, which became effective in the latter part of December, 1902, provides that in case of call for troops by the State the Governor shall order out the militia regiments as they are now organized. In the event of war the State can furnish, organized, trained, and fairly equipped, not fewer than 4,000 men in one week. The term of enlistment is now one year; the change from the two-year term was made by the Legislature in December, 1902.

Confederate Soldiers' Home.—A comparatively short time after the home for helpless Confederate veterans was opened, it was burned. In

the latter part of 1902 it was rebuilt and furnished at a cost of \$29,612.70, of which amount \$19,500 was from the insurance on the old building. The rest was contributed by private citizens. The home stands in a beautifully wooded tract of 119 acres near Atlanta. It now has 63 inmates, and 8 will return when their leave expires. The cost of maintenance has been about \$10 a month per capita. In 1901 the Legislature appropriated \$15,000 for a maintenance fund for the home, and in 1902 the State authorities set aside a like amount.

Political.—The Democratic party held its State convention in Atlanta on July 2, 1902. The distinctive portion of the platform adopted was this: "We favor the enactment of such laws as will afford equal and exact justice to labor and capital alike, and the administration of those laws in such a spirit of fairness as will protect and foster the interests which are already in the State and encourage the establishment of new enterprises, thereby affording larger and more extended fields of industry for our citizens. We do not believe the cause of temperance should be made a political issue in this State. The best interests of the people, as well as the furtherance of that cause, demand the complete separation of this question from personal and party politics. We approve the wisdom and safety of the non-partizan policy which characterizes our present legislation upon this subject, and commend the same to the people of the State."

The following ticket was nominated: For Governor, Joseph M. Terrell; Attorney-General, John C. Hart; Comptroller-General, W. A. Wright; Secretary of State, Philip Cook; Commissioner of Agriculture, O. B. Stevens; Prison Commissioner, Thomas Eason; Treasurer, Robert E. Park; State School Commissioner, W. B. Merritt; Justices of Supreme Court, Samuel Lumpkin and A. J. Cobb.

The Populist party held its State convention in Atlanta on Aug. 12, 1902. No platform was announced. James K. Hines was nominated for Governor, but he declined the nomination. The other men on the ticket nominated were: For Secretary of State, B. F. Lee; Treasurer, J. H. Taylor; Comptroller-General, W. W. Wilson; Attorney-General, P. H. Larey; Commissioner of Agriculture, W. L. Peek; State School Commissioner, S. H. Zellner.

At the election in October the Democratic ticket was successful. The Populist vote was small.

HAWAII, a Territory of the United States, formerly an independent kingdom, proclaimed a republic in 1894, and on Aug. 12, 1898, annexed to the United States in accordance with the annexation treaty signed at Washington on June 16, 1897. On June 14, 1900, the islands were organized as a Territory in accordance with an act of Congress, approved April 30, 1900, which admitted to United States citizenship all persons who at the date of the proclamation of annexation were citizens of the Hawaiian Republic. Sanford B. Dole, President of the Hawaiian Republic, was appointed Governor of the Territory.

Area and Population.—The area and population of the islands according to the census of 1900 are given in the following table:

ISLANDS.	Square miles.	Population.
Oahu.....	600	58,504
Hawaii.....	4,210	46,848
Kauai.....	590	20,784
Nihoa.....	97	
Maua.....	760	25,416
Molokai.....	270	
Lanai.....	150	2,504
Total.....	6,677	154,001

The increase in population since 1896 was 44,981, or 41.2 per cent. The number of Hawaiians in 1900 was 29,834, a decrease of 1,185 in four years; part-Hawaiians, 7,835, a decrease of 650; whites, 28,533, an increase of 6,105; Japanese, 62,122, an increase of 39,793; Chinese, 25,742, an increase of 6,360. Honolulu, the capital and chief port, situated on the island of Oahu, had 39,305 inhabitants in 1900.

There were 189 schools in 1899, having 15,490 pupils, of whom 5,043 were Hawaiian, 2,721 part-Hawaiian, 3,822 Portuguese, 2,455 Asiatics, 601 American, 213 British, and 337 German, and having 544 teachers, of whom 282 were American, 130 Hawaiian and part-Hawaiian, and 66 British.

Commerce and Production.—From Jan. 1 to June 14, 1900, the value of the imports was \$11,988,000, compared with \$19,059,000 for the entire year 1899. The value of exports of Hawaiian products for the year 1900 was \$25,461,000, compared with \$22,628,000 for the previous year. Sugar was exported in 1900 of the value of \$23,771,344; coffee, \$176,749; hides and tallow, \$82,192; bananas and pineapples, \$48,039; rice, \$24,077. Of the imports for the part of the year 1900 reported \$1,159,554 came from Great Britain, \$453,727 from Australia and New Zealand, \$136,585 from Canada, and the rest almost exclusively from the United States. The chief imports were provisions, groceries, cereals, clothing, lumber, machinery, hardware, and cotton cloth. Of the exports of 1900 the United States received 99.6 per cent. In the year ending June 30, 1902, the exports were \$3,000,000 less in value than in the previous year, owing mainly to lower prices for sugar, though most of the exports fell off.

Navigation.—Steamship lines run between Honolulu and San Francisco and the ports of Australasia, Japan, and China. The number of vessels entered during 1900 was 665, of 867,905 tons, having increased from 386, of 447,997 tons, in 1896.

Railroads and Telegraphs.—There are railroads in Hawaii, Maui, and Oahu islands having a total length of 100 miles.

Telegraph-lines connect different points in Oahu, Hawaii, and Maui, and a cable is laid between the two former islands. The Marconi wireless telegraph was installed in the spring of 1901 for communication with the other islands. The total length of telegraph-lines is 250 miles. The telephone was introduced early into Honolulu and is used by all.

IDAHO, a Northwestern State, admitted to the Union July 3, 1890; area, 84,000 square miles; population in 1890, 84,385; in 1900, 161,772. Capital, Boise City.

Government.—The following were the State officers during the year: Governor, Frank W. Hunt; Lieutenant-Governor, Thomas F. Terrell; Secretary of State, Charles J. Bassett; Auditor, Egbert W. Jones; Treasurer, John J. Plumer; Attorney-General, Frank Martin; Adjutant-General, J. L. Weaver; Superintendent of Public Instruction, Permeal French; Mine Inspector, Martin H. Jacobs; State Engineer, D. W. Ross; Chief Justice of the Supreme Court, Ralph P. Quarles; Associate Justices, I. N. Sullivan and Charles O. Stockslager; Clerk, Solomon Hasbrouck.

The State officers are elected in even-numbered years, the term beginning in January of odd-numbered years. The Legislature holds biennial sessions, beginning in January of odd-numbered years. Sessions are not limited, but members draw pay for only sixty days.

Valuation.—The State Auditor completed in September the computations of the assessed valua-

tion of the State as finally fixed after the changes made by the State board. The grand total of the State was \$61,291,896.36, an increase of \$9,851,138.17 over the preceding year. The greatest increase was in Shoshone County—\$4,247,470.99. Cassia and Elmore both showed decrease. In 1900 Cassia was ahead of the other counties in percentage of increase, but it has been sliding back ever since. Fremont County, which has developed very rapidly, did not show the gain in its assessment, having made an increase of only \$92,566.45. The total of the assessments by counties reported to the State Board of Equalization was \$50,283,704.60. The assessment as equalized by the State board was \$51,648,827.76. The figures for railroads were \$9,392,184.85; for telephones, \$148,132.50; for telegraphs, \$102,751.30; total as equalized, \$61,291,896.36; assessment in 1901, \$51,440,758.19; increase, \$9,851,138.17.

The value of merchandise in the State, as equalized by the State board, was \$3,041,980.25. The valuation of patented lands was given by the State board as \$14,142,787.15; by the assessors as \$14,443,086.96. The acreage was 2,981,268. The number of acres taken up under the homestead act in the first five months of the year was 34,699, the fees paid being \$2,240. The entries for timber and stone land for the same period were about the same.

The Pacific and Northern Railroad was assessed at \$3,500 a mile, a reduction of \$250 a mile from last year's valuation. The Clearwater branch was assessed at \$4,000 a mile, the same as last year. The Western Union Company's telegraph-lines were valued and assessed at \$60 a mile for pole and first wire, and \$15 for each additional wire, the valuation last year being \$55 and \$12 a mile respectively. The telephone-lines of the Rocky Mountain Bell Company and of the Independent Company, except the branch lines already assessed, were valued and assessed at \$65 a mile for pole and first wire, and \$15 a mile for each additional wire. The valuation of the Salmon river branch of the Oregon Short Line was fixed at \$2,500 a mile. The Boise, Nampa and Owyhee and Idaho Northern roads were valued at \$2,250 a mile, a reduction in the case of the first line of \$500 a mile. The assessments on all main lines of railroad and branches not heretofore fixed were fixed at the same rate as in 1901, except the main lines of the Northern companies, which were assessed at \$8,500 a mile, an increase of \$250 a mile on the Great Northern for a distance of 80 miles, and of \$235 on the Northern Pacific for 84 miles.

The tax levy was fixed at 46 mills. The rate in 1901 was 52 mills. The amount to be raised to run the State government was \$245,000.

Education.—The semiannual apportionment of the public-school fund was made by the State Superintendent in July. The apportionment was made by counties, the total amount being \$36,576.97. This sum exceeded the apportionment for the same period in 1901 by \$4,996.

Penitentiary.—According to the report of the warden of the State Penitentiary, the number of convicts on Nov. 1 was 120. Four convicts were received and 3 were discharged in October, during which month the bills presented and allowed on the maintenance fund amounted to \$2,013.88, and on the improvement fund \$50.

Mining.—A great mining revival set in this year, largely owing to the discoveries in Thunder mountain, which is expected to make the State one of the chief gold-producing regions of the world. Idaho has a greater area of gold-bearing territory than any other State in the Union, one

section of which, as large as the State of Pennsylvania, was very little prospected until this year, during which there has been an immense influx of prospectors. The Thunder mountain district has been now extended until it covers half a dozen important mineral sections, in which fine ledges in great number have been opened. The same work is going on beyond the Thunder range. Important discoveries have been made in Custer and Lemhi Counties. In Elmore County gold was developed in sections not before prospected, especially at Skeleton creek. Blaine County was invaded by an army of prospectors, who met with great success about the head waters of Boise and Wood rivers. Valuable gold properties were also opened in Neal, Pearl, Boise, Owyhee, Washington, and Warren Counties, some of the discoveries in Boise County being phenomenal. Several towns have sprung up in the Thunder mountain district. A postmaster was appointed at Roosevelt in February, and another at the Dewey mine in March. In April the mail-route from Idaho City to Roosevelt and Thunder mountain was selected by the Post-Office Department. The great ore bodies in the Thunder mountain district are all porphyritic. One of them, the Dewey mine, has been explored to a depth of 150 feet. It is several hundred feet wide, and the grade of the ore is such that all the stamps the company can put up can be kept in operation. Nearly two miles eastward the same belt of ore is found on the Sunny-side group, and it has been traced more than two miles westward.

Wool.—The reports of the deputy inspectors to the State inspector in January show that there were 2,700,000 sheep in the State at the beginning of 1901, which number had increased to more than 3,000,000 in January, 1902. The wool clipped was 17,745,000 pounds; the amount received for it by the growers was \$1,865,000; the number of sheep and lambs shipped was 796,991; the amount received for them was \$1,595,000; the total amount received by Idaho sheep men for wool, sheep, and lambs was \$3,460,000. As in the markets of the East the wool and mutton realized \$1,315,000 more than was paid to the growers, the total value at the point of consumption was \$4,775,000.

A proclamation was issued by the Governor in March, establishing quarantine against sheep from neighboring States where scab was prevalent. The proclamation differed in some respects from those issued in former years, as it included one county in Nevada and one in Wyoming, and made provision under which all sheep approaching the line should be dipped and held twelve days before being permitted to cross, their admission then being optional with the Idaho deputy, who should determine whether there was danger of infection from any band.

Oil.—The Fossil Consolidated Land Company, Limited, was organized in March with a capital of \$1,000,000 to operate in the Fossil oil-fields. It controls 1,010 acres in the district, and intends to purchase other oil-well lands in the neighborhood, for which purpose it has set aside a portion of its stock. The Idaho-Wyoming Oil Company increased its capital stock from \$1,000,000 to \$2,000,000. Oil was found in 11 assessment holes in November, in some at a depth of 25 feet. In the Spring valley district several wells had become daily producers; one of them was producing 45 barrels a day of a very high grade. This well is 300 feet deeper than any in the Fossil district.

Irrigation.—The Irrigation Department of the Census Bureau published the compilation for Idaho on June 15. For irrigation purposes the de-

partment has divided the State into 2 agricultural regions, the arid and the humid—the dividing lines beginning at the southern and eastern boundaries of Idaho County. The humid division contains vast areas of forest, and the rainfall is usually sufficient for the raising of general farm crops and fruits. The great Camas prairie of Idaho County, the high plateaus of Nez Percé, and the rolling hills of Latah produce more than half the cereals raised in the State, and yield better crops than are grown in the southern irrigated counties. There were 6,603 farms in the State in 1890, covering 1,362,256 acres. Of other farms, 1,820 were in the humid section and 4,783 in the arid section. In 1900 there were 17,471 farms in the State—6,737 in the humid region, and 10,734 in the arid section. Of the 53,945,600 acres of land surface, 5 per cent. were included in farms, and only 2.6 per cent. were improved. Of the improved land 1,385,596 acres were outside the Indian reservations. The irrigated land constitutes 42.6 per cent. of the improved land. The investment in irrigation canals increased in ten years from \$1,029,000 to \$4,168,352. There are 36 canals, involving a constructive expense of \$947,975, which distributed no water in 1899. Three canals, costing \$440,000, were failures on account of mismanagement. But the acreage under these ditches, which will be brought soon under cultivation, will undoubtedly be larger than the area now irrigated by all the ditches constructed since 1899. In 1890 the acres irrigated, outside the reservations, numbered 217,005; in 1900, 602,568. At a low estimate, the farm wealth of the State has been increased by \$12,000,000 by irrigation. The number of acres of irrigated land for each mile of ditch is 121, while the number of acres under ditch for each mile is 270. The average cost of constructing the ditches was about \$1,028 a mile, \$3.79 an acre of land under ditch, and \$8.46 an acre of land actually irrigated in 1899.

The State Land Board passed in April on the application of the Washington Irrigation Company, which asked for the segregation of 100,000 acres of land under the Carey act. The land lies along Snake river, between Minnidoka and the river. The company proposes to expend \$730,000 in reclaiming the tract, which it asked the land board to withdraw from settlement. The board granted the application.

New Companies.—The report of the Secretary of State for the quarter ending Sept. 30 shows that the total amount received as fees for the quarter was \$1,782.25, compared with the receipts for the same quarter in 1900, \$704.70. The business of the office had more than doubled as a result of the growth and general business activity all over the State. The report shows that 33 notarial commissions were issued in the quarter, quadrupling the filings of 1900. The receipts for the present year will be more than \$6,000. The increase in corporations is apparently the beginning of a vast development of the mineral wealth of the State. Among the more important incorporations during the year were the Vindicator Mining Company, of Mullan, with a capital of \$1,000,000; the Golden Eagle Mining Company, of Meadows, with a capital of \$3,000,000; the Flagstaff Mining Company, of Wallace, with a capital of \$1,000,000; the Idaho Mining and Development Company, with a capital of \$1,000,000; the Blackfoot Gold-Mining and Development Company, of Boise, capital \$1,500,000; the Greyhound Mining and Milling Company, of Boise, capital \$1,500,000; the Stewart Mining Company, of Kellogg, capital \$1,000,000; the Bullion Mining Company, limited, of Wallace, capital \$1,000,000; the Maryland

Gold-Mining and Development Company, at Hailley, capital \$2,500,000; the Alice Mining Company, of Wallace, capital \$1,000,000; the South Sinker Gold-Mining Company, of Silver City, capital \$1,000,000; the Basin Mining Company, of Wallace, capital, \$1,500,000; the Ajax Mining Company, capital \$1,600,000; the Idaho-Iowa Lateral and Reservoir Company for reclaiming the desert lands of the Boise and Snake river valleys of Idaho, capital \$100,000; the Idaho Prospectors' Finance Company, of Boise, capital \$2,000,000; the Wake-Up-Jim Gold-Mining Company, capital \$1,200,000; the Idaho Exploration and Development Company, of Weiser, capital \$1,000,000.

Geological Maps.—The United States Geological Survey issued in September reprints of the Bear valley and Idaho basin map sheets, which cover portions of the mountainous country of western Idaho. Portions of Idaho, Custer, Boise, Elmore, and Alturas Counties are included in the maps, as are also the Idaho City region and the rugged crest of the Sawtooth range for much of its length. By the use of contour lines the mountainous topography of the district is admirably represented. The maps are drawn on a scale of about half an inch to the mile, and are uniform with those issued of other parts of the State.

Intermountain Fair.—The Idaho Intermountain Fair was opened at Boise, Oct. 22, and was thronged with visitors. The mining exhibit was particularly fine, embracing ores and precious stones from every part of the globe. The agricultural and horticultural exhibits, which occupied the whole right-hand side of the building, contained chiefly the products of the State in these lines, and displayed many splendid specimens of Idaho fruits and vegetables. The quality of the entries in the dairy department was also exceptionally fine. The stock exhibit attracted much attention, the exhibit of sheep excelling anything of a similar sort that had previously been shown in the State. The main building has four wings, each 50 feet wide and 150 feet long. The grand stand is an immense structure, capable of holding 2,000 persons. There are several other fine structures on the grounds, which are almost encircled by box-stalls and pens for cattle.

Land Office.—The report of the Land Office for January showed that it turned into the State Treasury \$219,620.82 in 1901. Of this, \$137,189 was proceeds of sale of timber lands, the remainder representing sale of school and other State lands. The number of acres of school, normal-school, university, and school of science lands sold was 15,997. In addition to the amount turned into the general fund of the State, there was turned into the common-school fund, interest earned upon the general school fund, the sum of \$45,609.77.

Legal Decisions.—In March the United States Circuit Court handed down a decision that is considered of great interest to the mining interests of the State. In *The Empire State-Idaho Mining and Development Company vs. The Bunker Hill and Sullivan Mining and Concentrating Company*, Idaho, judgment was reversed and cause remanded with directions to enter judgment for the defendant. This was what is called the King case. It turned upon the extralateral rights of two claims located side by side upon the same ledge, each covering a portion of a very wide outcrop, the end lines of the claims not being parallel. Judge Beatty held that the lines of the older location must govern. The older location was the Viola, on the great Bunker Hill vein. The adjoining claim was the San Carlos. The point in controversy was the ownership of ore bodies far below

the surface. As it seems difficult to cleave a vein in two, permitting one owner to follow the hanging-wall portion between lines in one direction and giving the foot-wall owner the right to follow it between lines laid in a greatly different course, there was great interest in the decision of this case.

In December the Supreme Court reversed the decision of the lower court in the case of *Kindall vs. The Lincoln Hardware and Implement Company*. An interesting question of the mortgaging of community property by the husband and the status of such mortgage after the death of the wife was involved. Kindall and two others purchased certain agricultural implements from the Hardware and Implement Company and gave chattel mortgages to secure their notes given in payment. One of these mortgages covered the crops then growing and to be grown on a certain piece of land that was the community property of Kindall and his wife, this mortgage being executed without his wife joining in it. The Hardware and Implement Company foreclosed the mortgage. Kindall and his wife then began this action to enjoin the company from foreclosing the mortgage. While this action was pending Mrs. Kindall died. The court then permitted Kindall to prosecute the injunction proceedings alone. The defense held that, though the mortgage on the community property might not have been good while Mrs. Kindall lived, it was valid against him after her death, a view held by the lower court and reversed by the Supreme Court.

Fort Hall Indian Reservation.—The Fort Hall Indian Reservation was opened to settlers June 17. It consists of 418,000 acres, about 100,000 being fine farming land, and the rest known to contain abundance of copper and other minerals. Nearly 3,000 prospective settlers and miners rushed into the reservation when the sun reached the meridian, raced madly for favored locations, and then ran back to Blackfoot to register their claims at the Land Office. Although the lands within the 5-mile limit of Pocatello had not been thrown open to settlement, they were open to location, under the mineral-land laws, and the hills east of the city swarmed with prospectors. About 1,000 claims were staked on the first day within 6 miles of Pocatello. The Fort Hall treaty provided that the Indians should be allotted such lands as they occupied at its ratification. The Indian agent allotted 320 acres to heads of families, and 80 acres to each child, some Indian families receiving in this way from 600 to 800 acres of their own selection of the lands ceded. This excited much dissatisfaction among the white settlers, who asserted that allotments had been made to half-breeds and to Indians not belonging to the reservation.

Political.—The Republican State Convention met in Boise, Aug. 20, and nominated this ticket: For Governor, John T. Morrison; Lieutenant-Governor, James N. Stevens; Secretary of State, Will H. Gibson; State Auditor, Theodore Turner; State Treasurer, H. N. Coffin; Attorney-General, John A. Bagley; Superintendent of Public Instruction, Miss Mae L. Scott; Inspector of Mines, Robert Bell; Justice Supreme Court, J. F. Ailshie; Congress, Burton L. French.

The platform approved the foreign policy of the administration; denounced "the unpatriotic attitude of the Democratic party" toward the army and navy; declared that "the wisdom of the protective policy of the Republican party is made manifest by its results," but favored a revision of the tariff "which will place upon the free list every article and product controlled by any mon-

opoly, and such other articles and products as are beyond the need of protection"; declared that trusts are a great and growing evil, and favored an amendment to the Constitution enabling Congress "to effectually regulate and suppress" all injurious combinations and aggregations of capital; condemned the present administration of the State for the manner of its disposal of the timber lands, its wasteful extravagance, appointment of unauthorized commissions, expenditure of public funds for unauthorized purposes, the creation of unnecessary offices, and the introduction of partisan politics into the management of educational establishments; and it inveighed against the apportionment for legislative representation made by the last Democratic Legislature.

The State Democratic Convention met in Pocatello, Sept. 4, and nominated the following candidates: For Governor, Frank W. Hunt; Lieutenant-Governor, W. E. Adams; Supreme Judge, F. E. Fogg; Secretary of State, C. Y. Bassett; State Auditor, J. C. Callinan; State Treasurer, E. P. Coltman; Attorney-General, F. D. Culver; Superintendent of Public Instruction, Miss Permeal French; Mine Inspector, J. H. Nordquist; Congress, Joseph H. Hutchinson. The platform reaffirmed the principles of the national platform at Kansas City; opposed imperialism, colonialism, trusts and trust-fostering tariffs, financial monopoly and other legalized monopolies and privileges; demanded a revision of the tariff laws "which will place on the free list every article and product controlled by a trust"; opposed the Fowler currency banking bill and government by injunction; favored Government ownership of railway, telegraph, and telephone lines; demanded an amendment to the Constitution providing for the election of United States Senators by the people; commended the wise and economical administration of the present State Government, shown by the fact that the State has been brought to a condition according to which it is managed on a cash basis; invited voters to compare the conduct of the business of the State Land Board under Republican and Democratic administration; favored an amendment to the State Constitution providing for initiative and referendum; favored an eight-hour day for all underground employees, an employers' liability law, and a law giving married women equal property rights with men.

The Socialist, Populist, and Prohibition parties also nominated tickets. The candidates on the Republican ticket were chosen at the November election. The Republican candidate for Governor had 31,936 votes; the Democratic, 26,019. The election returns gave the Republicans majorities in both branches of the Legislature.

ILLINOIS, a Western State, admitted to the Union Dec. 3, 1818; area, 56,650 square miles. The population, according to each decennial census, was 55,162 in 1820; 157,445 in 1830; 476,183 in 1840; 851,470 in 1850; 1,711,951 in 1860; 2,539,891 in 1870; 3,077,871 in 1880; 3,826,351 in 1890; and 4,821,550 in 1900. Capital, Springfield.

Government.—The following were the State officers during the year: Governor, Richard Yates; Lieutenant-Governor, William A. Northcott; Secretary of State, James A. Rose; Auditor, James S. McCullough; Treasurer, Fred A. Busse; Attorney-General, H. J. Hamlin; Adjutant-General, James B. Smith; Superintendent of Insurance, Henry Yates; Printer Expert, Charles P. Burton—all Republicans. Justices of the Supreme Court, Carroll C. Boggs, James B. Ricks, Jacob C. Wilkins, Joseph N. Carter, John P. Hand, James H. Cartwright, Benjamin D. Magruder.

The presidents of the State boards were as follow: Agriculture, Martin Conrad; Railroad and Warehouse Commission, James S. Neville; Pharmacy, William C. Simpson; Labor, George L. Pittenger; Mining, Richard Newsam; Equalization, J. S. McCullough; Charities, William Jayne; Education, J. Stanley Browne.

The Governor, Lieutenant-Governor, Secretary of State, Auditor of Public Accounts, and Attorney-General are elected in November of presidential years and hold office four years. The State Treasurer is elected biennially, in November of even-numbered years, and may not serve two terms in succession. The State Superintendent of Public Instruction is elected for four years in November of even-numbered years other than "presidential years." The Legislature meets biennially in January of odd-numbered years. The length of the session is unlimited.

Valuations.—The total assessment of the counties for 1902 was \$1,030,292,435. This was the valuation as given by the Board of Equalization; that given by the local assessors was only \$921,817,117. The equalized value of capital stock of corporations other than railroad stock was \$22,705,627. The equalized value of all railroad property, including rolling-stock, improvements, and right of way, was \$88,270,104.

Finances.—The financial statement of the Illinois treasury is issued in biennial periods. The recent statement includes the period from Oct. 1, 1900, to Sept. 30, 1902. The total receipts for the revenue fund were \$12,151,242, and the disbursements were \$11,310,688, leaving a balance of \$840,554. The State school receipts were \$2,083,619, and the disbursements \$2,066,456. The balance of all funds in the treasury on Oct. 30, 1902, was as follows: Local bond funds, \$296,216; unknown and minor funds, \$8,879; State game protection, \$4,902; total, \$309,897. The aggregate taxes, local and State, was \$53,012,935.

Banks.—The following statement of earnings and dividends is tabulated from reports of 158 State banks of Illinois that were doing business for the twelve months ending June 30, 1902: Capital, July 29, 1901, \$19,025,000; surplus, \$10,251,725; undivided profits, \$4,329,539; total investments, consisting of loans, bonds, stocks, and realty, \$189,062,028; investments, consisting of part of reserve due from banks, \$36,043,800; gross earnings for the twelve months, \$10,981,978; net earnings, \$3,864,862. Of these banks, 127 report dividends having been paid in the twelve months amounting to \$2,037,044, on capital, surplus, and undivided profits of \$30,568,636, this being a percentage of 6.6. The percentage of dividend per capital was 12.

In October, 1902, the Auditor's statement showed the total resources and liabilities of 200 banks as \$314,793,437. This report includes the following items: Resources—loans and discounts, \$187,144,782; United States bonds, including premiums, \$283,378; other bonds, including premiums, \$47,344,392; other real estate, \$1,183,926; due from State banks and bankers, \$13,807,241; gold coin, \$7,268,950; gold certificates, \$9,197,900; silver coin, \$403,498; silver certificates, \$4,326,484; national bank currency, \$299,656; legal tender and treasury notes, \$3,609,390. Liabilities, capital stock paid in, \$30,655,000; surplus fund, \$13,289,018; undivided profits, \$5,353,418; bills payable, \$360,115.

Insurance.—The statement of the Insurance Superintendent for 1901, issued in February, 1902, contains the following figures: The companies doing a general fire, marine, and inland navigation insurance business in this State at this date

may be classified as follows: Illinois joint-stock fire and marine companies, 6; Illinois mutual fire-insurance companies, 9; joint-stock fire and marine insurance companies of other States, 112; foreign fire and marine insurance companies, 42; mutual fire-insurance companies of other States, 12; total, 181. This shows a net loss of 17 companies as compared with the number authorized to transact business in this State at the date of the last report.

The aggregate capital stock and deposit capital of the stock and foreign companies doing business in the State at this date is \$3,786,500 less than the aggregate capital at the date of the last report. The total assets of the companies are \$314,615,880, an increase over the previous year of \$5,417,339. The total surplus was \$94,870,553, a decrease of \$3,151,660. The total amount of capital of these companies is given as \$64,230,060, a decrease from the year previous of \$3,786,500. The amount of risks written was \$1,472,902,923, a decrease of \$15,212,163. The net excess of receipts over disbursements for 1901 was \$15,633,974. The risks in force at the close of the year were \$23,670,282,818, an increase of \$395,467,156.

The business done by the 49 legal reserve life-insurance companies shows an increase of 8,339 policies, and \$7,178,998 more insurance, exclusive of industrial business, over the previous year. The net increase of insurance in force on new insurance written was 49 per cent., as against 44 per cent. in 1900. The total premiums received, apart from industrial business, amounted to \$18,441,158, and the total losses paid to \$6,150,789. The entire industrial business written shows an increase of 6,869 policies and \$435,885 of insurance. The total business of all life-insurance companies shows an increase in income of \$48,200,310, in expenditures of \$27,558,083, in assets of \$155,409,412, in liabilities of \$110,869,786, and an increase in surplus of \$44,539,626.

The 44 fidelity, surety, and casualty companies show the following aggregate results: Capital, \$20,334,400; admitted assets, \$128,335,984; liabilities, \$106,463,423; net surplus, \$21,872,561; risks in force, \$5,440,889,761.

There were at the date of this report 22 assessment life and 6 assessment accident companies doing business in the State, with total admitted assets as follow: Life, \$17,304,221; accident, \$263,231.

The total admitted assets of 105 fraternal beneficiaries in the State are \$21,706,875.

Railroads.—The report of the Railroad and Warehouse Commission for the year ending June 30, 1901, shows the total mileage of steam-railroads in the State to be 17,351 miles, an increase over 1900 of 571 miles. The mileage of surface and elevated electric lines is 218 miles, which is an increase over last year of 69 miles. The total capital of all steam-railroads in Illinois is \$3,140,822,020, an increase of \$72,122,991. The increase was not so great as during the previous year, but is considered remarkable. The capital stock of elevated and surface lines was \$88,595,450, an increase during the year of \$5,528,150. Proportionately this is a far greater increase than is shown by the steam-railroads. The total amount of taxes paid by the steam-railways was 4,725,332, an increase of \$345,721. The taxes paid by surface and elevated electric roads was \$153,169, an increase of \$61,929.

For the first time the State Department has been able to secure definite information concerning wages paid by the railroads. The highest average salary is paid to general officers, and amounts to \$16 a day, and the lowest average

salary is paid to trackmen, and is \$1.28. The highest average salary paid by surface and elevated electric roads is \$8.40, and the lowest is \$1.43 a day.

The number of passengers carried on the steam-roads was 40,638,781, and the passenger earnings per mile were \$2,402, an increase per mile of \$215. The number of tons of freight handled was 116,117,821. The number of persons employed on steam-railroads in the State of Illinois was 88,230, to whom was paid in salaries \$51,999,868, an increase of \$639,178 over the year 1900.

Agricultural.—The State Board of Agriculture issued a report, Aug. 1, 1902, showing the condition of the crops and the number of bushels of those already harvested. The area of wheat harvested this season, 1,774,329 acres, is 85,000 acres less than that of 1901; nevertheless the 1902 wheat-crop exceeds that of 1901 by 5,475,985 bushels. The total crop, 36,588,783 bushels, is the largest harvested in the State since 1894, when the area was very much larger. The average yield per acre, 21 bushels, is the highest average ever reported. The ruling price of the grain Aug. 1 was 63 cents a bushel, making the value of the entire crop on that date \$22,906,930.

The oats area amounted to 3,747,956 acres, not quite so large as that of last year. The total yield amounted to 141,434,585 bushels; total value of crop, \$47,377,905—the most valuable oat-crop ever harvested in Illinois. The average yield per acre was 38 bushels. The 113,836 acres devoted to rye yielded 2,295,601 bushels, the price per bushel on Aug. 1 being 50 cents, and the total value of the crop \$1,153,274.

A larger area was devoted to corn this year than last by 123,691 acres, the area reported being 8,201,412 acres. The condition of the crop at the time of this report was excellent, being 96 per cent. of a seasonable average.

Education.—The report of the State Superintendent of Public Instruction for 1902 exhibits the following facts relating to the public schools: The last school census found 1,601,175 persons between the ages of six and twenty-one years. There were 22,273 more boys than girls. The average daily attendance in all grades was 765,057. There are 11,734 school districts in the State, and 12,865 schoolhouses, 169 of them built within the year. But 17 of the pioneer log schoolhouses remain in the State. There were 27,186 teachers employed, at wages averaging \$64.55 for men and \$54.18 for women. The total expenditures for teaching amounted to \$12,132,075.

In the year \$2,063,969 was paid for new schoolhouses. The total expenditures for public-school purposes amounted to nearly \$20,000,000.

There are 1,008 private schools reported in the State, and 350 high schools. The high schools cost for maintenance \$1,531,552, and the total number of pupils in them was 41,951; the number of teachers employed was 1,606, the pay-roll amounting to \$1,314,600.

The whole number of persons between the ages of six and twenty-one years reported as unable to read and write was 614.

Mining.—There are 54 coal-producing counties in Illinois. In the year ending July 1, 1902, the total output of 915 mines was 30,021,300 tons. The aggregate value of this coal at the mines was \$28,272,050. The total number of employees was 46,005.

Charities.—The bulletin of the State charitable institutions for the quarter ending Sept. 30, 1902, shows the following facts:

The number of inmates present in all the institutions, Sept. 30, was 11,055, the average num-

ber present during the quarter being 10,265. The per capita cost of maintenance was \$41.11. A comparison of the liabilities and available resources of the institutions shows that the surplus for all on ordinary expense accounts was \$191,996. The amount of appropriations in the State treasury undrawn Oct. 1, 1902, was \$1,588,678.

The number of inmates present in the insane hospitals at the end of the quarter was as follows: Northern, Elgin, 526 males and 607 females, total 1,133; cost to State for quarter, \$42,419. Eastern, Kankakee, 1,053 males, 1,040 females, total 2,093; cost to State, \$72,150. Central, Jacksonville, 580 males, 618 females, total 1,198; cost, \$37,870. Southern, Anna, males 576, females 472, total 1,048; cost, \$37,245. Western, Watertown, males 355, females 312, total 667; cost, \$21,773. Asylum for Incurable Insane, Peoria, males 380, females 320, total 700; cost, \$23,346. Asylum for Insane Criminals, 162 males, cost \$9,904.

The Illinois Soldiers' and Sailors' Home, at Quincy, had enrolled 1,519 inmates. The average per capita cost for the quarter was \$34.28. The increase in the cost of living is illustrated by the fact that the average per capita cost last year for the same institution for one quarter was only \$29.91.

The Asylum for Feeble-Minded Children, at Lincoln, had 1,094 inmates, 595 males and 499 females. The total cost for the quarter was \$39,606, or \$37 per capita net. The balance of cash on hand and cash due Sept. 30, 1902, was \$58,898.

The Institution for the Deaf and Dumb, at Jacksonville, had 478 inmates, 292 males and 186 females. Cost per quarter \$14,271, or \$30 per capita. Surplus, \$15,729.

The Institute for the Blind, Jacksonville, had 207 inmates, 124 males and 83 females. The cost to the State was \$10,928, or \$50 per capita.

The Home for Female Juvenile Offenders, at Geneva, had 200 inmates, maintained at an expense of \$44 per capita.

The Soldiers' Orphans' Home, at Normal, had 352 inmates. The Soldiers' Widows' Home, at Bloomington, was maintaining 62 inmates at a cost of \$58 per capita.

Free Employment Offices.—The free employment offices of Illinois were created in 1899, and the report of work done in the three Chicago offices and the Peoria office in the year 1902 indicates their value, especially to the working people. The total number of male applicants was 30,157, of whom 26,661 secured employment. The number of female applicants was 14,763, of whom 13,520 were successful. A glance at the detailed list of places secured shows the following figures: Female—nurses, 300; chambermaids, 970; general housework, 414; factory girls, 812; waitresses, 770. Male—farm-hands, 1,005; laborers, 11,506; factory hands, 997; cooks, 463; housemen, 820; janitors, 362.

It is seen that the offices are of greatest benefit to the laboring classes, large numbers of whom sought and found employment, and also that increasing numbers of skilled laborers are coming to understand the benefits of the system.

Militia.—The militia consists of 8 regiments of infantry, 2 battalions of colored infantry, 1 regiment of cavalry, 3 batteries of artillery, 1 engineer company, 1 signal-corps, and 1 hospital-corps.

Food Commission.—This board was created in 1899, and consists of a commissioner, an assistant, and 6 inspectors, to enforce the laws in regard to the purity of foods. The report for 1902 shows a total of 927 food samples analyzed, of which 527 were found to be pure and 397 were

adulterated. It is the duty of the commission to prosecute dealers or manufacturers found guilty of handling adulterated goods, and, as a result of these analyses, 358 suits were instituted in various courts, and 242 convictions were secured.

Chicago.—Business conditions in Illinois are best indicated by the situation in Chicago, where the business of the State, as well as that of the Mississippi valley, centers. The three business features that come nearest the life of a city—real estate, building, and fire and life insurance—show unparalleled prosperity. Building operations in the last year exceeded by a considerable margin those of any year for eleven years. There has been an average advance of about 15 per cent. in office space, and from 15 to 20 per cent. in store space. The building permits for the year amounted to \$48,445,850, compared with \$35,432,450 for 1901, the rate of increase being 36.75 per cent.

Insurance has closed a year of notable prosperity. Fire-insurance made an underwriting profit of about 10 per cent. While the premiums have been increased, the losses are still close to 60 per cent. of the premium income. The expenses on Chicago business are about 40 per cent. There has been a gain of more than \$1,000,000 in life premiums, Chicago paying more than \$11,000,000 in life-insurance. In the aggregate, the citizens of Illinois paid out \$55,000,000 for insurance of all kinds. The total fire losses for the year in Chicago were \$4,812,000. Because of heavy losses, rates have been advanced 25 per cent. on mercantile stock, 10 per cent. on mercantile buildings, and 25 per cent. at the stock-yards.

The real-estate market has improved, but not in a ratio to correspond with other things. There has been a sharp demand for central, business, and manufacturing property. The notable feature of the market is the demand for factory property, which has advanced from 15 to 20 per cent. The best idea of Chicago's industrial growth is afforded by the value of the permits taken out for factory and warehouse construction, amounting to more than \$8,100,000, an increase of 60 per cent. over the year before. The real-estate transfers filed for record aggregate \$126,536,745, compared with \$114,556,952 for 1901.

Progress on the Chicago river improvement has been steady. Wharfage has followed closely upon the acquisition of property, and the season's work shows 2,158 linear feet added to the previous amount of 3,757 feet, of the most substantial wharfage ever constructed on the river. Three new bascule bridges have been built, and 2 others are nearly completed.

A total of \$3,000,000 was spent in track elevation and construction of subways. The number of miles of main track elevated was 7.77, and of other track 30.75 miles.

The year was the busiest in the history of the Chicago Bureau of Charities. The total amount of \$43,239 was expended in relief work, distributed among 11,760 families. Of these families 8,450 were not previously registered. Of 15,442 applications for relief investigated by the Chicago Relief and Aid Society, 3,470 were found to be unworthy, and disapproved.

The financial operations in Chicago were large. Deposits in the national and State banks showed a gain of 7 per cent. over 1901. At one time in the year the total deposits were \$500,000,000. The Board of Trade closed the year with a surplus of \$21,000, compared with \$10,805 last year. The clearings for the year were \$83,590,507, compared to \$74,476,955 for the previous year.

The wholesale dry-goods business surpassed all previous records. An increase of 10 per cent. in the volume of business brought the receipts of the wholesale establishments up to \$173,030,000, exceeding the figures of 1901 by more than \$15,000,000. The volume of lumber shipments from Chicago was 900,000,000 feet. The local consumption for the year is estimated at \$1,175,000.

Arbitration.—The year 1902 marked a distinct advance in arbitration and conciliation in the adjustment of differences between employers and employees. The State Board of Arbitration was created in 1895; but it was hampered in its earlier years by a defective law and did not approach the highest degree of usefulness until within a recent period. With its enlarged powers and efficient membership the board has become an important factor in the industrial world. Its work in 1902 affected nearly all of the more important cities of the State. The most conspicuous results, however, were accomplished in Chicago, where, through the mediation of the board, the most serious labor disturbances of the year were adjusted. These included the strike of the department-store drivers, the strike of the stock-yards teamsters, and the strike of the freight-handlers. The latter was the more far-reaching in its effects, completely tying up the railroad freight business into and out of Chicago, and affecting the commercial interests of all the cities in the vast territory tributary to that city. The cost of the strike was estimated to be at least \$1,000,000 a day, and there was wide-spread commendation of the success of the State Board of Arbitration in hastening its end. The strike was declared off July 16, having been in effect ten days.

INDIANA, a Western State, admitted to the Union Dec. 11, 1816; area, 36,350 square miles. The population, according to each decennial census since admission, was 147,178 in 1820; 343,031 in 1830; 685,866 in 1840; 988,416 in 1850; 1,350,428 in 1860; 1,680,637 in 1870; 1,978,301 in 1880; 2,192,404 in 1890; and 2,516,462 in 1900. Capital, Indianapolis.

Government.—The following were the State officers in 1902: Governor, Winfield T. Durbin; Lieutenant-Governor, Newton W. Gilbert; Secretary of State, Union B. Hunt; Auditor, William H. Hart; Treasurer, Leopold Levy; Attorney-General, William L. Taylor; Superintendent of Public Instruction, Frank L. Jones; Adjutant-General, John R. Ward; Commissioner of Insurance, Cyrus W. Neal; Commissioner of Public Lands, L. G. Rothschild; Statistician, Benjamin F. Johnson; Geologist, Willis S. Blatchley; Tax Commissioners, J. C. Wingate, Parks M. Martin; Supervisor of Natural Gas, J. C. Leach; Secretary of the Board of Forestry, W. H. Freeman; President of the Board of Health, J. H. Forrest; Factory Inspector, D. F. McAbee; Fish and Game Commissioner, Z. T. McSweeney; Secretary of the Board of Charities, Amos W. Butler; Chief Justice of the Supreme Court, James H. Jordan; Associate Justices, John V. Hadley, Alexander Dowling, Leander J. Monks, Francis E. Baker, succeeded in January by John H. Gillett; Clerk, Robert A. Brown. All the State officials are Republicans.

A Governor is elected once in four years at the time of the presidential election. Other State officers are elected once in two years, in November of the even-numbered years. The Legislature meets biennially in January of the odd-numbered years, and consists of 50 Senators and 100 Representatives.

Finances.—The State received from the General Government in July \$635,859.20, the civil

war claim. The State debt was reduced this year by \$1,817,000, and is now \$2,887,615.12, on which the annual interest is \$101,565.

The tax duplicate of corporation property assessments in the State this year amounted to \$191,078,389.53, an increase of \$7,769,778.27.

On account of the failure of the gas supply and the consequent diminution of the value of gas property, the board reduced the assessment of pipeline companies \$688,028.26. Telegraph companies' assessments were decreased \$36,628.50. Transportation companies, including sleeping-car and refrigerating-car companies, were decreased \$26,762.77. The board increased the assessment on steam-railroad property \$5,824,836. On the property of electric and street railways it increased assessments \$1,892,860. On telephone companies the increase was \$638,660. On express companies it was \$174,841.50.

The figures on the property of the various classes of corporations were: Telephone companies, \$5,065,323.30; telegraph companies, \$2,478,183.50; steam-railroads, \$162,797,987; electric railways, \$9,639,312; transportation companies, \$846,048.23; express companies, \$2,055,981.50; pipe-line companies, \$8,195,554.

The assessed value of all property in 1902 was \$1,436,305,524. The Auditor estimates that this, together with other sources of revenue, will bring into the treasury \$2,704,350.

Decisions.—By a decision of the Supreme Court in a suit brought by the Auditor to collect taxes on the good-will of the property of a newspaper, the good-will of a business can not be taxed.

By a decision in May the Supreme Court declared the mortgage-deduction law valid. Two of the judges concurred in a minority report. They insist that the mortgage-deduction law is unconstitutional in four particulars. About 80,000 taxpayers in Indiana are affected by the court's decision. Mortgage deductions are claimed on property amounting to \$40,000,000 in value, and the benefit to the taxpayers in deductions under the law will not fall far short of \$800,000.

A suit begun by the State in 1872 against the Vandalia Railroad was won in the Supreme Court in November. The Legislature, in an act in 1847, provided that after the stockholders should receive as dividends an amount equal to the sum invested and 10 per cent. per annum, the Legislature might then regulate the tolls, and all net profits thereafter, above a sum sufficient to pay an annual dividend to the stockholders of 15 per cent., should go to the school fund. The Vandalia must pay a judgment of \$913,905 with interest at 6 per cent. Principal and interest, the judgment amounts to \$1,028,143.

The bonded debts of the 5 largest cities of the State are: Indianapolis, \$2,446,600; Evansville, \$2,155,000; Fort Wayne, \$624,800; Terre Haute, \$345,000; South Bend, \$289,500.

Education.—The number of illiterates in the State in 1900 was 90,539. The percentage of persons between the ages of ten and fourteen years able to read and write was 99.45, Indiana standing sixth in the list of States and Territories in this respect. In 1890 it stood thirteenth, with 98 per cent.

The report of the Superintendent of Education for the year ending July 31 shows that the total school fund was \$10,443,885.32, of which the schools received 6 per cent., distributed semi-annually. There was an addition of \$53,558.99 to this fund, principally from fines. Of the fund \$821,822.96 is in the hands of county auditors.

The total expenses of maintaining the schools of Indiana, including all forms of expenditure,

was \$8,585,354.98. The increase in the school attendance over the preceding year was 2,802 pupils. The total number of pupils admitted to schools was 560,224. There are 9,987 schoolhouses in the State, only 3 of which are log buildings.

The average daily wages of teachers in all common and high schools was \$2.51. The average in cities was \$2.99 and in country districts \$2.33. The average length of terms was one hundred and forty-six days—one hundred and seventy-nine in cities and one hundred and twenty-six in country.

A report on the operation of the compulsory education law shows that the 108 truant officers brought into school 25,025 children at a cost of \$27,885.50. The cost of assistance rendered poor children was \$19,801.48. The average total expenditure for each child was \$2.23.

The enrolment at the State Normal School at Terre Haute in the year ending Oct. 31, 1901, was 1,864, the largest number, 1,200, attending during the spring term. The summer-school attendance was 673. The fiscal year began with a balance of \$13,072.65 in the general fund and ended with a balance of \$16,123.78. From the State tax of $\frac{1}{10}$ th of 1 mill, \$65,910 was received. There were 475 students during the fall term, and 95 students were graduated in 1902.

The building of the former normal school at Muncie is to be opened as the Palmer University in September, having received an endowment of \$100,000 from Francis A. Palmer, of New York, another \$100,000 to be raised by the Christian Church of the country.

A class of 55 was graduated at the Indiana Law School in June. From the Medical College of Indiana 72 were graduated in April, of whom 4 were women.

A department of commerce has been added at the State University; the course requires two years and is to furnish training for business careers.

Charities and Corrections.—The number in the insane hospitals Oct. 31, 1901, was 3,961; there were 464 insane in county poor asylums, and 31 in county jails. Of those in the 4 State asylums, 2,098 were women.

The enrolment at the Institution for the Deaf and Dumb was 384, of whom 218 were boys.

From reports received by the Board of State Charities the population of the poor asylums of Indiana on Aug. 31, 1901, was 3,091—2,115 men and 1,076 women. In a Charities Board bulletin the following information is given:

"A few years ago there was spent in outdoor poor relief, including medical aid, in Indiana over \$630,000. This has been reduced in six years to less than \$210,000 a year. Ten years ago 14.8 persons in each 10,000 of the State's population were inmates of the poor asylums. Now there are 12.2 persons in each 10,000."

During the year ending May 31 the number of teachers in the Girls' Industrial School was 137; number of pupils, 927; average attendance of pupils, 507; yards of material used, 3,118; number of garments made, 1,287; amount expended, \$614.95.

Reports made to the Board of Charities for the year ending Oct. 31, 1901, indicate that during the year there were confined in the 92 county jails of Indiana 26,115 males and 1,899 females, an increase of 550 over 1900. The report says: "A synopsis of the reports shows that of the total number of prisoners 15,922 were serving sentence, 733 were confined as insane, and 5,209 were tramps." Attention is called to the number of tramps received. Some counties maintain jails as boarding-houses for tramps at public expense. In one county the books showed that the regular

in-and-out fee and full board were charged for every tramp received. Those who came in one evening and were let out the next morning were paid for by the county for two days' board at 40 cents and an in-and-out fee of 50 cents, a total of \$1.30, and the tramp received a night's lodging and 1 or 2 meals. Figures taken from the monthly reports show that for the first six months of this year 3,232 tramps were harbored in Indiana jails at a cost of \$4,483.99, of which \$1,497.05 was for sheriff's fees and \$2,987.94 for board.

There were 9,111 inmates in the 13 State institutions May 1. The cost of maintenance per capita for the quarter then ending was: Central Hospital for Insane, \$42.77; Northern Hospital for Insane, \$37.11; Eastern Hospital for Insane, \$44.67; Southern Hospital for Insane, \$44.52; Soldiers' Home, \$39.05; Soldiers' and Sailors' Orphans' Home, \$42.11; Institution for Deaf, \$69.97; School for Feeble-Minded Youth, \$37.59; State Prison, \$39.85; Reformatory, \$36.28; Industrial School for Girls and Woman's Prison, \$49.96; Reform School for Boys, \$35.74; Institution for Blind, \$95.48.

Banks.—There are 114 State banks, all in excellent condition. This year 13 new banks were organized, 1 retired from business. There are 5 savings-banks. The trust companies are coming into general use as depositories for savings.

The latest available report on State banks answers the call made Nov. 25, 1902. A comparison with the report made Sept. 15 shows that deposits have increased more than \$800,000, loans and discounts more than \$700,000, while overdrafts have decreased \$40,000 over the last call. On a combined capital of \$4,770,550 the surplus and profits amount to \$1,530,619.62.

The annual report of the savings-banks, issued in February, shows an increase in assets over the report of a year ago of \$750,597.40.

Building Associations.—The State has 403 associations, with a membership of 112,822, and assets amounting to \$29,292,665. Their assets have increased \$725,739.14. This is the first year since 1896 that there has not been a falling off in the volume of business. In addition to this there has been an increase in loans of \$1,100,748.04 and a decrease in real estate held of \$256,198.59. The increase in dues, prepaid and paid-up stock and deposits has been \$662,960.94.

Life-Insurance.—The result of the enactment of 1899 is that the credit of Indiana life-insurance companies has been raised, and now these companies find ready admission into other States, where, previous to the enactment of the law, they were debarred.

Statistics of all the companies for 1901, standard life and approved assessment and fraternal organizations, show a total paid in the State of \$4,202,863.

The Antitrust Law.—This law, passed in 1901, was in effect declared unconstitutional by the decision of the United States Supreme Court in regard to the similar statute of Illinois. Both laws are invalidated by an exemption in favor of live stock and agricultural products in the hands of the raiser or producer, or of labor organizations. Under the rulings of the court, an antitrust law, to be constitutional, must apply indiscriminately to all combinations, with no exemptions or exceptions whatever.

Agriculture.—A census bulletin issued in June shows that the farms of Indiana June 1, 1900, numbered 221,897, and were valued at \$841,735,340. Of this amount \$154,101,880, or 18.3 per cent., represents the value of buildings.

On the same date the value of farm implements and machinery was \$27,330,370 and that of live

stock \$109,550,761. These values added to that of farms make the total value of farm property \$978,616,471.

The total value of farm-products for 1899 exceeds that for 1889 by \$109,690,936.

The average area of farms has declined from 136.3 acres in 1850 to 97.4 acres in 1900. Considerably more than two-thirds of the area in farms is tilled by the owners or part-owners.

The value of live stock in 1900 was \$109,550,761, of which horses represent 37.1 per cent.; cattle, except cows, 20.7 per cent.; and dairy cows, 16.7 per cent. The value of the products of the dairy in 1900 was \$15,739,594, while the value of the poultry and eggs was \$15,614,937.

Manufactures.—In manufactures great progress is shown during the decade. The report of 1900 shows 18,015 manufacturing establishments. The aggregate capital invested in 1900 was \$234,481,528, an increase of 78 per cent. over 1890. The number of persons employed in 1900 was 155,956, an increase of 31,607 since 1890, the aggregate of wages paid was \$66,847,317, against \$51,749,976 in 1890, and the value of the products was \$378,238,100, an increase of almost 67 per cent. since 1890. This remarkable growth of manufacturing industries was largely due to natural gas.

By the factory inspector's report for 1902, a further increase of employees is shown, the total being 178,019, of whom 26,200 were women; there were 2,622 boys and 1,196 girls under sixteen.

Later figures than those of the census are shown also in a report of the State Statistician, giving a comparison of 10 representative industries, which have a total of \$38,714,977 capital invested in 1901, against a total of \$24,286,833 in 1898. Each of the 10 industries shows a large increase in the value of the product for 1901 over that of 1898. In 1898 the value of the product was \$86,283,795, and in 1901 it was \$121,434,106. The greatest increase is in the beef and pork packing industry, being \$18,103,273. The total amount paid for wages in 1898 was \$16,386,807, and in 1901 \$21,973,820.

The coal product in 1901 was given as 6,962,940 short tons, valued at \$7,078,842.

Valuable deposits of iron ore have been found along the line of the projected Indiana Southern Railroad, according to reports by experts who have recently made an examination there. In addition to the coal deposits beds of limestone have also been found. The samples of the iron ore that have been assayed show that there is practically no admixture of sulfur, and the same condition of freeness from sulfur is found in the coal veins in the immediate neighborhood.

Lawlessness.—A strike on the street-railway in Terre Haute in January was the occasion of an outbreak of mob violence, in which one man, a miner, lost his life.

A negro, guilty of assault upon 2 women, was hanged by a mob near Sullivan, Nov. 20. The sheriff, from whom he was taken by the mob, was deposed from office by the Governor, in accordance with a law passed in 1901. He was, however, entitled by the same law to a hearing before the Governor, and may be reinstated if he can show that he did all in his power to protect his prisoner.

A national federation of negroes was incorporated at Indianapolis, Aug. 23, the object of which was declared to be "to protect the colored race from mob violence, to aid a general advancement of the race, to arrest and punish lynchers of colored people, secure equal rights for colored people in all States, and to secure legislation to

pay compensation to widows of colored men deprived of their lives by other than process of law."

In September great excitement was caused by the discovery of wholesale grave robberies in the vicinity of Indianapolis. The bodies were sold to medical colleges. Several indictments were found in November against alleged grave-robbers, most of whom are negroes.

Soldiers' Memorial.—The dedication of a monument to the memory of the soldiers and sailors of Indiana who took part in the civil war was witnessed by an immense concourse at Indianapolis in May. The corner-stone of the monument was laid in 1889. Among those who took part in the dedication exercises were the Governor, Major G. V. Menzies, Gen. J. W. Foster, Gen. Lew Wallace, James Whitcomb Riley, and Commander Starr, of the Grand Army.

Political.—An election for State officers, excepting Governor, was held in November. There were 6 tickets in the field—Republican, Democratic, Prohibitionist, Populist, Socialist, and Social Labor.

The Republican State Convention met in Indianapolis, April 23, and named the following candidates: For Secretary of State, Daniel E. Storms; Auditor of State, David E. Sherrick; Treasurer of State, Nat U. Hill; Attorney-General, Charles W. Miller; Clerk of Supreme Court, R. A. Brown; Superintendent of Public Instruction, Fassett A. Cotton; Judge of Supreme Court, John H. Gillett; Judges of Appellate Court, Ulric Z. Wiley, Woodfin D. Robinson, Frank S. Roby, Daniel W. Comstock, William J. Henley, James B. Black; State Geologist, Willis S. Blatchley; State Statistician, Benjamin F. Johnson.

The resolutions, which were very long, were largely devoted to approval of the national policy and of the leaders of the party. The present State administration was commended. Other declarations were:

"We pledge the people that the Republican party will not confer special privileges on railway or other combinations, but will maintain and preserve the right of lawful competition and the supremacy of the laws over all corporations and monopolies.

"The laws touching the garnishment of wages should be revised; and the laws for the protection of miners must be observed and enforced.

"The Republican party demands the adoption and enforcement of proper laws regulating nominations, securing to every man the right to express his choice for the candidate of the party to which he belongs, whether the nominations are made by a direct primary or a delegate or mass convention."

The Democrats met in State convention in Indianapolis June 4 and made nominations as follows: For Secretary of State, Albert Schoonover; Attorney-General, W. E. Stilwell; Auditor, James R. Riggs; Treasurer, Jerome Herff; Clerk of Supreme Court, Adam Heimberger; Superintendent of Public Instruction, Samuel L. Scott; State Statistician, Myron D. King; State Geologist, Edward Barrett; Judge of Supreme Court, Fifth District, Timothy E. Howard; 3 Judges of the Appellate Court from the Southern District, John R. East, W. H. Bracken, and John D. Megee; 3 Judges of the Appellate Court from the Northern District, R. H. Hartford, James T. Saunderson, and H. G. Zimmerman.

The platform denounced trusts, the Dingley tariff law, the Philippine policy of the Government, and the Fowler bank bill; and condemned "the Republican party for refusing to give the Interstate Commerce Commission power to enforce

its decisions against discriminations in railroad rates." On the currency it said: "We recognize as an economic fact the increase of standard money arising from the vast increased production of gold from our own and foreign mines, and the prodigious influx of foreign gold into this country, as a result of an exceptional demand for our products arising from foreign wars and other causes, and we point to the results consequent upon this increase of the circulating medium as a demonstration of the truth of the quantitative theory of money."

On State affairs the following declarations were made:

"We oppose granting to corporations of any other State or States the power to acquire any railroad organized and operating under the laws of this State.

"We are in favor of restoring to citizens of the State the right to appeal to the Supreme and Appellate Courts in any civil case within jurisdiction of a justice of the peace, where the amount in controversy, exclusive of interest and costs, exceeds \$50.

"We condemn the Republican Governor of Indiana for his violation of the Constitutions and laws of the United States and the State of Indiana in his refusal to honor the requisition of the Governor of Kentucky upon regularly returned indictments for murder against fugitives from justice, and denounce this flagrant violation of his oath to support the Constitution of the United States and the State of Indiana as a species of official lawlessness, vicious in itself and subversive of that comity among the States which is an essential element of the Union of the States."

In convention, April 16, the Prohibitionists named the following candidates: For Secretary of State, James M. Dungan; Auditor of State, Dr. J. Levi Lord; Treasurer of State, Preston Rider; Attorney-General, Sumner W. Haynes; Clerk of Supreme Court, Charles F. Holler; Superintendent of Public Instruction, Andrew F. Mitchell; State Geologist, Earl Stinespring; State Statistician, J. Lewis Speicher.

The People's party made nominations as follows in convention at Indianapolis, June 4: For Secretary of State, William B. Gill; Auditor, Joseph B. Cline; Treasurer, Henry Brocksmith; Attorney-General, David F. Boger; Clerk Supreme Court, Parker T. Brown; Superintendent Public Instruction, Louis Patterson; State Statistician, E. S. Pope; State Geologist, Albert Shook.

Extracts from the platform follow:

"We declare in favor of municipal ownership of street-cars, water, light and heating plants in Indiana, and against the granting of further franchises to private corporations for such purposes.

"We favor the election of county school superintendents by a direct vote of the people.

"We condemn the practise of farming out on contract the men confined in our State prisons as vicious.

"We adhere most positively to our former position on the finance question, which has been, is, and will be the paramount question in American politics.

"We condemn in unmeasured terms the bill now before Congress, known as the Fowler bill, which seeks to give banks and corporations the power to issue currency on cash assets."

In State convention at Terre Haute, July 5, the Socialists placed in nomination a State ticket as follows: For Secretary of State, E. H. Meyer; Auditor, James Hutchinson; Treasurer, Samuel

D. Straw; Attorney-General, William McGregor; Statistician, George B. Strum; Geologist, John H. Adams; Judges of Appellate Court, William Raugh, F. J. Macomber, David Young, William J. Crake, H. B. Keppler; Superintendent of Public Instruction, Miss Martha Biegler.

The Republican ticket was successful at the polls, having a larger plurality than in the last presidential year. Following are the official figures of the vote for Secretary of State: Storms, Republican, 298,819; Schoonover, Democrat, 263,555; Dungan, Prohibition, 17,765; Gill, People's, 1,350; Meyer, Socialist, 7,111; Dreyer, Social Labor, 1,756.

IOWA, a Western State, admitted to the Union Dec. 28, 1846; area, 56,025 square miles. The population, according to each decennial census since admission, was 192,214 in 1850; 674,193 in 1860; 1,194,020 in 1870; 1,624,615 in 1880; 1,911,896 in 1890; and 2,251,829 in 1900. Capital, Des Moines.

Government.—The following were the State officers in 1902: Governor, Albert B. Cummins; Lieutenant-Governor, John Herriott; Secretary of State, William B. Martin; Treasurer, Gilbert S. Gilbertson; Auditor, Frank F. Merriam; Attorney-General, Charles W. Mullan; Superintendent of Instruction, Richard C. Barrett; Adjutant-General, Melvin H. Byers; Labor Commissioner, C. F. Wennerstrum, succeeded April 1 by E. D. Brigham; Dairy Commissioner, B. P. Norton, succeeded April 1 by H. R. Wright; Custodian, J. D. McGarraugh, succeeded April 1 by T. P. McCurdy; Veterinarian, J. I. Gibson, succeeded by P. O. Koto; Railroad Commissioners, E. A. Dawson, D. J. Palmer, Edward C. Brown; Geologist, Samuel Calvin; Fish and Game Commissioner, George A. Lincoln; Librarian, Johnson Brigham; Secretary of the Board of Health, J. F. Kennedy; Secretary of the Board of Agriculture, G. H. Van Houten; Secretary of the Executive Council, A. H. Davidson; Mine Inspectors, John Verner, J. W. Miller, E. Sweeney; Chief Justice of the Supreme Court, Scott M. Ladd; Associate Justices, Emlin McClain, H. E. Deemer, J. C. Sherwin, and C. M. Waterman, resigned, and succeeded July 1 by Charles A. Bishop; Clerk, C. T. Jones. All are Republicans.

A State election is held every November, but the term of State officers is two years, the Governor, Lieutenant-Governor, Superintendent of Instruction, one Justice of the Supreme Court, and one Railroad Commissioner being chosen in the odd-numbered years, and the Secretary, Auditor, Treasurer, Attorney-General, a Justice, and a Railroad Commissioner in the alternate years. The Legislature meets in January of the even-numbered years.

Finances.—A summary of the financial report of the biennium 1900-'01, made to the Legislature this year, was given in the Annual Cyclopaedia for 1901.

The collections made by the so-called "tax-ferrets" in 1901 amounted to \$993,699, about 10 per cent. of which was due to the State.

The railroad assessment was raised this year to \$51,112,814, an increase of \$4,041,556 over that of 1901. The aggregate taxable valuation of the express companies in Iowa for 1902 is \$366,273; last year it was \$261,587. The increase in the actual valuation would be four times the increase in the taxable valuation, or \$418,784.

The actual valuation of the telegraph and telephone property of the State is placed at \$6,512,496. The taxable valuation is \$1,628,124, or one-fourth the actual valuation.

Last year the telephone and telegraph com-

panies had actual valuation of \$5,200,996, and the taxable valuation was \$1,300,248.

The war claim of \$456,417.89 of Iowa against the General Government was allowed, and an appropriation was made by Congress this year for its payment.

Education.—By the census report Iowa stood second among the States and Territories in 1900 in respect of the percentage of persons from ten to fourteen years of age able to read and write, with 99.63 per cent., Nebraska standing higher with 99.66. In 1890 Iowa stood first, with 99.23 per cent. The number of illiterates of ten years and over in 1900 was 40,172.

The school report for 1902 shows a decrease in the number of children of school age, 728,810 in 1902 and 735,159 in 1901. The enrolment in 1902 was 560,173; in 1901 it was 562,662. The attendance was a little larger in the later year. The total amount expended in 1902 was \$9,556,890; in 1901 it was \$9,321,652. The attendance in private schools rose from 43,715 to 49,169; the enrolment in high schools was 21,692 in October, with 3,083 in the graduating classes.

Fire destroyed a wing of the main building of the Agricultural College at Ames, Aug. 14, with a loss of \$10,000. The Legislature authorized a tax of one-fifth mill for building, and a central and an agricultural building are to be erected the coming year. A "corn-judging school" is to be held at the college Jan. 5-17, 1903. Every farmer in the State is invited to be present, bringing samples of corn and other seeds.

On June 11 took place the forty-second annual commencement of the College of Liberal Arts of the State University, the thirty-seventh of the Law College, and the twentieth of the College of Dentistry, at which time ground was broken for the new medical buildings.

A new university, the Memorial, established by the Sons of Veterans, was opened at Mason City in September with an enrolment of 50. At present the course is that of a military academy, occupying three years and preparing for the college course hereafter to be established.

Coe College, at Cedar Rapids, graduated 24 in June, and Des Moines College 15. Upper Iowa University, at Fayette, has received a new library from Andrew Carnegie.

Charities and Corrections.—Following is the report for one month, May, of the number of inmates at each of the State institutions and the expenses of each: Anamosa, convicts, 417, \$7,014; Fort Madison, convicts, 451, \$7,151; Clarinda, insane, 1,001, \$17,806; Independence, insane, 1,088, \$23,999; Mount Pleasant, insane, 1,067, \$19,744; Council Bluffs, deaf, 196, \$4,407; Vinton, blind, 142, \$2,526; Davenport, orphans, 500, \$6,126; Marshalltown, veterans, 563, \$7,729; Glenwood, feeble-minded, 916, \$11,725; Eldora, reformatory, 518; \$5,397; Mitchellville, reformatory, 202, \$2,726; Cherokee building, \$25,232; totals, 7,061, \$141,588.

The main building and the chapel of the School for the Deaf, at Council Bluffs, were burned May 9. The loss was estimated at \$225,000. The State does not insure its buildings. There was also a loss of \$20,000 by fire at the Anamosa Penitentiary.

The Board of Control has prepared figures showing a large increase in the number of insane in the State, county, and private institutions in the past year. There has been a net increase of 136, not including paroles and dismissals.

The Board of Control has established departments for dipsomaniacs, inebriates, and persons addicted to the excessive use of narcotics in two

of the State hospitals, as provided for in the law on that subject passed by the last General Assembly. In November 139 inebriates were confined in two of the hospitals.

A home for ex-convicts has been built on the outskirts of Fort Dodge by Hon. L. S. Coffin on his own farm. Its purpose is to receive the most deserving prisoners as they are discharged from the penitentiaries of the State, to place them in quiet, homelike surroundings, where they can regain their self-respect and efface the prison taint, and finally to find for them situations where they may begin life anew.

Banks.—Deposits in the 310 savings and 235 State banks increased almost \$1,000,000 between June 15 and Sept. 15. On June 18 they had deposits amounting to \$133,692,464. On Sept. 15 they had \$134,513,583 of deposits. In a period of two years the deposits increased \$43,400,000.

Insurance.—The number of life companies transacting business in the State Jan. 1 was 128; the policies in force, 382,664; the amount of insurance in force, \$534,394,495. The joint-stock and mutual fire-insurance companies wrote \$311,695,076 in risks and paid \$2,652,707 in losses. The State and county mutual insurance assessment associations wrote \$91,253,782 in risks and paid \$458,362 in losses. All kinds of companies paid \$4,111,069 in losses.

Railroads.—The railroad mileage in 1901 was 9,353.90; in 1902 it was 9,614.06. Other items in the two years were: Earnings, 1901, \$54,764,635.95; in 1902, \$59,106,191.41; expenses, 1901, \$31,449,871.10; in 1902, \$39,839,794.83; net earnings per mile, 1901, \$1,851.06; in 1902, \$2,003.98. There were 193 fatal accidents in 1902, of which 9 were to passengers.

The report shows a decrease in the compensation to employees, considering the daily average. In 1901 the average daily compensation was \$1.88. In 1902 this dropped to \$1.82. At the same time there was an increase in the aggregate of wages paid and in the number of employees.

Industries and Products.—The amount of coal produced in the State in 1901 was 5,578,522 short tons, valued at \$8,016,274.

The number of farms in the census year was 228,622, valued at \$1,497,554,790. Of these farm lands, 86 per cent. was improved, the highest percentage among the States. The value of the live stock was \$271,844,000. In 1900 the number of farms operated by owners was 148,886.

The Dairy Commissioner's report of butter shipments shows that there were 4,425,930 more pounds shipped out in 1901 than in 1900, a total of 89,806,645 going out.

The rains of 1902 were more damaging to crops than the drought of 1901. The value of the corn, wheat, oats, barley, rye, flax, potatoes, and hay was estimated in December as worth \$215,722,339. In 1901 the estimate was \$274,000,000.

The number of creameries fell from 994 in 1900, with 91,417 patrons, to 920 in 1902, with 81,532 patrons.

The number of manufacturing establishments in the census year was 14,819, with capital amounting to \$102,733,102; the value of the products was \$165,000,000.

The wooded area of the State, according to the estimate of the topographer of the national Geological Survey, is 7,000 square miles.

The Prohibitory Law.—The Legislature of 1900 enacted a law which provided that section 2382 should be amended by adding to the prohibition that no one should sell the following:

"Or solicit, take, or accept any order for the purchase, sale, shipment, or delivery of any such

liquor, or aid in the delivery and distribution of any intoxicating liquor so ordered or shipped; provided that nothing herein shall prohibit traveling salesmen soliciting orders for the purchase, sale, and shipment of intoxicating liquors from persons legally authorized to sell or dispense the same."

The Supreme Court decides that the law is unconstitutional in that it interferes with interstate commerce.

Legislative Session.—The General Assembly was in session from Jan. 13 to April 11. W. L. Eaton was chosen Speaker of the House, N. E. Kendall, Speaker *pro tem.*, and W. F. Harriman, President *pro tem.* of the Senate.

In the Senate were 11 Democrats and 39 Republicans; in the House, 16 Democrats and 84 Republicans.

The constitutional amendments proposed were to provide for biennial instead of annual elections, and to give to each county one member of the House of Representatives and to such larger counties as have the fixed ratio of population an additional member, the number of members of the House, however, to be limited to 108.

Among the larger appropriations were these: To the Board of Control of State institutions, \$716,557; to the State educational institutions, \$434,269; the Capital Improvement Commission, \$250,000; St. Louis Exposition, \$125,000; National Guard, \$104,000; for erection of Vicksburg monuments, \$150,000; to finish Cherokee Insane Hospital, \$138,000; additional support for State institutions, \$75,222; pavilion at State fair grounds, \$37,500; monuments at Chattanooga, \$35,000; State Library Commission, \$12,000; State Historical Society, \$9,500; for transferring patients to Cherokee, \$21,600.

The levy of taxes for buildings at the State educational institutions was authorized—one-fifth mill for the university, and the same for five years for each of the others—the Agricultural College and the Normal School. Other acts relating to taxation were:

Making taxes on assets of any corporation, partnership, or person which are placed in the hands of a receiver a prior lien, and providing that they shall be first paid in full by the receiver.

Authorizing the levy of a 4-mill road tax.

Providing that property not to exceed \$800 in actual value of any honorably discharged Union soldier or sailor of the Mexican War or of the war of the rebellion, or of the widow remaining unmarried of such soldier or sailor, shall be exempt from taxation.

Permitting communities to vote 5 per cent. taxes in aid of railroads once in ten years.

Reducing the taxes upon foreign insurance companies from $3\frac{1}{2}$ to $2\frac{1}{2}$ per cent. upon gross premiums.

Fixing the amount to be raised during the year 1902 by taxation at \$2,300,000; during the year 1903, at \$2,000,000. On the present valuation this will make a levy of about 4 mills for the two years.

Repealing the section requiring boards of library trustees to fix a levy for the maintenance of libraries and permitting a levy of 1 mill in cities having 22,000 population and 2 mills in cities having more than 22,000 for maintenance, and a levy of 3 mills in cities of more than 25,000 for building.

Acts affecting railroads provided that railroads shall report in the aggregate to the Executive Council the following: Net income derived from business originating in Iowa and terminating in other States, from business originating in other

States and terminating in this State, from business neither originating nor terminating in Iowa, but carried across a part of this State. All of these items are to be included in one sum.

The State mine examiners are required to examine every mine having an average output of 50 tons or more as often as once in six months; and a board of 5 examiners is to be appointed to examine candidates for appointment as mine inspectors, mine-hoisting engineers, and mine foremen. Members of this board must hold certificates of competency and have had at least five years' actual experience immediately preceding appointment.

The Board of Medical Examiners is required to issue certificates to practise to qualified osteopaths.

The age to which girls may be detained at the Industrial School was raised from eighteen to twenty-one.

The Support fund of the State institutions was fixed as follows: The Institution for the Deaf and Dumb, at Council Bluffs, \$22 a month per capita for all purposes; \$22 a month per capita for all salaries and supplies at the College for the Blind, at Vinton, for each resident scholar in that institution, for nine months in each year; the Soldiers' Home, at Marshalltown, \$10 a month, for officers and others; the insane hospitals at Clarinda, Independence, and Mount Pleasant shall not exceed \$12 a month per capita; at Cherokee, \$15 when the population is under 600, \$14 when the population does not exceed 750, \$13 when the population is in excess of 900, and \$12 thereafter, provided, however, that all in excess of \$12 shall be paid out of the treasury of the State.

The allowance at the Eldora Industrial School was increased from \$9 to \$10 a month.

Other measures were:

Reorganizing the Supreme Court and increasing the salaries of the members from \$4,000 to \$6,000 per annum.

Increasing the salary of the Governor from \$3,000 to \$5,000. The Governor receives house rent amounting to \$600 a year and \$500 for services on the Executive Council, so that the increase is really from \$4,100 to \$6,100.

To punish kidnapping by imprisonment in the penitentiary by any term between ten years and life.

To provide that any person convicted of the murder of another person shall not receive any interest in the estate of the decedent as surviving spouse.

Punishing by imprisonment for not more than twenty years persons who advise, counsel, encourage, advocate, or incite murder, although no such killing takes place.

Providing for a department in one of the State hospitals for the treatment of inebriates, dipsomaniacs, etc.

Requiring children between seven and fourteen years to attend school at least twelve school weeks in each year.

Recognizing corporations organized for the care and placement of abandoned children.

Making the laws of Iowa with reference to negotiable instruments uniform with the laws of other States upon this subject; among other things this law practically abolishes the three days of grace.

Providing that savings-banks may loan not to exceed one-half of their capital stock to any person upon farm land worth twice the amount loaned.

Giving farmers' institutes \$100 a year State aid instead of \$50.

Permitting savings-banks to take deposits to twenty times their capital stock, instead of ten times, as at present.

Validating conveyances of real estate in which the husband or wife conveyed the inchoate right of dower of the other spouse.

Providing that the inheritance between parent and child by adoption shall be the same as between parent and children born in lawful wedlock.

Relieving the State Game and Fish Warden of liability for destroying illegal fishing and gaming apparatus; promoting catfish to be game-fish, placing pickerel in the class of game-fish with reference to the closed season; prohibiting the killing of fish by drugs or dynamite, etc.; making the open season for squirrels to begin with September instead of June; making rail, plover, and sandpiper and marsh birds game.

Authorizing the organization of naval militia.

Political.—For the offices to be filled at the November election the Republican State Convention, at Des Moines, July 30, named the following candidates: For Secretary of State, W. R. Martin; Auditor of State, B. F. Carroll; Treasurer of State, Gilbert S. Gilbertson; Attorney-General, C. W. Mullin; Judge of Supreme Court, Scott M. Ladd; Judge of Supreme Court, Charles A. Bishop; Clerk of Supreme Court, John C. Crockett; Supreme Court Reporter, W. W. Cornwall; Railroad Commissioner, E. A. Dawson.

The more significant declarations of the platform were those relating to tariff revision and control of trusts, and there was some controversy over these, which was settled in the Committee on Resolutions in favor of a reiteration of last year's utterances, with an addition to the trust plank, congratulating President Roosevelt on the inauguration of judicial proceedings to enforce the antitrust laws.

Last year's platform, which is reaffirmed, contained the following paragraph concerning the tariff: "We favor any modification of the tariff schedules that may be required to prevent their affording shelter to monopoly."

"We assert the sovereignty of the people over all corporations and aggregations of capital and the right residing in the people to enforce such regulations, restrictions, or prohibitions upon corporate management as will protect the individual and society from abuse of the power which great combinations of capital wield."

Attention was drawn all over the country to these declarations of the platform by the action of Hon. D. B. Henderson, Speaker of the House of Representatives, who declined to be a candidate for reelection in the Third District because he was not in accord with his constituents, not believing that the evil of trusts could be effected by revision of the tariff in the direction of free trade.

The Democratic Convention, at Des Moines, Sept. 3, made nominations as follow: For Secretary of State, Richard Burke; Auditor of State, J. S. McLuin; Treasurer of State, Dr. R. U. Chapman; Attorney-General, John D. Denison; Judge of Supreme Court (long term), Thomas Stapleton; Judge of Supreme Court (short term), J. H. Quick; Railroad Commissioner, Thomas Benson; Supreme Court Clerk, Jesse Tripp; Supreme Court Reporter, John Dalton.

Besides condemning the policy of the administration in regard to the Philippines, the permitting of shipments of war supplies from our ports for the use of the British in the Boer War, denouncing the pending Fowler banking bill, and demanding election of United States Senators by

direct vote of the people, the platform made the following declarations:

"The tariff policy, originally adopted for the avowed purpose of raising revenue to meet the enormous burdens of the civil war, has been turned to the use of individual and class interests until it has become the creator of countless unearned fortunes and the shelter of huge combinations of capital, organized in the form of trusts, which are strangling competition in many of our industries, destroying individual effort, crushing ambition largely in every line of industry, and already acquiring a power which enables them to dictate in their own interest the prices of labor and raw material and the cost of transportation of finished products.

"We charge that discrimination in freights by common carriers is the handmaid of an exorbitant protective tariff in fostering the gigantic trusts that have become a menace to the welfare of the masses, and we demand such changes in our interstate commerce act as may be necessary to secure the speedy punishment by imprisonment of any officer or agent of a corporation engaged in interstate commerce, who is guilty of such discrimination, and the enactment of further provisions that shall make such discrimination a ground for prohibiting the offending corporation from transacting the business of a common carrier in the business of interstate commerce."

A minority report from the Committee on Resolutions proposed a reaffirmation of the Kansas City platform in regard to silver coinage, but it was rejected by a vote of 344 to 384.

The ticket of the Prohibition party, whose convention was held at Waterloo, Aug. 21, was: For Secretary of State, W. W. Howard; Auditor of State, John W. Leedy; Treasurer of State, F. P. Fetter; Railroad Commissioner, E. H. Albright; Attorney-General, J. B. Ferguson; Judge of Supreme Court, J. A. Harvey; Clerk of Supreme Court, E. A. Graves; Reporter of Supreme Court, W. P. Briggs.

The platform declared that the convention "reverentially acknowledged God as the author of civil government and Jesus Christ as the ruler of the nations of the earth, and that his law is the *magna charta* of human liberty, to which all legislation should conform."

The Socialistic party met in State convention at Davenport, Sept. 2, and adopted a platform which declared the purpose of the party to acquire for society the control of Government and the ownership of capital represented by mines, machinery, and all means of production and distribution. The following State ticket was nominated: Secretary of State, W. A. Jacobs; Auditor of State, T. J. Grant; Treasurer of State, S. R. McDowell; Attorney-General, I. S. McCrelis; Judge of Supreme Court, A. D. Pugh; Clerk of the Supreme Court, A. M. Larson; Railroad Commissioner, James Lorimer.

The Republican candidates were elected by a plurality of 79,214.

Republicans were elected to Congress in all the districts except the second, where M. J. Wade, Democrat, was elected by 1,158 plurality.

Louisiana Purchase Flag-Day.—Dec. 20 was set apart, by proclamation of the Governor, as Louisiana Purchase Flag-Day. This day was the ninety-ninth anniversary of the acquisition of the territory of Louisiana by the United States, and it was proposed to observe it by a display of the flag on public buildings and business houses and dwellings if practicable.

KANSAS, a Western State, admitted to the Union Jan. 29, 1861; area, 82,080 square miles.

The population, according to each decennial census, was 107,206 in 1860; 364,399 in 1870; 996,096 in 1880; 1,427,096 in 1890; and 1,470,495 in 1900.

Government.—The following were the State officers in 1902: Governor, William E. Stanley; Lieutenant-Governor, Harry E. Richter; Secretary of State, George A. Clark; Treasurer, Frank Grimes; Auditor, George E. Cole; Attorney-General, A. A. Godard; Superintendent of Public Instruction, Frank Nelson; Secretary State Board of Agriculture, F. D. Coburn; Adjutant-General, S. M. Fox; Superintendent of Insurance, W. V. Church; Oil Inspector, S. O. Spencer; Grain Inspector, B. J. Northrup; State Printer, W. Y. Morgan; Bank Commissioner, Morton Albaugh; Labor Commissioner, W. L. A. Johnson; Members State Board of Charities, Henry J. Allen (president), Edwin Snyder (secretary) (Snyder served until Aug. 1, 1902, when he was superseded by Charles Yoe), G. W. Kanavel (treasurer), Reuben Vincent, and John Hannon. All the elected officers are Republicans. Supreme Court—Frank Doster, Chief Justice; William A. Johnston, William R. Smith, Edwin W. Cunningham, Adrian L. Greene, Abram H. Ellis, and John C. Pollock, Justices (Justice Ellis died in September, and the Governor appointed R. A. Burch in his stead). Prior to 1901 the Supreme Court consisted of the Chief Justice and two associate justices. The court was so far behind with its work that in 1895 provision was made for a Court of Appeals, of 6 members, to relieve the Superior Court of a portion of its work. The Court of Appeals expired by limitation of the law Jan. 14, 1901. At the general election of 1900 a judicial amendment to the Constitution, providing for the increase of the membership of the Supreme Court to 7, was adopted, and the 4 additional members—Cunningham, Greene, Ellis, and Pollock—were appointed by Gov. Stanley. With the exception of the Populist Chief Justice, all are Republicans.

The State officers are elected in November of the years of even number. The Legislature meets biennially in January of the odd-numbered years. The session is limited to fifty days.

Finances.—The State Treasurer's report shows the financial affairs of Kansas to be in good shape, the payment of taxes, fees, bonds, and interest being prompt and regular. The total delinquent taxes due the State (dating from 1861) are only \$62,814.94, compared with \$74,748.77 two years ago, and \$164,838.58 four years ago. The total assessed valuation of property for 1902 was \$363,163,630; the total State tax, \$1,997,354. The State tax levy for the year was 5½ mills, the same as for the three preceding years. Property in Kansas is customarily assessed at from one-third to one-tenth of its actual value. This year a State Tax Commission, created by the last Legislature, drew up for presentation before the next Legislature a tax law designed to correct the inequalities of the present method of assessing property. The total appropriations made by the Legislature for the fiscal year ending June 30, 1902, amounted to \$2,624,905.96. Of this amount, \$2,258,493.61 was drawn, leaving unexpended \$366,412.35. The entire bonded indebtedness of the State, amounting to \$632,000, is held by the State school funds. On July 1, 1903, \$220,000 of the State bonds will fall due, and on Jan. 1, 1904, \$159,000. The Treasurer this year says that with reasonable prudence it will not be necessary to refund them, and recommends payment when due. The entire receipts for the fiscal year ending June 30 amounted to \$3,595,350.19; disbursements, \$3,545,609.33; leaving a balance of \$627,366.85.

The semiannual examination of the treasury, held Dec. 20, 1902, showed cash on hand to the amount of \$241,283.59, distributed as follows: General revenue, \$81,935.10; State-House, \$251.07; State-House (completion), \$408.01; live stock sanitary inspection, \$2,295.65; permanent school, \$11,385.82; annual school, \$16,802.34; University permanent, \$9.47; University interest, \$132.50; Normal School permanent, \$687.68; Normal School interest, \$52.95; Agricultural College permanent, \$365.49; Agricultural College interest, \$1,281.74; insurance examination, \$80; Stormont Library interest, \$1,474.25; municipal interest, \$2,672.84; State twine plant revolving fund, \$121,448.68.

The bonded indebtedness of all municipalities in Kansas, comprising all securities outstanding issued by counties, cities, townships, boards of education, and school district boards, amounted, on June 30, to \$32,614,909. Adding the indebtedness of the State, \$632,000, the total is \$33,246,909.

State Property.—The Auditor's estimate shows the property owned by the State to be worth \$11,168,303. In this amount is included endowment funds of State institutions of learning to the amount of \$901,180. The Capitol building is valued at \$3,000,000; the Executive Mansion at \$35,000 (what it cost); and the new State-House heating plant at \$50,000. All told, the State owns 12,249 acres of land and 39 city lots.

Following is a statement of the property belonging to the various State institutions: State University, \$1,225,000; Emporia Normal, \$570,000; Manhattan Agricultural College, \$1,083,000; Quindaro Industrial School, \$21,500; Penitentiary, \$1,594,500; Hutchinson Reformatory, \$510,595; Dodge City Soldiers' Home, \$108,000; Ellsworth Biekerdyke Home, \$17,250; forestry stations at Dodge City and Ogallah, \$5,415; Peabody silk station (unused), \$2,500; Osawatimie Insane Asylum, \$800,300; Topeka Asylum, \$791,100; Parsons Asylum, \$118,000; Topeka Reform School, \$186,050; Winfield Imbecile Asylum, \$158,900; Beloit Industrial School for Girls, \$115,500; Atchison Orphans' Home, \$183,000; Kansas City Blind School, \$156,250; Olathe Deaf and Dumb School, \$272,965; Fort Hays Experiment Station and Normal School, \$163,688.

The fees from the various departments collected for the fiscal year ending June 30, 1902, were: Oil Inspector, \$19,544; Grain Inspector, \$34,205; Auditor, \$1,464; Secretary of State, \$12,895; Clerk of Supreme Court, \$14,133; Bank Commissioner, \$8,688; stenographers, \$2,715; Live Stock Sanitary Commission, \$4,260; Normal School, \$5,469; charter fees, \$40,390; fees for examining insurance companies, \$2,263; 2-per-cent. tax collected by State Superintendent of Insurance from insurance companies for distribution among the fire departments of the State, \$123,625.

For the expenses of 1902 the last Legislature appropriated \$2,624,905.96. The expenditures were \$2,258,593.61, leaving a balance of \$366,312.35.

There was turned back into the general fund \$88,559.38 of the appropriation made for the completion of the State-House. The Adjutant-General turned back \$21,292.40. The Agricultural College had a balance of \$17,569.39 and the Penitentiary \$38,000.

Banks.—The statement called for at the close of business on Nov. 25, 1902, showed that there were doing business in Kansas 130 national and 477 State and private banks. The total deposits in all banks were \$82,480,515.61; total loans and discounts, \$67,709,842.05; total overdrafts, \$1,045,-

033.45. The individual deposits in the national banks aggregate \$36,557,008.01; in the State banks, \$39,541,407.80. While there are more than three times as many State as national banks, the capital stock of the former aggregates but \$7,751,000, compared with \$9,235,500 for the latter. As to surplus funds the State banks have \$1,769,701.86; the national, \$1,675,958.56. It was expected that the November statement would show a decrease in deposits over the statement of the preceding September, but there was an increase in the State banks amounting to \$75,885.61, and in the national banks \$186,576.99. In the year 65 State banks were incorporated, and 10 national banks began business. The report of the Bank Commissioner shows that 85 State and 13 private banks have an unimpaired surplus equal to or greater than 50 per cent. of their capital. With but few exceptions these are in small towns, with good agricultural surroundings, their capital ranging from \$5,000 to \$50,000. There were no bank failures in 1902.

Insurance.—On Dec. 20, 1902, there were authorized to do business in Kansas 209 insurance companies: 70 life, 42 fire, 21 casualty, 20 mutual, 56 fraternal beneficiary. Four companies retired in the year: 2 fire, 1 mutual, 1 fraternal. Sixteen new ones were admitted: 4 life, 11 fraternal, 1 mutual. The department issued to agents 10,265 licenses. Up to Dec. 20, 1902, the fees collected amounted to \$255,461.95, of which \$132,900 went to the general fund and \$22,561.95 to the fund for distribution among the fire departments of the State, this fund being raised by a tax on the companies doing business in the State. The Insurance Department nets the treasury more than any other department of State work.

Education.—Kansas has a school population of 506,820 between the ages of five and twenty-one; total enrolment, 389,272. There are 9,106 schoolhouses and 11,709 teachers. The value of all school property is \$18,603,324. The amount expended for education in 1902 was \$6,171,205. Of this amount, \$4,804,562.55 represents the total expense of the public schools. There was collected for the public schools for the year \$5,505,240.11, leaving a balance of \$700,677.56. The permanent school fund amounts to \$7,500,000, and the interest of this amount is distributed semi-annually. The permanent fund of the State University is about \$145,000, and the yearly interest amounts to \$7,500. The State Normal school has a fund of \$200,000, the yearly interest amounting to \$10,000. The fund of the State Agricultural College aggregates \$500,000, and the interest is \$26,500. These funds are increasing yearly as the result of the sale of land held in trust by the State for the schools. More than 500,000 acres of school land remain unsold. Compromises were effected with four of the far western counties whose delinquent bonds are held in the permanent school fund. A portion of the interest was remitted, and the rate lowered. The demand for school land is increasing. The Auditor's records show that in 1902 the land sales aggregated \$178,427, and most of it was for the permanent school fund. The rentals for unsold school land for the year amounted to \$20,790. A detailed statement of money paid out for education for the past year shows: Public schools, \$4,804,562; county high schools, \$60,763; business colleges, \$50,975; shorthand and schools of telegraphy, \$10,685; manual training-schools, \$6,155; medical schools, \$8,000; Soldiers' Orphans' Home, \$4,000; Industrial School for Boys, \$25,732; Swedish Orphans' Home, \$2,000; denominational schools

(academies and colleges), \$495,219; private normals, \$6,500; State educational institutions, \$314,432; federal educational institutions, \$319,000; Young Men's Christian Associations (doing educational work), \$19,645; total, \$6,171,205. A statement of the value of all school property is: Public schools, \$11,669,470; county high schools, \$214,799; business colleges, \$52,000; shorthand and schools of telegraphy, \$25,000; manual training-schools, \$19,296; medical schools, \$60,000; Industrial School for Boys, \$175,800; Industrial School for Girls, \$116,300; denominational schools (academies and colleges), \$2,768,100; private normals, \$50,000; elocution and oratorical, \$2,500; State educational institutions, \$3,176,959; federal institutions, \$282,100; total, \$18,603,324.

There are but \$3,101,899 in school bonds outstanding, of which \$249,740 were issued in the past two years. During the same period 137 new schoolhouses were erected at a cost of \$263,319. There are 8,323 women teachers and 3,386 men. The men receive an average monthly salary of \$44.24; the women, \$36.55. The average length of the school term is 25.15 weeks. The average levy of taxes for school purposes is 11.05 mills. Wyandotte ranks first in value of school property, \$685,000. Haskell is the other extreme, \$2,150. One county (Gove) has no bonded school indebtedness whatever. In proportion to school population Kansas has a school enrolment larger than that of any other State in the Union. There are 25 counties in which women are superintendents of public instruction. Kansas ranks fifth among the States in percentage of persons who can read and write—99.48. Ten years ago it ranked fourth. Seventeen per cent. of the school-children enter high schools; only 6 per cent. go to college.

Kansas has 5 manual training-schools; 12 county high schools; 106 city high schools that prepare students for entrance to the State University; schools of telegraphy, 2; oratory and elocution, 2; music, 10; business colleges, 23 (in addition, some denominational and private schools also support business departments); medical colleges, 2; private normals, 3; denominational schools, 30; colleges and universities, 26; State educational institutions, 5; federal institutions (Indian), 2; Young Men's Christian Association schools, 7.

The State University, at Lawrence, has 80 instructors; enrolment, 1,233; graduates last commencement, 199; value of buildings and apparatus, \$1,000,000; endowment, about \$145,000; total expenditures for current year, \$165,000; tuition, per annum, \$10; for non-residents, \$25; average total annual expense per student, \$133; volumes in library, 37,764. The State Normal School, at Emporia, has 44 instructors; enrolment, 2,034; value of buildings and apparatus, \$248,000; volumes in library, 15,000; expenditures for current year, \$65,965.37. The Western Branch of the State Normal School, at Hays City, founded in 1902, has 3 instructors; enrolment, 70; land owned, 4,100 acres, valued at \$80,000; value of buildings and apparatus, \$6,990.78. The State Agricultural College, at Manhattan, has 63 instructors; enrolment, 1,396; land owned, 323 acres; value of buildings and apparatus, \$484,708; endowment, \$491,181.36; volumes in library, 23,168; pamphlets, 20,000; value, \$53,625; total receipts for year, \$73,747.35; total expenditures, \$73,467.10; the Fort Hays branch experiment station of the Agricultural College, founded in 1901, has 3,700 acres; value of buildings, \$2,000; apparatus, \$500; expenditures for the current year, \$3,000. The first steps in experimental work have been entered upon at this station. Arrange-

ments have been made by the Government to cooperate with the State in experimental irrigation. The Normal School, at Emporia, and the Agricultural College at Manhattan are the largest institutions of their kind in the world.

The Kansas Medical College, in Topeka, has 33 instructors; enrolment, 98; value of buildings and apparatus, \$25,000; expenditures for year, \$4,000.

Washburn College, Topeka, has 25 instructors; enrolment, 238; value of buildings and apparatus, \$198,000; endowment, \$75,000; volumes in library, 10,000; expenditures for year, \$30,107.60. A well-equipped observatory, which will cost about \$75,000, is in process of construction at Washburn.

Western University (industrial school for negro youth), at Kansas City, has 10 instructors; 4 lecturers; enrolment, 103; value of buildings and apparatus, \$40,000; expenditures for year, \$7,000.

Topeka Industrial and Educational Institute (for negro youth) has 9 instructors; 2 lecturers; enrolment, 134; value of buildings and apparatus, \$10,325; expenditures for year, \$3,655.36; supported by donations.

Haskell Indian School, at Lawrence (federal), has 66 instructors; enrolment, 891; land owned, 1,000 acres; value of buildings, \$250,000; expenditures for year, \$152,000.

Traveling Libraries.—The traveling-library department of the State Library contains more than 10,000 books, having doubled the number in the past two years. Libraries to the number of 225 are in actual use. Each library contains 50 books, made up in any manner to conform to the orders sent in. The majority of them are sent out to schools, both in cities and rural districts. In many instances these traveling libraries lead to the establishment of permanent ones in the communities that use them. The heartiest reports in their favor come from country districts and small towns. The State appropriation is \$4,000 annually, \$3,000 of which is to be used in the purchase of new books. Frequent calls are made for these libraries from study clubs.

Charitable Institutions.—Besides the 8 institutions directly under the control of the Board of Trustees of State Charities and Corrections, there are 28 independent charities that receive State aid, the appropriations ranging from \$300 to \$2,000 a year. One, the Kansas Children's Home Society, receives \$2,000; another, the Kansas Industrial and Educational Institute for Colored Youth, receives \$1,500; 15 receive \$700, and the others from \$300 to \$2,000 per year. Reports made by 25 of these concerns show 1,138 inmates and patients, and buildings and property valued at \$498,300.

The Topeka State (insane) Hospital has 1,258 inmates; expenditures for fiscal year ending June 30, 1902, \$169,717.04.

The Osawatomie State (insane) Hospital has inmates, 1,094; officers and employees, 172; expenditures for the fiscal year, \$150,217.99.

The School for the Deaf, at Olathe, has inmates, 250; officers and employees, 42; expenditures for the fiscal year, \$47,790.31.

The School for the Blind, at Kansas City, has inmates, 105; officers and employees, 21; expenditure for the fiscal year, \$22,086.59.

The Soldiers' Orphans' Home, at Atchison, has inmates, 257; officers and employees, 41; expenditures for the fiscal year, \$32,429.20.

The Boys' Industrial (reform) School, at Topeka, has inmates, 198; officers and employees, 35; expenditures for the fiscal year, \$41,887.20.

The Girls' Industrial (reform) School, at Beloit, has inmates, 123; officers and employees, 20; expenditures for the fiscal year, \$25,730.

The School for Feeble-Minded Youth, at Winfield, has inmates, 288; expenditures for the fiscal year, \$48,503.54.

The School for the Feeble-Minded and the asylums at Topeka and Osawatomie are sadly overcrowded, unable to receive patients that are held in private asylums. At Parsons a third asylum is in course of construction. It is being built with especial reference to the care of epileptics. All patients of this kind will be assembled there. Provision was made by the last Legislature for inspection of the poorhouses, jails, and lock-ups of the State by members of the Board of Charities and Corrections. Reports made by the inspectors show that in nearly all instances the inmates of the poorhouses are comfortably clothed and well fed, but in many instances the quarters are poor and the conditions unsanitary in the extreme. Many buildings were found unfit for use, but the law gives the inspectors no power to condemn. Some of the oldest and wealthiest counties in the State have the meanest and worst-kept poorhouses. In a general way, the inspectors report, the jails of the State "are a disgrace to civilization," many of them being both unsanitary and unsafe.

The State Industrial Reformatory (for boys), at Hutchinson, has 301 inmates; 43 officers and employees; total value of all property, \$503,491.22; total expense for the fiscal year, \$90,379.93.

The State Penitentiary has 1,089 inmates; 85 officers and employees; the appropriation for the last fiscal year was \$179,300; balance of appropriation unexpended, \$10.91; total cash earnings, \$50,949.76; cash expenditures over cash receipts, \$128,350.24. Against this excess of cash expended over cash received are set earnings to the amount of \$110,280.11, for which no cash was remitted, leaving a debit balance against the Penitentiary of \$17,070.13. In 1902 the Penitentiary mine furnished the various State institutions with \$70,315.05 worth of coal and \$13,231.84 worth of brick. The Penitentiary plant is furnishing all the brick that will be needed for the new Parsons asylum at a cost of a trifle more than \$2 a thousand. In the warden's judgment it has been demonstrated that the prison binding-twine plant has been successful. In the year the plant turned out 1,101,660 pounds of twine; cash sales amounting to \$106,521.58. In September the plant paid the State the \$112,000 due on the revolving fund, the \$150,000 which was appropriated to start the plant, making said fund whole, the balance then on hand being \$22,713.41, in cash and raw material. Aside from the financial success, the plant is considered as of special value in keeping the price of twine made by the trust below an exorbitant figure.

Less than 6 per cent. of the prisoners released under the terms of the parole law violated the conditions under which they received liberty.

Products.—In 1902 Kansas, in common with other States of the West, suffered considerably from long-continued dry weather. In 1902 the farmers' principal trouble was caused by floods in Kansas streams that were greater than any that had occurred in many years. One result was that the yield of wheat was cut down materially, and the quality of what was raised was injured in great degree, but the yield of corn was the greatest in the State's history.

The yield of winter wheat was 54,323,839 bushels. Its home value is given as \$28,983,943.60.

The area sown, as returned by township assessors in March, was 6,254,474 acres. The area reported sown for next year's crop is 6,020,103 acres, being a decrease of 234,644 acres, or 3.7 per cent. below last year's sowing, which was much the largest ever reported. The shrinkage in spring-wheat sowing, so conspicuous annually of late years, is again strikingly in evidence this year with but 46,293 acres, and a yield of 325,397 bushels, worth \$155,546.57.

The corn area was 6,990,764 acres (which includes the 5,919,590 acres reported by assessors, plus 1,071,174 acres of the plowed-up wheat-land first planted to corn) and yielded 201,367,102 bushels, worth \$78,321,653.26.

The yield of oats was nearly 60 per cent. greater than last year, or 32,966,114 bushels, the largest yield since 1892.

The yield of potatoes, on a conspicuously diminished area, 60,618 acres, was 8,193,632 bushels, the largest and best crop by far since 1899, with a value of \$3,136,856.71.

The net increase in value of this year's agricultural productions over that of 1901 is \$20,614,343; and of live stock \$2,069,680. In two years the increase in value of agricultural productions has been \$28,072,589, and of live stock \$11,649,659. The total increase over the values of three years before amounts to \$68,071,029.

The quantity of old corn in the hands of farmers on March 1 was 7,724,942 bushels. The year before it was 35,121,339 bushels, and two years before 48,252,667 bushels. The quantity of old wheat in farmers' hands March 1 was 9,664,595 bushels. The year previous 7,996,555 bushels, and two years previously 4,824,828 bushels.

Other products of 1902 are: Rye, 3,728,296 bushels, valued at \$1,584,321.31; barley, 2,188,973 bushels, valued at \$801,381.69; buckwheat, 2,770 bushels, valued at \$2,216; castor-beans, 4,400 bushels, valued at \$5,500; cotton, 136,005 pounds, valued at \$9,520.35; flax, 1,427,975 bushels, valued at \$1,713,570; hemp, 10,200 pounds, valued at \$610; tobacco, 15,150 pounds, valued at \$1,515; broom-corn, 16,584,205 pounds, valued at \$495,640.15; millet and Hungarian millet, 400,160 tons, valued at \$1,445,415; sorghum for sirup, 1,792,200 gallons, valued at \$663,114; value of sorghum, Kafir corn, milo maize, and Jerusalem corn for forage, \$12,738,694; tame hay, 803,934 tons, valued at \$4,823,604; prairie hay, 820,637 tons, valued at \$3,282,548; wool-clip, 647,427 pounds, valued at \$97,114.05; cheese, butter, and milk, \$8,412,217.65; poultry and eggs sold, \$5,706,352; animals slaughtered or sold for slaughter, \$51,346,589; horticultural and garden products and wine, \$1,995,550.50; honey and beeswax, 403,155 pounds, valued at \$60,631.20; wood marketed, \$186,150; total value of products, \$215,868,995.

Railroads.—Kansas has 8,753.55 miles of main track, and 1,636.25 miles of sidings. The assessed valuation of all railroad property is \$60,276,206. In 1902 two branches were constructed by the Missouri, Kansas and Texas in the southeastern portion of the State; one from Moran to Iola, the other from Mineral Junction to Joplin, their aggregate length being about 37 miles. The Kansas-Southwestern, a line 59.35 miles long, from Cale Junction to Anthony, became the property of the Santa Fé. The Kansas and Southern, an 8-mile road in Pottawatomie County, connecting Westmoreland with Blaine, on the Leavenworth, Kansas and Western, operated independently, went into the hands of receivers in the fall. The Kansas City, Mexico and Orient, chartered in May, 1900, to build from Kansas City to Port

Stilwell, on the west coast of old Mexico, has in operation a portion of its line, south from Anthony, in Harper County, into Texas. Grading has been done for a portion of its road-bed in Lyon County. In November preparations were begun on an electric line to connect Wichita with McPherson. Surveys had also been completed for an electric line up the valley of the Kaw, connecting Kansas City, Mo., and Topeka. Only 5 of the 105 Kansas counties, and but 7 county seats, are without railroad communications.

National Guard.—The Legislature of 1901 passed a militia law, and the organization of the National Guard of the State is made to conform as closely as possible to the organization of the regular army. The membership of the National Guard is: Officers, 126; enlisted men, 1,232. There are 2 regiments of infantry, and an artillery battalion. All equipment required by the organized militia of the State is supplied by the United States to the amount of \$21,241.82 annually. This equipment remains the property of the United States, the State being held to close accountability. The value of the property for which the State of Kansas is responsible at the close of the fiscal year ending June 30, 1902, is: Ordnance and ordnance stores, \$42,020.72; quartermaster's supplies, \$55,795.61; aggregate, \$97,816.33. The old Napoleon smooth-bore, muzzle-loading field-guns have been discarded, and the artillery is now equipped with 4 3.2-inch breech-loading steel guns. The infantry is still equipped with the Springfield rifle. The militia took part in the military maneuvers conducted by the regular army at Fort Riley in September, the Legislature having made an appropriation for an annual muster, and on being invited to do so, the militia men participated with the regulars in their mimic war. For the maintenance of the National Guard for the fiscal years ending June 30, 1904, and June 30, 1905, the Adjutant-General recommends that the Legislature make an appropriation of \$60,040.

Free Employment Agency.—December closed the twentieth month for the State Free Employment Bureau established by the last Legislature (1901). In that time 4,694 applications for work were received, of which 3,971 were supplied. It is believed by the director that a large number of those reported as not finding places had simply failed to notify the agents, and hence were marked as unprovided for. In the same period there were 1,993 applications for help, of which 966 were furnished. The director assigns as the reason for the failure to provide the help sought the general prosperity that prevailed, making it next to impossible to find, in this or other States, unemployed men or women. Of the 1,027 unsupplied, two-thirds represent applications for farmhands received in September and October, 1902. The wages offered were largely in excess of the ruling rates during previous years, yet men could not be obtained from any source. The total figures, as shown by the director's consolidated report, are: Work and help desired, 6,687; furnished, 4,937; not secured, 1,750. The State employment agent works in connection with the clerks of cities of the first and second class, the clerks receiving no additional remuneration for this work. All books and blanks are furnished by the State, the city furnishing a room in which to do the business. No charges are made to those seeking employment or those in quest of help. For the most part, housemaids and common laborers have benefited in greatest degree by the new law, although it is planned for all classes.

Labor.—Eight hours constitute a day's service in State, county, city, town, and other municipal

work. The matter of seeing that the law is obeyed is in the hands of the State Labor Commissioner. In 1902 he enforced recognition of the law by taking 9 cases into court—the same number as last year. In 55 cases the law was enforced without litigation; about one-fourth of the number that were settled in this manner in the previous year; but the number of men affected by the decisions was about 5,000, against one-fifth that number in the previous year. Several cases this year involved large numbers of men. In several instances the State Labor Commissioner acted as a mediator in disputes arising between workmen and employers, and affected amicable settlements. The year was marked by a great increase in the strength and extension of labor-unions, the number growing from 337 to 398, the new unions and the increases in the old ones making the total number of members greater by 17,000.

Antiliqor Work.—Mrs. Carrie Nation, the erratic Kansas woman who in 1901 began a spectacular campaign against saloons in Kansas, smashing several bars herself, after being released from jail in Topeka in the early part of the year, set out on a lecturing tour, and appeared in the Eastern States. She returned to Topeka in November, and the day after her arrival created a disturbance on the street and was promptly placed in jail, in default of payment of the fine imposed, whereupon she returned to her old plan of writing letters to newspapers, denouncing officials, from President Roosevelt down to the police judge of Topeka, for what she termed their complicity in the liquor traffic. After eleven days in jail she was released, whereupon she immediately began to hold meetings again, and to work on the organization of a new political party, its object being the suppression of the liquor traffic.

An investigation following the November elections, made by the State Temperance Union, revealed that in 36 out of 82 counties reporting the enforcement of the prohibitory law was an issue in the campaign, while in 46 it was not. Announcement was made by the union that an aggressive campaign would be entered into for the purpose of winning the spring municipal elections.

More than ordinary interest was manifested in the situation with regard to the prohibitory law during the year, partly because of the fact that in Topeka, always the head and center of the work for prohibition, a Democrat was seated as mayor after a contest case had been carried to the Supreme Court, and open saloons were allowed to run in the capital city on payment of a monthly "fine"—a plan followed in practically all the larger towns of the State and in many of the smaller ones, but which was new to Topeka.

Legal Decisions.—In the case of *The Atchison, Topeka and Santa Fé Railway Company vs. The Kansas City, Mexico and Orient Railway Company* (not yet reported) the Supreme Court held that "one railway corporation may, under the general statutes of eminent domain, condemn for its right of way real estate belonging to another corporation not in actual and necessary use for railway purposes."

In the *Consolidated Electric Light and Power Company vs. Daniel Healy* (not yet reported) the court said in its syllabus: "It is the law of this State that one who maintains on his premises what is called an 'attractive nuisance,' that is, a place which, though patently dangerous to those of ordinary knowledge and prudence, is so enticing to others excusably lacking in intelli-

gence and caution as to induce them to venture to it, is liable for resulting injuries to the latter; and the same rule applies to one who maintains on his own premises a dangerous instrumentality not in itself attractive, but placed in such immediate proximity to an attractive situation on the premises of another as to form with it a dangerous whole, notwithstanding the attractive situation on the other premises may not be of itself dangerous."

Rural Free Delivery.—At the beginning of the year, 359 rural free-delivery routes were in operation in the State, the carriers' monthly wages amounting to \$15,387.66. By the end of the year there were in operation 652 routes, the December payment of carriers' wages being \$33,000. There were pending 417 applications for new routes, and 84 reports were awaiting the action of the department in December.

Political.—State elections are held in Kansas in the even-numbered years. Six tickets were placed in the field in 1902: Republican, Democratic, Prohibition, Socialist, and Populist. The Democratic forces represented the old-line Democrats and the great majority of the old Populist party. For the first time in Kansas these two organizations went into the campaign under a single ticket heading on the Australian ballot. This was made necessary by the passage of a law by the Legislature of 1901 prohibiting the name of any candidate from appearing under more than one ticket heading on the ballot. It had been the practise for the Democrats and Populists to nominate the same candidates, running them under both "Populist" and "Democratic" headings. Both parties held their conventions as usual, but by agreement there was a division of offices, and it was decided to call the fusion forces "Democrats." This action marked the death of the once dominant Populist party in Kansas. The original Democrats met in convention at Wichita, on May 22, and nominated their portion of the ticket as follows: For Justice of the Supreme Court, two-year term, John C. Cannon; six-year term, J. D. McCleverty; Governor, W. H. Craddock; Secretary of State, Claude Duval; Auditor, J. M. Lewis; Superintendent of Instruction, William Sense. Mr. Sense withdrew and his place was taken by William Stryker. The Democrats passed resolutions in which they reaffirmed faith in the national platform of 1900; denounced trusts, and declared the Republican party was responsible for them; denounced the Republican Legislature for passing the ballot law making it impossible for a candidate to have his name in more than one place on the ballot; favored reform in the tax laws of the State, and such changes in the law as would reach trusts and monopolies and give to municipalities the right to determine as to methods of taxation respecting local matters; declared for the ownership and operation of all public-service functions by and in the control of the people; declared in favor of electing a Legislature free from "railroad domination"; declared in favor of legislation prohibiting railroad passes; approved the position taken by the Democratic members of Congress with respect to the duty of the United States toward the Philippines; condemned the "official action and hypocrisy" of the Republican administration for "cowardly dodging" on the Kansas prohibitory question; declared in favor of resubmitting the prohibitory amendment to a vote of the people.

On June 24 the Populist wing of the party met in Topeka and completed the ticket by nomina-

ting: For Justices of the Supreme Court, six-year terms, Edwin S. Waterbury and Benjamin F. Milton; four-year term, Frank Doster; Lieutenant-Governor, Fred J. Close; Treasurer, David H. Hefebower; Superintendent of Insurance, Dan Hart; Congressmen at Large, Jeremiah D. Botkin. Resolutions were passed in which they reaffirmed the principles of the last national platform; demanded initiative and referendum as necessary to secure needed legislation in the interests of producer and laborer and to correct abuses; demanded the enactment of a primary election law by means of which fair expression of opinion in selecting candidates might be secured; approved the declaration of the Democratic State platform in regard to trusts, taxation of corporations, public ownership, and passes; denounced the Republican party for "subserviency to trusts and combines," and its maintenance of an "unnecessary and burdensome tariff on trust-made goods"; and for its refusal to give promised relief to Cuba by reducing sugar tariff; denounced the ballot law passed by the Republicans; criticized the Republicans for failure to provide a railroad commission elected by popular vote; denounced the extravagance and partizanship of the last Republican Legislature (1901); demanded that railroad property be assessed at as high rate as the property of "natural citizens"; favored graduated taxation, State insurance, and reduction of the extravagant expenditures for public printing by the installation of a plant owned by the State; demanded, on the part of the next Legislature, a rigid examination of the methods followed by the American Book Company in introducing its publications into the schools; deplored the death of President McKinley, and demanded legislation to stamp out the "whole viperous brood of murderous anarchists" in the United States.

On May 28 the Republicans met in State convention in Wichita, and nominated: For Justices, six-year terms, H. F. Mason, J. C. Pollock, A. L. Greene; four-year term, A. H. Ellis (Justice Ellis died on Sept. 25, and his place on the bench was filled by the appointment of R. A. Burch, whose name was also placed on the ticket instead of that of Justice Ellis); two-year term, E. W. Cunningham; Governor, W. J. Bailey; Lieutenant-Governor, D. J. Hanna; Secretary of State, J. R. Burrow; Treasurer, T. T. Kelly; Auditor, Seth G. Wells; Attorney-General, C. C. Coleman; Superintendent of Instruction, Insley L. Dayhoff; Superintendent of Insurance, Charles H. Luling; Congressman at Large, Charles F. Scott. The Republicans passed resolutions in which they reaffirmed adherence to the national platform of 1900; mourned the death of President McKinley and demanded early passage of law for protection of Presidents from similar assaults; heartily approved the administration of President Roosevelt, and pledged him support for nomination in 1904; declared in favor of liberal pensions for soldiers of the civil war, their widows and orphans; condemned the attacks made on the army in the Philippines; approved the efforts of the administration to enforce the Sherman antitrust law; reaffirmed faith in a protective tariff, and recommended such reciprocal relations as would open new markets without interfering with home industries; approved legislation barring Chinese immigration; approved abrogation of the Clayton-Bulwer treaty; and commended Gov. Stanley's administration.

The Prohibitionists nominated: For Governor, F. W. Emerson; Lieutenant-Governor, W. Buffing-

ton; Secretary of State, George Holsinger; Treasurer, E. A. Kennedy; Auditor, S. P. Gould; Attorney-General, F. M. McHale; Superintendent of Insurance, Sena H. Wallace; Superintendent of Instruction, William L. Coryell; Congressman at Large, W. H. Ransom.

The Socialists nominated: For Justices of the Supreme Court, six-year terms, F. L. McDermott, C. R. Mitchell, F. J. Arnold; four-year term, H. H. Benson; two-year term, Charles Gorsuch; Governor, A. S. McAllister; Lieutenant-Governor, John M. Parr; Secretary of State, J. T. Barnes; Treasurer, J. E. Taylor; Auditor, W. J. McMillan; Attorney-General, G. C. Clemens; Superintendent of Instruction, Luella R. Kraybill; Superintendent of Insurance, C. G. Warrington; Congressman at Large, Louis Matignon.

The Populists nominated: For Justice, six-year term, J. C. Tillotson; two-year term, J. Y. Robbins; Governor, James H. Lathrop; Lieutenant-Governor, T. B. Wolfe; Secretary of State, Edward F. Green; Treasurer, P. B. Maxson; Auditor, R. C. Bradshaw; Attorney-General, Maxwell Thorp; Superintendent of Public Instruction, W. G. Riste; Superintendent of Insurance, A. E. Munch. This ticket was placed on the ballot by a few of the old-line Populists who objected to the fusion of their party with Democracy. The head of the ticket received but 635 votes.

The Republicans elected their entire State ticket and all the 8 Congressmen, securing more than two-thirds of the county officers and 95 of the 125 members of the House of Representatives. The Republicans also have 34 of the 40 members of the Senate, which held over. The vote on the heads of the tickets was: For Governor, W. J. Bailey, Republican, 159,242; W. H. Craddock, Democrat, 117,148; F. W. Emerson, Prohibitionist, 6,065; A. S. McAllister, Socialist, 4,078; J. H. Lathrop, Populist, 635. Bailey's plurality, 42,094. Bailey's majority was 31,316, the largest ever given to a candidate for Governor in Kansas.

Compared with the vote for Governor in 1900, these figures show a decrease in the Republican vote of 22,651; a decrease for the Democrats of 47,645; a gain for the Socialists of 2,820; a gain for the Prohibitionists of 3,403. Thousands of ballots were thrown out because of defective markings.

An amendment in the Constitution providing for an increase in the pay of members of the Legislature from \$3 a day for a fifty-day session to \$500 for the session, was voted down.

An amendment making a change in the method of holding elections was carried. By previous action the old system of electing half a set of county officials every autumn was changed, and provision was made for the election of a full set once in two years. By the new amendment county commissioners and township officers are to be elected at the same time with other officials, so that hereafter Kansas will elect all her officers, from Governor down, in November of the even-numbered years.

KENTUCKY, a Southern State, admitted to the Union June 1, 1792; area, 44,400 square miles. The population, according to each decennial census since admission, was 220,955 in 1800; 406,511 in 1810; 564,135 in 1820; 687,917 in 1830; 779,828 in 1840; 982,405 in 1850; 1,155,684 in 1860; 1,321,011 in 1870; 1,648,690 in 1880; 1,858,635 in 1890; and 2,147,174 in 1900. Capital, Frankfort.

Government.—The following were the State officers in 1902: Governor, J. C. W. Beckham; Lieutenant-Governor, L. H. Carter; Secretary of State, C. B. Hill; Treasurer, S. W. Hager; Auditor, G. C. Coulter; Adjutant-General, D. R. Mur-

ray; Attorney-General, R. J. Breckinridge, succeeded April 1 by Clifton J. Pratt; Superintendent of Education, H. V. McChesney; Commissioner of Agriculture, I. B. Nall; Commissioner of Insurance, J. B. Chenaunt; Chairman of the Railroad Commission, C. C. McChord; Prison Commissioners, J. M. Richardson, E. Fennell; State Inspector, H. B. Hines—all Democrats but Pratt; Chief Justice of the Court of Appeals, T. H. Paynter, Democrat; Associate Justices, J. D. White, Democrat; George DuRelle, Republican; A. Rollins Burnam, Republican; B. L. D. Guffy, Republican; J. P. Hobson, Democrat; E. C. O'Rear, Republican; Clerk, S. J. Shackelford, Democrat.

Elections of State officers are held in November of the years next preceding presidential elections. The term of office is four years. The Legislature consists of 38 Senators and 100 Representatives, and meets on the first Tuesday after the first Monday of January in even-numbered years.

Education.—The number of illiterates in the State, according to the census of 1900, was 262,954. The percentage of persons between ten and fourteen years of age who were able to read and write was 91.66. In 1890 it was 85.17. Relatively, Kentucky occupies about the same place on the list as in the former year, having been the thirty-seventh in 1890 and the thirty-sixth in 1900. A table showing the average wages paid to teachers gives \$44.03 as the average for men and \$37.18 for women.

Corrections.—The dormitory at the State School of Reform, near Lexington, was burned shortly after midnight, March 20. This was the only dormitory completed to this time, excepting the one occupied by the girls, three-quarters of a mile away. The colored boys of the manual training building and the colored girls occupy an old house, at one time called the old "farm," purchased by the State.

A serious riot was occasioned in the State Prison at Frankfort, Aug. 20, by the attempt made by 3 desperate murderers to escape. The warden placed a guard of 60 men around the building in which the desperadoes had barricaded themselves, and called on them to surrender. As they refused, he determined to starve them into surrender. After this they made several proposals to treat with the officers, and at length the warden consented to meet them. As they came down-stairs with their hands up, one of them dropped his to his side, as if to draw a weapon, when he was immediately shot by one of the guards; he died at night. Two others of the leaders were wounded.

Industries and Products.—The census report on agriculture, issued in July, shows that the farms of Kentucky June 1, 1900, numbered 234,667, and were valued at \$382,004,890, of which 76 per cent. were in land and improvements other than buildings. The value of the farm implements and machinery was \$15,301,860, and of live stock \$73,739,106. The total value of farm property was \$471,045,856.

With 384,805 acres in tobacco in 1899, the State produced 314,288,050 pounds, valued at \$18,541,982.

The capital invested in the lumber industry in 1900 was \$9,805,404, and the cut was 777,218,000 feet. The forest area is 22,200 square miles.

The coal product in 1901 was 5,487,994 short tons, valued at \$5,208,094.

The value of mill-products in 1900 was \$154,590,069; in 1890 it was \$126,719,857. The capital employed in flour and grist mills was \$4,928,928, and the value of the product \$14,515,161. In saw and planing mills \$9,804,404 was the amount of

capital, and \$13,774,931 the value of the product. In cotton manufacture there were 991 looms, capital of \$1,867,605, and products of the value of \$1,663,712. By the report of 1901-'02, Kentucky had 976 looms in operation with 68,414 spindles running, and consumed 24,372 bales.

Railroads.—The number of miles of railroad built in 1902 was 57; in 1903 148 miles are to be constructed. Four railroads of the State were to be consolidated July 1, to be known as the Lexington and Big Sandy Railway Company. It will operate 1,188½ miles of track.

The Goebel Murder Trials.—James Howard was tried for the second time in January, and was found guilty by the jury; but the penalty was fixed at life imprisonment. At the first trial he was sentenced to death. In December the Court of Appeals reversed the judgment of the Circuit Court and granted him a new trial. A new trial was granted to Caleb Powers also, who was under conviction and sentence of life imprisonment.

Lawlessness.—A negro charged with assaulting a white girl was taken from jail at Springfield, Jan. 11, and hanged by a mob. Another, for the same crime, was hanged by a mob at Nicholasville, Feb. 6. A white man who was in jail at Owensboro charged with the murder of his wife was taken out and hanged in one of the principal streets, July 17. Another was lynched at Russellville in August for assault and murder—his victim a girl sixteen years old, daughter of his former employer, with whom he had had trouble.

On Feb. 12 a battle was reported at Middlesboro between officers and mountaineers. The officers were trying to arrest a saloon-keeper. In the fight the saloon was burned. The number of the dead was supposed to be at least 6. The saloon was notorious for the number of men that had been killed there—53 before the fight in February.

Under the title "Race War," an account was given in March of an occurrence at Madrid Bend in which 2 negroes were shot and 3 were beaten almost to death. Their offense was stealing chickens.

Election Frauds.—Two men were convicted in the federal court at London, in November, of gross frauds committed in Lexington at the November election of 1900; and 3 others were indicted by the London Grand Jury for alleged frauds in Louisville in the election of 1902. They were charged with violation of the federal election laws in regard to registration. During the congressional registration they wilfully prevented and refused to allow a number of colored voters to register because of their Republican affiliations.

Legislative Session.—The General Assembly was in session from Jan. 7 to March 18. N. W. Utley was president *pro tem.* of the Senate, and Gerald Finn was Speaker of the House. There were 26 Democrats in the Senate and 74 in the House; 12 Republicans in the Senate and 26 in the House.

The House adjourned Feb. 3, on motion of a Representative, who said: "Mr. Speaker, I move that this house now adjourn out of respect to the memory of Gov. William Goebel, who died and passed to heaven two years ago to-day."

The Senate also adjourned.

The power of appointment of the legal assistant for the Attorney-General was taken from the Attorney-General and given to the State Auditor. The courts had decided that Clifton J. Pratt, Republican, was the rightful claimant of the office of Attorney-General, then held by R. J. Breckinridge, Democrat. The Auditor announced that he would reappoint Breckinridge's assistant.

The right to vote in school elections in sec-

ond-class cities was taken from women; but they have the right to serve on school boards.

The law regarding the sale of the dower rights of women was amended.

The charters of cities of the second, fourth, and sixth classes were amended. It was provided that the State shall pay its proportion of the cost of improvements of streets in cities of the second class.

A free public library in Louisville was provided for, enabling the city to accept the Carnegie offer of \$200,000. The establishment of libraries in cities of the second class was provided for; and the creation of a free-library commission.

The office of Inspector of Labor, with a salary of \$1,200, was created.

Mine operators are required to pay employees once in two weeks, instead of once a month.

A new revenue law was enacted. The so-called McCain tobacco law was repealed; as was also the law allowing county judges, on petition of citizens, to call out guards to protect property from mobs.

A bill was passed to protect wild birds and their nests. It does not refer to game-birds. A bill was passed, also, to prohibit the docking of horses' tails, but it was vetoed on the ground that it would interfere with the sale of Kentucky horses in the East, and that the statute on cruelty to animals, if enforced, would prevent the practice if it could be shown to be cruel.

A bill requiring the certificates of registration to be issued to voters in cities and towns of Kentucky without presentation of which at the polls on the day of the general election no such voter could exercise his right of suffrage was passed in the lower house and signed there, but was reported to have disappeared without reaching the Senate.

The double-liability clause of the statute on corporations was repealed. The new law relieves all corporations from double liability on its stock save banks, trust companies, and insurance and investment companies.

The life-insurance laws were amended so that policies shall have a cash surrender value only after the third annual premium has been paid. The scope of insurance companies for investments of accumulations was enlarged.

Among the appropriations were \$17,000 annually for the State militia; \$15,000 for improvement at Frankfort penitentiary; \$61,000 for improvements at Eddyville prison; \$10,000 for the Children's Home Society; \$110,000 for the Eastern and Central Asylums, and \$60,000 for the Deaf-Mute School, at Danville; \$2,000 for a monument over Confederate graves at Perryville; \$15,000 annually for the State fair; \$16,000 for the colored normal school at Frankfort, the name of which was changed to the Kentucky Normal and Industrial School.

Other measures passed were: Providing for the maintenance of a Confederate home by the State.

Ceding to the Government jurisdiction over certain land in Boyle County for the establishment of a military park at Perryville.

Providing for the erection of levees along the Ohio river by ceding to the United States Government jurisdiction over certain land.

To suppress "blind tigers."

Making the first Monday in September, Labor Day, a legal holiday.

Making abduction for ransom a felony.

Making attempted rape a felony.

Fixing \$100 as the per capita for inmates of the House of Reform.

Creating a board of examiners for barbers in

cities of the first, second, and third classes, and requiring an examination by the board before a certificate is issued allowing the practise of the trade. The bill has also provisions for the inspection of barber shops for the purpose of preserving sanitary conditions.

Authorizing the legal voters of a county to vote a tax for extension of the common-school term.

Political.—The contest for the minor State offices that arose from the disputed election when Goebel and Taylor were the candidates for Governor was ended this year by the decision that Clifton J. Pratt, the Republican candidate for Attorney-General, had been legally elected. Mr. Pratt, who had been compelled by a former decision to give up the office to R. J. Breckinridge, the Democratic candidate, took possession of the office again April 1.

At the November election the Democratic candidates for Congressmen were elected in all the districts except the Eleventh, where Vincent Boreing, Republican, had 8,013 plurality. Justices Guffy and DuRelle, of the Court of Appeals, were defeated by the Democratic candidates, W. E. Settle and H. S. Parker.

The eligibility of Gov. Beckham, under the State Constitution, to succeed himself has been questioned; but several constitutional lawyers have agreed that he is eligible and he has announced his candidacy for the nomination at the Democratic primary to be held May 9, 1903. The action of the State Committee in calling the primary was strongly opposed by a section of the party, and proceedings were taken to serve an injunction.

LOUISIANA, a Southern State, admitted to the Union April 30, 1812; area, 48,720 square miles. The population, according to each decennial census since admission, was 152,923 in 1820; 215,739 in 1830; 352,411 in 1840; 517,726 in 1850; 708,002 in 1860; 726,915 in 1870; 939,946 in 1880; 1,118,587 in 1890; and 1,381,025 in 1900. Capital, Baton Rouge.

Government.—The following were the State officers in 1902: Governor, William W. Heard; Lieutenant-Governor, Albert Estopinal; Secretary of State, John T. Michel; Attorney-General, Walter Guion; Treasurer, Ledoux E. Smith; Auditor, W. S. Frazee; Superintendent of Education, J. V. Calhoun; Adjutant-General, Allen Jumel; Commissioner of Agriculture and Immigration, Jordan G. Lee; Railroad Commission, C. L. De Fuentes, W. L. Foster, Overton Cade; Registrar of the Land Office, J. M. Smith; Chief Justice of the Supreme Court, Francis T. Nicholls; Associate Justices, Newton C. Blanchard, Joseph A. Breaux, Frank A. Monroe, O. O. Provosty; Clerk, T. McC. Hyman. All are Democrats.

The term of the State officers is four years; they are elected in April of the years of presidential elections. The Legislature meets biennially in May of the even-numbered years; the length of the session is limited to sixty days.

Finances.—The Treasury transactions for 1900-'01 are summarized as follow: The total receipts from all sources, including cash balances on hand and transfers, for 1900, to Dec. 31 of that year, are \$5,549,274.94. The total disbursements for all purposes for the same period, \$4,243,583.31; balance, \$1,305,691.63. The gross receipts for the year 1901 and cash and balances on hand aggregated \$5,188,373.49; the disbursements, \$3,775,567.75. The total receipts in 1902 were \$4,160,067.60, and the balance on hand \$1,392,047.37.

The Treasurer's report says the gross receipts to the general fund for 1900 amounted to \$929,030.82, while the expenses of the general fund for the

same period were \$1,055,717.04, an excess of expenditures over receipts of \$126,686.22. This was promptly met by the balances to the credit of that fund, amounting to \$214,433.80.

In 1901 the receipts of the general fund were \$1,015,499, while the expenses were \$878,964.37, showing an excess of \$136,534.63.

Since the organization of the Pension Board in 1898 there have been 1,871 beneficiaries, and \$175,000 has been paid out.

The total of State assessments for 1902 was \$315,583,468. For 1901 it was \$301,215,222. The official schedule of appraisement of railroads, telegraph, telephone, express companies, etc., in the State, shows a net increased assessment of approximately \$2,000,000. This increase is almost wholly made up of new lines and actual increased values.

Education.—The number of illiterates in the State ten years of age and over was 381,145 in 1900. Of these, 284,028 were negroes and 566 Indians and Chinese. In the percentage of persons from ten to fourteen who were able to read and write, Louisiana stood at the foot of the list of the States, with 67.12 per cent. It is pointed out that there are three facts which explain the proportion of illiteracy in the State: First, the large negro population, densely ignorant; second, the fact that in the southern part of the State a majority of the population speaks a foreign language, and is therefore difficult to reach through the public schools; third, the large proportion of children compared with adults and wage-earners.

In 1901 the total enumeration of school-children in the State was 404,757, and the enrolment in the schools 198,896. The receipts for 1901, including balance on hand, amounted to \$1,396,892, and expenditures \$1,236,647.57. For 1902 it was estimated that the apportionment of 1½ mill for the schools would yield \$475,000, to which are to be added the interest on sixteenth sections, amounting to \$62,836, which, with the proceeds from the poll-tax and the local taxes for schools, aggregate about \$1,500,000. This sum when prorated among the 404,727 children of educable age, gives a per capita of \$3.70. Prorated among the 198,896 children enrolled in the public schools, the per capita would be \$7.40.

The number of pupils in Catholic schools is given as 23,398.

The Peabody Normal School, at Alexandria, reported 445 pupils in June, 1901.

The roll of the State University shows 420 students in 1901-'02, against 179 in 1891-'92, with a graduating class of 34, against 8 ten years before.

The State Normal School at Natchitoches, the State industrial schools at Ruston and at Lafayette, the Louisiana State University and Agricultural and Mechanical College at Baton Rouge, the Southern University at New Orleans, the Institute for the Deaf-Mutes and for the Blind at Baton Rouge, are maintained by the State, save the State University, at Baton Rouge, which is maintained by the State and the United States jointly. Tulane University, at New Orleans, is liberally aided by the State by means of the exemption of its rent-bearing property from taxation. The Legislature of 1902 appropriated the sum of \$176,900 for new buildings, repairs, additions, equipments, etc., for the Institute for the Blind, the State Normal School, the industrial schools at Ruston and Lafayette, and the State University, at Baton Rouge.

Convicts.—The average distribution of the convicts in 1901 was: Within walls, 105; at Angola, 455; at Hope, 184; at levee camps, 320; total, 1,064. Of the 1,142 at the end of the period 158 were white males, 1 a white female, 944 colored males, and 39 colored females. Only 418

could read and write. The life convicts numbered 240 and those sentenced for ten to twenty years 150. By April, 1902, the number was further increased to 1,210 and by August to 1,270. The gross product of the work of convicts in 1901, on farms, levees, and work within the walls, was \$238,138.20. The net cost of maintenance of prisoners and farms was \$191,354.84.

The Insane.—The number admitted to the State Asylum in 1900-'01 was 486; those discharged as cured, 202; number of deaths, 170. In 1902 there were 1,284. The cost of maintenance is estimated at about \$2 a week.

Building Associations.—The number of these this year was 32; the membership, 20,885; the assets, \$5,943,208.

Railroads.—In 1901 the new railway-track built amounted to 160 miles; in 1902 to 236. The total mileage in 1901 was 2,662; in 1902 it was 2,898. The East Louisiana and the Louisiana Southern were established in 1902.

Industries and Products.—Oil has been found in quantities at Jennings, in Calcasieu Parish, and also at Welsh, in the same parish, and a good flow has been secured near Breaux Bridge, in the parish of St. Martin, or at a point more than 100 miles east of the Beaumont oil-field, and consequently not much more than 100 miles from New Orleans.

In a report on the Texas-Louisiana oil-field by the United States Geological Survey it is said that the apparent consensus of opinion among chemists who have examined the field is that the Gulf coast petroleum is unsuited for the production of illuminating oil, and it is doubtful if it can be made to yield a good lubricating oil on a commercial basis. Its value as a source of asphalt and a gas oil are, as yet, undetermined. The experiments seem to establish both its availability and its economy as a generator of steam.

The cotton-crop of the State in 1901-'02 was given in September as 880,000 bales. There were 5 cotton-mills, with 1,609 looms and 66,552 spindles, consuming 18,017 bales.

At a meeting of citizens interested in the production of sugar, at New Orleans, in January, a protest was adopted against the proposal to remit the duties on sugar brought in from Cuba.

The rice-crop of Louisiana and Texas, in 1901, was estimated at 3,250,000 bags, of which Louisiana probably produced 2,750,000 bags. The estimated production of the two States, 1902, was 3,100,194 bags.

The census bulletin gives the number of farms in 1900 as 115,969; in 1890 it was 69,294. The value of farm property was \$198,536,906 in 1900 and \$110,447,005 in 1890. Of the owners of farms in the census year 36,255 were white and 8,460 were colored. Of the tenants, 18,531 were whites and 48,703 were colored. In 1900, 21.2 per cent. of the total acreage was operated by colored farmers, while less than 10 per cent. was actually owned by them. The average of corn to the acre in 1902, by the preliminary estimate, was 12.5; the average for ten years, 16.4.

The growth in the value of mill-products was from \$57,806,713 in 1890 to \$121,181,683 in 1900.

The leading industry of Louisiana is the manufacture and refining of sugar and molasses. The 384 establishments reported in 1900 gave employment to 6,504 wage-earners, or 15.4 per cent. of the wage-earners employed in the State, and the products were valued at \$47,891,691, or 39.5 per cent. of the total value of the products of the State.

The manufacture of lumber and timber products ranks second in importance, with 432 establish-

ments, 10,171 wage-earners, and products valued at \$17,408,513.

The manufacture of cottonseed oil and cake holds third place among the manufacturing industries of the State. There were 24 establishments in 1900, with 1,317 wage-earners and products valued at \$7,026,452. The refining of cottonseed oil is a branch of the industry recently established in New Orleans.

Lawlessness.—Two negroes were lynched in West Carroll Parish, in January, for the murder of a police juror who attempted to arrest them for stealing from him. Another negro murderer was lynched in Vidalia, March 19. Near Cocoa, in June, a negro was hanged by a mob for criminal assault, and another for the same crime near Homer, Aug. 7.

A street-car strike in New Orleans in October was attended with rioting and bloodshed. The entire National Guard of the State was called to the city.

Legislative Session.—The Legislature was in session from May 12 to July 10. J. Y. Sanders was Speaker of the House.

The nominations of Justices Provosty and Breaux to succeed themselves were confirmed.

A reapportionment act divides the State into 7 congressional districts, the State being entitled to one more Representative by the last census. The legislative districts also were redivided.

A revenue bill passed with the following provisions: Providing for an attorney of the Board of Assessors in New Orleans; depriving the boards of review of assessments of the power of cutting down assessments; providing for the taxation of standing timber owned by a person other than the landowner; providing for the redistribution of the 6-mill tax, which, on an assessment of \$301,000,000, will yield revenues as follow: General fund, 1½ mill, \$451,500; school fund, 1½ mill, \$451,500; interest tax fund, 2 mills, \$602,000; engineer fund, 1 mill, \$301,000. There is an additional provision that a sum equal to one-eighth of 1 mill shall be transferred from the surplus in the general fund to the school fund, which will bring that fund up to \$489,125.

A "merger" bill was passed, affecting New Orleans only, but important in its provisions. It gives to the voters in general the management of the fund for the sewerage and water-supply. About 6,000 taxpayers of the city put up this fund, amounting to about \$14,000,000, and voted that the handling of the money should be put into the care of the Drainage Commission, to which should be added 7 property taxpayers, to be appointed by the mayor.

The bills affecting New Orleans were, besides the merger bill, an appropriation of \$200,000 for a court-house; an act allowing cities to anticipate their revenues for ten years; changing the date of the city election to November, 1904, and every fourth year thereafter; providing for the succession to the mayoralty in case of vacancy; creation of a firemen's pension fund, by using as a nucleus 1 per cent. of the city licenses collected; and the constitutional amendment elsewhere mentioned, enabling the city to fund \$500,000 of certificates invalidated by a court decision.

Other acts were:

For an exhibit of Louisiana's resources at the Louisiana Purchase Exposition, making an appropriation of \$100,000.

Making an appropriation to celebrate the centennial anniversary of the transfer of the territory of Louisiana from France to the United States at New Orleans in December.

To establish an insane asylum for colored per-

sons, and making an appropriation of \$100,000 for it.

To provide substantial artificial limbs for the citizens of the State who lost a limb or limbs in the military service of the Confederate States.

Among the larger appropriations were: Expenses of the General Assembly, \$80,000; State printing, two years, \$70,000; public schools, \$450,000; constructing and repairing levees, \$300,000; interest consolidated bonds, \$435,112; militia, \$29,500; and for maintenance of State institutions, as follows: Institute for the Blind, \$12,000; for the Deaf-Mutes, \$21,600; university, \$15,000; Normal School, \$27,200; Industrial Institute, \$15,000; Southwestern Industrial Institute, \$12,000; Southern University, \$10,000; Asylum for Insane, \$140,000; Charity Hospitals, \$122,000; Lepers' Home, \$10,000; Soldiers' Home, \$17,680; pensions, \$75,000; support of Penitentiary, \$200,000. The general appropriation bill carries a million dollars a year. The special appropriations reached nearly \$500,000.

A bill providing that no history should be used in the schools of the State that did not give credit for the victory at Santiago to Admiral Schley was passed, but was vetoed. A bill to create the office of commissioner of hygiene was vetoed also. A proposal to amend the Constitution so as to allow the Governor to succeed himself was not pressed, as the Governor disapproved of it.

Among important bills that failed was an anti-trust bill and an antilynching bill, giving the Governor power to transfer prisoners and grant change of venue where lynchings are threatened.

A separate street-car law was passed. On a trial for violation of the law it was attacked as unconstitutional, and the judge of the Second New Orleans Criminal Court sustained the demurrer.

Court Decisions.—In June the United States Supreme Court decided that Louisiana or any other State has the right to pass laws excluding bodies of people from going into a city or community which is quarantined.

In a case involving the question whether the wages of a locomotive engineer were exempt from seizure for debt under the provision of law exempting "laborers' wages," the State Supreme Court decided that the exemption could not apply to a master mechanic's wages.

A celebrated case was decided by the State Supreme Court in April. The owner of an orange-grove in Plaquemines Parish had sold to a buyer by contract, in advance, the crops of the years 1899 and 1900 for \$8,000, half of which was paid down and the other half to be due Dec. 1, 1900. The contract said "Purchaser assumes all risks." Within three months after the execution of this contract, and therefore in the same winter, and before the trees had had a chance even to put out the blossoms of the crop of 1899, a frost came that killed the trees, root and branch. Cold weather had been known to destroy the crops of the year, and even to kill the trees half-way down, but never, within the memory of the oldest inhabitant, had the trees been killed entirely, or even so injured as not to produce a crop the following year. In the several histories of Louisiana mention is made of such a killing frost having occurred in 1748, 1768, and 1830. Nothing shows that the parties when they entered into their contract had any knowledge of these events. The plaintiff, the buyer, claimed the return of the \$4,000 he had paid, and the defendant demanded in reconvention the \$4,000 that was payable Dec. 1, 1900. The decision was that the defendant should keep the \$4,000 already paid, and the plaintiff should be released from obligation to pay the remaining

\$4,000. Dissenting opinions were that the loss could not be so divided, that the agreement of the buyer to assume all risks either covered the extraordinary case of the destruction of the trees or covered only the ordinary risks.

Public Works.—Work was begun in the summer on a canal to run 75 miles from Washington, through St. Landry and Acadia Parishes, to the Bayou Nez Piquez, and into Calcasieu Parish. This canal will be 250 feet wide, and there is an ample water-supply at Washington, on a branch of the Atchafalaya and Mississippi rivers. It is proposed to build this canal and equip it with the most modern appliances, sufficient to irrigate from 500,000 to 700,000 acres, which to-day is prairie.

The Good-Intent dry-dock, at Algiers, opposite New Orleans, sank Dec. 27. It was built thirty-five years ago, and cost originally \$38,000, but many thousands have been spent in improvements upon it.

Biologic Station.—A biologic station has been established at the mouth of Calcasieu river, in Cameron Parish. A large building has been erected, and many specimens of the Gulf's rich fauna have been collected.

Alleged Violation of Neutrality.—A flurry of excitement was caused in the spring by the statement of Gen. Pearson, representative of the Boers, that there was at Chalmette a base of supplies and enlistment station for the use of the British in the South African War. The Governor laid the facts before the Government at Washington. As hostilities ceased soon afterward, there was no occasion for further action.

Political.—At the election in November for members of Congress only 26,265 votes were polled, although the number of possible voters in the State is 235,344. In New Orleans, where there are about 40,000 citizens qualified to be voters, only about 16,000 were registered, and not all of these voted. The small number voting is due in part to the effect of the new Constitution in disfranchising a large percentage of otherwise qualified voters, in part to the requirement of a poll-tax payment of \$1 as a prerequisite for voting, and in part to the fact that there is practically but one party, there is little interest in elections. The 7 members of Congress are all Democrats.

Six constitutional amendments were submitted, 4 of which were carried. They are: 1, to make valid certain contracts for works of public improvement in New Orleans; 2, relating to the payment of judicial expenses; 3, creating a special board of appraisers; 4, changing the specifications of property exempt from taxation. The exemptions include church, school, and library property, household property to the value of \$500, mining and certain manufacturing property for ten years; certain exemptions to railroads hereafter built and completed before 1904, and property used by the National Guard for military purposes.

The 2 amendments that were defeated were: 1, The repeal of the poll-tax payment as a requisite for voting; 2, changes in the judiciary system, creating more judgeships, and providing that only cases involving \$5,000 or more can be carried to the Supreme Court. The limit remains \$2,000.

Reports of registered voters and poll-taxes paid appear to give proof of the claim that the poll-tax requirement has not operated to disfranchise negroes, those registered having as a rule paid the tax, while many white citizens have refused or neglected to pay it. The Secretary of State gives figures showing that in 10 parishes where there were 11,095 white voters 21,951 poll-taxes were paid in 1900.

MAINE, a New England State, admitted to the Union March 15, 1820; area, 33,040 square miles. The population, according to each decennial census since admission, was 298,268 in 1820; 399,455 in 1830; 501,793 in 1840; 583,169 in 1850; 628,278 in 1860; 626,915 in 1870; 648,936 in 1880; 661,086 in 1890; and 694,466 in 1900. Capital, Augusta.

Government.—The following were the State officers in 1902: Governor, John F. Hill; Secretary of State, Byron Boyd; Treasurer, Oramandal Smith; Attorney-General, George M. Seiders; Superintendent of Education, W. W. Stetson; Adjutant-General, Augustus B. Farnham; Commissioner of Labor, Samuel W. Matthews; Bank Examiner, F. E. Timberlake; Insurance Commissioner, S. W. Carr; Liquor Commissioner, James W. Wakefield, who died June 6 and was succeeded by Justin M. Leavitt; Railroad Commissioners, Joseph B. Peaks, B. F. Chadbourne, Parker Spofford; Assessors, George Pottle, Otis Hayford, F. M. Simpson; Librarian, Leonard D. Carver; Pension Agent, E. C. Milliken; Commissioner of Agriculture, Augustus W. Gilman; Land Agent and Forest Commissioner, Edgar E. Ring; Superintendent of Buildings, E. C. Stevens; Registrar of Vital Statistics, A. G. Young; Steamboat Inspectors, Horace Atwood, J. M. Taylor; Chairman of Commission of Inland Fisheries and Game, L. T. Carleton; Chief Justice of the Supreme Court, Andrew P. Wiswell; Associate Justices, Lucilius A. Emery, W. P. Whitehouse, Sewall C. Strout, Albert R. Savage, Frederick A. Powers, Henry C. Peabody, and Albert M. Spear, the last named succeeding William H. Fogler, who died in February; Clerk, W. S. Choate. All are Republicans except Justice Strout.

The term of the State officers is two years. The election takes place on the second Monday in September of even-numbered years. The Legislature meets biennially the first Wednesday in January in the odd-numbered years; the session is not limited.

Finances.—The Treasurer's report for 1901 was rendered in February. The total receipts for the year amounted to \$2,392,022.86, which, with the cash on hand at the beginning of the year, \$198,879.01, makes the sum of \$2,590,901.87 to be accounted for.

The total expenditures for the year amounted to \$2,293,064.70, leaving a balance on hand Dec. 31, 1901, of \$297,837.17, or the sum of \$98,958.16 more than was on hand at the beginning of the year 1901.

The bonded debt amounts to \$2,053,000; the temporary loans to \$250,000; the trust funds, upon which interest is paid, to \$794,002.

The State has liabilities amounting to \$177,894.08, upon which no interest is paid, being deposits of insurance companies. Other liabilities amount to \$856,191, and \$38,726.13 is due counties for county taxes paid, making the total liabilities of the State \$4,169,813.25.

The income from the organization of new corporations and the increase of capital stock of old ones in 1901 was \$56,775. For the first ten months of 1902 it was \$75,095.

The taxes on savings-banks amounted to \$500,470.92 in 1901, and \$537,720.51 in 1902. The tax on loan associations was \$214.43 in 1901 and \$262.47 in 1902. The taxes on railroads in 1901 amounted to \$291,860; the increase in 1902 was about \$35,000. Other receipts were: Trust and banking companies, \$21,385; sleeping and palace cars, \$592.36; telegraph, telephone, and express companies, \$25,186.23; insurance companies, taxes and fees, \$89,603.28; collateral inheritances, \$38,

951.41; public lands, income, \$13,408.08; shore rents for Penobscot Indians, \$3,474.50; fines and licenses, fish and game, \$8,582.88; from United States, account Spanish War, \$28,263.21. The receipts from dog licenses amounted in 1901 to \$28,980; payments for damage to domestic animals by dogs aggregated \$4,808. The remainder of the fund goes back to the town treasuries.

Valuations.—In 1901 the total valuation of the State, except the wild lands, was \$317,067,894. The wild lands were valued in 1900 at \$19,127,407. The money at interest in the State, so far as the assessors were able to ascertain for taxation for 1902, amounts to \$11,308,877.

The total debt of all the towns is given as approximately \$8,780,100, or 2.7 per cent. of valuation. This does not include the plantations. More than two-thirds of the total is owed by the cities; 132 towns are free from debt, and 12 have a surplus. The real and personal property of the 20 cities as locally assessed amounts to \$141,894,429; the valuation by the State assessors is larger, amounting to about \$150,000,000.

Education.—The number of illiterates of ten years and over in the State, as shown by the census of 1900, was 29,060. By the percentage of those between ten and fourteen who were able to read and write, Maine stood twenty-eighth in the list, with 97.92 per cent.

The apportionment of the school fund and mill tax for 1902 disposed of \$590,280.77, which is an increase of \$28,118.59 over the amount apportioned in 1901. The returns to the superintendent of public schools show the total number of pupils in the State to be 212,965, the towns therefore receiving a fraction over \$2.77 for each pupil. The number reported in 1901 was 211,834, which gave a fraction over \$2.65 per pupil.

Half of the savings-bank tax goes to the schools. The increase of this and of the State valuation has largely added to the school fund in recent years. The cost of providing free textbooks averages about 98 cents to a pupil. The law compels towns to furnish them; the State provides for unincorporated places. The average wages of male teachers in 1901 were \$35.66 a month; of female teachers, \$6.72 a week.

The class of 1902 at the Castine Normal School numbered 50. In 1901 211 free high schools were receiving aid from the State.

The State University, at Bangor, at its thirty-first annual commencement in June, graduated 54 in the academic department, 14 in the law schools, and 3 in the short course in pharmacy. It opened in September with 136 registered.

The centenary of the opening of Bowdoin College was celebrated in June. Every class graduated since 1842 was represented at the celebration, and several earlier classes. The oration was delivered by Hon. Thomas B. Reed, LL. D., class of 1860, and Rev. Samuel V. Cole, D. D., class of 1874, read an original poem.

The catalogue for 1902-'03 shows 36 instructors and 391 students at the institution. Of these students there are 275 in the college proper and 124 in the medical school. This shows a gain of 2 instructors and 50 students over the previous year.

The class of 1875 presented the college with new entrance gates at the centennial celebration. A library building has been given by T. H. Hubbard.

The eighty-third year of Colby University opened in September with an entering class of 72, of whom 32 were women. At Bates College, Lewiston, a new library, the gift of Mr. Coram, was dedicated in October.

The Legislature of 1899 made an appropriation to carry into effect the act establishing free public

libraries. On Oct. 20, 1899, the first library was sent out, and in that year 15 libraries of 50 books each were prepared for circulation. Although only \$1,000 a year is available for the purpose, there were in 1902 80 libraries going the round of the State with 4,000 volumes.

Military.—The number of men subject to military duty in the State in 1901 was 102,268. About 600 men were encamped at Camp Hill for the annual muster in August. The National Guard numbers 698.

In 1901, 2,571 pensioners received State aid. The annual appropriation is \$80,000.

Charities and Corrections.—The report of the General Hospital, covering its thirty-second year's work, shows that for the year ending Sept. 30, 1,267 patients—636 male and 631 female—were admitted. There were 102 under treatment at the close of the year. In the year 75 patients died at the hospital, 741 were discharged as recovered, 297 as relieved, 21 as not relieved, and there were 112 who were examined and advised but not treated. The expenses of the hospital for the year were \$63,805. There is a deficit of about \$7,000. The notable event of the year was the completion of the nurses' home to accommodate 58 nurses. A building wholly for surgical purposes is being constructed, costing about \$33,000.

There were 92 pupils in the School for the Deaf, at Portland, in 1901. The State appropriation is \$17,500 a year.

The Reform School has received 2,395 boys since its first opening; there were 141 Dec. 1, 1901.

Railroads.—In 1901 reports were received from 22 steam and 21 street railways; in 1902 from 21 steam and 18 street railways, consolidations having reduced the number. The gross income per mile of the 21 steam-roads varies from \$512 on the Wiscasset and Quebec to \$13,647 on the Boston and Maine. Only a small part of the former line was in operation up to June 30, 1901; and the gross income of all the lines operated by the company is included in the average of the Boston and Maine.

There are 347.72 miles of street-railway in operation. In the construction and equipment of the street-railways more than \$10,000,000 has been expended, and yet the aggregate bonded indebtedness of the 18 systems in existence is only \$5,723,517.93. The gross earnings for the past year aggregate \$1,449,043.97, and the operating expenses amounted to \$1,035,194.87.

Highways.—The Legislature of 1901 appropriated \$15,000 to aid towns in building and repairing roads. One road is to be designated as the main thoroughfare and to be known as a State road. Towns establishing such roads may secure State aid not exceeding \$100 to each, which will be half the amount expended. The Secretary was notified that year by 41 towns, applicants, but only 5 had complied with the full provisions of the law.

Steamboats.—There are in the inland waters of the State, as nearly as can be ascertained, 195 steam-vessels. The inspectors have issued licenses to 147 masters and pilots and 156 engineers. Seventeen new steamers were added to the service in the year.

Banks.—The report of the State Examiner for 1901 is summarized as follows:

There are 51 savings-banks, with assets of \$74,623,171.03; 18 trust and banking companies, \$15,207,325.55; and 34 loan and building associations, \$2,865,380.98; making 103 institutions, with combined assets of \$92,695,877.56.

For the first half of 1902 the figures were: Fifty-one savings-banks, with total liabilities of \$76,-

582,415.56. The resources include cash on deposit of \$977,618.87 and cash on hand of \$225,289.38. The trust and banking companies are 18, with total liabilities of \$16,528,146.79, and among the resources is a total cash account of \$348,593.39.

Insurance.—The fire-insurance companies doing business in the State in 1901 were reported as follow. Risks written, \$138,543,163.19; amount paid in premiums, \$1,840,632.84; losses incurred, \$1,298,174.73; losses paid, \$1,294,849.

The business done by the marine insurance companies was as follows: Risks written, \$36,806,312.39; amount paid in premiums, \$397,555.61; losses incurred, \$203,708.38; losses paid, \$201,629.09.

The total of risks written by the miscellaneous companies was \$50,793,013.22, against \$41,853,102.24 in 1900. The total of losses paid was \$86,764.99, while in 1900 the losses paid amounted to \$68,695.44.

Four assessment companies are doing business in Maine. These totals are as follow: Policies, 1,809; amount, \$1,480,836; premiums received, \$52,338.59; claims paid, \$26,994.37.

Policies in force Dec. 31, 1901, numbered 3,220, against 3,172 in 1900. The amount of these policies was \$4,773,561. In 1900 the amount was \$6,662,675.

The total loss to buildings amounted to \$1,116,582; to contents, \$1,053,442.

The commissioner says the payments made by companies of other States and countries were greater than in any other single year; and the ratio of payments to premiums received, 70.35 per cent., was greater than in any year since 1886, when on account of the conflagrations at Farmington and Eastport the companies paid \$102 for every \$100 received. The abnormal loss ratio last year was occasioned by conflagrations at Lisbon Falls and Old Town and by a single fire in the city of Portland, which alone resulted in a property loss of more than \$280,000.

Nineteen companies withdrew from the State this year.

Life-insurance policies to the number of 31,217, amounting to \$15,543,429, were issued this year. In 1900 the figures were 23,686 and \$13,828,064, respectively.

Industries and Products.—The farms of Maine, June 1, 1900, numbered 59,299, and had a value of \$96,502,150. Of this amount, \$47,142,700, or 48.9 per cent., represents the value of buildings, and \$49,359,450, or 51.1 per cent., the value of land and improvements other than buildings. The value of farm implements and machinery was \$3,802,720, and of live stock \$17,106,034. Of the 59,299 farms 56,524 were operated by their owners, 2,030 by cash tenants, and 745 by share tenants.

The number of dairy cows has steadily increased and in 1900 there were 173,592. The importance of this industry is shown by the fact that in 1899 the proprietors of 29.9 per cent. of the farms derived their principal income from dairy produce.

During the last five months of 1900 Aroostook County shipped 2,500,000 bushels of potatoes.

This State leads in the granite industry. There are about 150 granite quarries, of which about one-third are now operated.

In 1901 a new mica-mine was discovered and opened on Hedgehog mountain in Peru.

The reports show a capital of \$122,918,826 invested in 1900 in manufactures and mechanical industries in the 6,702 establishments reporting.

The value of the products is returned at \$127,361,485, to produce which involved an outlay of \$3,171,433 for salaries of 3,329 officials, clerks, etc.;

\$28,527,849 for wages of 75,000 employees; \$7,774,216 for miscellaneous expenses; and \$68,863,408 for materials.

The 10 leading manufacturing industries of the State are, in the order of the value of their products, as follow: Cotton, lumber, wool, paper and pulp, fish canning, flour and grist, foundry products, ship-building, tanning, and the printing and publishing of newspapers. The first four are nearly equal in importance.

The manufacture of cotton goods has long been the leading industry of the State. The 15 establishments reported in 1900 gave employment to 13,723 persons, 18.3 per cent. of the wage-earners of the State, and their products were valued at \$14,631,086, or 11.5 per cent. of the total manufactured products.

There were 838 establishments engaged in the manufacture of lumber and timber products in 1900, the industry second in rank, with 6,834 wage-earners and products valued at \$13,489,401.

In the manufacture of paper and wood pulp Maine ranked third with 35 establishments with 4,851 wage-earners and products valued at \$13,223,275.

The wooded area of the State is given as 23,700 square miles, 79 per cent. of the total land area.

There were 117 establishments engaged in the canning and preserving of fish in 1900, with 5,567 wage-earners, and products valued at \$4,779,733.

Ship-building ranked eighth in 1900, but this year it would doubtless stand much better on the list. There were 115 establishments engaged in wooden ship and boat building in 1900, with 1,369 wage-earners and products valued at \$2,491,765.

Legal Decision.—A decision, affecting thousands, was given by the Supreme Court in December. The act of 1901 requiring hawkers and peddlers to pay a license fee was declared unconstitutional.

New Defenses.—The new defensive works which the Government has allotted Casco Bay will consist when completed of 38 rifled guns. Eighteen of these will be 12-inch, 10 10-inch, and 10 8-inch, to cost for guns \$1,352,164 and for carriages \$546,000. The large disappearing guns at Fort Williams, Portland Head, are the largest in the world. They have a range of 15 miles and fire 5 shots before the first one reaches its destination.

In addition there is constructing a mortar battery to contain 48 12-inch mortars, to cost \$648,000, and their carriages an additional \$336,000. These, with the fortifications at Diamond and Cushings islands, complete a line of defense which would effectually take care of any fleet that any country might send here.

The whole eastern end of Diamond island has recently been acquired by the Government.

Pemaquid.—The ancient fortifications at Pemaquid, known as Fort William Henry, have been conveyed to the State by the Pemaquid Monument Association, and are in the charge of a commission. The foundations of the old fort, which was destroyed by Iberville, have been uncovered and a part of the wall rebuilt from the original materials, corresponding to the plan of the old fort; and it is desired to carry on the work still further, for which the Legislature is asked to make appropriation.

Centennial Anniversaries.—Several towns this year celebrated the one hundredth anniversaries of their incorporation—Waterville, Minot, Brownfield, and Lincolnville. York reached this year the age of two hundred and fifty years.

Bowdoinham.—Half the business portion of this village was destroyed by fire Dec. 14.

Political.—A Governor, members of Congress, and a Legislature were elected in September.

The Republican convention, at Portland, June 11, renominated Gov. Hill and adopted a platform affirming the party principles, approving the policy of the administration, favoring legislation to suppress anarchy, and saying on State affairs: "We fully indorse the strong and able administration of Gov. Hill, under which the Republican pledges of two years ago have been fully and faithfully carried out. As a result of wise legislation, the great corporate interests are bearing a larger portion of the public burdens than ever before in the history of our State. Within a few weeks the last dollar of the temporary loan, incurred largely on account of the war with Spain, will be paid. Along with this good work has gone also a substantial reduction in our permanent debt. All this has been accomplished without any increase in the State tax rate."

At Bangor, June 17, the Democratic convention nominated Samuel W. Gould for Governor and adopted a platform demanding "the immediate abolition of all tariffs upon trust-made articles." "We ask," it said, "why it is that the Maine Congressmen permit the steel trust to charge the ship-builders of Maine \$1.65 per hundred for the same material which they sell to the English builder for 95 cents, thereby crippling one of our State's leading industries."

The Prohibitionists met at Bath, June 4, and nominated James Perigo for Governor.

Charles L. Fox was the candidate of the Socialist party for Governor.

The vote for Governor, Sept. 8, stood: Hill, Republican, 65,839; Gould, Democrat, 38,349; Perigo, Prohibition, 4,376; Fox, Socialist, 1,973. Republicans were elected to Congress in all the 4 districts.

The Legislature will have, on joint ballot, 158 Republicans to 24 Democrats. Three Republican candidates in Lewiston will contest the election of the Democratic candidates.

MARYLAND, a Middle Atlantic State, one of the original thirteen, ratified the Constitution April 28, 1788; area, 12,210 square miles. The population, according to each decennial census, was 317,728 in 1790; 341,548 in 1800; 380,546 in 1810; 407,350 in 1820; 447,040 in 1830; 470,019 in 1840; 583,034 in 1850; 687,049 in 1860; 780,894 in 1870; 934,945 in 1880; 1,042,390 in 1890; and 1,185,044 in 1900. Capital, Annapolis.

Government.—The following were the State officers during the year: Governor, J. Walter Smith; Secretary of State, Wilfred Bateman; Comptroller, Joshua W. Hering; Treasurer, Murray Vandiver; Adjutant-General, John S. Saunders; Attorney-General, Isidor Rayner; Superintendent of Education, M. Bates Stephens; Commissioner of Insurance, Lloyd Wilkinson; Commissioner of Public Lands, E. Stanley Toadvin—all Democrats; Chief Judge of the Court of Appeals, James McSherry; Associate Judges, David Fowler, A. Hunter Boyd, Henry Page, I. Thomas Jones, John B. Briscoe, Samuel D. Schmucker, and James A. Pearce; Clerk, Allan Rutherford—all Democrats except Schmucker and Rutherford, Republicans.

The term of the State officers is four years; they are elected in November of the years preceding the presidential elections, and take office the next January. The sessions of the Legislature are biennial, beginning in January of even-numbered years, and are limited to ninety days.

Johns Hopkins University.—Feb. 22 is observed at the Johns Hopkins University as Commemoration Day. This day in 1902 marked the

silver jubilee of the university and the formal transfer of the presidency of the institution from Dr. Daniel Coit Gilman, who organized the university and directed its destiny from its beginning, to Prof. Ira Remsen, who had been associated with President Gilman on the faculty from the opening of the university. Eighty-three educational institutions had at least one member of their faculty present, most of them being represented by their presidents. The ceremonies extended over three days. During the exercises the announcement was made that the donors to the university of a tract of land in the city estimated to be worth \$1,000,000 had relieved the university of the conditions originally connected with the gift of raising an additional \$1,000,000 in cash. But \$750,000 of the \$1,000,000 had been raised, and as some of the subscriptions had been made conditional upon the raising of the entire \$1,000,000, the friends of the university continued their efforts until June 28, when President Remsen was able to announce that the entire million-dollar fund, though no longer a condition, had been completed.

Landscape architects have been laying out the tract, which contains 151 acres of beautifully wooded lands, and the university has, in accordance with one of the conditions of the gift, conveyed 10 acres to the city for a public park. The trustees will follow the principle that has guided the policy of the university from the beginning and not use any of the principal for buildings.

Commemoration Day was also made notable by the largest gathering of alumni of the university ever assembled, and the presentation to retiring President Gilman of a beautifully engrossed and illustrated address signed by 1,012 alumni. The presentation address was by Dr. Woodrow Wilson, an alumnus of Johns Hopkins, now president of Princeton University.

In his first annual report President Remsen said: "A false impression has been spread abroad in regard to the present condition of the university. It will probably be a surprise to many to learn that the university has no debt. It has had misfortunes, but, by the good management of the trustees and the generous aid of the citizens and of the State, it has always been enabled to meet its obligations. A cautious policy has been necessary, but the caution has been wisely exercised so as to affect as little as possible the members of the staff. For a long period it has not been practicable to increase the salaries of a number of those who are entitled to recognition by virtue of the character of their work. This has been the cause of a good deal of hardship, but this has been in the main without complaint. The loyalty of our staff during the long period of depression is worthy of the highest praise. While the buildings of the university form a striking contrast to the costly collections that so many of the older and some of the younger institutions rejoice in, and while many a visitor has expressed astonishment and disappointment at the first sight of these plain structures, the fact should be emphasized that the equipment of these buildings has never been allowed to deteriorate. The laboratories are, and always have been, supplied with everything needed for the purposes of the work carried on in them. I do not believe any important piece of work, whether in the line of instruction or of research, has ever been allowed to suffer for lack of means. Large sums have been expended from the beginning for the purpose of encouraging research."

Railroads.—The strong desire of the Wabash Railroad interests to secure a line to the Atlantic

seaboard, with tide-water terminals, gave the city of Baltimore its long-looked-for opportunity to dispose of its controlling interest in the Western Maryland Railroad at a reasonable figure. The city had guaranteed the company's bonded indebtedness, and as the road was just beginning to pay its fixed charges, the road's debt to the city had been constantly growing. When it became known that a syndicate representing the Wabash interests had put in a bid for the road competition became brisk. The Reading Railroad and other syndicates also put in bids. The bid of the Wabash syndicate of \$8,751,370.45 was accepted in preference to the higher bids of its competitors, one of which was \$10,001,000. The contract with the Wabash syndicate requires the purchasers to avail themselves of the extensive tide-water franchises of the Western Maryland and build terminals here.

The syndicate also purchased the interest of Washington County in the road upon the same terms upon which it acquired Baltimore city's interests. Since acquiring the Western Maryland the Wabash has bought considerable property along the water-front, and work on the terminals has already been arranged for.

Prior to purchasing the Western Maryland, the Wabash secured control of the West Virginia Central and Pittsburg Railroad. This is to be connected with the Western Maryland, to give the Wabash a transcontinental road.

The annual report of the Baltimore and Ohio Railroad shows remarkable results achieved in the reconstruction of that company, the "cradle of railroads," which a few years ago was bankrupt. The receivers issued enormous blocks of securities to provide for improvements and new equipment. Their equipment purchases aroused opposition from the bondholders and bankers, who misapprehended their acts. Not only were large amounts of securities issued, but the maintenance expenditures of the company were also largely increased. In two years the maintenance of way and maintenance of equipment expenditures rose from \$4,838,000 to \$7,655,000, an increase of almost 55 per cent. In less than five years the Baltimore and Ohio was almost entirely reconstructed, and from a state of absolute bankruptcy it was placed upon a dividend basis. There were issued in the reorganization, for receivers' certificates and reorganization expenses, nearly \$42,000,000 of bonds, \$10,000,000 of convertible debentures, \$24,000,000 preferred stock and \$6,000,000 common stock. About \$60,000,000 in cash was realized from the sale of these securities, of which more than \$50,000,000 was spent for new equipment and improvements to the roadway. The annual report shows gross earnings for the entire system of \$62,215,150. This includes the controlled or affiliated lines, most of which were acquired during the year covered by the report. On the Baltimore and Ohio system proper the gross earnings amounted to \$51,178,000. The net income for the twelve months amounted to \$9,021,000.

Commerce.—Baltimore largely increased its customs receipts in 1902, as the result of an enormous increase in imports; but the exports show a marked decrease. The customs receipts amounted to \$4,699,116.63, an increase of \$2,829,078.63, compared with the receipts of 1898. The value of the exports was \$74,097,708, a decrease of more than \$41,000,000 since 1898. In the five years the cost of collecting the revenue fell from 13 $\frac{3}{4}$ cents to 5 $\frac{1}{4}$ cents on the dollar. The total expense of collecting in 1902 was \$271,239.38, and in 1898 \$250,490.89.

The following is a summary of the collections of internal revenue in 1902, in comparison with 1901: Assessments, penalties, etc., \$120,371.80, decrease \$770,781.21; fermented liquors, \$1,486,601.30, decrease \$444,154.45; distilled spirits, \$2,464,889.32, decrease \$396,921.17; cigars and cigarettes, \$727,808.76, decrease \$65,047.76; snuff, \$225,009.27, decrease \$55,237.84; tobacco, \$765,445.90, decrease \$342,971.34; special taxes, \$194,053.49, decrease \$24,208.72; oleomargarine, \$79,721.32, increase \$9,679.28; adhesive stamps, \$99,729.94, decrease \$499,841.49; renovating butter, \$681.50, increase \$681.50. The collections amounted to \$6,164,312.60, a decrease of \$2,499,434.04, caused principally by the abolishment of the war-revenue taxes. While the collection from fermented liquors, cigars, tobacco, and snuff are less than in the previous year, the actual manufacture and sale of the articles themselves show a substantial increase over the previous year. The decrease in distilled spirits is occasioned by the closing of one of the largest plants.

The grain trade was not satisfactory. The previous year's failure of the corn-crop and the shortage of cars after the last corn-crop was ready for movement to the seaboard most seriously affected the corn-export trade, although the amount of corn exported in December—3,398,851 bushels—was very satisfactory, the quantity exported in the preceding months of the year having been only about 1,000,000 bushels more.

The exports of bituminous coal, foreign, from Baltimore in 1902 were 245,864 tons, against 403,505 tons in 1901.

Industries.—The charter records of the Superior Court show that in 1902 196 corporations, with an aggregate capital stock of \$14,857,400, were formed in Baltimore for business purposes. Of these, 171, with a total capital stock of \$6,073,900, are for manufacturing and trade. The remaining 25, with a total capital stock of \$8,783,500, are building associations and land and loan companies.

In the shirt-making industry of Baltimore, the total product of 1901 was worth about \$7,000,000; the value of the product of 1902 will probably reach \$10,000,000.

In the clothing trade the volume of business exceeded that of any previous year, and the number of employees was correspondingly greater. Fully 25,000 persons are employed in this industry, with steady work at good wages. The output is estimated between \$18,000,000 and \$20,000,000. The receipts of Maryland tobacco in this market in 1902 were 34,662 hogsheads, about 3,000 hogsheads more than in 1901. The increase was partly caused by unusually heavy receipts of the new crop, estimated at 1,800 hogsheads.

Immigration.—The number of alien immigrants that arrived at this port in 1902, on whom the tax of \$1 each was collected, was 47,605, compared with 27,014 in 1901 and 19,158 in 1900. They come from the following countries: Austria-Hungary, 32,435; German Empire, 5,057; Italy, 32; Roumania, 29; Russian Empire, 9,820; England, 110; Turkey in Europe, 63; Ireland and Denmark sent 1 each; Norway, 2; Scotland, 3; West Indies, 9; Serbia, 13; Spain and Switzerland, 15 each. The number of immigrants that settled in Maryland, and the race or people to which they belong, in the year ended Dec. 31, 1902, was: English, 3; Roumanian, 5; German, 793; Hebrew, 632; Russian, 16; Polish, 633; Russniak, 6; Croatian and Slavonian, 42; Slovak, 95; Bohemian, 168; Lithuanian, 71; Magyar, 46; total, 2,510.

Legislative Session.—The regular biennial session of the Legislature began on Jan. 1 and con-

tinued until April 1. The Senate consisted of 17 Democrats and 9 Republicans, and the House of 51 Democrats and 44 Republicans. John Hubner was elected President of the Senate, and Noble Mitchell Speaker of the House. Six hundred and thirty-three bills were passed and several resolutions. One of these was a memorial urging Congress to take action to give recognition to Commodore Winfield Scott Schley as the commander of the American fleet at the battle of Santiago. There was also a joint resolution for a joint committee to adjust the Maryland-Virginia boundary-line, and to decide upon joint legislation for the preservation of the food supply of the Chesapeake Bay. A resolution was also adopted, urging the acquisition by the Government and the enlarging and deepening of the Chesapeake and Delaware Canal. The more important laws that were passed during the session were:

Amending the election law and removing some of its defects. It requires notice to all persons suspected of not being entitled to registration and an abundant opportunity for a hearing, before their names are stricken from the list. It also provides that no person coming into Maryland from another State shall be entitled to vote until one year after his intention to become a citizen of this State, shall, upon his application, have been inscribed in a book kept for the purpose by the Circuit Court clerks in the various counties and by the clerk of the Superior Court of Baltimore city. The law also provides that the names of the various candidates shall be printed on the official ballots in 12-point (pica) type, one-eighth of an inch high and in depth. At the recent elections the names of candidates in some of the counties were printed in a small, antiquated type for the evident purpose of puzzling or misleading voters who had a meager education, the invalidating of the ballot of the negro voter being especially aimed at.

Providing that no room or apartment in any tenement or dwelling-house shall be used except by the immediate members of the family residing therein, which shall be limited to a husband and wife and their children, for the manufacture of any article of clothing, feathers, artificial flowers, cigarettes, or cigars. Before such dwelling can be used for such purposes there must be an inspection by the Chief of the Bureau of Industrial Statistics and a permit issued by him.

A compulsory school-attendance law. A child that is found to be an habitual or incorrigible truant to be committed to a "parental school," to be established in each county and in the city of Baltimore.

For the appointment of a commissioner to codify the incorporation laws of the State and to prepare a general system of incorporation law, to be submitted to the next Legislature.

For the appointment of a tuberculosis commission.

Forbidding the employment of minors under sixteen years of age in handling intoxicating liquors, or in any brewery or bottling establishment where liquors are prepared or offered for sale.

To prevent the desecration of the national flag. It provides that the flag or coat of arms of the United States or any imitation thereof shall not be attached to or imprinted on any goods, wares, or merchandise, or any advertisement of the same.

Providing for a State library commission, to consist of 7 persons, of whom at least 2 shall be women; the State Librarian, Superintendent of Public Instruction, and the librarian of the Enoch Pratt Library to be *ex-officio* members, the others to be appointed biennially by the Governor. Its

duties are to advise all public and free libraries and all committees and persons proposing to establish them as to the best means of selecting and cataloguing books and other details of management; also to organize and conduct traveling libraries.

Placing the primary elections of both parties upon practically the same footing as the general elections.

Authorizing the Mayor and City Council of Baltimore to issue stock to an amount not exceeding \$1,000,000 for enlarging and improving the water service. The ordinance was submitted to the voters at the municipal election, and was ratified by a large majority.

Changing the law for a State board to examine persons desiring to practise medicine in the State. Two State boards are now provided for, one named by the Medical and Chirurgical faculty of the State of Maryland, and the other by the Maryland State Homeopathic Society, which are to examine respectively the candidates of the two schools of medicine. Physicians who have been practising in States which allow Maryland practitioners to practise without taking an examination are to be entitled to practise here.

Prohibiting railroad companies from issuing, selling, or receiving tickets for passage through the city of Baltimore without coupons attached to and from the city, and allowing a stop-over privilege.

Providing a pension fund for teachers who have taught in the public or normal schools twenty-five years and have reached the age of sixty years. In the event of their becoming physically or mentally disabled they are entitled to an annual pension of \$200.

Providing for the issue of bonds to the amount of \$600,000, the proceeds to be used for the erection of an addition to the State-House in Annapolis, for the removal and demolition of the State Library Building and annexes, for construction of a plant to heat all the State buildings, for the completion of the Fifth Maryland Armory, and the construction of an annex to the Maryland House of Correction.

Providing for a State Board of Undertakers, to be appointed biennially by the Governor and to consist of 7 members, of whom 5 shall be undertakers of at least five years' active experience.

Providing for a State Board of Pharmacy, to be composed of 5 persons, to be appointed by the Governor. The law provides that no person shall open or conduct a pharmacy unless such person has received a certificate from the board, and no pharmacy shall at any time be left in charge of any person not a certified pharmacist to compound prescriptions or sell poisonous drugs.

Providing for the creation of a commission to investigate the cause, origin, treatment, prevention, and cure of the disease in horses called cerebro-spinal meningitis.

Making the counterfeiting of any kind of deed, will, promissory note, or document of value of any kind a felony.

For the more complete support of the Maryland Agricultural College, containing the provisions necessary to meet the requirements of the congressional acts known as "the land grant act of 1862," "the Hatch experiment station act of 1887," and "the Merrill act of 1890."

Baltimore.—The city was able to meet every one of its financial obligations in 1902, and on Dec. 31, 1902, had nearly \$200,000 in bank. The city comptroller announced that every department lived within its appropriation for the year, and that there will probably be an unexpected bal-

ance of \$1,500, which will be turned into the sinking fund. Last year the city expended about \$9,703,248.52.

The Fire Department consists of 513 active men, including substitutes. The cost of operation for 1902 was as follows: Salaries, \$374,302.21; expenses, \$103,346.93; salaries and equipment of No. 23 Engine Company, \$18,277.74.

City-Engineer Fendall reports the expenditure of \$173,000 in repairs to cobble and improve streets and \$25,000 on the maintenance of and repairs to the city bridges.

Building-Inspector Preston's report shows that the amount spent for improvements to public buildings for the city was \$428,218.96, while for repairs and rebuilding there was spent \$178,898.

The Street-Cleaning Department expended \$368,925.15, out of a total appropriation of \$369,040.

The collector of water rents and licenses reports the receipt of \$17,055.83 from the sale of dog licenses and \$61,542.62 from the sale of wagon, street-car, telegraph and telephone pole, theatrical, pool, and other licenses. From water rents he collected about \$853,000.

The chief engineer for the Subway Commission reports the construction of 600,000 feet of duct work in the year. Almost the only unfinished work is the connection of the Pratt Street powerhouse and substation of the United Electric Light and Power Company with the subway system.

In 1901, the net cost to the taxpayers on account of the jail, exclusive of salaries, was \$13,716.10, being the lowest in the history of the institution. This record was surpassed in 1902, the net cost for the year being \$10,455.25, a decrease of 24 per cent.

Political.—The Legislature, at its biennial session, elected Arthur Pue Gorman, Democrat, to succeed George L. Wellington in the United States Senate. Mr. Gorman, who was Mr. Wellington's predecessor, will take his seat on March 4, 1903. The Legislature also elected Murray Vandiver to succeed himself as State Treasurer.

At the November elections 6 members of Congress were elected, of whom 4 were Republicans and 2 Democrats. This was a gain of 2 Democrats, the congressional delegation having been solidly Republican.

MASSACHUSETTS, a New England State, one of the original thirteen, ratified the Constitution Feb. 6, 1788; area, 8,315 square miles. The population, according to each decennial census, was 378,787 in 1790; 422,845 in 1800; 472,040 in 1810; 523,159 in 1820; 610,408 in 1830; 737,699 in 1840; 994,514 in 1850; 1,231,066 in 1860; 1,457,351 in 1870; 1,783,085 in 1880; 2,238,943 in 1890; and 2,805,346 in 1900. Capital, Boston.

Government.—The following were the State officers in 1902: Governor, Winthrop Murray Crane; Lieutenant-Governor, John L. Bates; Secretary of State, William M. Olin; Treasurer, Edward S. Bradford; Auditor, Henry E. Turner; Attorney-General, Herbert Parker; Insurance Commissioner, Frederic L. Cutting; Adjutant-General, Samuel Dalton; Savings-Bank Commissioners, Warren E. Locke, James O. Otis; Prison Commission, F. G. Pettigrove, Margaret P. Russell, Henry Parkman, Mary V. O'Callaghan, Arthur H. Wellman; Chief of the Bureau of Labor Statistics, Horace G. Wadhin; Secretary of the Board of Education, Frank A. Hill; Secretary of the Board of Agriculture, James W. Stockwell; Chief Justice of the Supreme Court, Oliver Wendell Holmes, who was appointed in August to the bench of the United States Supreme Court. He was succeeded by Associate Justice Marcus P.

Knowlton, and Henry K. Braley was promoted from the Superior Court bench to fill the vacancy caused by Justice Knowlton's promotion. Other Associate Justices, James M. Morton, John La-throp, James M. Barker, John W. Hammond, and William C. Loring; Clerk, Henry A. Clapp. All are Republicans.

The term of the State officers is one year; they are elected in November. The Legislature meets annually on the first Wednesday in January. The length of the session is not limited.

Finances.—The gross debt of the Commonwealth, actual and contingent, Jan. 1, 1902, was \$77,696,635. Of this amount, \$25,738,223 is represented by loans issued for State purposes exclusively, and \$51,958,412 by loans issued for the benefit of cities and towns. Applicable to the loans issued for strictly State purposes are sinking-funds amounting to \$13,278,169, making the net actual State debt \$12,460,063. For the redemption of the contingent debt there are sinking-funds of \$3,312,853, which makes the net contingent debt \$48,645,558.

JOHN L. BATES,
GOVERNOR OF MASSACHUSETTS.

The Auditor's estimate of the sum needed for the expenditures of 1902 was \$6,376,242.60. The reimbursement of towns for the care of the insane added \$15,000 more to the expenses of the executive department than was needed in 1901. The Treasurer's department called for an increase of \$10,000 for premiums on securities for the Massachusetts school fund, and a decrease of \$1,000 on clerical assistance. For State and military aid \$18,800 more was required; and for the Attorney-General's office \$4,000 more.

In the estimates for 1903 the high prices of fuel and other supplies caused increases; and in addition each department is compelled by the new law to pay for its own printing. The Cattle Bureau asks for \$100,000 for exterminating contagious diseases among animals. Last year the appropriation was \$58,000. The Insurance Commissioner asks \$15,700 for salaries, \$26,025 for extra clerks, \$4,000 for incidentals, and \$4,800 for printing. The Civil-Service Commissioners ask for \$25,550, an increase of \$850 to cover printing. The Tax Commissioner desires \$25,400, with an added sum of \$9,500 for salaries; the Attorney-General \$40,000, as last year, for salaries and contingent expenses; the Harbor and Land Commissioners \$43,200, an increase of \$1,000; the Highway Commission \$34,950 for salaries, traveling expenses, etc. The Fish and Game Commissioners desire \$5,630 for salaries, \$1,550 for travel and incidentals, \$780 for clerical expenses, and \$18,445 for enforcement of game-laws, distribution of fish, etc. The Court of Land Registration asks \$39,000; the Savings-Bank Commissioners the usual amount, with \$5,000 added. The Auditor's estimate is \$20,600, no increase; the Commissioners of War Records \$10,000, as last year; the editor of Province Laws, \$21,200, an increase of \$1,900.

Treasurer Bradford asks for an increase of \$15,000. He says that on April 1 \$1,500,000 Bos-

ton and Albany bonds, a part of the investment, matured and were paid. Other investments in time securities are constantly maturing, so that on Nov. 5 there was \$871,288.43 of the fund in cash, producing only 2 per cent. per annum.

The deputy chief of the district police asks for the fire marshal's department \$21,800, an increase of \$1,000 for traveling expenses and of \$800 for additional stenographer; for the district police proper the chief asks \$104,100, an increase of \$500. Judge Dewey, for the bar examiners, asks \$1,500, as last year; the State Board of Charity \$526,900, an increase of \$15,800.

Education.—The number of illiterates in the State reported by the census of 1900 was 134,043. In the percentage of children from ten to fourteen who were able to read and write Massachusetts stood ninth in the list of States and Territories, with 99.33 per cent. In 1890 it stood second, with 99.17 per cent.

Caroline Hazard succeeds Alice Freeman Palmer (deceased) as member of the State Board of Education.

The enrollment at Harvard for 1902-'03 shows 534 instructors and 4,281 students. The proportion of instructors to students is greater than ever. There are 120 more students than in the year preceding, and 51 more instructors. Counting Radcliffe College and the Summer School, the total number of persons enrolled for instruction in 1902 is 5,206. The Law School shows its usual steady gain in number of students, this year's total being 640. The requirement of a college degree as a qualification for admission to the Medical School, the full force of which is felt this year for the first time, results in a decrease of about 50, 445 men being registered. The Dental School shows an increase, with 112 students. The Graduate School has 316 students, against 312 last year. The Theological School remains as before, and the Bussey Institute, or Agricultural School, registers an increase of one. The catalogue notes the opening of two museums—the geological section of the University Museum and the new Germanic Museum.

Harvard has a new hospital, the Stillman Infirmary, opened in September. It is the gift of James Stillman, of New York, and is as nearly complete and modern as any hospital in the United States.

A gift of \$250,000 from Mrs. Collis P. Huntington in March completes an aggregate of nearly \$3,000,000 for the enlargement and endowment of the Harvard Medical School.

Funds have been collected for a building at Radcliffe to serve as a home for the use during college hours of the day-students who come from the various parts of the city and vicinity. The fund is at present about \$125,000. The house is to be known as the Elizabeth Cary Agassiz Hall.

Tufts College celebrated its fiftieth anniversary in April. There were 903 men and women catalogued in 1901-'02, and 141 degrees were conferred in course in June.

Simmons College, provided for in the will of John Simmons, a Boston merchant who died about forty years ago, leaving for the purpose property now amounting to more than \$2,500,000, was opened in Boston in October with about 120 women as students. It has as yet no permanent home. Four lines of instruction are opened—household economics, secretarial, library, and scientific courses. For entrance a high-school education or its equivalent is required. The secretarial courses, which are now the most popular, give instruction in modern languages, history, stenography, and typewriting.

Banks.—At the beginning of the year there were 186 savings-banks in the State, with 1,593,640 depositors, and deposits aggregating \$560,000,000. The Central National Bank of Boston closed its doors Nov. 14, the Comptroller of the Currency having ordered the Bank Examiner to take charge of its business. The closing is said to be due to excess loans and a lack of quick assets. No dishonesty was charged.

A final dividend was paid in December to the creditors of the Globe National Bank.

Building and Loan Associations.—There are of these 128 in the State, with 74,771 members and assets amounting to \$28,674,207.

Industries and Products.—The value of farms in the State in 1900 was given as \$182,646,704. Only 95 acres were devoted to wheat in 1899; dairying and market gardening have increased in late years, and also the cultivation of fruit.

The wooded area is estimated at 4,200 square miles.

The value of manufactured products in 1900 was about \$1,035,000,000. The value of cotton manufactures, exclusive of cotton small wares, was \$110,478,327. The capital invested was \$155,761,193, and the number of looms 179,280. For cotton small wares the figures were: Capital, \$528,258; value of products, \$646,848; looms, 302.

In the value of woolen manufactures Massachusetts stood first among the States, with a value of \$81,041,537.

In 1901 the number of textile mills added to those of the State was 4, with 134 looms and 30,000 spindles.

Peabody.—The Historical Society of Peabody has erected a monument to the memory of John Proctor, of that place, who was hanged as a wizard on Gallows Hill, Salem, Aug. 19, 1692. Proctor's wife and children were prosecuted at the same time, but escaped death. The monument consists of a boulder bearing a tablet.

Boston.—The number of immigrants to this country through the port of Boston in the year ending July 1, 1902, was 41,462. The greatest number ever admitted in one year into this port was 52,416, in 1882. In the year ending July 1, 1901, the port admitted 29,998.

In December the Dominion Line established direct service with ports on the Mediterranean, and this is held accountable in large measure for the increase of immigration.

By the report of an expert on the municipal finances, it appears that the cost of administration in Boston is greater than that of any other city in this country. The total expenditures per capita exceed those of New York by 18½ per cent., and exceed those of the average of 10 cities by 172 per cent. These 10 cities are Chicago, Philadelphia, St. Louis, Baltimore, Cleveland, Buffalo, Milwaukee, Providence, Indianapolis, and Kansas City. Some reasons are given to show that a part, at least, of this disparity is rather apparent than real. For instance, Boston, unlike many other cities, does not, as a rule, charge the cost of street improvements and other public works wholly on abutting property, but pays for them from the general tax levy. Hence the great cost of streets—\$2.51, compared with 40 cents in the 10 cities named. Again, the cost of ferries and bridges is due to the geographical position of the city. The greater expenditure for charities and that for street cleaning may indicate greater relief and better sanitation, or they may indicate more expensive administration.

At the November election the question of ac-

cepting the "district option bill" was voted upon. The bill, which was rejected by a vote of 45,939 to 35,671, was subject to this referendum, and provided that the voters of the 8 Boston districts should decide independently the question of license for their districts.

Wakefield.—A soldiers' monument, the gift of Mrs. Harriet N. Flint, was dedicated at Wakefield in June.

Rivers and Harbors.—The appropriations made by Congress this year for waters of the State were as follow: For beginning the work on the great new channel of Boston harbor, \$3,600,000; harbor at Fall River, \$156,000; Gloucester, \$302,000; New Bedford, \$37,700; Hyannis and Nantucket, \$35,000; Newburyport, \$30,000; Rockport, \$22,000; Lynn, \$25,000; Beverly, \$10,000; Cohasset, \$21,000; Woods Hole, \$20,000; Plymouth and Provincetown, \$5,000; Manchester, \$5,000; and provisionally \$200,000 for the harbor of refuge at Sandy Bay, Cape Ann. Also \$85,000 for improvements to the Merrimac, Mystic, Malden, Weymouth, Town, and Taunton rivers.

Lawlessness.—Seven men were tried at Plymouth in November on a charge of "white-capping," in having tarred, feathered, and horse-whipped a man at Marion for alleged immorality. The trial, which attracted much attention, ended in a verdict of not guilty.

Legislative Session.—The Legislature this year was made up of 198 Republicans—33 in the Senate and 165 in the House—79 Democrats, of whom 7 were in the Senate, and 2 Social-Democrats, both in the House.

Rufus A. Soule was reelected President of the Senate, and James J. Myers was again chosen Speaker of the House.

The message of the Governor recommended many radical changes in the administration of State departments, and others, which were formulated in bills and many of them passed. Following is a summary of the recommendations: That the powers and duties of the fire marshal be transferred to the district police; the powers and duties of the Cattle Commissioners be transferred to the State Board of Agriculture; the powers and duties of the inspector of gas and gas-meters be transferred to the Board of Gas and Electric Light Commissioners; the powers and duties of the inspector-general of fish be transferred to the Commissioners on Inland Fisheries and Game; the powers and duties of the State assayer of liquors be transferred to the State Board of Health; the powers and duties of the pension agent be transferred to the Commissioners of State Aid; that the number of such commissioners be reduced to one; and that an appeal may be taken from his decision to the Governor and Council; all the State officers be accommodated in the State-House, and none in hired quarters outside; a Board of Publication to be established composed of State officials, to be appointed by the Governor and Council, to serve without additional compensation, to supervise publication of public documents, which have grown too large; the salaries of the Park Commissioners be permanently fixed instead of named each year by the Governor and Council. It was recommended that if legislation is to be passed authorizing the continuation of a new subway in the city of Boston, the act should contain these provisions: First, that the subway shall be owned, controlled, and paid for by the city of Boston; and second, that the act shall not take effect until it has been accepted by a majority of the voters of said city, voting at a special, State, or municipal election. To prevent the ex-

cessive and wasteful consumption of water in the metropolitan district and others, the consumption of water should be the basis for determining the assessment laid upon each city and town; that all street-railway locations granted by local boards be subject to the approval of the Railroad Commission; and that as the general law of 1890 for the abolition of grade-crossings has practically ceased to be operative, its further operation should be secured by an appropriation of \$5,000,000 to be expended at the rate of not more than \$500,000 in any one year, under the direction of the Railroad Commissioners.

An incident of the session was the protest of the two Socialists in the House against the proposal to extend the invitation of the Legislature to Prince Henry of Prussia to meet the General Court in joint convention on the occasion of his formal return of the Governor's call at the State-House on the 6th of March, which was adopted in the Senate by a rising vote without dissent.

Delegates from various labor organizations, estimated to be about 700 strong, appeared before the Committee on Constitutional Amendments to support a petition that amendments to the Constitution may be submitted to the voters of the Commonwealth upon petition of 50,000 legal voters.

The Sunday laws were modified by an act that made the following provision: "The provisions of the preceding section shall not be held to prohibit the manufacture and distribution of steam, gas, or electricity for illuminating, heat, or motive power, nor the distribution of water for fire or domestic purposes, nor the use of the telegraph or the telephone, nor the retail sale of drugs and medicines, nor articles ordered by the prescription of a physician or mechanical appliances used by physicians or surgeons, nor the retail sale of tobacco in any of its forms by licensed innholders, common victualers, druggists, and newsdealers whose stores are open for the sale of newspapers every day in the week, nor the retail sale of ice-cream, soda-water, and confectionery by licensed innholders and druggists, and by such licensed common victualers as are not also licensed to sell intoxicating liquors, and who are authorized to keep open their places of business on the Lord's Day; nor the letting of horses and carriages or of yachts and boats, nor the running of steam ferryboats on established routes, nor the running of street-railway cars, nor the preparation, printing, and publication of newspapers, nor the sale and delivery of newspapers, nor the wholesale or retail sale and delivery of milk, nor the transportation of milk, nor the making of butter and cheese, nor the keeping open of public bath-houses, nor the making or selling by bakers or their employees, before ten o'clock in the morning and between the hours of four o'clock and half-past six o'clock in the evening, of bread or other food usually dealt in by them, nor the carrying on of the business of bootblacks before eleven o'clock in the forenoon."

The Governor was directed to appoint a committee of three persons to examine and consider the State laws in relation to the formation, taxation, and conduct of all corporations, foreign and domestic, except municipal, banking, and public-service corporations, and to determine what legislation, if any, is necessary to make the relations existing between the Commonwealth and corporations more advantageous to it and to the public interest.

An act calling for the appointment of a commission to investigate the methods of supporting the public schools provides that its members

shall be taken from those already in the public service, and that no additional compensation shall be given.

A State board of publication was created in accordance with the recommendation of the message.

The Cattle Commission was abolished, and Austin Peters, for several years its chairman, was appointed chief of the Cattle Bureau of the State Board of Agriculture.

In accordance with the suggestions of the message, the committee recommended these other changes: That the offices of pension agent and State-aid agent be merged in the new office of State Aid Commissioner; that the office of State fire marshal be abolished and its duties given to a division of the State police; that the office of inspector-general of fish be abolished; and that of the inspector of gas-meters be abolished and its duties given to the Gas Commissioners.

A bill respecting banks provided that after July 1, 1904, no incorporated savings-banks shall occupy the same office or offices with a national bank, or any office directly connected by doors or other openings in partitions with the offices occupied by any national bank or other banks of discount. After the same date no president, vice-president, or treasurer of a savings-bank shall hold similar offices in a national bank or any similar institution.

Other enactments were: Making vaccination compulsory; regulating the speed of automobiles and prescribing for their management, so as to prevent accidents; providing that elevators running more than 100 feet a minute must be in charge of persons eighteen years of age or over, and other elevators must be in charge of persons sixteen years of age or over; providing that a married woman under twenty-one years of age may convey lands as if she were of age; providing that the succession tax shall be assessed on the value at the time the right of possession falls; and the value of existing life estates and estates for years is to be deducted; making it "unlawful for any person to advertise in a newspaper circulated in this Commonwealth, or by any other means, to perform or to procure the performance of the marriage ceremony"; authorizing cities and towns to appropriate money for celebrations of greeting to returning sons and daughters and other invited guests, and for addresses and ceremonies of historical interest.

Provision was made for a memorial statue of Gov. Wolcott on the State-House grounds.

In accordance with an act providing for three additional judges for the Superior Court, the Governor appointed Charles A. De Courcy, Robert O. Harris, and Lemuel L. Holmes. William C. Wait was appointed to fill the vacancy caused by the death of Justice John Hopkins.

The Governor vetoed a bill for nearly \$33,000 for Herring river in Harwich, as extravagant and wasteful.

Among the bills defeated was one for abolishing capital punishment, and one for preference of Spanish War veterans.

Requisition for a Criminal.—It was reported in August that the Governor had refused to honor a requisition of the Governor of North Carolina for a negro who was under indictment for arson in that State. It was true that protests were made against delivering up the negro on the ground that he would be lynched; that though the Governor of North Carolina had promised him protection the fact that two negroes had been lynched during his administration, though he had made vigorous attempts to stop

the crime, showed that there was no certainty that he would be able to afford protection. A hearing of the protests was held before the Attorney-General; in the end, the requisition was honored.

Political.—There were 5 tickets in the field for the State election this year—Republican, Democratic, Socialist, Socialist-Labor, and Prohibition.

The Democrats met in convention at Boston, Sept. 17. Following is the ticket named: For Governor, William A. Gaston; Lieutenant-Governor, John C. Crosby; Secretary of State, Willmore B. Stone; Treasurer, Thomas C. Thatcher; Auditor, J. L. Chalifoux; Attorney-General, John J. Flaherty. Some changes were made in the ticket later.

The nominations and the platform, which was adopted after they were made, were a triumph for that part of the party opposed to the Kansas City platform and to Mr. Bryan. There was a minority report from the Committee on Resolutions, offering a platform, which was read by George F. Williams, approving the Kansas City platform and reaffirming the principles advocated by the party in the last two national campaigns. The majority report, which was adopted, made no reference to these. It declared that the supremacy of the State over its corporate creatures, the trusts, must be asserted and maintained; that tariff duties should be reduced to a reasonable revenue basis; and that duties on raw materials, particularly on coal, iron ore, wool, and hides, should be removed; it favors a reciprocity policy and demands reciprocity with Canada; demands the repeal of the tariff duties upon articles whose production is controlled by trusts; condemns the coal operators for refusal to submit differences with employees to arbitration; denounces the Republican Congress for failure to give tariff concessions to Cuba; opposes all forms of Government subsidies, whether on land or on sea; reaffirms opposition to colonial imperialism; and declares that the State, in connection with the city of Boston, should join in the work of harbor improvements.

In Boston, Oct. 3, the Republicans named the following candidates: For Governor, John L. Bates; Lieutenant-Governor, Curtis Guild, Jr.; Secretary of the Commonwealth, William M. Olin; Treasurer and Receiver-General, E. S. Bradford; Auditor of Accounts, Henry E. Turner; Attorney-General, Herbert Parker.

The platform approves the gold standard, and says of trusts: "These combinations of labor and capital, by whatever name they are called, are the natural results of modern economic developments and are entitled to the due protection of the laws so long as they are innocent and law-abiding. Publicity, honest accounting, issuing stock only for its true value, the prohibition of improper devices to break down competition and severe penalties for corrupt interference with elections or with legislation by the use of money or offers of employment will protect the public against injury from large combinations of capital." The Democratic plan of free trade in all products made by trusts is opposed as meaning the greatest possible injury to all the competitors of trusts. The anthracite-coal strike is deplored, but is declared not to be a political question, and should not be used as such. President Roosevelt's efforts toward ending the strike are heartily approved. The platform concludes with a commendation of Gov. Crane's administration.

The candidate for Governor of the Socialists was John C. Chase; of the Socialist-Labor party,

Michael T. Berry; of the Prohibitionists, William H. Partridge. The platform of the Socialist-Labor party denounced the capitalist class and declared that the Republican and Democratic parties are the friends of the capitalistic class, while the Socialist-Democrats are the stool-pigeons of both.

The election was held Nov. 2, and resulted in the success of the Republican ticket. The vote for Governor was: Bates, Republican, 196,276; Gaston, Democrat, 159,156; Chase, Socialist, 33,629; Berry, Socialist-Labor, 6,079; Partridge, Prohibitionist, 3,538.

The Executive Council consists of the following members from the 8 districts of the State: David F. Slade, Arthur A. Maxwell, Edwin R. Hoag, Jeremiah J. McNamara, David I. Robinson, Walter S. Watson, Arthur H. Lowe, Richard W. Irwin.

Republicans were chosen to Congress in all but 4 of the 14 districts; but notice of contest has been served by the Republican candidate in the Ninth District, in Boston.

The surprise of the election was the large Socialist vote, which showed an increase of about 210 per cent. over that of 1901. In Haverhill and Brockton the party was especially strong. The two Representatives in the last Legislature, from Haverhill and Rockland, were reelected, and another Socialist was added by Brockton.

MICHIGAN, a Western State, admitted to the Union Jan. 26, 1837; area, 58,915 square miles. The population, according to each decennial census since admission, was 212,267 in 1840; 397,654 in 1850; 749,113 in 1860; 1,184,059 in 1870; 1,636,937 in 1880; 2,093,889 in 1890; and 2,420,982 in 1900. Capital, Lansing.

Government.—The following were the State officers in 1902: Governor, Aaron T. Bliss; Lieutenant-Governor, Orrin W. Robinson; Secretary of State, Fred M. Warner; Treasurer, Daniel McCoy; Auditor, Perry F. Powers; Attorney-General, Horace M. Oren; Superintendent of Public Instruction, Delos Fall; Commissioner of the State Land Office, E. A. Wildey; Adjutant-General, George H. Brown; Labor Commissioner, Scott Griswold; Bank Commissioner, George L. Maltz; Insurance Commissioner, James V. Barry; Railroad Commissioner, Chase S. Osborne; Food Commissioner, W. E. Snow; Salt Inspector, F. P. Dunwell; Commissioner of Mineral Statistics, T. A. Hanna; President of the State Board of Health, Frank A. Wells; Tax Commission, James C. McLaughlin, A. F. Freeman, William T. Dust, Ira T. Sayre, Graham Pope; Coal-Mine Inspector, Charles Atwood; Game Warden, Grant M. Morse; Secretary of the Board of Charities, L. C. Storrs; Fish Commissioner, Horace W. Davis; Chief Justice of the Supreme Court, Frank A. Hooker; Associate Justices, Joseph B. Moore, Claudius B. Grant, Robert M. Montgomery, and Charles D. Long, who died June 27; his successor is William L. Carpenter; Clerk, Charles C. Hopkins. All are Republicans.

The term of the State officers is two years. They are elected in November of the even-numbered years. The Legislature, consisting of 32 Senators and 100 Representatives, meets biennially in January of the odd-numbered years.

Finances.—By the Auditor's report submitted in December it is shown that the balance at the beginning of the year was \$2,627,523.84; the receipts of the State Treasury from all sources in the year ending June 30 were \$7,079,429.21; the disbursements for all purposes, \$6,253,141.91; the balance at the close of the fiscal year, \$3,453,811.14.

The transactions of the tax division were unusually satisfactory as regards the collection of delinquent revenues. The amount paid into the division was \$692,555,554, against \$407,958.61 the previous year. The local taxes collected amount to \$440,534.80, against \$272,900.62 the year previous.

A total of \$1,892,347.71 in specific taxes was collected from companies, the railroads paying \$1,430,434.62.

The receipts were larger than usual on account of the money received from the General Government on account of the Spanish War and other claims.

The Secretary of State received fees sufficient to pay the entire expenses of that department. A total of \$64,915.42 was received, of which sum \$55,833.61 was franchise fees, \$3,688.65 for recording and filing articles, and \$1,696.43 for charges against building and loan associations.

The Insurance Department received for the year ending June 30, 1902, \$323,027.01.

The Land Commissioner's office received for the year ending June 30, 1902, \$105,261.74.

The outstanding bonded indebtedness on account of Spanish-American War bonds is \$416,300, and the amount of money in the State treasury available for the payment of these bonds is \$473,311.99.

The total tax levy for 1902 was fixed at \$2,669,943.65—more than \$1,000,000 less than that of the year next preceding. The various purposes for which the tax is levied and the amount credited to each are as follow: University, \$397,525; Agricultural College, \$100,000; State Normal College, \$124,491.40; Central Normal School, \$45,000; Northern Normal School, \$27,630; Michigan College of Mines, \$97,875; State Library, \$12,000; Soldiers' Home, \$124,000; Home for the Feeble-Minded and Epileptic, \$85,000; State Public School, \$32,500; School for the Deaf, \$80,500; School for the Blind, \$30,700; Jackson Prison, \$4,000; Industrial School for Boys, \$72,750; Industrial Home for Girls, \$58,750; State Fish Commission, \$31,000; compiling records of Adjutant-General's office, \$1,250; dairy and food department, \$25,000; Michigan Dairymen's Association, \$300; Library Commission, \$900; National Guard, \$120,949.10; Naval Brigade, \$12,104.91; State Board of Health, \$6,500; State Weather Service, \$1,000; Michigan war loan of 1898, \$197,262.50; Michigan Agricultural Society, \$4,500; State Horticultural Society, \$1,500; current expenses of prisons, \$68,000; current expenses of asylums for insane, \$614,318.24; general purposes of State Government, \$500,000.

Education.—The census figures on illiteracy show a total of 80,480 illiterates in the State. In the percentage of persons between ten and fourteen who are able to read and write, Michigan stands tenth in the list, with 99.30 per cent.

Owing to the increased amount of specific taxes collected and placed to the credit of the primary-school fund, the semiannual apportionment of school money this year called for the largest sum ever distributed from the State treasury to the schools. The total is \$1,530,799.20, which is at the rate of \$2.10 for each of 728,952 children of school age.

The enrolment in the Agricultural College in 1901-'02 was 699, the largest in its history.

At the commencement of the University of Michigan, in June, degrees were granted to 777 graduates, the largest number ever given.

The State Board of Registration in Medicine calls attention to the successful operation of the Chandler medical act after an experience of

twenty-seven months. "Previous to Sept. 23, 1899, Michigan was the dumping-ground for so-called graduates of fake and disreputable colleges, over 200 of whom had registered in one county of this State alone. Not only has this law entirely cut off the undesirable future supply, but has caused this class of practitioners already in the State to either abandon the practise or properly qualify themselves."

The State Prison.—The Board of Control of Jackson Prison established a rule in April prohibiting corporal punishment in the institution.

One of the amendments adopted at the November election was to empower the Legislature to enact a law for indeterminate sentences, a law of 1889 to that effect having been found to be unconstitutional.

Railroads.—The total main-line mileage in the State is 8,199.43, an increase of 253.49 over that of the previous year. The commissioner says the statements of monthly earnings indicate an increase of about 9 per cent. over those of last year.

In 1901 there were 162 persons killed and 638 injured. This is the greatest number in the history of the State, with the single exception of 1900, when 254 were killed. Of the number killed last year, 28 were passengers, being 1 passenger for every 525,406 passengers carried.

A total of 82 companies reported to the department for the year. Of these 52 were regular operating companies. All were in first-class financial condition. In addition to paying interest on indebtedness, 8 companies declared dividends.

Under the repeal act of the last Legislature the Michigan Central was required to reduce its passenger fares to 2 cents a mile on its main line, the earnings of the passenger-trains on such line being in excess of \$2,000 a mile of road operated. It was found that the passenger income of the Detroit, Grand Haven, and Milwaukee was in excess of \$2,000 a mile of road operated, and a case is pending in the Wayne Circuit Court to require this company to reduce its passenger rates to 2½ cents a mile.

Articles of association were filed by 15 railroad companies.

A law of the last Legislature changed the system of taxation. Heretofore the railroads have paid a certain percentage on their gross earnings, but under the new system they will pay on the value of their property, like ordinary taxpayers.

The State Tax Commission fixed the valuation of the roads, making a total of about \$208,212,500, while the tax computed upon this valuation is \$2,850,231.22. The amount of tax assessed against the railroads this year under the specific system is \$1,483,906.84.

Banks.—An abstract of reports of the 213 State and 85 national banks and 3 trust companies, Feb. 25, shows increases over the report made Dec. 10, 1901, as follow: Loans, discounts, bonds, mortgages, and securities, \$3,597,986.79; commercial deposits in State banks, \$1,553,037.02; commercial deposits in national banks, \$1,548,108.20; savings deposits in State banks, \$2,093,132.22; total increase in deposits, \$5,194,277.44.

The City Savings-Bank, of Detroit, failed in February. The vice-president was tried on a charge of fraudulently securing from the bank more than \$1,000,000, and was convicted and sentenced to fifteen years' hard labor in prison.

Building and Loan Associations.—The number of these in the State is 63; they have a membership of 31,787, and assets amounting to \$9,386,764. The Attorney-General is endeavoring to exclude from the State certain so-called home-purchasing associations believed to be fraudulent.

Insurance.—A report of the financial condition and business of companies of other States doing business in Michigan in 1901 shows the following totals: Paid-in capital, \$58,642,875; admitted assets, \$312,958,919.52; liabilities, \$155,310,396.51; divisible surplus, \$96,776,816.65; taxes paid in Michigan, \$161,041.27; fire risks written, \$427,572,100; fire premiums received, \$5,367,437; fire losses paid, \$3,159,304; fire losses incurred, \$3,424,991; marine risks written, \$21,304,082; marine premiums received, \$258,077; marine losses paid, \$126,614; marine losses incurred, \$146,152. The per cent. of losses to premiums received was 63, against 62 for the years 1899 and 1900.

The commissioner says: "The fact that during the past eighteen months 24 companies, representing an aggregate capital of \$5,000,000, have retired from Michigan, coupled with the further fact that their places have not been taken by other companies, and that the companies which continue to do business in the State have reduced their lines fully 30 per cent., presents the anomaly in insurance economics of a constantly increasing demand with just as constantly decreasing supply of indemnity."

The commissioner urges amendments to the insurance laws that will relieve double taxation on premiums in case of reinsurance. The number of companies authorized to do business in the State is 146, there being 2 Michigan companies, 36 of foreign countries, and 108 of other States.

Industries and Products.—The farms of the State on June 1, 1900, numbered 203,261, and were valued at \$582,317,710, of which amount 27 per cent. represents the value of buildings, and 73 per cent. the value of the land and improvements other than buildings.

According to statistics compiled by the Department of Agriculture, Michigan is now the leading State in sugar-beet acreage, having a total area this year of 98,000 acres, an increase of 70 per cent. over last year. Statistics of the Sugar-Manufacturers' Association give the following items: The total daily capacity of the 13 Michigan factories is 6,600 tons of beets; the total investment is \$7,700,000; 64,400 acres of beets were harvested; and the crop weighed 597,600 tons. The average value of the ton was \$5.20, making the amount paid to farmers \$3,107,520. The average cost of a ton of beets to the farmer is \$3.70, and the net profit per acre is \$6.30. Freight must be deducted from this profit. The average output of sugar per ton of beets at the Michigan factories is 210 pounds.

In the census year there were 286 butter and cheese factories and creameries in the State, of which 146 were cheese. Michigan stands fifth in cheese production, the value having more than doubled since 1890. In the year 18,378,869 pounds of condensed milk was produced, nearly four times as much as in any other State. The value of all products of the 286 factories was \$3,918,995.

The figures for the manufactures of the State in 1900 are: Number of establishments, 16,806; capital, \$284,047,233, an increase of 8 per cent.; value of products, \$356,387,412, an increase of 23 per cent. There were 162,336 wage-earners, \$66,458,947 of wages, \$25,491,813 of miscellaneous expenses, and \$199,153,711 was the cost of materials used.

Michigan, which was the first among the States in the production of iron ore, is now second to Minnesota. The total production in 1901 was 9,654,067 long tons of iron ore. The coal product in 1901 was 1,040,530 short tons, valued at \$1,543,756. The State is credited with producing gold of the value of \$30,000 and \$48,600 worth of silver.

The wooded area of the State is 38,000 square miles. A forest reserve has been established in Roscommon and Crawford Counties, at the head waters of the principal rivers of the lower peninsula.

Legal Decisions.—The act of the last Legislature increasing the salaries of the State Treasurer, Land Commissioner, and Secretary of State, was declared invalid by the Supreme Court in its denial of a mandamus to compel the Auditor to pay the increase.

The decision against the Illinois antitrust act virtually applies to that of Michigan.

The Sault Canal.—This was opened Oct. 25. Statistics of the work are given in brief as follows: Length of canal, 13,000 feet; time consumed in construction, four years; cost, \$7,000,000; power developed, 60,000 horse-power; average width of canal, 200 feet; width at bottom, 164 feet; width at top, 215 feet; width of intake, 950 feet; depth of water, 23 feet; fall, 20 feet; velocity of current, 4½ miles per hour; volume of flow, per second, 30,000 cubic feet; number of turbines, 320; size of power-house, 1,380 by 125 feet. From an account of the opening celebration the following is taken: "In the military and civic parade in the morning were over 10,000 men, including the great army of men employed in the Clergue works across the river. The afternoon industrial parade showed the various products of the Clergue works in all stages from raw material to the finished article. The farmers of Chippewa County were much in evidence, having in the parade 250 wagons loaded with the produce of their lands. The historical section showed the Soo in all sizes and conditions, from the Indian to the present population, clad in Prince Albert coats and silk hats. This canal is the greatest hydraulic power plant in the world. Starting in the lower arm of Lake Superior, it passes straight through the heart of the city, and by a magnificent true curve debouches into the St. Mary's river a mile below the rapids."

On the American side of the river most of the power is to be devoted to two distinct lines of industry, calcium-carbide and alkali works.

By the invention of a distinguished scientist named Rhodin, a method has been devised for decomposing common salt by electrical current into chloride gas and caustic soda. The American works will employ about 2,000 men. Three hundred tons of salt and about the same quantity of lime will be consumed daily and transformed from a substance worth \$2.50 a ton to products worth \$25 a ton.

The storage-battery plant is the largest of its kind in the world. It has a capacity for the storage of 25,000 electrical horse-power.

Political.—The Republican State Convention, in Detroit, June 26, nominated Gov. Bliss for a second term. The other nominations were: For Lieutenant-Governor, Alexander Maitland; Secretary of State, Fred M. Warner; State Treasurer, Daniel McCoy; Auditor-General, Perry F. Powers; Attorney-General, Charles A. Blair; Commissioner State Land Office, Edwin A. Wildey; Superintendent of Instruction, Delos A. Fall; Members State Board of Education, Patrick H. Kelley, L. L. Wright.

The platform commended the national administration, reaffirmed the principles of the party, and favored reform in primary elections. On the trust question it said: "We realize that large combinations of capital may be necessary, but we desire to express our condemnation of all conspiracies and combinations to restrict business, to create monopolies, to limit production, or control

prices, and we favor such legislation as will effectually restrain and prevent all such abuses. We cordially approve and commend the efforts of President Roosevelt to enforce the laws against illegal combinations in restraint of trade."

A special convention was held in Grand Rapids, Sept. 25, to nominate a candidate to succeed Judge Charles D. Long, of the Supreme Court, who died June 27. William L. Carpenter was nominated. The candidacy of Gen. Russell A. Alger to succeed the late Senator McMillan was approved, and he was appointed by the Governor "to serve until his successor is chosen by the Legislature."

The Democratic Convention met in Detroit, July 30. Following is the ticket: For Governor, George H. Durand; Lieutenant-Governor, John F. Bible; Secretary of State, John Donovan; State Treasurer, W. F. Davidson; Auditor-General, David A. Hammond; Land Commissioner, Arthur F. Watson; Attorney-General, W. F. McKnight; Superintendent Public Instruction, W. N. Ferris; Member State Board of Education, Charles F. Field; Justice of Supreme Court, Benjamin J. Brown.

Later, George H. Durand withdrew on account of failing health, and his brother, L. T. Durand, was chosen to take his place.

The resolutions adopted by the convention demanded the destruction of bossism in Michigan; favored primary election reform; election of the United States Senators by direct vote; adoption of the system called the initiative and referendum; equal taxation and equitable assessment; municipal ownership of all public utilities; and adequate compensation for State employees. It denounced profligate expenditures in the State administration, and demanded that a strong fight be made on the contemplated suit of the Michigan Central against the State on account of the repeal of the charter of the road.

Candidates were named by the Prohibitionist, Socialist, and Social-Labor parties also.

The Republican State ticket was successful throughout. The vote for Governor stood: Bliss, Republican, 211,261; Durand, Democrat, 174,077; Westerman, Prohibition, 11,326; Walter, Socialist, 4,271; Conlin, Social-Labor, 1,264. The other Republican candidates received larger pluralities, Judge Carpenter's being 76,104.

Republicans were chosen to Congress in all the districts except the first, where Alfred Lucking, Democrat, was elected. The Legislature will stand on joint ballot 121 Republicans to 11 Democrats.

Two proposed constitutional amendments were submitted, one relative to the publishing of all the general laws of any session in a newspaper, abolishing the provision for payment; the other, empowering the Legislature to enact a law imposing indeterminate sentences as a punishment for crime, and to provide for the parole and return to prisons of persons imprisoned on such sentences. Both were carried, the former by a majority of 50,596, the latter by 68,027.

MINNESOTA, a Western State, admitted to the Union May 11, 1858; area, 84,287 square miles. The population, according to each decennial census since admission, was 172,023 in 1860; 439,706 in 1870; 780,773 in 1880; 1,301,826 in 1890; and 1,751,394 in 1900. Capital, St. Paul.

Government.—The following were the State officers in 1902, taking office the first Monday in January, 1901: Governor, Samuel R. Van Sant; Lieutenant-Governor, Lyndon A. Smith; Secretary of State, Peter E. Hanson; Auditor, Robert C. Dunn; Treasurer, Julius H. Block; Attorney-

General, Wallace B. Douglas; Commissioner of Insurance, Elmer H. Dearth; Adjutant-General, Elias D. Libbey; Chief Grain Inspector, L. D. Marshall; Commissioner of Labor, John O'Donnell; Public Examiner, Sam T. Johnson; Chief Justice of the Supreme Court, Charles M. Start; Associate Justices, L. W. Collins, John A. Lovely, Calvin L. Brown, Charles L. Lewis; Clerk of the Supreme Court, Darius F. Reese; Railroad and Warehouse Commissioners, Ira B. Mills, Charles F. Staples, and Joseph G. Miller—all Republicans.

The Governor, Lieutenant-Governor, Secretary of State, Auditor, Treasurer, and Attorney-General are elected every two years. The Railroad Commissioners are elected for six years, but the present board, the first elected, was so arranged that one term expires biennially. The Insurance Commissioner, Adjutant-General, Labor Commissioner, and Grain Inspector are appointed by the Governor for two years; the Public Examiner for three years.

The judges of the Supreme and district courts are elected by the people for six years. The clerk of the Supreme Court is elected every four years. The other court officers are appointed by the judges, except the deputy clerk and his assistants, who are appointed by the clerk of the court. State officers are chosen in November of even years. The Legislature convenes in January of odd years, and the session is limited to ninety legislative days.

Finances.—For the fiscal year ending July 31, 1902, the receipts of the State treasury were \$7,506,443.94, and the disbursements \$7,292,950.12, leaving a balance of \$2,212,837.06. The balance July 31, 1901, was \$2,000,343.24.

The State debt was \$1,069,000, having been reduced \$140,000 during the year. It has since been reduced to \$999,000 Dec. 31, 1902. The permanent school and university funds were respectively \$14,316,389.06 and \$1,334,035.55.

The principal classifications of the treasury receipts for the year were: Revenue fund, \$4,051,043.46; permanent school fund, \$1,217,219.13; general school fund, \$1,237,368.45; general university fund, \$373,775.08. The disbursements were: Revenue fund, \$3,898,948.60; permanent school fund, \$1,252,442.01; general school fund, \$1,153,562.46; general university fund, \$402,592.61. The amount of railroad taxes paid was \$1,659,296.94. The total of insurance taxes paid through the State Insurance Commissioner's office was \$216,515.68.

Charities and Corrections.—The new Board of Control, appointed by the Governor, and consisting of William E. Lee, S. W. Leavitt, and C. A. Morey, took charge of charitable and correctional institutions Aug. 1, 1901, and for the first fiscal year reduced the cost to the State \$147,000. The population of these institutions Aug. 1, 1902, was: Insane, 3,792; distributed as follows: Anoka Asylum, 135; Hastings Asylum, 137; St. Peter's Hospital, 981; Fergus Falls Hospital, 1,407; Rochester Hospital, 1,132. The asylums are for chronic cases. School for the Deaf, 254; School for the Blind, 74; School for the Feeble-Minded, 817; State Public School, 248; State Training-School, 326; State Reformatory, 192; State Prison, 553.

Lands.—The influx of settlers from the older and more crowded portions of the United States, which grew to large proportions in 1901, continued throughout 1902, and land values increased in a corresponding degree. The average value of State school lands sold was \$9.78, as compared with \$5.76 the year previous. The full amount

permitted by law, 100,000 acres, was sold. Practically every acre of known mineral land in the State is now leased, and much of this land is held by the State. Prospecting is continuous, and new areas are being added to the mineral values frequently. Some State pine still remains to be sold, and during the year sales of this amounted to \$324,991.60. The stumpage averaged about \$5 per thousand feet. The permanent school fund, which is derived from the sale of State lands and the revenue from timber and mineral leases, amounted July 31, 1902, to \$14,316,389.06, of which \$8,289,230.65 was invested in the bonds of other States and of Minnesota school districts; \$5,680,873 was in outstanding land contracts; and \$346,285.41 was in cash. The permanent university fund amounted to \$1,334,035.55 and the internal improvement fund to \$2,816,996. A new fund derived from the sale of swamp lands allotted to the State institutions amounts to \$298,905.

Products.—In the past year 36 new creameries have been established, making a total of 682. These made 63,726,450 pounds of butter out of 1,217,787,450 pounds of milk, produced by 382,356 cows. The butter output per cow was considerably increased over the year previous. The creameries paid to their 50,839 patrons \$10,052,743.50 in cash, besides 3,988,791 pounds of butter. The total value of the butter product of the State is figured at \$13,909,897.76. There was shipped out of the State 42,525,605 pounds of butter, practically two-thirds of the product.

The chemists of the Dairy and Food Commission made more than 16,000 analyses of food samples, of which about one-fourth were found to be below the standard required by law.

The ore product of the Missabe and Vermilion iron ranges had a phenomenal increase, the total shipments being 13,401,691 tons, against 10,786,983 tons the year previous.

While the wheat acreage decreased from 6,250,000 acres in 1901 to 5,960,000 acres in 1902, the average yield was increased from 12.5 to 13.7 bushels per acre, making the crop of that staple 82,150,000 bushels, as against 78,000,000 in 1901. The decrease in wheat acreage was more than made up by the increase in flax, although figures as to that crop are not systematically gathered.

Education.—There are in the State 141 high schools, and each receives special State aid of \$1,000. The total enrolment in these schools for the year ending July 31, 1902, was 15,410; the number of graduates was 1,877. There are 119 graded schools of not less than four departments, employing 667 teachers. In addition to these there are 92 graded schools of either two or three grades, employing 308 teachers.

In the University of Minnesota there are 3,720 students, including 1,044 women. The students are distributed as follow: College of science, literature, and the arts, 1,179; engineering and mechanic arts, 345; school of mines, 109; agricultural department, 619; law, 504; medical colleges, including pharmacy and dentistry, 551; summer school, 237; graduate students, 176.

The annual resources for current expenses are \$410,000; invested funds, \$1,334,035.55.

Labor.—In the last year this department has been pursuing, in addition to its factory inspection, a special inquiry into the condition of women wage-workers, and has sought to ascertain the causes underlying the aversion of women for housework. This inquiry has included an inquiry of the employers, as well as of the employees, and while it has not been entirely fruitful, is believed to promise some success.

Legislative Session.—The Legislature convened Feb. 4, 1902, in special session, and adjourned March 11, being in session twenty-nine working days. The principal business before it was the new code of tax laws, prepared by a commission appointed at the preceding session. The new code failed of passage.

Political.—The Republican State Convention was held in St. Paul, July 1. The important planks of the platform were these:

Approving the administration of President Roosevelt, including the administration of civil government in the Philippine Islands.

Adhering to the policy of protection.

Favoring the wider extension of markets for the sale of all American products.

Favoring reciprocity with Cuba.

Favoring legislation, national and State, to prevent combinations which stifle competition, limit production, control prices, or unduly increase profits or values.

Favoring the most stringent legislation for the suppression of anarchy.

Our faith in the gold standard has been amply justified by the wonderful strides of American industry and commerce.

The following ticket was nominated: For Governor, Samuel R. Van Sant; Lieutenant-Governor, Ray W. Jones; Secretary of State, Peter E. Hanson; Auditor, Samuel G. Iverson; Treasurer, Julius H. Block; Attorney-General, Wallace B. Douglas; Clerk of the Supreme Court, C. A. Pidgeon; Railroad and Warehouse Commissioner, Charles F. Staples.

The Democratic State Convention was held in Minneapolis, June 25. The principal planks in the platform were:

Demanding independence for the Philippines.

For the enforcement of the laws against trusts and the revoking of the tariff benefits they enjoy.

Favoring the income tax and postal savings-banks.

Opposing government by injunction.

Favoring municipal ownership of public-service corporations.

Favoring the election of Senators by direct vote.

Favoring the eight-hour work day.

The following ticket was nominated: For Governor, Leonard A. Rosing; Lieutenant-Governor, Robert A. Smith; Secretary of State, Spurgeon Odell; Auditor, Albert G. Leick; Attorney-General, Frank D. Larrabee; Treasurer, Joseph L. Meyers (Meyers declined, and the State Central Committee substituted H. L. Shirley); Clerk of the Supreme Court, George P. Jones; Railroad and Warehouse Commissioner, J. M. Bowler.

The Republican ticket was elected, the vote on Governor being: Van Sant, Republican, 155,849; Rosing, Democrat, 99,362; Scanlon, Prohibition, 5,765; Meighen, People's party, 4,821; Van Lear, Socialist Labor, 2,570; Nash, Socialist, 2,521; Van Sant's plurality, 56,487.

MISSISSIPPI, a Southern State, admitted to the Union Dec. 10, 1817; area, 46,810 square miles. The population, according to each decennial census since admission, was 75,448 in 1820; 136,621 in 1830; 375,651 in 1840; 606,526 in 1850; 791,305 in 1860; 827,922 in 1870; 1,131,597 in 1880; 1,289,600 in 1890; and 1,551,270 in 1900. Capital, Jackson.

Government.—The following were the State officers in 1902: Governor, A. H. Longino; Lieutenant-Governor, J. T. Harrison; Secretary of State, Joseph W. Power; Treasurer, George W. Carlisle, who resigned Nov. 1, and was succeeded by Thad. B. Lampton; Auditor, W. Q. Cole; Su-

perintendent of Education, H. L. Whitfield; Attorney-General, Monroe McClurg; Adjutant-General, William Henry; Land Commissioner, E. H. Nall; Revenue Agent, Wirt Adams; Railroad Commission, J. D. McInnis, J. C. Kincannon, A. Q. May; Chief Justice of the Supreme Court, Albert H. Whitfield; Associate Justices, S. H. Terral, S. S. Calhoun; Clerk, Edward W. Brown. All are Democrats.

The term of the State officers is four years; they are chosen in November of the years next preceding those of the presidential elections. The Legislature meets biennially the first Tuesday after the first Monday in January of the even-numbered years. Every second session is a special session, the regular sessions coming quadrennially. The length of a special session is limited to thirty days unless it is extended by the Governor; and only appropriation and revenue bills may be considered unless the Governor introduces other subjects by message.

Finances.—Following is an unofficial statement of the condition of the funds in December: "Indications point to the fact that on Jan. 1, 1903, there will be \$60,000 in cash in the State treasury, after paying all outstanding warrants and all expenses to that date. This will be accomplished, according to Auditor Cole, without any delay anywhere, and without issuing a dollar of the million dollars' worth of bonds authorized for the construction of the new State-House. By Feb. 1 \$750,000 will be received from State taxes, ample to meet the common-school funds and other appropriations to be paid to that date."

In the year \$199,996.50 was paid to 6,680 Confederate pensioners.

The present bonded debt of the State is given as \$2,887,026.

Valuations.—The assessed value of realty this year is \$145,719,108, an increase over 1901 of \$14,403,287; the personal property valuation is \$64,647,897, an increase of \$1,411,421; that of railroads, \$30,622,121, an increase of \$2,326,893. The total, \$240,989,126, shows an increase of \$18,141,601. The increase for three years amounts to \$52,713,217. The number of polls assessed in 1902 was 300,756, an increase of 8,837. "Of the 75 counties of the State, 57 show an increase in valuations, while 18 show a decrease. The most notable increases are from the southeastern part of the State, formerly called 'cow counties,' where the railroads have been followed by sawmills, new towns, and other enterprises."

The Treasurer's Office.—The shortage in the treasury (see Annual Cyclopædia for 1901, p. 722) was made the subject of a legislative investigation, and following is a part of the report: "We find that \$100,000 of the \$107,621.44 that was missing at the time the Governor made his count, in August, 1901, of the money in the State treasury had been loaned in Memphis at the rate of 3 per cent. per annum; said interest, when collected, was to be divided equally among Messrs. F. T. Raiford, Phil A. Rush, and John Armistead. This \$100,000 so loaned had been brought from Memphis before the counting of the money in the State treasury by the Governor on two occasions, one time by John Armistead and the last by F. T. Raiford. We failed to find any trace as to the whereabouts of the \$7,621.44 at the time the Governor and Auditor Cole counted the money in the treasury in August, 1901. We find from the evidence that there were no bonds or security in the State treasury to cover the missing \$107,621.44 at the time of the count made by the Governor; nor was there any evidence as to the whereabouts of said money at that time. We find

that the banks of Jackson, collecting checks and drafts and handling money for the State treasury, placed bonds, collaterals, or securities with said Treasurer covering all amounts so obtained from him."

Indictments were found against the men named. The prosecution of Rush resulted in a mistrial. He will be tried again in 1903, when the other trials are also to occur.

Mr. Carlisle, who was appointed after Mr. Stowers resigned, gave up the office Nov. 1, on the ground that it was too great a responsibility to have the care of such an amount in the treasury.

Education.—By the census report of 1900 there were in the State 351,461 illiterates. In the percentage of children from ten to fourteen years old who are able to read and write Mississippi stands forty-fifth, with 77.62 per cent. The school enumeration shows 630,439 this year, an increase for the biennial period of 40,427. The school term has been lengthened in most of the counties, only 5 at the beginning of this year having but the old four-months' term, others having from five to eight. Ninety towns in the State have organized into separate school districts with terms of nine months.

The enrolment at the Agricultural College for the year ending in June was 604; about 20 received the degree of bachelor of science.

The State University graduated 19 in the academic department and 24 in the department of law.

The Hazelhurst Summer Normal School had an attendance of 79 throughout the term and a total enrolment of nearly 200.

Mississippi College, at Clinton, graduated 20 in May; the East Mississippi Female College, 8.

The Alcorn Agricultural and Mechanical College, for colored students, had an attendance of 478, of whom 60 were girls.

Jefferson Military College, at Natchez, the first literary institute in the Southwest and the first military college endowed by Congress, celebrated its centennial at the commencement, May 30.

The property of Jackson College has been sold to Millsaps College for \$40,000. The latter enrolled 240 students in 1901-'02, and graduated 29 in the several courses.

Charities and Corrections.—The Legislature having refused to make any provision for a soldiers' home, the Sons of Confederate Veterans have taken steps to raise money for the purchase of Beauvoir, near the waters of Mississippi Sound, which is offered for \$10,000. There are 48 Confederate veterans in the various poorhouses and county farms of Mississippi.

The main building of the Institute for the Deaf and Dumb, in Jackson, was burned, March 18, with a loss of \$40,000, partly covered by \$15,000 insurance. At a meeting of the trustees in May it was decided to build 5 cottages and a dining-room and have them ready for opening in the autumn. The opening took place in November, with about 100 pupils.

Charges were made against the warden of the Penitentiary by a member of the Board of Control, in connection with the finances of the institution, but after a hearing they were dismissed with a slight censure for the omission to report the collection of \$91, as required by law. The appraisal of the prison property in March showed \$2,023,000 realty and \$99,617 personalty. The expenses for the first half of 1902 were \$89,004.23, and the receipts \$190,436.72.

Banks.—According to the report of the Comptroller of the Currency, the national banks in Mississippi make a good showing. Their loans and

discounts are \$4,632,556.66; United States bonds to secure circulation, \$1,012,500; United States bonds to secure United States deposits, \$250,000; money in reserve, gold coin, \$59,390.50; gold treasury certificates, \$25,650; silver dollars, \$99,202; silver treasury certificates, \$29,117; silver fractional currency, \$39,119.55; legal-tender notes, \$374,128; capital stock paid in, \$1,460,910; surplus, \$549,000; undivided profits, \$303,641.60; individual deposits, \$5,552,489.20; average reserve held, 20.69 per cent.

The Auditor, in his report of the State banks in July, says that this is the best showing made during his term. The number of banks reporting on July 15, 1901, was 117, compared with 129 for July 5, 1902. These new institutions have capital stock ranging from \$25,000 to \$100,000. The total resources of the 129 banks is \$26,544,946.83, compared with \$23,948,412.12 for the 117 banks. Loans and discounts on personal securities amounted to \$17,386,114.36. Under the heading of liabilities, capital paid in is placed at \$5,468,080.33, an increase of \$577,989.10 and an average of about \$44,000 for each of the 12 new banks established.

Railroads.—The mileage of roads in the State was increased by 127 in 1902; in 1901, the increase was 98. The gross receipts of the Yazoo and Mississippi for the year ending June 30 were \$6,587,355.80, an increase of 7.5 per cent.; the net receipts were \$1,930,171.14, a decrease of 6.77 per cent.

The business of the Louisville and Nashville in the State for the first quarter showed receipts from all sources, \$228,294.97; operating expenses, \$123,966.14; net revenue after paying taxes, interest, etc., \$55,963.12. This is an increase of \$34,138.08 over last year.

Hattiesburg is now reached by the Mobile, Jackson and Kansas City road. This part of the State is developing rapidly.

Insurance.—There are 55 insurance companies, 8 guarantee companies, 12 accident companies, and about 60 fraternal orders doing business in the State.

The new insurance law passed at the last session of the Legislature requires more extensive reports from the companies than heretofore. A separate insurance department was created, and the powers of the commissioner were enlarged. The present law affords greater security, providing that only capitalized companies may write fire-insurance. The system of taxation is changed, the law now requiring a percentage tax on actual business.

A strong effort was made to have an extra session of the Legislature called in order to repeal the valued-policy clause of the law. The Governor even received an offer from Vicksburg to pay the expenses of the extra session. But he declined to call the session, as, from answers received to a circular letter to the legislators, he found that the law would not be repealed.

On the other hand, the insurance companies were emphatic against writing blanket policies on cotton if the Legislature should amend the law only in its application to that staple; demanding the repeal of the entire law. But in September the Mississippi Fire Association decided to insure cotton under the old blanket policy. The new method adopted by the companies in the spring was to insure cotton in bales only, by marks and numbers.

Industries and Products.—According to the census report, 61.5 per cent. of the land area of the State is included in farms. There were of these 220,803, valued at \$152,907,000. Of this value, 24 per cent. represents the buildings and 76 per cent.

the land and all improvements other than buildings. The total value of farm property is \$204,221,027. Of the farms 41.7 per cent. were operated by white farmers and 58.3 by colored. Of the white farmers, 66.2 per cent. owned all or a part of the farms they operated. The colored farmers owned 16.3 of the farms they cultivated.

The cotton-crop in 1902 was 1,375,000 bales, against 950,000 in 1901. The consumption in mills of the State was 16,203,653 pounds of lint cotton. There were 16 mills, with 3,821 looms and 127,772 spindles. Two new textile-mills, with 160 looms and 10,120 spindles, were constructed in 1901. In the census year there were but 2,464 looms. The growth of the cottonseed-oil business is very rapid. In the first half of the year, 19 new mills were started, with \$860,000 capital. There is a great demand for Mississippi turpentine, and distilling plants have been running day and night.

The forest area of the State is estimated at 32,300 square miles.

The aggregate of capital stock of all concerns incorporated in the fiscal year was \$9,133,000.32, subdivided as follows: Lumber companies, \$1,127,000.29; banks, \$1,065,000.65; mercantile companies, \$1,669,000.22; oil-mills, \$1,995,000.07; railroads, of which 3 have already organized, \$85,000; 3 cotton factories, \$310,000; 150 miscellaneous corporations, \$2,882,000.

Lawlessness.—Lynchings have been reported this year in Attala County and at Walnut Grove, Clayton, Corinth, Columbus, Summit, and Darling. Three of the victims, negroes, were burned. The one burned at Corinth, Sept. 28, confessed to an atrocious murder. The one burned at Darling had, in company with 2 white men, murdered a mill owner whom they robbed. The one burned at Clayton in July had assaulted a young lady. A policeman attempting to arrest a negro running an unlicensed saloon at Summit in November was shot by the negro, who escaped. But 2 negroes accused of assisting the escape were caught and lynched. The negro lynched at Walnut Grove had committed an assault on a white woman, and the one at Columbus had attempted one. Two negroes were lynched in Attala County in September, accused of promoting dissension between the races.

Whitecap troubles have arisen this year in Amite, Franklin, Pike, and Lincoln Counties. The blacks have been terrorized by threats and notices to give up their employment in mills or to leave the county altogether. The Governor issued a proclamation, offering a reward for the arrest and conviction of each and every one guilty of the crime.

A race riot was reported from Tupelo in August, with 6 persons seriously shot and others injured.

Indianola.—Trouble arose in this place near the close of the year over the resignation, on compulsion, of the negro postmistress, who has conducted the office satisfactorily for several years, but was objected to on account of her color. Her resignation was not accepted, and the office was ordered closed.

Legislative Session.—The Legislature met for its special session Jan. 7. The limit of this session is thirty days, unless the time is extended by the Governor, as it was twice this year. Adjournment took place March 5. Adoniram J. Russell was Speaker of the House.

The number of Senate bills passed and approved was 56; of House bills and resolutions, 103.

Three constitutional amendments were proposed and submitted to vote in November. They were: 1, Authorizing a town or county, upon the vote of a majority of its qualified electors who pay

taxes on \$100 or more of property, to aid, by donation or subscription, in building of new railroads; 2, making the required vote to pass a constitutional amendment a majority of those voting, authorizing the Legislature to insert in the Constitution an amendment which has been adopted, at its next succeeding session, and giving the Legislature the power to determine finally whether an amendment has received a majority; 3, providing for regular biennial sessions of the Legislature, thus doing away with the present rule, which makes every second session a special one, and enabling the Legislature to take up any subject, instead of, as now, only those of revenue and appropriation and those introduced by the Governor.

The tax levy for the next two years was fixed at 6 mills.

As the State is entitled, by the census, to 1 more Representative in Congress, the 7 districts were redivided into 8. An additional judicial district was created, making 11.

Among the more important bills passed were a primary-election bill and one to provide for the better enforcement of the antitrust law, which was defective in some ways and so drastic as to be impossible of enforcement; also a new liquor law, and a so-called "amnesty act" in regard to the payment of privilege taxes.

A Board of Oyster Commissioners was created, to consist of 5 members appointed by the Governor, the full term of office being five years. They are to receive, besides their expenses, \$5 a day while engaged, not to exceed twenty days in a year. Oyster vessels of 1 ton burden gross must be licensed by them. They are to elect a chief inspector at \$100 a month, deputy inspectors, 3 or fewer, at \$60 for the canning season, and a secretary at \$600.

The office of Insurance Commissioner was created. Heretofore his duties have been a part of the Auditor's. Another office created was that of Assistant Attorney-General.

A State Department of Archives and History was created, to be established under the auspices of the historical society, from which the 9 trustees shall be chosen; and they shall elect a director to serve at a salary of \$1,800.

A portion of the Capitol grounds was set apart as a Confederate Memorial Park, and certain State officers were made a commission for its control.

Among other enactments were the following: Providing that any cause of action, or any interest therein, may be sold after suit is brought thereon, like any other property.

Raising the salary of the Governor and of the judges of the Supreme Court to \$4,500 each, and that of the Adjutant-General to \$600.

Appropriating \$50,000 for an exhibit at the St. Louis Exposition, and creating an exposition bureau, to consist of the Governor and 4 other members appointed by him. They are to appoint a commissioner who shall receive a salary of not more than \$2,000 and expenses.

Authorizing the Board of Levee Commissioners for the Yazoo-Mississippi Delta to levy a tax upon all privileges exercised within the said levee district, the taxes not to exceed those levied by the State on the same privileges.

To repeal section 1575 of the code, and prevent the granting of liquor licenses in towns of less than 500 inhabitants having police protection.

Authorizing supervisors to provide for the channeling of streams.

A committee that had been appointed to investigate the financial management of the Penitentiary made a report severely criticising the administration of the prison; finding that loose management

and unbusiness-like methods had prevailed; that it was "impossible, even with the most careful and long-continued examination of the books, to ascertain with any degree of accuracy whatever the results of former operations of the board," and that a "large tract of land had been cleared by convict labor for various parties with whom the Board of Control had no farming contracts whatever, and in whose lands the State had no interest whatever," together with other specifications. The Legislature passed a resolution directing the committee to begin investigating anew. A large amount of testimony was taken in open sessions, and the report, while it withdrew some of the charges and modified others, repeated the criticisms on the bookkeeping and the improper use of convict labor. Both houses merely received the report, refusing to adopt it, and discharged the committee. The Board of Control in charge of the prison consists of the Railroad Commissioners, the Governor, and the Attorney-General.

Congress was memorialized for an appropriation for Gulfport harbor.

Resolutions were passed condemning the majority report of the court of inquiry in the case of Admiral Schley, and commending that of Admiral Dewey, and saying further:

Resolved, by the Mississippi House of Representatives, that Admiral Schley is the real hero of Santiago, that he is one of the world's greatest naval commanders, and is entitled to the unfading gratitude of his country.

Resolved, further, that we extend a most cordial invitation to Admiral Schley to visit the State capital during his contemplated Southern tour, and receive a public manifestation of the exalted respect, confidence, and admiration in which he is held by the people of Mississippi.

A resolution of sympathy with the Boers passed both houses.

Another resolution instructed the representatives in Congress to support the bill for the purchase of Temple Farm and the Moore House at Yorktown, Va., by the Government. Still another requested the United States Fish Commission to investigate and report upon the oyster reefs in the State.

The Governor strongly recommended the establishment of a soldiers' home for the State, and it was desired to purchase for that purpose Jefferson Davis's old home, Beauvoir. The Senate passed a bill to that effect, but it was defeated in the House.

A concurrent resolution was passed "That the following verses be adopted as the State ode":

For thy grand and varied hills,
For thy clear and rippling rills,
For thy wide and fertile vales,
For thy coves, and glens, and dales—
I love thee, Mississippi.

With thy mists, and clouds, and storms,
With thy winds, and rains, and calms,
With thy snow, and hail, and sleet,
With thy sunshine and thy heat—
I love thee, Mississippi.

Where thy forests stand serene,
Where thy prairies roll between,
Where thy rich plantations lie,
Where thy sedge-fields never die—
I love thee, Mississippi.

Brave thy men, thy women fair,
Boys and girls beyond compare,
Proud thy record, years gone by,
Bright thy prospects, drawing nigh—
I love thee, Mississippi.

Place where first I saw the light,
Place where boyhood made its flight,

Place where love and hope grew strong,
Place where home and friends belong—
I love thee, Mississippi.

Here, my heart, thy vigils keep;
Here, my dead, in quiet sleep;
Here, my life, ebb thou away;
Here, my bones, turn back to clay—
I love thee, Mississippi.

The appropriations amounted to \$5,597,082, exceeding those of 1900, which were \$4,074,284. The amounts for the new Capitol are not included in either of these aggregates.

Political.—The primary-election law passed this year by the Legislature came before the courts and was pronounced constitutional. At the congressional election in November there was no opposition to the Democratic candidates. The 3 proposed amendments to the Constitution were defeated. The total vote polled was only 18,078, out of a voting population of 234,413.

Gulfport.—This city, the terminus of the Gulf and Ship Island Railroad, celebrated in November the arrival of the first seagoing steamship that ever touched there. For years the State has had a good port at Ship Island. Although this harbor afforded a shipping-point for the products of the mills of the Mississippi coast, its distance from the mainland and the necessity of employing lighters to handle freight limited the character of the business. A port on the mainland was desired, and that has at last been secured at Gulfport.

MISSOURI, a Western Mississippi valley State, admitted to the Union Aug. 10, 1821; area, 69,415 square miles. The population, according to each decennial census since admission, was 140,455 in 1830; 383,702 in 1840; 682,044 in 1850; 1,182,012 in 1860; 1,721,295 in 1870; 2,168,380 in 1880; 2,679,184 in 1890; and 3,106,665 in 1900. This is an increase since 1890 of 15.9 per cent. The city of St. Louis had in 1900 a population of 575,238. Capital, Jefferson City.

Government.—The following were the State officers in 1902: Governor, Alexander Monroe Dockery; Lieutenant-Governor, John Adams Lee; Secretary of State, Samuel B. Cook; Auditor, Albert O. Allen; Treasurer, Robert P. Williams; Attorney-General, Edward C. Crow; Superintendent of Schools, William T. Carrington; Railroad and Warehouse Commissioners, Joseph P. Rice, John A. Knott, W. E. McCully; Superintendent of Insurance, Robert G. Yates; State Geologist, E. R. Buckley; Supervisor Building and Loan Associations, Luther S. Hickman; Commissioner of Labor Statistics and Inspection, William Anderson; Inspector of Coal-Mines, Charles Evans; Inspector of other mines than coal, George K. Williams; Warden of Penitentiary, Frank M. Woolridge; Beer Inspector, Gyles Y. Crenshaw; Special License Commissioner, Thomas J. Martin; Adjutant-General, William T. Dameron; Factory Inspector, Clement J. Nordmeyer; Judges of the Supreme Court—Waltour M. Robinson, Chief Justice; Theodore Brace, Gavon D. Burgess, William Champs Marshall, Leroy B. Valliant, James D. Fox, James D. Gantt. The only Republican State officer is Waltour M. Robinson, Chief Justice of the Supreme Court.

State elections are held in November of even-numbered years, and all State officers hold for a term of four years. The Legislature holds biennial sessions, beginning in January of odd-numbered years. The Senate was composed of 26 Democrats and 8 Republicans. The House was composed of 82 Democrats and 60 Republicans. James H. Whitecotton was Speaker.

Finances.—The bonded debt of the State on Jan. 1, 1902, was \$1,287,000, showing a reduction in the year of \$600,000. The State also has \$4,393,839 in certificates of indebtedness outstanding, in which the State school and seminary funds are invested, making the total debt amount to \$5,680,839. The State's bonds draw 3½ per cent. interest, are dated Jan. 1, 1886, are due Jan. 1, 1908, and are redeemable after Jan. 1, 1893. The certificates of indebtedness draw 5 and 6 per cent. interest. The bonded debt of cities and towns is \$31,055,192. County and township bonds to the amount of \$9,000,000 are outstanding. They are owed by 53 counties, while 68 counties have no bonded indebtedness.

Railroads.—There are 154 steam-railways in the State, operated by 54 companies. Their total mileage is 8,656.26 miles, of which 7,300 is main line, showing an increase of 200 miles within the past year. Five counties in the State have no railroads. The railways pay a total tax of \$928,572. The casualties last year were as follows: Persons killed, 229; injured, 1,132. Of those killed, 60 were employees and 4 were passengers. Of the injured, 700 were employees and 160 passengers. All the railroads are of standard gage except the Missouri Southern and the Sedalia, Warsaw and Southwestern, and the latter is widening its tracks.

Insurance.—There are doing business in the State 13 regular mutual fire-insurance companies, 10 Missouri town mutual fire, lightning, and tornado companies, 26 foreign fire companies, 47 miscellaneous stock companies, 49 regular life companies, 4 stimulated premium life companies, 3 assessment life companies and associations, 67 assessment accident companies and associations, and 72 fraternal benefit associations. The business done in the State in 1901 was as follows: Fire—risks written, \$522,077,298.43; premiums thereon, \$5,900,949.39; losses paid, \$4,216,794.43; losses incurred, \$4,490,332.96. Marine and inland—risks written, \$10,317,743; premiums thereon, \$66,781.29; losses paid, \$43,747.60; losses incurred, \$43,445.56. Tornado—risks written, \$28,435,469.44; premiums thereon, \$124,110.55; losses paid, \$5,307.03; losses incurred, \$5,183.92. Fidelity and surety—risks written, \$56,660,081.23; premiums thereon, \$212,078.34; losses paid, \$59,494.57; losses incurred, \$44,650.39. Miscellaneous—risks written, \$227,839,080.45; premiums thereon, \$1,257,405.23; losses paid, \$593,185.52; losses incurred, \$634,736.10. Grand totals other than life—risks written, \$845,329,672.55; premiums thereon, \$7,561,324.80; losses paid, \$4,918,530.14; losses incurred, \$52,018,348.93. The life business done in the State in 1901 was as follows: Policies in force Dec. 31, 1901, number 105,756; amount, \$230,780,804.99; claims paid in 1901, \$3,205,563.21; premiums collected in 1901, \$8,842,241.76. The industrial insurance business during 1901 was as follows: The policies in force Dec. 31, 1901, numbered 441,895; amount, \$60,189,164; claims paid in 1901, \$629,387.36; premiums collected in 1901, \$617,947.81.

Education.—The State school fund amounts to \$3,159,073.40, and the State seminary fund to \$1,235,839.42, all of which is invested in the State certificates of indebtedness, and draws interest at 5 and 6 per cent. The interest is annually distributed among the 9,948 school districts, in proportion to the number of children of school age that they contain. The State school system consists of the State University, Agricultural College, School of Mines, 3 normal schools, 1 institute for colored teachers, 286 high schools, and 10,299 public schools.

The State University has an endowment of \$1,236,000, and 47,108 acres of unsold land. It receives annually from the United States Government \$38,150. Its total annual income is \$416,000. The number of students enrolled in June, 1902, was 1,710. The School of Mines and Metallurgy is at Rolla.

The Normal School, at Kirksville, had an enrolment as follows at the time of the last report: Men, 354; women, 501; total, 855. The total enrolment at the Normal School, at Warrensburg, was 1,012. The total enrolment at the Cape Girardeau Normal School was 442; and at Lincoln Institute for colored teachers, at Jefferson City, 247, of whom 123 were men and 92 women.

The following statistics of schools have been condensed from reports of county commissioners: Enrolment, white—male, 341,593; female, 337,616; total, 679,209; colored—male, 15,617; female, 16,894; total, 32,511; grand total enrolled, 711,720. Number of teachers employed, white—male, 5,607; female, 9,759; total, 15,366; colored—male, 285; female, 509; total, 794; grand total teachers employed, 16,160. Average salaries of teachers per annum—men, \$296; women, \$308. Estimated value of school property, \$20,328,279.

There are 128 private schools in the State, employing 1,275 teachers, and having an enrolment of 19,517 pupils, and buildings and grounds worth \$7,853,604. They have a total permanent endowment of \$8,829,000.

State Institutions.—The State institutions are the Penitentiary, at Jefferson City; the Reform School for Boys, at Boonville; the Girls' Industrial Home, at Chillicothe; 4 insane asylums—at Fulton, St. Joseph, Nevada, and Farmington—a colony for the feeble-minded, at Marshall; a Confederate Soldiers' Home, at Higginsville, which costs \$40,000 a year; and a Federal Soldiers' Home, at St. James, which costs \$20,000 a year. About \$900,000 was spent in the last two years on the buildings of public institutions.

Agriculture.—Seventy-seven per cent. of the land area of Missouri is included in its farms, of which 67.4 per cent. is improved. The number of farms, according to the last census, was 284,886. The value of farm property in 1900 was \$1,033,121,897, of which \$843,979,213 is lands, improvements, and buildings, \$23,602,680 implements and machinery, and \$160,540,004 live stock. The value of farm-products was \$218,296,970. The total increase in the value of farm property since 1850 was found to be 31.4. The number of farms operated by owners was 197,989; by cash tenants, 31,230; and by share tenants, 55,667. Of the farmers of the State, 98.3 are white and 1.7 colored. Of the white farmers, 69.1 per cent. own all or a part of the farms they operate; of the colored farmers, 30.9 per cent. Of the value of crops, cereals contributed 65.5 per cent.; hay and forage, 16.8 per cent.; vegetables, 7.2 per cent.; fruits and nuts, 3.6 per cent.; forest products, 3.7 per cent.; all other products, 3.2 per cent.

Labor.—There are 410 labor organizations in the State, with a total membership of 52,426, of which 51,426 are men and 1,378 women. The total number of strikes in the State in 1901 was 177, of which, according to the Labor Commissioner's report, 119 were settled satisfactorily to the strikers, 33 were compromised, and 15 were lost.

Manufactures.—The Bureau of Labor received reports from 1,666 manufacturing concerns. The aggregate value of their products in 1901 was \$253,711,595, an increase over 1900 of \$77,053,963. The average number of males em-

ployed was 80,610; females, 101,433; an increase of 27,890 over the previous year. The amount of money paid out in wages was \$46,809,729, an increase over the preceding year of \$13,748,198.

Militia.—The National Guard of Missouri consists of 1 brigade, comprising 4 regiments of infantry and 1 battery. The numerical strength is as follows: Commissioned officers, 198; non-commissioned officers, 337; musicians, 158, including 4 regimental bands and trumpet corps; hospital and ambulance corps, 64; farriers and blacksmiths, 7; privates, 1,918; total, 2,682.

Political.—The State election took place Nov. 5. Tickets were nominated by the Democratic and Republican parties, and the following parties nominated tickets by petition: Independent, Aligned, Prohibition, Socialist, and Socialist-Labor.

The Democratic State Convention met in St. Joseph, July 22, and nominated the following: For Superintendent of Public Schools, William T. Carrington; Railroad and Warehouse Commissioner (long term), John A. Knott; Railroad and Warehouse Commissioner (short term), Joe P. Rice.

The opening sentence of the platform "indorsed and affirmed the Democratic national platform adopted at Kansas City in 1900." Continuing, the platform said:

"We condemn the dishonest paltering with the trust evil by the present Republican administration, and we especially condemn the subversive to the trusts of our 'strenuous' President, who, only a few days before Mr. McKinley's assassination, boldly proclaimed in public speech at Minneapolis that trusts are an evil which the public safety requires should be promptly and mercilessly destroyed, but who, since his accession to the presidency, has struck not one effective blow against them, although holding in his hands all the necessary powers of government, and who, instead of executing his threat to exterminate the trusts, talks now only of regulating them.

"We favor the most stringent national and State legislation for the absolute control and regulation of the trusts, to the end that they will cease to be a menace to our public welfare as well as persecutors of the great army of the laboring people of our land. To that end we favor a consistent tariff revision which will remove the duty or tariff from all trust-made or trust-controlled products, thereby forcing the trusts into competition with foreign nations, depriving them of the fraternal support and fostering care of the Republican administration, by which they are now enabled to reduce their labor, minimize their output, grind down the working classes, and arbitrarily fix their own prices in this country, to the great detriment and hardship of our people, while at the same time the people of foreign countries reap all the benefits of the trust's economy by being able to purchase all of our trust products in their own country at fixed reductions varying from 20 to 60 per cent.

"In the event of such legislation failing in its purpose, then we favor the most drastic legislation which can be enacted prohibiting the existence or forming of such trusts, or any other such combinations which will have even a tendency to destroy honest competition in any line of business or make it possible to arbitrarily regulate wages, prices, rates, or charges of any kind.

"We condemn the alarming waste of the people's money in extravagant appropriations by Republican Congresses, now amounting to more than \$1,000,000,000 per year, and we heartily approve of the course of our Democratic representa-

tives in Congress in sturdily resisting this riotous profligacy, and in standing steadfastly for economy in public expenditures and for just principles of government.

"The assassination of the President of the United States by a self-confessed anarchist is deeply deplored. The recent assassination of the Governor of Kentucky by political anarchists, who fled to Indiana, where they are now protected by the Governor of that State, is also deplored. We denounce anarchy in all its forms and declare that it should not be permitted to find an abiding-place in this country.

"The Democratic party of Missouri offers as the best guarantee of the future its wise and economical administration of affairs of the State since it came into power in 1873, at which time it found a bonded debt of \$21,768,000, the securities for which had been corruptly squandered by the Republicans. This vast debt has been reduced, through Democratic economy and business methods, until the entire amount, except that held in trust for the public schools, will be paid by the close of the present year. We have continually reduced taxation until the levy for State purposes is now but one-half of what it was when the Republicans were in control of the State, being now only 25 cents on the \$100 valuation, and this tax can be still further materially reduced at the end of the current year."

The Democratic Judicial Convention met in Springfield, July 8, 1902, and nominated the following: For Judge of the Supreme Court, Division No. 1, Leroy B. Valliant; for Judges of the Supreme Court, Division No. 2, Gavon D. Burgess and James D. Fox.

The Republican State Convention met in Jefferson City, June 24. The following nominations were made: For Superintendent of Public Schools, James U. White; Railroad and Warehouse Commissioner (long term), Walter Silas Crane; Railroad and Warehouse Commissioner (short term), Barney W. Frauenthal.

The platform expressed the party's sorrow for the assassination of President McKinley. President Roosevelt's administration was approved, and he was favored for the Republican nomination for President in 1904. The convention declared itself "unalterably opposed to all trusts or combinations in restraint of trade, or having for their purpose in the remotest degree the stifling of competition," and demanded "such legislation, State and national, as will effectually protect the public from these evils." The "policy of President Roosevelt respecting our trade relations with Cuba" was approved. The convention favored legislation "enabling the people of our new possessions to enjoy the largest measure of self-government consistent with our sovereignty," and for securing an isthmian canal.

The rest of the platform discussed State issues. It charged that, "after thirty years of power in the State, the Democratic party has so administered the affairs of the State, particularly its financial matters, that the custodians of the books, records, and funds are unable to account to the people for the proper disbursement of the funds and for the money taken from the taxpayers.

"Democrats holding responsible positions of official trust have become gatherers of campaign funds from corporations whose property values were subject to assessment at their hands." It favored local self-government for all cities and towns, and denounced the Democratic party of the State for "having for twenty years maintained at the State capital an iniquitous lobby."

The Republican Judicial Convention met in Joplin, July 15, and nominated the following: For Judge of the Supreme Court, Division No. 1, Edward Higbee; Judges of the Supreme Court, Division No. 2, Henry Lamm and Moses Whybark.

The candidates of the Independent party were: For Judge of the Supreme Court, Division No. 1, Edward Higbee; Judges of the Supreme Court, Division No. 2, Henry Lamm and Moses Whybark; Superintendent of Public Schools, James U. White; Railroad and Warehouse Commissioner (long term), W. S. Crane; Railroad and Warehouse Commissioner (short term), Barney W. Frauenthal.

The candidates of the Allied party were: For Judge of the Supreme Court, Division No. 1, Frank E. Richey; Judges of the Supreme Court, Division No. 2, Henry N. Ess and Zachary Taylor; Railroad and Warehouse Commissioner (long term), Lyman Forgraves; Railroad and Warehouse Commissioner (short term), Oswald Hicks.

The candidates of the Prohibition party were: For Judge of the Supreme Court, Division No. 1, Reuben B. Robinson; Judges of the Supreme Court, Division No. 2, Jonathan P. Orr and Austin F. Butts; Superintendent of Public Schools, David R. Dungan; Railroad and Warehouse Commissioner (long term), Andrew Grassley; Railroad and Warehouse Commissioner (short term), William N. Keener.

The candidates of the Socialist party were: For Judge of the Supreme Court, Division No. 1, J. W. Gibbens; Judges of the Supreme Court, Division No. 2, James A. Slanker and Frank P. O'Hare; Superintendent of Public Schools, A. H. Hull; Railroad and Warehouse Commissioner (long term), Pearl Thompson; Railroad and Warehouse Commissioner (short term), W. I. Phifer.

The candidates of the Socialist-Labor party were: For Judge of the Supreme Court, Division No. 1, Charles Weppermann; Judges of the Supreme Court, Division No. 2, O. M. Howard and George F. Rudnick; Superintendent of Public Schools, Edward Heitzig; Railroad and Warehouse Commissioner (long term), Amil Neidermeyer; Railroad and Warehouse Commissioner (short term), Henry F. Mueller.

The Democratic candidates were elected. The vote on the candidates for Supreme Judge who headed the tickets was as follows: Valliant, Democrat, 273,081; Higbee, Republican, 228,897; Wippermann Socialist-Labor, 969; Gibbens, Socialist, 5,335; Richey, Allied, 1,841; Robinson, Prohibitionist, 4,945; scattering, 1.

MONTANA, a Western State, admitted to the Union Nov. 8, 1889; area, 146,080 square miles. The population, according to each decennial census since admission, was 132,519 in 1890 and 243,329 in 1900. Capital, Helena.

Government.—The following were the State officers in 1902: Governor, Joseph K. Toole; Lieutenant-Governor, Frank Higgins; Secretary of State, George M. Hays; Auditor, J. H. Calderhead; Treasurer, A. H. Barrett; Attorney-General, James Donovan; Superintendent of Education, W. W. Welch. These were elected on a fusion ticket of Democrats and Populists. Other officials were: Commissioner of Agriculture, Judson A. Ferguson; Adjutant-General, R. L. McCulloch; Land Register, Thomas D. Long; State Examiner, William Hudnall; Coal-Mine Inspector, Howard F. Welch; Game Warden, W. F. Scott; Sheep Commissioner, F. D. O'Neill; Mine Inspector, John Byrne; Inspector of Horticulture, E. N.

Brandagee; Chief Justice of the Supreme Court, Theodore Brantley, Republican; Associate Justices, G. R. Milburn, W. T. Pigott, Democrats; Clerk, Henry G. Rickerts, Democrat.

The State officers are elected for terms of four years at the time of the presidential elections. The Legislature meets biennially in January of the odd-numbered years.

Finances.—The unexpended balance Dec. 31, 1902, was \$616,698.45. The balance of warrants outstanding in the Capitol building funds was \$48,049.71; and in the Reform School building fund, \$1,212.20. The warrants drawn on the stock-bounty fund amounted to \$110,898.13, which was balanced by the cash on hand.

The bonded debt of the State is \$860,000. The debts of the 26 counties aggregate \$2,583,979.

Valuations.—The total valuation of the State for taxation, including railroads, is \$185,625,657 for 1902, of which \$86,001,619 is real, exclusive of railroads, and \$66,709,742 personal property. In 1901 the total was \$166,787,593. There is a gain of more than \$6,000,000 in real, and a loss of nearly \$5,000,000 in personal property.

Education.—By the census report there were 11,675 illiterates in the State in 1900. In the percentage of persons from ten to fourteen able to read and write Montana stood twenty-seventh in the list, with 98.07 per cent. The total number of children of school age Aug. 31 was 64,623, of whom 32,813 were boys and 31,810 girls.

This year 1,291 teachers were employed—236 men and 1,055 women.

The average length of term in the State was 6.56 months. There are reported 4 private schools, which have 1,839 pupils.

The whole number enrolled during the year was 44,881, while the average daily attendance was 31,471.

Sixty-five districts erected new schoolhouses. The number of districts adopting free text-books was 22, while in 28 districts the proposition was defeated by vote of the people. There are 48,510 volumes in the district libraries. The average salary for male teachers is \$76.89, and for female teachers \$52.04.

The State Normal School had an attendance of 118 in December. The School of Mines had 62. A night-class organized for young men employed during the day had 32. The expenses of the school amount to about \$24,515.

The enrolment at the Agricultural College, at Bozeman, was about 250 in the fall term. The estimated expense for 1902-'03 is \$51,420, of which the Government contributes \$40,000.

The science hall of the State University, at Missoula, was damaged by fire, March 13, to the extent of \$5,686.

Banks.—There are 21 State banks, with total resources \$15,254,236. The loans and discounts amount to \$7,924,946, besides those on real estate, \$797,030. The deposits amount to \$11,880,695.

The State Savings-Bank of Butte has resources \$4,133,889.

The defaulting teller of the First National Bank of Great Falls pleaded guilty in May, and was sentenced to ten years in the Penitentiary.

Telephones.—There has been a marked increase in the telephone business of Helena, which now has more than 500 telephones. Butte has 1,300 instruments. Great Falls has 325 telephones, Missoula 275, Anaconda 200, and Bozeman 110.

Charities and Corrections.—A new building has been provided for the Asylum for the Deaf, at Boulder. About 12 blind children are taught there.

The insane are provided for by contract at the rate of 65 cents a day, and the State convicts at 45 cents. The number of patients in the insane asylum averages 500, of whom about one-fifth are women.

Deer Lodge Prison had in April 463 convicts, about 100 more than in the previous year. About 20 were women.

The number of inmates at the Reform School, at Miles City, was 94, of whom 82 were boys and 12 girls. The report details the expenditures of \$21,998.47 for 1901 and \$22,522.11 for 1902.

Militia.—There are 34,000 men liable to military service. The infantry regiments of the National Guard consist of 2,613 men. The State appropriation is \$10,000.

Railroads.—The State is credited with 127 miles of new track in 1901, and 53 during the first six months of 1902. The valuation of the roads for taxation is somewhat more than \$30,000,000.

The Capitol.—The new Capitol was finished in January and was formally accepted and dedicated July 4. The contract price of the building was \$289,893; the actual cost to the contractor is given as about \$420,000.

Industries and Products.—The value of the principal mineral products of the State in 1901 was estimated as follows: Gold, \$4,802,717; silver, \$18,334,443; copper, \$36,751,837; lead, \$498,622; total, \$60,387,619.

Probably the silver is estimated at coinage value by the Government rate of \$1.29 an ounce; figured on the average market price, the value would be less than half that given in this estimate. The preliminary estimate of the Director of the Mint for the production in 1902 gives Montana's gold product as in value \$4,134,365, and silver, \$6,890,000.

The report of the United States Geological Survey for 1901 shows that Montana produced in that year \$90,000 worth of sapphires. Nearly all these stones were mined in the Yogo fields, in Fergus County. The value of the sapphires mined in Montana exceeded that of any other precious stones mined except turquoise, whose value amounted to \$118,000.

Rubies are found in the State, but none have the deep color of the Oriental stone.

New deposits of corundum have been found in Gallatin County.

According to statistics gathered by Commissioner Ferguson, there was a falling off in the production of coal in Montana in 1901 as compared with 1900. The total production was 1,442,569 tons.

There are, according to the latest estimate of the survey, 32,000 square miles of coal-bearing formations in Montana.

There were 33 accidents in the coal-mines in 1902, of which 7 were fatal. The whole number of fatal accidents in mines was 35.

The total value of the stone quarried, including plaster of Paris and other by-products, was \$470,142, compared with \$302,194 the previous year.

There are 20 breweries in the State, employing about 256 men, with a capital estimated at \$1,271,000. The amount of beer manufactured was greater than in any other year, the number of barrels being 163,283.

A table of industrial statistics for 1900 gives the value of the manufactured products of Montana at \$48,000,000.

The report of the State Board of Stock Commissioners shows that in 1902 the State produced 151,986 beef cattle, of which 92,000 head were shipped to points out of the State.

Montana excels all other States in wool-grow-

ing, the clip having been about 33,000,000 pounds this year.

The farms of Montana, June 1, 1900, numbered 13,370, and had a value of \$62,026,090. Of this amount, \$9,365,530, or 15.1 per cent., represents the value of buildings, and \$52,660,560, or 84.9 per cent., the value of land and improvements other than buildings.

Lands.—The wooded area in the State is about 42,000 square miles. The records of the State Land Office show a remarkable increase in the sale and lease of State lands. The State's holdings now amount to 2,020,977.73 acres. Of this amount, 304,814.24 acres are timber land, showing an estimate of 892,297,000 feet of saw timber; 65,693.03 acres are classified as agricultural, and the remainder of 2,650,470 are classified as grazing lands.

From the leased land the State received the annual sum of \$186,553.52. The school lands under lease exceed 1,350,000 acres.

Reserves.—By proclamation, Aug. 16, the President created 2 additional forest reserves in Montana, to be known as the Little Belt mountain and the Madison forest reservations. A large amount of land is withdrawn from public entry, and the Government will undertake to protect many millions of feet of timber on the land from the ravages of fire. The Little Belt mountain reserve includes timber land in the range of mountains bearing the same name, situated in a portion of Meagher, Fergus, and Cascade Counties, and is quite close to Helena. The Madison reserve lies almost wholly in the county of that name, excepting a very small portion which laps over into Gallatin County. The Lewis and Clarke reserve contains 4,572 square miles.

Legal Decisions.—By a decision of the United States Supreme Court, the antitrust laws of many States are pronounced unconstitutional. The ruling applies to all that make exceptions in favor of any class or classes.

The law of the Legislature of 1901 extending the operation of the statute of limitations upon accounts from three to five years has been declared invalid because it never passed the Senate, though it was signed by the President of the Senate and by the Governor.

The antigambling law was attacked, but was upheld by decision of the Supreme Court. One of the test cases was in regard to a slot-machine.

Political.—An election was held in November for an Associate Justice of the Supreme Court, a member of Congress, State Representatives, and local officers.

The Socialists were first in the field with a State ticket. Their convention was held at Bozeman, in July. W. F. Cameron was named for Associate Justice and George B. Sproull for Congress.

The resolutions called for an eight-hour amendment to the Constitution, and one prohibiting blacklisting, an employers' liability law, the initiative and referendum, and woman suffrage; expressed sympathy for the coal-miners of Pennsylvania; and said regarding fusion: "That the Socialist party can never recognize, unite, or affiliate or fuse in any way with any other political party. That any candidate on our ticket must refuse the indorsement of any other political party, because it insinuates our acceptance of their platform. We call upon the State membership to expel at once any member who proposes compromise or fusion."

There was dissension in the Democratic party this year, Senator Clark and F. Augustus Heinze being at the head of the two factions. The Clark faction gained control of the State convention,

which met at Boreman, Sept. 24. Jere B. Leslie was nominated for Associate Justice, and John M. Evans for member of Congress. The Heinze faction then organized what was called "the Antitrust Democratic party." They did not make nominations for the State offices, but threw their influence for the Republican candidates. Senator Clark and Mr. Heinze stumped the State, making charges each against the other party of bribery and corruption.

Early in the year the factional troubles in the Republican party broke out in a meeting of "straight Republicans" in Helena, Jan. 6, when a preamble and resolution were passed protesting against the domination of the "machine" controlled by ex-Senator Carter. The resolution was sent to the President.

Apparently the quarrel was settled or compromised before the State convention, which met in Great Falls, Sept. 27, and nominated W. L. Holloway for Associate Justice and Joseph M. Dixon for member of Congress.

In October the Populist and Labor parties in a joint conference nominated Judge Holloway.

The Republican candidates were elected. The vote for Justice stood: Holloway, Republican, 31,600; Leslie, Democrat, 21,204; Cameron, Socialist, 2,466. For Representative in Congress, Dixon, Republican, 24,626; Evans, Democrat, 19,560; Del. Labor, 6,006; Sproule, Socialist, 3,131.

The State Senate will have 12 Democratic, 13 Republican, and 1 Labor members; the House, 9 Democratic, 45 Republican, 9 Labor, and 5 Democratic.

NEBRASKA, a Western State, admitted to the Union March 1, 1867; area, 77,510 square miles. The population, according to each decennial census since admission, was 122,993 in 1870; 452,402 in 1880; 1,058,910 in 1890; and 1,068,539 in 1900. Capital, Lincoln.

Government.—The following were the State officers in 1902: Governor, Ezra P. Savage; Lieutenant-Governor, C. F. Steele; Secretary of State, George W. Marsh; Treasurer, William Stuefer; Attorney-General, F. N. Prout; Auditor, Charles Weston; Adjutant-General, J. N. Kilian, succeeded by William Hayward, who in turn was succeeded by L. W. Colby; Superintendent of Public Instruction, W. K. Fowler; Commissioner of Public Lands, G. D. Follmer—all Republicans; Chief Justice of the Supreme Court, J. J. Sullivan, Democrat; Associate Justices, S. H. Sedgwick, Republican, and S. A. Holcomb, Fusion; Clerk, Lee Herdman.

The State officers are elected in even-numbered years, the term beginning in January of odd-numbered years. The Legislature holds biennial sessions, beginning in January of odd-numbered years.

Finance.—The report of the Treasurer for the biennium beginning Dec. 1, 1900, and ending Nov. 29, 1902, presents the following remarks and suggestions: A balance of \$5,074.10 in the Normal School fund and \$4,068 in the Penitentiary land fund is unavailable on account of the failure of the Legislature to make the necessary appropriation. The amount of \$64.74 derived through the operation of the inheritance-tax law is unavailable because the law does not designate the fund to which it is to be credited.

The investment of the educational trust funds of the State in interest-bearing securities, the Treasurer recommends, should receive the earnest attention of the Legislature until a wise and practical solution is obtained. Under present constitutional limitations, municipal bonds and school-district bonds are not available for in-

vestment. The recent decision of the Supreme Court holding that bonds of other States are available securities has temporarily relieved the situation, and practically all the educational trust funds are now invested. In the biennium just closed the total investments amounted to \$2,839,825.43. But it has been impossible to keep all the trust funds invested at all times. The Treasurer suggests a constitutional amendment authorizing investment in municipal and school-district bonds coupled with a provision for the deposit of any uninvested balance in depository banks. The trust funds hold as investments bonds and warrants to the amount of \$5,456,977.90.

JOHN MICKY,
GOVERNOR OF NEBRASKA.

The floating indebtedness of the State is \$1,989,328.63, consisting of warrants drawn on the general fund. The educational trust funds hold \$1,457,351.56 of this amount. This floating debt has been created by making appropriations larger than the amount that could be collected from the State levy upon the assessed valuation of property.

The general financial statement for the biennium ending Nov. 29, 1902, is as follows: Balance Dec. 1, 1900, \$615,018.34; receipts from Dec. 1, 1900, to Nov. 29, 1902, \$6,742,551.71; total, \$7,357,570.05; disbursements from Dec. 1, 1900, to Nov. 29, 1902, \$6,925,314.67; on hand Nov. 29, 1902, \$432,255.38.

The receipts and disbursements of the treasury from Dec. 1, 1900, to Nov. 29, 1902, inclusive, were as follow: General fund, receipts, \$2,139,332.36; payments, \$2,105,320.22. Sinking-fund, receipts, \$11,617.58; payments, \$67,782.81. Permanent school fund, receipts, \$2,463,954.69; payments, \$2,569,792.07. Temporary school fund, receipts, \$1,346,975.99; payments, \$1,399,306.45. Permanent university fund, receipts, \$63,573.15; payments, \$65,550.97. Agricultural College endowment fund, receipts, \$138,882.52; payments, \$160,482.39. Temporary university fund, receipts, \$426,841.23; payments, \$383,522.69. Hospital for Insane fund, receipts, \$1,406.92; payments, \$291.67. State Library fund, receipts, \$7,813.50; payments, \$8,148.21. University cash fund, receipts, \$57,491.34; payments, \$55,272.97. Normal Library fund, receipts, \$3,095; payments, \$2,990.51. Normal endowment fund, receipts, \$16,728.77; payments, \$44,000. Normal interest fund, receipts, \$5,685.35; payments, \$4,604.17. Penitentiary special labor fund, receipts, \$46,141.38; payments, \$43,768.11. Penitentiary land fund, receipts, \$1,730. Agricultural and Mechanic Arts fund, receipts, \$50,000; payments, \$51,841.17. United States experiment station fund, receipts, \$30,000; payments, \$30,423.07. Inheritance tax fund, receipts, \$64.74. Total receipts, \$6,810,334.52; total disbursements, \$6,993,097.48.

Education.—State Superintendent W. K. Fowler issued a new educational directory, giving statistics for the year ending July 8, 1901. There are 6,875 districts in the 90 counties, and 6,773

schoolhouses. The whole number of teachers employed is 9,485, at an average monthly salary of \$40.08. Of the 377,069 children of school age (five to twenty-one), 286,718 are enrolled. It costs the State an average of \$13.90 a year to educate each enrolled pupil, but this amount is increased to \$21.82 on the basis of average attendance. The value of district property is estimated at \$9,870,683.79.

In apportioning the temporary school fund among the counties in December, 1902, the Superintendent had at his disposal \$236,252.68, the smallest amount available for several years. The whole number of persons of school age in the State being 374,304, the rate per pupil was 63 cents. In the May apportionment the rate was \$1.11, and in the previous December 84 cents. The smallness of the fund is explained by Treasurer Steufer by the fact that during his term \$800,000 has been paid in by holders of educational lands, necessitating the reinvestment of this money in bonds and warrants bearing only 3 per cent. interest, just half the rate on the land contracts, and little or no return is to be expected on many of the securities for some time.

Difficulty was experienced at the opening of the school year, in September, in securing teachers, the salaries not being large enough to attract either men or women, who could secure more profitable employment in harvesting the unusually bountiful crops.

The State Superintendent urged the purchase of small libraries for all lower-grade schools. Hitherto none but the high schools have possessed them.

The regents of the University of Nebraska decided to adopt the Omaha Medical College as an affiliated school. Students will pursue two years of their medical course at Lincoln, and the remaining two at Omaha, where they will have the benefit of the clinical work to be found in a city.

But 1,500 acres of school lands remained unleased in April, 1902.

Products and Resources.—Census Bulletin No. 193, published in July, 1902, gives the agricultural statistics for the past ten years. The farms of Nebraska, June 1, 1900, numbered 121,525, and were valued at \$577,660,020. Of this amount 15.8 per cent. represents the value of buildings and 82.2 per cent. the value of land and improvements other than buildings. The total value of farm properties was \$747,950,057. The 121,525 farms reported contained 29,911,779 acres, or 61.6 per cent. of the area of the State, of which 18,432,596 acres were improved. The average size of the farms was 246.1 acres, this high average being due to the large stock-farms in western Nebraska. The number of farms operated by owners was 76,715; by cash tenants, 11,599; by share tenants, 33,211. In 1900 the number of dairy cows in the State was 512,544; of other neat cattle, 2,663,699; horses, 795,318; mules and asses, 55,856; sheep, 335,950; swine, 4,128,000.

In 1890 3,014 manufacturing establishments were enumerated, with a capital of about \$37,500,000, producing \$93,000,000 worth of goods at a cost of \$85,333,333, with a net profit of \$7,715,778. In 1900 5,414 establishments, with a capital of about \$72,000,000, at a cost of \$123,000,000, produced \$144,000,000, yielding a net profit of about \$21,000,000.

Deputy Food Commissioner Bassett issued his biennial report in December. He estimated an increase of 33½ per cent. in the production of butter, over that of 1901. In this report the

commissioner asked that the Legislature give him control of all the foodstuffs, in order more effectually to enforce the law against food adulterations. The commission reported having issued 436 permits since its organization, and received \$4,296 in fees.

The University Agricultural Experiment Station published a report made up from 500 replies of alfalfa-raisers regarding the number of processes employed, and also the care of the crop. Bottom-land produced somewhat larger crops than up-land, but sustained greater loss from winter killing. A clay subsoil was found to be no impediment in a large number of cases. Early sowing, no use of a nurse crop, sowing broadcast with subsequent harrowing, and the use of 20 pounds of seed to the acre—are the principal approved conditions. Disking—that is, going over the ground with a disk harrow before growth begins, or in summer immediately after cutting—is beneficial, as this process cuts the crown root and stirs the soil.

Cattle suffered severely from what is called the corn-stalk disease, which was pronounced by a prominent veterinarian not to be a disease, but a dietetic error, in that corn-stalks when not properly cared for lose their nutrient qualities.

Coal was discovered in the boring for a well in the neighborhood of Jamestown; and subsequent borings led to the belief that the vein underlies a large part of the country around Jamestown and may be mined with profit.

Legal Decisions.—The constitutional amendment relating to the vote to amend the Constitution was proposed in due form by the Legislature during the incumbency of Gov. Dietrich, but was vetoed by him on the ground of the expense it would entail. The amendment was revived by Secretary of State Marsh under the advice of Attorney-General F. N. Prout, who declared that since the power of initiative rested with the Legislature the Governor had no power over the proposed amendment, either to approve or to veto. His view was supported by citations from the Constitution and from decisions of the Supreme Court.

On Oct. 9 the judgment of the Supreme Court, written by Commissioner John H. Ames and concurred in by Judge Holcomb and Judge Sedgwick, restrained the School Board of District 21 of Gage County from permitting a teacher to continue the practise of reading the Bible, singing certain songs, and offering prayer, on the ground that the exercises were sectarian and forbidden by the Constitution. Attorney E. O. Kretsinger, representing the School Board, filed a motion for a rehearing, and received permission to submit his brief in support of it by Dec. 20. The decision of the court attracted attention throughout the United States.

One of the hardest fought legal battles began June 8, when the Supreme Court was taking testimony on the application of the Bee Building Company of Omaha for a writ of mandamus to compel the State Board of Equalization to assess railroad franchises separate and apart from tangible property, and thereby increase the taxes of the railroads above the amount fixed at the spring meeting of the board. The defense of the board was that it had assessed franchises; the attorneys for the railroads concurrently maintaining that, as the courts had failed to define a franchise, the action of the board in taking into consideration earnings and the fact that the lines were in active operation constituted the taxing of franchises. The court denied the application. The Real-Estate Exchange of Omaha attempted

to enter a protest upon the City Council, during its sitting in January as a board of equalization, concerning the disproportion between the assessments of real estate and the property of such corporations as the street-railway, electric-light, telephone, gas, and water companies. The Council refused to entertain their protest, and an injunction was served by the Supreme Court restraining the Council from passing the tax-levy ordinance until a hearing had been secured in the cases of the 5 corporations above mentioned. The litigation lasted three months. The injunction was dissolved on May 18, after the hearings had been completed, and resulted in an increase of \$1,523,190 in the assessments of the 5 public-service corporations. The ruling was that the bonded indebtedness of the corporations, instead of being subtracted from the taxable property, be added to it.

Penitentiary.—The \$75,000 appropriated by the Legislature to rebuild the Penitentiary, which had suffered by a fire, proved insufficient to complete the new structure, and work was suspended.

Political.—In the State election, Nov. 4, the Republican ticket was successful by a large majority. The following were the officers chosen: Governor, John H. Mickey; Lieutenant-Governor, E. G. McGilton; Secretary of State, George W. Marsh; Treasurer, Peter Mortensen; Auditor, Charles Weston; Attorney-General, Frank N. Prout; Commissioner of Public Lands and Buildings, George D. Follmer; Superintendent of Public Instruction, William K. Fowler. The 5 Representatives elected to Congress were all Republicans.

The platform adopted at the party convention in June expressed its sympathy with the President's policy in favor of the national irrigation law; favored a speedy revision of the State Constitution to meet the changed conditions of the new century; called for the enactment of additional laws to hold every custodian of public funds responsible for the repayment of principal and accruing interest; called attention to the necessity of increasing the State's revenues and reducing the State's debt, which had exceeded the constitutional limit: to this end requiring a more strict enforcement of the laws relating to assessment and taxation, also requiring a revenue from all non-resident corporations writing life and accident insurance in the State (except mutual-benefit and fraternal societies); favored the creation of a board of pardons to investigate and pass upon applications for executive clemency; favored the creation of a board of audit, who should examine the accounts of the State Treasurer and periodically make public reports.

In the April town elections the main contest was over the liquor question, and high license won in a majority of cases.

An amendment to the State Constitution, proposed by George W. Marsh, Secretary of State, was voted on at the November election. The proposition was to make it easier to amend the Constitution by requiring that when amendments have been agreed to by three-fifths of the members elected to each house and published at least once each week in at least one newspaper in each county for a period of thirty days before an election of Senators and Representatives (the present Constitution requires three months), the amendment shall become a part of the Constitution if its adoption is approved by a majority of voters voting at such election on the proposed amendment (the present Constitution requires the vote of "a majority of the electors voting at such election"). The amendment was defeated by

the provision which it sought to correct. Out of the 198,574 votes cast at the election, 49,147 were cast in favor of the proposition and 15,999 against it, the total for and against not being a majority of the whole.

NEVADA, a Western State, admitted to the Union Oct. 31, 1864; area, 110,700 square miles. The population, according to each decennial census since admission, was 42,491 in 1870; 62,266 in 1880; 45,761 in 1890; and 42,335 in 1900. Capital, Carson City.

Government.—The following were the State officers in 1902: Governor, Reinhold Sadler; Lieutenant-Governor, James R. Judge; Secretary of State, Eugene Howell; Treasurer, David M. Ryan; Comptroller, Samuel P. Davis; Attorney-General, William Woodburn; Surveyor-General, Edward D. Kelley; Superintendent of Public Instruction, Orvis Ring; Adjutant-General, James R. Judge, *ex officio*; Chief Justice of the Supreme Court, Thomas V. Julien; Associate Justices, Charles H. Belknap, Albert L. Fitzgerald; Clerk, Eugene Howell, *ex officio*. All are of the Silver-Democratic party except Superintendent Ring, who is a Republican. William A. Massey resigned as Chief Justice of the Supreme Court, and Gov. Sadler appointed Thomas V. Julien to fill the unexpired term.

State officers are elected in November, once in four years. An Associate Justice of the Supreme Court is elected in the alternate even-numbered years. The Legislature meets every second year on the second Monday in January.

Finances.—The treasury, Dec. 31, 1902, had \$288,616.50 in coin. The State fund securities were: Irredeemable State school funds, Nevada 4-per-cent., \$240,100; Nevada 5-per-cent., \$380,000; United States 4-per-cent., \$900,000; total, \$1,520,100. In 1902 the Bond Commissioners redeemed \$13,000 worth of bonds and issued \$15,500. The Nevada war claims against the Government amounts to \$462,000. The annual report of the Treasurer shows that the State is better in a financial way than it has ever been.

Lands.—The grants to the State were 2,732,884.70 acres, of which 30,293.56 acres are still due to the State. There are 1,400,000 acres under contract at 6 per cent. per annum. The State has 400,000 acres of reverted lands, the greater part of which are for sale at \$1.25 an acre. The State has issued patents for 876,378.59 acres. Approximately 61,250,000 acres in the State are owned by the General Government.

Education.—The school population between the age of six and eighteen years is 9,277. The semiannual apportionment was \$70,414.27.

Products.—The number of cattle in the State is estimated at 50,000, and the sheep from 5,000,000 to 7,000,000.

Political.—The Democratic State Convention met in Reno on Aug. 26, 1902. The Silver Party Convention also met on the same day. After a three days' meeting the two parties agreed to a fusion, and the following ticket was nominated: For Congressman, Clarence Van Duzer; Governor, John Sparks; Lieutenant-Governor, Lemuel Allen; Supreme Judge, George F. Talbot; Attorney-General, James G. Sweeney; Secretary of State, Eugene Howell; Treasurer, David M. Ryan; State Comptroller, Samuel P. Davis; Surveyor-General, Edward D. Kelley; Superintendent of Public Instruction, John Edwards Bray; Superintendent of State Printing, Andrew Maute; Regents of the State University, William W. Boohar (short term), Richard Kirman (long term).

Their platform pledged to them the free and unlimited coinage of silver; opposed trusts and

monopolies of any kind; favored an eight-hour law for workmen; favored the election of United States Senators by the direct vote of the people; favored the irrigation law in every form; opposed the leasing of public lands to individuals or corporations; and pledged their votes to Francis G. Newlands for United States Senator.

The Republican Convention met in Reno on Sept. 12, 1902, and nominated the following ticket: For United States Senator, Thomas P. Hawley; Congressman, Edward S. Farrington; Governor, Abner C. Cleveland; Lieutenant-Governor, Frank J. Button; Justice of Supreme Court, P. J. Bowler, Jr.; Secretary of State, William G. Douglass; Comptroller, Milo C. McMillian; Treasurer, Simon Bray; Attorney-General, Samuel Platt; Surveyor-General, Walter C. Gayhart; Superintendent of Public Instruction, Orvis Ring; Superintendent of State Printing, William W. Booth; Regents of State University, Herman H. Springmeyer (short term), Edward E. Dodge (long term).

Their platform approved the administration of President Roosevelt; favored the largest use of silver as money metal in all matters compatible with the best interests of our Government; approved the efforts of the present administration to enforce to the fullest extent possible the Sherman antitrust law; favored labor-unions in all their lawful acts and procedures as being powerful instrumentalities for the public good, and declared themselves in favor of an eight-hour working day; favored territorial expansion; opposed any constitutional amendment authorizing a lottery; opposed the pollution of rivers and reservoirs; favored the election of United States Senators by direct vote of the people.

At the election, Nov. 4, 1902, the following ticket was elected: Congressman, Clarence Van Duzer, Democrat; Governor, John Sparks, Democrat; Lieutenant-Governor, Lemuel Allen, Democrat; Supreme Judge, George F. Talbot, Democrat; Secretary of State, William G. Douglass, Republican; Comptroller, Samuel P. Davis, Democrat; Treasurer, David M. Ryan, Democrat; Attorney-General, James G. Sweeney, Democrat; Surveyor-General, Edward D. Kelley, Democrat; Superintendent of Public Instruction, Orvis Ring, Republican; Superintendent of State Printing, Andrew Maute, Democrat; Regents, William W. Booher, Democrat, Richard Kirman, Democrat.

The total vote cast for Governor was 11,318; for Congressman, 10,921. Francis G. Newlands, Democrat, will have, on joint ballot in the Legislature, 44 votes, insuring his election.

NEW HAMPSHIRE, a New England State, one of the original thirteen, ratified the Constitution June 21, 1788; area, 9,305 square miles. The population, according to each decennial census, was 141,885 in 1790; 183,858 in 1800; 214,460 in 1810; 244,022 in 1820; 269,328 in 1830; 284,574 in 1840; 317,976 in 1850; 326,073 in 1860; 318,300 in 1870; 346,991 in 1880; 376,530 in 1890; and 411,588 in 1900. Capital, Concord.

Government.—The following were the State officers during the year: Governor, Chester B. Jordan; Secretary of State, Edward N. Pearson; Treasurer, Solon A. Carter; Adjutant-General, Augustus D. Ayling; Insurance Commissioner, John C. Linehan; Labor Commissioner, Lysander H. Carroll; Superintendent of Public Instruction, Channing Folsom; Bank Commissioners, Alpheus W. Baker, John Hatch, George W. Cummings; Railroad Commissioners, Henry M. Putney, Francis C. Faulkner, E. B. S. Sanborn; State Librarian, Arthur H. Chase; Chief Justice of the Supreme Court, Frank N. Parsons; Associate Jus-

tices, William M. Chase, Reuben E. Walker, James W. Remick, George H. Bingham; Chief Justice of the Superior Court, Robert M. Wallace; Associate Justices, Robert J. Peaslee, Robert G. Pike, John E. Young, Charles F. Stone; Attorney-General, Edwin G. Eastman.

The State elections are held biennially in November of even-numbered years. The Legislature meets in January of odd-numbered years.

Population.—Of the population of the State in 1900, 410,791 were white and 797, including 112 Chinese and 22 Indians, were colored. The native born numbered 323,431, and the foreign born 88,107. There were 110,895 of school age—between the ages of five and twenty years; and there were 88,149 males of military age—between eighteen and forty-four inclusive. Of the 168,453 males ten years old and over, 12,043, or a little more than 7 per cent., could not read and write; and of the 169,410 females of the same age, 9,032, or 5½ per cent., were reported as illiterates. There were 337,893 persons ten years old and over, and of these, 178,719, or 53 per cent., were engaged in gainful occupations—were wholly or in part earning a living either as wage-earners or as the proprietors of some business. Of these workers, 136,961 were males and 41,758 were females. Of the 178,719 who were

at work, 38,782 were engaged in agricultural pursuits, 7,765 in the professions, 30,576 in domestic and personal service, 25,651 in trade and transportation, and 75,945 in manufacturing and mechanical business. Thus it appears that only a little more than 21 per cent. of the State's population above ten years of age can be classed as agricultural, while 42 per cent. are mechanics or manufacturers, 14 per cent. are in trade or rail-roading, 17 per cent. in domestic and personal service, and 4½ per cent. in professional work.

There were 97,702 families, and of these 51,017 owned the homes they occupied. Of these homes, 36,078 were unencumbered and 13,154 were mortgaged. Of the 25,472 farm homes, 18,446 were unencumbered, and 6,319 were encumbered.

Finances.—Cash in the Treasury June 1, 1901, \$447,907.02; receipts during the year 1901-'02, \$1,389,322.67; total, \$1,837,229.69. Disbursements during year ending June 1, 1902, \$1,261,614.57; cash on hand at same date, \$575,615.12; total, \$1,837,229.69. Liabilities June 1, 1901, \$1,793,795.36; assets same date, \$785,162.45; net indebtedness June 1, 1901, \$1,008,632.91. Liabilities June 1, 1902, \$1,669,071.30; assets same date, \$912,638.94; net indebtedness June 1, 1902, \$756,432.36. Reduction of debt during the year was \$252,200.55.

The Treasurer says: "The net results of the year's business show a reduction of the State's indebtedness, notwithstanding the large appropriations of 1901 for public institutions and new enterprises. This is explained by the reduction of the annual interest charges, by the redemption of municipal war-loan 6-per-cent. bonds, and the receipt from the United States of \$108,372.53 for

NAHUM J. BACHELDER,
GOVERNOR OF NEW HAMPSHIRE.

interest on notes and bonds issued for raising and equipping the State's quota of troops during the civil war of 1861-'65. The State will never be free from debt, by reason of the obligations it has assumed in the acceptance of certain trust funds upon which it has contracted to pay interest forever. The Benjamin Thompson Trust fund, which originally amounted to \$363,823.32, will, on Jan. 30, 1910, amount to \$797,181.67. The State will have added to the original fund \$433,358.35, and after Jan. 30, 1910, will be obliged to pay in cash annually to the New Hampshire College of Agriculture and the Mechanic Arts 4 per cent. on \$797,181.67—an annual interest charge of \$31,887.27. Other trust funds on that date (Jan. 30, 1910) will, with the Thompson fund, amount to nearly \$1,000,000, involving an annual interest charge of nearly \$40,000."

Banks.—There are under the supervision of the Bank Commissioners 77 savings-banks, 13 banking and trust companies (7 with savings-bank departments), and 17 building and loan associations. This includes the savings-banks and trust companies now in the hands of assignees. The savings-banks now in active operation show an aggregate of resources on June 30, 1902, of \$70,725,954.79. There is due the depositors \$60,249,862.29, and the surplus and the guaranty fund amount to \$10,476,092.50. *Per capita* deposits for the entire population of the State, \$146.35.

The increase of deposits for the year was \$3,171,429.14, and the number of depositors has increased from 142,460 to 147,928. Unwise investments in distant States, induced by high rates of interest, have wholly ceased, and, under a conservative investment law, satisfactory investments in securities proper for trust funds have taken place.

But little change in the volume of business of the building and loan associations is shown. The loans to members on homesteads on June 30, 1902, was \$1,595,618.41; loans on shares, \$41,640.20; loans to others not members, \$38,696.08. The book value of real estate held by the associations was \$65,790.50; cash on hand and on deposit, \$58,785.37; total assets, \$1,740,116.64. The withdrawals during the year were: Dues capital, \$160,384.50; dues retired, \$98,435; dues matured, \$96,291; profits withdrawn, \$38,923.31; profits retired, \$36,306.62; profits matured, \$51,330.93. The shares account shows additions during the year of 5,821; withdrawn, 3,127½; forfeited, 25; retired, 898; matured, 751½; shares outstanding, 28,867.

Insurance.—The report for 1901, issued May 1, 1902, shows the withdrawal of 7 companies from the State and the admission of 1. The number of companies now doing business in New Hampshire is 113—83 stock companies and 30 mutual companies—a net loss of 6. The total business transacted within the State by all authorized companies for the year was: Risks written, \$111,581,480.96; premiums received, \$1,456,852.36; losses paid, \$875,264.92; a gain of about \$9,000,000. The largest amount written in any previous year was in 1899, the risks written being \$103,674,181.06.

The financial condition of all the companies doing business in New Hampshire on Jan. 1, 1902, was as follows: Total paid-up capital, \$44,677,875; total gross assets, \$259,324,706.80; total liabilities (except capital), \$128,946,004.04; total surplus as to policy-holders, \$130,378,705.76. By surplus to policy-holders is meant the surplus over all liabilities added to the amount of the paid-up capital; for both amounts are available, if necessary, for the payment of loss claims.

From 1867 to 1901, inclusive (thirty-four years), foreign insurance companies (companies of other States and countries) doing business in New

Hampshire received in premiums \$15,027,652.16, and paid losses in the same years of \$8,888,308.62. The premiums received exceeded losses paid by \$6,139,343.54.

In 1885 the "valued-policy law" was passed, which resulted in the withdrawal from the State of all foreign stock and mutual companies. They believed it impossible to do business with safety and profit under that law. In 1889, however, they began to return; and business went on as before. The ratio of losses to premiums, from 1867 to 1884, inclusive, under the old law common to most of the States, was 66.81; the ratio of losses under the "valued-policy law," from 1889 to 1901, inclusive, was 50.25—fairly showing the great value of the new law to New Hampshire and to the insurance companies compared with the old law. Nothing could induce the State to return to the old system of insurance.

Railroads.—The history of steam-roads for 1902 is mainly a duplication of last year's statement. Mileage, rentals, and dividends are precisely the same. The Boston and Main Railroad is authorized by the Railroad Commissioners of Maine, New Hampshire, and Massachusetts to increase its capital stock \$1,000,000 by issuing 10,000 shares, par value \$100. The proceeds of this increase will be expended in the further abolishing of grade-crossings, in permanent repairs on the Worcester, Nashua, and Portland branch, and for other lawful purposes.

The electric-road mileage now in operation is 223 miles, with 10 miles more in process of construction. Their capitalization is \$3,451,000 in stock and \$2,196,000 in bonds, an average of about \$25,000 a mile.

State Library.—This institution aims to be the central reference library of the State, supplementing the public libraries of the towns and cities, and furnishing aid to professional men, historians, scientists, and others within the borders of the State. The State has provided it with a commodious fire-proof building, well adapted for its needs. Upon its shelves are over 80,000 bound volumes, besides a very large number of unbound volumes. The average annual increase for the past few years has exceeded 6,000 bound volumes and an equal number of unbound volumes. While the legal department is the largest and most complete at present, much thought and effort is being given to the medical, historical, agricultural, scientific, religious, and other departments, to the end that all may be eventually as well served as is the legal profession. Much attention has been given during the past few years to the collection of proceedings and publications of societies of all kinds, with the result that the library to-day contains one of the best collections in the country.

National Guard.—The guard consists of 1 brigade of 2 12-company regiments of infantry, 1 4-gun light battery, 1 troop of cavalry, a signal-corps, and a hospital corps. The infantry is armed with the now obsolete breech-loading rifle, caliber 0.45, but a few of the Springfield magazine rifles, caliber 0.30 (Krag-Jorgensen), have been issued to each of the companies for rifle practise on the ranges, with the result that an unusual number of sharpshooters and marksmen have qualified. The interest in this branch of a soldier's education has been much increased.

New flag-cases for the battle-flags of the war regiments of New Hampshire of the civil and Spanish wars have been erected in the Doric Hall of the State-House. These cases, of unstained mahogany, are lined throughout with copper and enclosed in front with plate-glass, making them not only dust-proof, but practically air-tight.

The State Prison.—The average daily population for 1901-'02 was 150—a little more than the preceding two years, but much less than from 1895 to 1899. There have been no escapes since 1870. Trouble with the men is practically unknown. There are but 2 female convicts.

Prisoners are now sentenced under the indeterminate-sentence act of 1901, which went into effect in May of that year. Eight have been paroled under that act, but so recently that nothing can be said concerning the results. The most effective inducement to the convicts to submit bravely and patiently to their duties during their imprisonment is the provision for commuting sentences for good behavior.

tal, which, with their experience in the wards, broadens and perfects their education.

During the summer months the open-air treatment of insanity has been pushed to the furthest limit possible consistent with the physical condition of the patients. Tuberculosis patients were cared for in a tent, and all whose physical condition admitted were placed out on the grounds. Out of a population of 470, as many as 440 were out of doors. The results of such treatment were eminently satisfactory, both in promoting increased nutrition and in quieting such as were restless and excitable.

Soldiers' Home.—The inmates of the home number from 80 to 100 through the year. Up-

STATE LIBRARY, CONCORD, NEW HAMPSHIRE.

State Hospital.—The sum of \$15,000 was appropriated by the Legislature to provide fire-proof elevator wells for the food-elevators, a tower containing an iron stairway to serve as a fire-escape for the chapel building, a new oven and tile floor for the bakery, and a new cottage for the head farmer.

The summer sanatorium, located at Lake Penacook and distant 4 miles from the hospital proper, continues to be a most useful supplement to the remedial equipment of this institution. This addition now includes 56 acres of land, 2 cottages for men and women patients, besides small stable and barn. An average of 30 patients have been accommodated there during the summer months.

The Training-School for Nurses has been eleven years in successful operation. Its efficiency has been greatly increased during the past year by an alliance with the Concord District Nursing Association. Every nurse prior to her graduation must have served a certain number of weeks in district nursing under the direction of a head nurse employed by the association. In this way the nurses of the State Hospital acquire a fine drill in house-to-house nursing outside the hospi-

ward of 500 soldiers have resided there, and the deaths number 105. The cost of individual maintenance of members is about \$210 a year.

The home is in the town of Tilton, 20 miles from the capital, and is located on a beautiful eminence half a mile from the village. Its original cost was \$40,000, and it has been maintained at an annual expense to the State of about \$10,000, over and above the amounts received from the United States Government under general law. The Governor of the State is, *ex officio*, chairman of the Board of Managers; secretary, Col. Daniel Hall, of Dover; the commandant, Capt. Ervin H. Smith, of Peterborough.

Dartmouth College.—The total enrolment of students for the academic year 1902-'03 is 789—an increase of 21 over the preceding year. Of this number, New Hampshire has 220; Massachusetts, 284; and the remainder come from 25 different States and foreign lands.

State Agricultural College.—There was in the year some increase in the grade of work and the requirements for admission. The college is so related to the recently adopted courses of study in the State high schools that the graduates of these

schools can be admitted without examination. The courses of study in mechanical, in electrical, and in chemical engineering have been considerably improved. In a more marked degree the agricultural course has been strengthened. A special building for agriculture is being erected at an expense of \$30,000. It will be ready for occupancy early in 1903.

Normal School.—This year the enrolment was 140, an advance of 40 per cent. over the previous year. The model school is well equipped, and is under the supervision of 2 teachers who are specialists in their respective lines. It has a liberal course of study, including nature study, art work, and manual training, and is thoroughly up to date. In the Normal School the work in each subject has been placed under the direction of heads of departments. Room and apparatus have been provided for thorough physical training, partly through the agency of the Students' Athletic Association. The school has a well-chosen library of 5,000 volumes, while a special reference library of text-books has just been established. The principal of the school is Mr. J. E. Klock.

Board of Health.—The most important work of the year has been in the State Laboratory of Hygiene. In its chemical department much attention has been given to the analysis of public and private water-supplies with excellent results. Numerous cases of lead-poisoning have also been discovered, and its causes eliminated. In its 2 bacteriological departments many examinations have been made for the determination of tuberculosis, diphtheria, typhoid fever, malaria, etc., which have proved to be of great value.

Smallpox has existed in various parts of the State for two years, and the board has been indefatigable, and very successful, in its efforts to stamp it out.

The State Board of Health also constitutes the State Board of Commissioners of Lunacy, having authority to commit worthy indigent patients to the State Hospital for treatment at the expense of the State.

Charities and Corrections.—The Legislature of 1901 provided for a secretary and clerk outside the membership of the board; for the return of accurate statistics of all pauper relief given by towns throughout the State; that all the county reports should be prepared in a uniform manner, giving certain statistics as to the insane, feeble-minded, and prisoners, to be returned to the board; for an indeterminate sentence of prisoners; and for a State school for the feeble-minded, appropriating \$30,000 wherewith to establish it. This school has been located at Laconia, and will be opened Jan. 1, 1903, with about 60 pupils. By this action of the Legislature the Board of Charities was put upon a level with the other State departments, and its scope largely increased.

Old Home Week.—This distinctively New Hampshire festival was celebrated with more than the usual enthusiasm by 100 towns and cities. It brought back to the State thousands of her long-absent children, and was an interesting augmentation of the bulk of the summer travel. New roads through the mountain passes, under the patronage of the State, and new and magnificent hotels are meeting the visitors at every turn.

Antisaloon League.—The principal officers of the league for 1902 are: President, Hon. D. H. Goodell; superintendent, Rev. J. H. Robbins. The business of the league has been prosecuted with the accustomed vigor. The question of a change of the State policy from absolute prohibition to license or local option came prominently before the people at the biennial election in November,

and will be brought before the Legislature for consideration at its coming winter session. Some of the purposes of the league are to insure united action in the churches in the cause of temperance; to enforce all temperance laws; to secure advanced additional prohibition legislation; and to circulate temperance literature freely among the people.

Bureau of Labor.—The biennial report of this department for 1901-'02 was issued in December. It reports unusual activity and prosperity in all departments of business, and gives some interesting and exhaustive statistics concerning the foremost industries of the State. In manufactures, for 1891, the cotton interest leads, with manufactured goods to the value of \$29,143,680; with boots and shoes a close second, \$22,988,189. The woolen, lumber, paper, and granite industries have made remarkable strides, the business of each running into the millions, while many other industries are reported as equally prosperous. The New Hampshire creameries, in quality of goods manufactured, lead the whole country, as shown by the awards at the Chicago Exposition in 1893, and at Buffalo. The number of creameries reported is 50.

State Grange.—The master of the grange is Gov.-Elect Nahum J. Bachelder. Its present membership is 25,109, and it has held 6,000 meetings during the year. Its receipts have been \$8,898.48, and the total cash in the treasury is about \$17,000. It encourages the observance of Arbor Day by offering prizes to subordinate granges for the planting of shade-trees by the country roadsides, the number of such trees desired being 50,000. For fourteen years the Grange Mutual Fire-Insurance Company has been maintained, furnishing insurance exclusively to its members. Property upon which policies are now in force exceeds \$6,000,000. All losses and expenses have been promptly met, and the saving to the insured in premiums since the inception of the company has exceeded \$100,000, as compared with the cost of insurance for the same amount on the same property in stock companies.

There are more than 3,000 summer hotels and boarding-houses in the State, including the most costly and elegant summer hotelery in the United States, and they accommodate 75,000 guests. About 1,200 (abandoned?) farms have been purchased by wealthy non-residents for summer homes, who have expended nearly \$3,000,000 on their purchases in addition to the purchase price.

Political.—The whole number of votes cast for Governor at the November election of 1902 was 79,162, as follows: Nahum J. Bachelder, Republican, 42,115; Henry F. Hollis, Democrat, 33,844; John C. Berry, Prohibition, 1,621; Michael H. O'Neill, Socialist, 1,057; scattering, 525. Republican plurality, 8,271.

The new Legislature consists of 24 Senators—21 Republicans and 3 Democrats; House of Representatives, 393 members—256 Republicans and 137 Democrats.

The Governor's Council consists of 5 members, all Republicans.

Constitutional Convention.—The Constitution of New Hampshire has remained unchanged since 1889. The General Court (the Legislature), by an act approved March 21, 1901, provided for the election, on Nov. 4, 1902, of delegates to a constitutional convention, to assemble at Concord in the following December. The convention assembled as provided, and finally submitted to the people for ratification 9 amendments to the Constitution, as follow:

1. For the prohibition of trusts.
2. For the extension of the suffrage to women.

3. For a tax on inheritances and franchises.
4. For an educational qualification of the suffrage.
5. To strike the word "Protestant" from the bill of rights.
6. To place representation in the Legislature upon a new basis.
7. To establish voting precincts.
8. To extend the criminal jurisdiction of police courts.
9. To require examination of commissioned officers in the militia.

Statue to Commodore Perkins.—A noble and elaborate monument to Commodore George Hamilton Perkins, a son of New Hampshire, given to the State by his widow and his daughter (Mrs. Isabella Anderson), was unveiled in the State-House grounds, at Concord, April 25, the fortieth anniversary of Farragut's battle of New Orleans. The exercises were attended by many distinguished naval and military men and civilians. The oration was by President William Jewett Tucker of Dartmouth College. The monument stands on North State Street, in the rear of the State-House and facing the United States Government building. The statue is the work of Daniel C. French, of New York city, a native of Chester, N. H. The general structure is of New Hampshire granite, while the niche is of Tennessee marble. The statue (bronze), which stands in the niche, is 7½ feet in height. Elaborate panels and historical inscriptions occupy appropriate places on the monument. Its cost was about \$40,000.

NEW JERSEY, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 18, 1787. Area, 7,815 square miles. The population, according to each decennial census, was 184,139 in 1790; 211,149 in 1800; 245,562 in 1810; 277,426 in 1820; 320,823 in 1830; 373,306 in 1840; 489,555 in 1850; 672,035 in 1860; 906,096 in 1870; 1,131,116 in 1880; 1,444,933 in 1890; and 1,883,669 in 1900. Capital, Trenton.

Government.—The State officers in 1902 were: Governor, Franklin Murphy; Secretary of State, George Wurts; Comptroller, William S. Hancock; Attorney-General, Samuel H. Grey; Adjutant-General, Alexander C. Oliphant; Superintendent of Public Instruction, Charles J. Baxter; Commissioner of Banking and Insurance, William Bettle—all Republicans. Chief Justice of the Supreme Court, William S. Gummere; Associate Justices, Gilbert Collins, J. Franklin Fort, Jonathan Dixon, Mahlon Pitney, Bennet Van Syckel, Charles G. Garrison, Abram Q. Garretson, and Charles E. Hendrickson; Court of Errors and Appeals: Judges John W. Bogart, Gottfried Krueger, Frederic Adams, William H. Vredenburg, Peter V. Voorhees, and Garret D. W. Vroom. Chancellor, William J. Magie.

A general election is held annually in November. The only elective State officer is the Governor, whose term is three years. The others, including the justices of the Supreme Court and the judges of the Court of Errors and Appeals, are appointed by the Governor, excepting the Treasurer and the Comptroller, who are appointed by the Legislature, which meets every year in January, the sessions not being limited.

Finances.—At the close of the fiscal year ending Oct. 31 the State fund was \$2,933,418.26; the school fund (including the school tax for 1901, \$1,486,806.75), \$5,461,789.42; local taxation on railroad corporations, \$400,784.47; allotment of taxes on railroad and canal property to the taxing districts, \$200,461.93; Agricultural College fund, \$116,000; total, \$9,112,454.08. The sinking-fund of the State consisted of the following as-

sets: Loans on bonds and mortgages, \$91,783.34; real estate, \$77,974.20; due from Thomas Crozier decree, \$1,000; balance in bank, Oct. 31, \$1,792.52; total, \$172,550.06.

Valuations.—The State Board of Taxation, in its annual report, Oct. 31, placed the total valuation of taxable real and personal property for 1902, as returned by the county boards of assessors, at \$952,560,540, an increase of \$34,141,798 over the ratables of 1901. Of this total of ratables, \$827,500,112 represents real estate, and \$153,233,682 personal property.

The amount of exempt property for 1901 was \$107,318,912. This, with the \$9,749,442 of exemptions allowed veterans, firemen, and militia, makes a total increase of \$8,309,294 over the exemptions of 1901. Of the amount of exempt property, \$15,261,060 is for the exemption of public schools, \$7,792,953 for other school property, \$40,802,264 for public property, \$35,719,711 for church and charitable property, and \$4,227,250 for cemeteries and graveyards. The deductions for debts in the State amount to \$21,756,071, compared with \$26,696,779 in 1901.

The returns of the ratables in the counties for 1902 show a net increase of \$34,141,798 over the valuations of 1901. All the counties show an increase except Burlington and Hunterdon.

The valuations of real estate in each county for 1902, compared with the valuations of personal property, show that the assessed value of real estate represents 84.4 per cent. of the whole.

The total valuation of real estate was \$827,500,112; of personal property, \$153,233,682.

The number of taxable corporations has steadily increased from 619 in 1884 to 8,056 in 1902, this latter figure being exclusive of about 300 corporations subject to tax under the provisions of the Voorhees franchise act of 1900, and being also exclusive of the great number of corporations that are exempt from State tax by reason of being engaged in manufacturing or mining carried on in New Jersey. There are, in fact, about 15,000 corporations carried by the State Board of Assessors. As a result of the assessments levied by this board, there was paid into the State treasury on account of miscellaneous corporation taxes for 1902 the sum of \$1,791,079.71, and for the amount of taxes levied in previous years the further sum of \$177,128.66, which is exclusive of \$569,237.35 received by the Secretary of State for the year and paid into the treasury for incorporation and reinstatement fees. The total receipts from miscellaneous corporations in the fiscal year were \$2,537,445.72, an increase over the last fiscal year of \$346,001.99.

The aggregate assessed valuation of the railroad and canal property is given as \$223,461,784, an increase of \$3,527,205 over the previous year. The total tax levied against the railroad corporations by the State was \$1,528,255.111, against \$1,500,524.75 for the previous year. Of this total tax, \$1,117,308.91 is for State uses and \$410,946.20 for local uses.

Industries.—The preliminary census report on the manufacturing industries of New Jersey, issued Jan. 16, 1902, showed a total capital of \$503,824,082, an increase of almost 101 per cent., and value of products in 1900 of \$611,728,933, an increase of almost 73 per cent. There were 15,481 establishments, increase 68 per cent.; 241,581 wage-earners, increase 101 per cent.; total wages of \$110,088,605, an increase of almost 33 per cent. The miscellaneous expenses increased 131 per cent., to \$42,640,143, and the cost of materials used was \$360,941,870, an increase of 91 per cent.

Banking.—The report of the State Banking Commissioner to the United States Comptroller showed the condition of the trust companies, savings-banks, and State banks for the quarter ending Sept. 15. There were 51 trust companies, 17 State banks, and 27 savings-banks. The condition of the trust companies was shown to have been as follows: Resources, \$99,995,256.74; liabilities, \$72,463,715.22. Notes and bills rediscounted, \$79,300; bills payable, \$850,000; bonds outstanding, \$1,150,000; other liabilities, \$573,600; total, \$99,995,256.74. The statement of the State banks showed the following condition: Resources, \$11,658,437.17; liabilities, \$8,556,437.17; bills payable, \$25,000; other liabilities, 4,600; total, \$11,658,437.17. The condition of the 27 savings-banks was reported as follows: Resources and assets, \$76,621,110.12; liabilities, capital stock paid in, \$500,000; amount due depositors, \$70,107,420.40; liabilities other than those stated, \$282,442.29; surplus, \$5,731,248.03; total, \$76,621,110.12.

Distribution of Products.—The chief of the New Jersey Bureau of Statistics compiled in December a statement showing the distribution of the product of the large manufacturing industries of the State. The statement is the first compilation of the kind made, and has to do with the distribution to capital account. The report of the bureau contains a classified list of 62 distinct industrial lines. There are 1,385 returns, and the firms reporting have a combined capital of \$225,000,000. In felt hats the industry product is \$4,014,197, which is \$1,530.32 per \$1,000 of capital employed. But the amount of capital is only \$2,610,045. The number of firms reporting was 48. The percentage of industry product devoted to profit and minor expenses was only \$32.88. In shoe manufacturing 41 firms reported, yet only \$2,152,079 in capital is employed. The ratio of the industry product devoted to profit and minor expenses is 42.37 per cent. In iron the percentage of industry product devoted to profit and minor expenses is less than one-third. In jewelry it is 61.23 per cent. Silk manufacturing is the most important industry included. The product is \$14,286,518, and the amount per \$1,000 of capital employed is \$705.42. The amount of capital is \$20,252,319, while the ratio of industry product devoted to profit and minor expenses is 47.74 per cent.

Factories.—The State Factory Inspector submitted his annual report in December. It shows that in the last fiscal year the department had made 180 inspections of factories, mines, and bakeshops, as a result of which 187 children were discharged. It sets forth that in the year 19 persons were killed and 68 injured because of accidents in factories and mines. The general conditions of all industries inspected was good, although some of the bakeries were reported to be very dirty, especially in Jersey City and Paterson. The year was one of unprecedented prosperity, and there was greater industrial activity than ever. The consequent increased demand for labor rendered special activity necessary for enforcement of the child-labor laws. Prosecutions of offenders were instituted in the local courts, and the penalties provided by law were imposed.

Agriculture.—The report of the Secretary of the State Board of Agriculture, filed in November, shows that the year 1902 was one of the most prosperous in the agricultural history of the State. The white-potato crop exceeded all previous records by about 3,000,000 bushels, and the financial yield to the farmer was far in excess of any previous year. The report says that "for so small a State, and with so much territory

taken up with truck-farming and market-gardening, the crops of grain have been remarkable. The increase in the production of corn and in the acreage devoted to its growing is indicative of an increase in the dairy business. The indication, when coupled with the fact that during the past year 17,127 cows were brought into New Jersey from other States, a number largely in excess of other years, confirms the conclusion."

The farming interests of the State represent a business with a capital of \$195,359,106. The only short crop was of hay, and this shortage is attributed to lack of rain. The yield is about 10,000 tons less than in 1901.

Of the various crops, the report says that oats were better than for some years past. Rye, an average crop. The acreage of buckwheat is being reduced each year. The production of sweet potatoes is being extended in the lighter soils of the southern part of the State. The crop is large and valuable.

The report places the total value of the farms of the State for 1902 at \$43,528,871. It gives the number of farms as 34,650, and the improved land, capable of profitable cultivation, is 1,977,042 acres. It says there is use of commercial plant food or fertilizers \$2,165,320 worth. Although farm-laborers seem hard to obtain, there is expended for this item \$6,720,030. The stock comprising the flocks and herds, horses, mules, and other animals, is valued at \$17,613,620.

Ceramics.—The Legislature at its last session passed an act providing for the establishment of a course in practical and scientific instruction in the art of clay-working and ceramics in the State Agricultural College, and appropriated \$12,000 for the organization and equipment of the department for the current year, and \$2,500 annually for its maintenance. The report of the Board of Visitors, issued in December, spoke very favorably of its progress. A laboratory, thoroughly equipped, had been erected and the work of instruction in ceramics is begun. The trustees received a gift of \$50,000 from Ralph Voorhees, a resident of New Jersey, for a library building, which is to be erected immediately.

Education.—The report of the School Superintendent, submitted in December, gives the statistics of the high schools of the State. As this was the first time that the data were collected, no comparison could be made with previous records. Of the 394 school districts in the State, 147 report full or partial high-school courses. In these 147 high schools and partial high schools were enrolled 12,980 pupils, 5,159 boys and 7,821 girls, or 3.8 per cent. of the entire school enrollment. In the 247 districts that have not established high-school courses there were 1,564 pupils which were doing high-school work. In the 147 high-school districts there were 603 teachers. They received \$511,281.19. The total cost of maintaining these schools was \$611,312.94. Sixty-nine schools maintain courses of study covering four years' work. Of these, 55 are on the "approved list," which means that graduates of these schools are admitted to the State Normal School without examination.

The State Librarian, in his annual report made in December, noted a great falling off of interest in the traveling-library system. At the close of the fiscal year 23 of the 62 traveling libraries were in use, against 42 in the preceding year. Twenty-two towns discontinued their use, while only 4 new towns applied for them.

The educational exhibit from New Jersey at the Charleston Exposition won both the gold and silver medals. The New Jersey Normal and

Model School, which had a separate exhibit, won a gold medal, as did the New Jersey School for the Deaf. The insect exhibit won a gold medal; it was said that the State had the finest collection of wood- and grain-destroying insects in the country. The State Museum won the whole set of medals—gold, silver, and bronze.

The registrar of Princeton University gave out the report of the entrance examinations for the university on June 25 as 229 for the academic course and 212 for the scientific, against 247 academic and 208 scientific the preceding year. The falling off was principally from the Middle States. The entrance rolls showed that New York city leads. Dr. Francis L. Patton resigned the presidency of the university July 31, and was succeeded, Aug. 1, by Woodrow Wilson, LL. D. Dr. Patton was elected president of Princeton Theological Seminary, Oct. 14. Three summer schools were in operation at the university during the summer.

Prisons.—In the annual report of the Board of Prison Inspectors it was stated that the striped-clothing, lock-step, and short-hair system should be abolished. It recommended that a separate institution for women should be built on the site of the present State arsenal adjoining the prison. There were 31 women in the prison, 20 of the number being white and 11 colored. It appeared from the supervisor's report, Nov. 1, that at the beginning of the fiscal year ending Oct. 31 the number of prisoners confined in the institution was 1,106. During the year 516 of these were removed. The number received in the year was 431, so that the number remaining Nov. 1 was 1,021, or 85 fewer than at the beginning of the year. The terms of 407 prisoners expired, 5 were discharged by the United States commissioner, 1 was pardoned by the President, 15 were removed to the insane asylum, 8 were pardoned by the Board of Pardons, and 61 were paroled.

Charities and Corrections.—According to the report of the Trustees for the State Home for Girls for the year ending Oct. 31, the number of girls committed to the home in the year was 24. The number sent out was 29, most of whom were doing well in good homes. The number of girls in the institution at the date of the last annual report was 119. At present there are 114. The addition of a new cottage has proved to be of great advantage, enabling more and better work to be done in all departments. There was 1 death. With this exception the health of the inmates has been good.

According to the superintendent's report for the fiscal year ending Oct. 31, the Home for Boys cared for 500 in the year. It received 160, and discharged 163. Boys were received from every county in the State, with the exception of 3. The health of the boys was very good. There were but 2 deaths. There seemed to be a more contented and happier feeling among them, due largely to the policy of making the boys understand that their release depended entirely upon their own behavior and individual merit, and not upon any outside influences. The blacksmith, carpenter, and mason shops were very successful, all these departments being as full as possible, and all the boys very much interested in their work. The results from the garden and factory were also very satisfactory; there was an abundance of fruit and melons for the boys during the season, and this contributed largely to the unusually healthy condition of the institution.

The Governor approved, in October, the erection of the Tuberculosis Sanitarium on Mount

Kipp, an elevation of 954 feet in the range of mountains near Glen Gardner. The site is unequaled in the State for this special purpose. It was decided to erect one large central building for the patients. A macadamized road from Glen Gardner was begun.

The annual report of the Board of Managers of the Insane Asylum, submitted in December, reiterated the recommendation for a separate asylum for the convict and criminal insane, and deprecated the failure of the State to provide for the removal of the epileptics from the Insane Asylum. It called attention to the fact that in several counties the places designated as "asylums," although receiving State aid, are without any organization, without adequate medical supervision or proper attendants or nurses. The total population of the 6 county asylums was 555, of whom 282 were males and 273 were females. The report referred to the overcrowded condition of the State Hospital in Trenton, which contained 1,137 patients, although the present buildings were designed for only 840. The total expenditure in the year was \$236,749.39, and the per capita expense per week for maintenance was about \$380.

The Epileptic Village.—The annual report of the Board of Managers of the State Village of Epileptics shows that, although the place is a model one in many respects, there is still much to be done. The village was opened in 1898, and since then 9 inmates have been discharged as cured, 4 transferred to other institutions, 4 removed by relatives, 2 died, and 3 have eloped. In the past year 25 male and 20 female epileptics were admitted, and the total population at this time is 75.

It is estimated that there is 1 epileptic to each 500 of the population. A conservative estimate would place the total number at more than 2,500. "There is a large number of epileptics confined in the hospitals for the insane and other institutions throughout the State that properly belong in the village."

Forestry.—Forest Bulletin No. 11, issued by the Geological Survey, tells of the first extensive, systematic, and successful experiment in forest cultivation made in the State, after eight years' practical work on a 3,000-acre tract along Ramapo river. The forest was divided into 10 parts, of 300 acres each, and every year one of these divisions was taken in hand. The result of the treatment of 2,400 acres has been most successful, both from a sylvicultural and a financial point of view, and is described at length in the bulletin. New Jersey has 3,324 square miles of forest area that could be subjected to this treatment. The forests of the State suffered great damage from fires in 1902.

Interstate Fair.—The Interstate Fair closed on Saturday, Oct. 4. Notwithstanding the bad weather, the fair was very successful. More than 89,000 persons attended it. The profits were less than in 1901, but there was a considerable remainder after paying all expenses. The exhibition of cattle, sheep, and swine exceeded that of former years. At a meeting of the Board of Directors of the association, Dec. 10, it was decided to pay a dividend of 7 per cent. on \$20,000 worth of preferred stock, and 2 per cent. on \$115,000 worth of common stock.

Disasters.—On March 3 a flood at Paterson placed the mill section of the city under water. The East Jersey Water Company was damaged to the extent of \$1,500,000, and the entire damage amounted to several millions. Only two lives were lost in the city, but several persons per-

ished at other points of Passaic river. The bridge from Passaic to Dundee island was destroyed, and 6 persons who were trying to get floating lumber were swept away and drowned.

The worst fire in the history of Atlantic City occurred on April 3, in which 11 of the principal hotels were burned to the ground. The direct property loss considerably exceeded \$1,000,000. Three other hotels were partially destroyed, and 30 business establishments of various kinds were burned out.

On March 19 the Phenix line pier, in Hoboken, and the steamer British Queen, besides a dozen lighters and barges, were burned. Two men were killed and 6 were injured. About \$2,000,000 worth of property was destroyed. The fire was due to defective electric-light wires.

A fire that started at midnight in Paterson, Feb. 8, burned unchecked for eighteen hours, and destroyed the heart of the business section, with a loss of property values at \$18,000,000, including the City Hall, 5 bank buildings, the public library containing 200,000 volumes, 5 churches, 2 hotels, 2 schoolhouses, police headquarters, 1 fire-engine house, 1 theater, the Hamilton Club, and more than 40 stores, office buildings, and public halls.

Legislative Session.—There were 295 bills passed by the Legislature. Of these, the Governor signed 280 and vetoed 15. Among the more important acts were these:

Providing for the study of ceramics in the State Agricultural College.

Allowing the State Board of Education \$45,000 for a manual training-school for colored youths.

The antianarchist bill, which forbids any attempt to destroy Government by writing or speech, or to be a member of any organization for this purpose. The penalty is \$2,000 fine, or fifteen years' imprisonment, or both. Any person that assails high Government officials or encourages such assault shall be put to death or imprisoned for life.

An act appropriating \$20,000 for a new dormitory at the Old Soldiers' Home at Kearny.

The general school act, which allows school boards to condemn land for school purposes, excludes teachers who have not been vaccinated, and renders parents and guardians liable to a fine of \$1 to \$25, or imprisonment for ninety days, if they fail to compel their children to attend school.

Appropriating \$250,000 for Trenton armory.

Creating a State Board of Architecture, and allowing only licensed architects to practise in the State.

Making it illegal to catch any food fish for the purpose of manufacturing therefrom any oil or fertilizing food.

Authorizing cities to borrow up to \$100,000 on bonds for purposes for which taxation may be raised.

Amending the corporation act, so that any stockholder who is dissatisfied with a merger may have his stock appraised.

Providing for the establishment of a State sanatorium for the treatment of tuberculous diseases.

Requiring that children who become a public charge shall be placed in care of some family of the same religious faith as that of the parents, or of an institution of that kind.

Limiting the money to be raised by cities for city purposes to \$2 on every \$100 assessed valuation.

Appropriating \$10,000 for a monument to the New Jersey men who fell at Antietam.

Political.—The election for members of the Legislature, in November, resulted in the return of 14 Republicans and 7 Democrats to the Senate, and of 38 Republicans and 22 Democrats to the Assembly. The Republicans elected 7 Congressmen; the Democrats, 3.

NEW MEXICO, a Territory of the United States, organized Sept. 9, 1850; area, 122,580 square miles. The population, according to each decennial census, was 61,547 in 1850; 93,516 in 1860; 91,874 in 1870; 119,566 in 1880; 153,593 in 1890; and 195,310 in 1900. Indians not taxed in 1900, 12,937. Capital, Santa Fé.

Government.—The Territorial officers in 1902 were: Governor, Miguel A. Otero; Secretary, J. W. Reynolds; Treasurer, J. H. Vaughn; Auditor, W. G. Sargent; Adjutant-General, William H. Whiteman; Attorney-General, E. L. Bartlett; Superintendent of Education, J. Francisco Chaves; Commissioner of Public Lands, A. A. Keen; Coal-Oil Inspector, John S. Clark; Public Printer, James D. Hughes—all Republicans. Supreme Court—Chief Justice, William J. Mills; Associate Justices, John R. McFie, Benjamin S. Baker, Frank W. Parker, and Daniel H. McMillan; Clerk, José D. Sena—all Republicans.

The Legislature meets biennially, in January of the odd-numbered years. The members are elected at the preceding general election in November. The Governor and Secretary are appointed by the President, and hold at his pleasure. The judges of the Supreme and District Courts are also appointed by the President, and hold under the same tenure. All other general officers of the Territory are appointed by the Governor, with the advice and consent of the Council, which is the upper branch of the Territorial Legislature, and consists of 12 members, elected by the people of the respective council districts. The only officer elected by the people of the Territory at large is the Delegate in Congress.

The Legislature elected in November, 1902, consists of 12 Republicans and no Democrats in the Council, and 20 Republicans, 3 Democrats, and 1 Independent in the House.

Political.—The Republican Convention to nominate a candidate for a delegate was held at Raton in October, and Bernard S. Rodey, then the sitting Delegate, was nominated for reelection. A platform was adopted approving all the general principles of the Republican party, declaring strongly in favor of the admission of New Mexico, Arizona, and Oklahoma to the Union as States, and giving cordial approval to the policies of the present national administration.

The Democratic Convention to nominate a candidate for delegate was held at Albuquerque in October, and nominated Harvey B. Fergusson, who was elected as delegate by the Democrats in 1896, and served one term. The platform declared in favor of the admission of the Territories to statehood, approved the general principles of the Democratic party, and vigorously condemned the expansion and tariff policies of the present national administration.

During the campaign the speakers and newspapers of both parties gave their attention chiefly to the statehood issue, all being equally earnest in its support, but the people of the Territory believed that the chances of admission would be better with a Republican Congress if the result of the election should show the existence of a predominant Republican sentiment in the Territory, and some believe that for that reason many Democrats voted for the Republican candidate as a matter of policy. How strong a hold this feeling had upon the voters of the Territory may be judged

by the fact that, while the normal Republican majority of New Mexico is not more than 3,000, Mr. Rodey was elected by a majority of almost 10,000 out of a total vote of only a little more than 38,000, and over a man who was personally very popular.

Finances.—The financial standing of the Territory is excellent. Careful and competent management of the public business has made it possible to accumulate a surplus in almost every fund in the treasury, enabling all obligations to be met promptly, leaving a handsome surplus to be used in the reduction of the interest-bearing debt.

The bonded debt of the Territory outstanding at the beginning of the fiscal year, June 1, 1902, was \$1,123,300. Since that time sinking-funds have been accumulated sufficient for the redemption of the bonded debt in the sum of \$89,246.26, leaving the net bonded indebtedness at this time \$1,034,053.74. For more than a year endeavors have been made by the Territory to buy unmatured bonds without success. Many orders have been filed to take up any bonds the Territory might issue, and there has been a wide demand for county and school-district bonds. The Territorial tax levy for all purposes is 13.99 mills, which is below the average in the Western States.

Banks.—There are 14 national banks in the Territory, an increase of 4 during the year. In addition there are 12 banks operating under the Territorial laws, a total of 26 banking institutions, having resources aggregating \$10,000,000, with deposits of more than \$7,500,000.

New Corporations.—The records of the Secretary's office show that the number of corporations chartered during the year was 205, and the aggregate capitalization was \$100,480,000. Of the corporations so organized, 110 were for the purpose of mining, milling, and smelting, having a combined capitalization of \$73,017,630; 63 were for manufacturing and other industrial pursuits, with a capitalization of \$4,796,500; 6 were bank, building and loan associations, with a capital of \$4,830,000; 6 were railway companies, with a capital of \$15,825,000 to construct 834 miles of new road; 10 were irrigation and land-improvement companies, with a capitalization of \$2,011,000; and 10 were benevolent and charitable associations. In 1901 there was a gain of 41 in the number of industrial corporations chartered over the previous year, and 1902 shows a gain of 55 over 1901. Among the important industries that have been operated during the year are the smelting of copper and lead ores, with a product valued at nearly \$1,000,000; flour-milling, with a product valued at \$551,108; the scouring of wool, with \$77,875 as the receipts for last year's work. The flour and grist mills number about 20, and there are numerous fruit-canneries, distilleries, and wineries in operation. There are 21 saw-mills in the Territory, with an invested capital of \$160,798, employing 243 men, earning \$80,851 a year, whose annual product is worth \$290,527. There are 13 planing-mills, employing 41 persons, which turned out work in 1902 valued at \$200,000.

There were but few failures in any of the industrial lines, the only one worthy of note being that of the Cochiti Gold-Mining Company.

Railroads.—The era of railroad building in New Mexico, which began in 1901, continued with unabated vigor through 1902. About 350 miles of new road have been added to the total mileage in operation, and work is now in progress on other new lines, which cover in the aggregate more than 800 miles.

Nearly all the immigration during the past year has been to points along the line of the newly

opened railway, running diagonally through the southeastern portion of the Territory. That section of New Mexico, a district a little larger than the State of Ohio, and embracing valuable natural resources, has remained practically unsettled because of the lack of communication with the outer world, but since the opening of the Rock Island Railroad last spring a large number of home-seekers have made homesteads upon the public lands, a score or more of new villages have sprung up in the district, and 23 new post-offices have been established.

Lands.—A little more than a million acres of the public domain in New Mexico was taken up by settlers under the United States land laws in 1902. Under the act of Congress, June 21, 1898, giving a limited area of the public lands to the Territory for the benefit of educational and other purposes, the United States Commission has selected, located, and entered for the various institutions 820,026.58 acres, including 79,693.25 acres of saline lands.

The United States Court of Private Land Claims practically completed in 1902 the duty assigned to it by the act of Congress under which it was created, and its term will expire by limitation in the summer of 1903. Since its organization this court has adjudicated the title to tracts of land in this Territory aggregating a little more than 28,000,000 acres, all of which, except about 1,000,000 acres, was found to be public land, and was restored to the public domain, thus adding 25,000,000 acres (the best lands in the Territory) to the area that will some time be open to entry under the United States land laws. At present all the lands of this great sum total are out of market—that is, they have not been surveyed and platted, and therefore can not be entered by home-seekers.

Immediately after the organization of this court one of the judges spent a year in Spain, and another spent an equal length of time in Mexico, examining the archives of those countries from the time the first grant of land in this Territory was made by Spain down to the time the country was acquired by the United States, and during their absence the other 3 members employed the time gathering testimony and examining the early records in this country, and when the court began to adjudicate the cases coming before it, its 5 members undoubtedly possessed a more comprehensive and accurate knowledge of the history and character of Spanish and Mexican land grants in New Mexico than any other 5 men in the world, and a good idea of the thoroughness and correctness with which they did their work is to be gained from the fact that none of their decisions has been reversed by the Supreme Court.

A large number of the pretended grants were found to be spurious and were thrown out in their entirety; and nearly all those that had some foundation in law or fact to rest upon had been so egregiously inflated by having their boundaries extended from time to time at the will of the grantee that some of them had come to claim a greater number of square miles than they had originally of acres.

Education.—The educational interests of New Mexico made gratifying progress in 1902. The school census for the year shows the school population to be 62,864; increase over the previous year, 9,856, or 18.6 per cent. The enrolment of pupils in all schools was 42,925; average daily attendance, 29,825; number of schools, 726; teachers employed, 1,046; number of higher Territorial institutions, 7; city high schools, 7; kindergartens, 4; private schools, 6. The average number

of months taught in all schools, 7.35. The total paid to teachers was \$412,340.23; annual receipts, \$838,018.70; annual expenditures, \$723,048.32; total value of school property, \$2,071,702.25.

There was expended in improvements on public-school property \$242,617.60. The average monthly salary of teachers in all schools was \$54.21. The average annual cost of educating pupils in all schools was \$17.07.

In 1902 the United States Government expended in New Mexico \$252,000 for educational work among the Indians. Thirty-three schools were maintained, and there was an average daily attendance of 2,114. The larger number of these institutions are day-schools, on the reservations or within the several pueblos, but about one-third of all the children included in the total enrolment attended the two large schools—one at Albuquerque and the other at Santa Fé. Both of these are manual training-schools and boarding-schools, and supply the pupils with clothing as well as board and lodging.

The annual meeting of the Teachers' Association of the Territory was held at Las Vegas on Dec. 22 and 23, and was well attended. The reports from the various districts were all very encouraging and went to show that the cause of popular education has been making gratifying progress.

Minerals.—A very large area of coal, iron, and oil-bearing lands has passed to private ownership during the year, and energetic operations have been inaugurated for their development. Oil-drill rigs are at work in 5 or 6 different districts, with every promise that New Mexico will become a producer of merchantable oil before many months. Several new and important coal camps contiguous to the new lines of railroad have been established, and notable gold and copper discoveries have been made. The coal and coke industry gives employment to 2,000 persons, and the machinery and operating plants are valued at \$715,000. The net output for the coal-mines for the year was 1,102,046 tons, valued at the mines at \$1,609,898.90. The coke production for the year amounted to 25,012 tons, valued at \$58,207. Of gold, silver, lead, and copper, the Territorial product for the year is estimated by the Governor between \$6,000,000 and \$7,000,000, and the turquoise mined in New Mexico is put by the same authority at about \$138,000.

Irrigation.—Some progress was made in the construction of irrigation works, though comparatively little, for the reason that practically all the natural openings for the construction of successful irrigation works on a small scale have already been utilized, and whatever is done hereafter to increase the area of irrigated land must be done by the construction of works too expensive and costly to be compassed by individual effort—such as the building of dams to conserve the flood waters of the streams and the construction of reservoirs to store the storm waters of the country, especially of the mountains. The total length of irrigation ditches in operation in the Territory is estimated by the Governor, in his annual report for the current year, at a little more than 3,000 miles, and he places the cost at \$6,000,000.

Live Stock.—The live-stock interests of New Mexico were fairly successful during the year; 133,835 head of cattle were inspected for removal from the Territory, and the revenues derived by beef-raisers from such shipments were about \$3,000,000. There are 1,248,237 head of beef cattle now on the range. The wool-clip for the year exceeded 20,000,000 pounds. The lamb crop in the spring was about 1,000,000 head, and there are

on the ranges of New Mexico nearly 5,000,000 head of sheep. The shipments for the year were 406,908 head. The Angora goat industry is enjoying great prosperity. At a conservative estimate, the live stock on the ranges of New Mexico has a value of \$40,000,000. The weather during the summer was very favorable, there was good feed on the range at the beginning of winter, and the season, up to the close of the year, was mild and comparatively free from snow except in the mountains.

Invalids.—A much larger number of invalids than usual came to New Mexico this year as a health resort, especially persons afflicted with diseases of the respiratory organs. To such an extent has this class of immigration increased that facilities for the special accommodation of such persons are being provided in various parts of the Territory. The Santa Fé Railway Company has expended \$100,000 on a hotel of this kind at Albuquerque, which was opened this year.

The Sisters of Charity opened a large sanitarium at Albuquerque, with a view to giving special care to persons of this class; but this is properly a hospital rather than a hotel.

In the summer an enterprising hotel-keeper put up at Santa Fé what he called a "tent city" for the entertainment of guests of this class. An eligible site was selected near the town, and was regularly laid off in streets, but instead of houses there were rows of tents on either side, about 100 feet apart, furnished with all the necessary comforts for camping out, while a central hotel tent served meals to such as did not prefer to do their own cooking.

There are also hotels for the special accommodation of health seekers at Las Cruces, Alamogordo, Deming, Silver City, and other places in the Territory.

The greater part of the immigration to New Mexico consists of health seekers, and fully 10 per cent. of the present population is composed of persons of this class.

NEW YORK, a Middle State, one of the original thirteen, ratified the Constitution July 26, 1788; area, 47,620 square miles, excluding water surface. The population, according to each decennial census, was 340,120 in 1790; 589,051 in 1800; 959,049 in 1810; 1,372,111 in 1820; 1,918,608 in 1830; 2,428,921 in 1840; 3,097,394 in 1850; 3,880,735 in 1860; 4,382,759 in 1870; 5,082,871 in 1880; 5,997,853 in 1890; and 7,268,012 in 1900. Capital, Albany.

Government.—The following were the State officers during the year: Governor, Benjamin B. Odell, Jr., Republican; Lieutenant-Governor, Timothy L. Woodruff; Secretary of State, John T. McDonough; Comptroller, Nathan L. Miller, who succeeded Erastus C. Knight, who resigned on Jan. 1 to become Mayor of Buffalo; Treasurer, John P. Jaeckel; Attorney-General, John C. Davies; State Engineer and Surveyor, Edward A. Bond; Superintendent of Public Instruction, Charles R. Skinner; Superintendent of Insurance, Francis Hendricks; Superintendent of Banking Department, Frederick D. Kilburn; Superintendent of State Prisons, Cornelius V. Collins; Superintendent of Public Works, Charles S. Boyd, who succeeded John N. Partridge, who resigned on Jan. 1 to become Police Commissioner in New York city; Commissioner of Labor Statistics, John McMackin; Railroad Commissioners, Ashley W. Cole, George W. Dunn, and Frank M. Baker; Chief Judge of the Court of Appeals, Alton B. Parker; Associate Judges, John C. Gray, Denis O'Brien, Celora E. Martin, Edward T. Bartlett, Albert Haight, and Irving G. Vann, together with

Edgar M. Cullen and William E. Werner, who are judges of the Supreme Court, sitting in the Court of Appeals.

The term of the State officers is two years. They are elected in November of even-numbered years. The Legislature meets every year in January.

Finances.—The State debt on Sept. 30 was \$10,075,660, and the sinking-fund \$1,866,526.94, leaving the net debt, exclusive of interest (to be paid by the usual annual appropriation), \$8,633,473.06. The appropriations made in 1901 for all purposes were \$22,307,608.75, the lowest since 1896, a decrease of \$1,600,000 over the figures of 1900. The principal receipts from indirect sources were as follows: Tax on corporations, exclusive of organization tax, \$4,966,680.93; tax on transfers, \$4,084,606.87; liquor tax, \$4,197,858.72. In the Corporation Tax Bureau there has been an increase in the last decade of 200 per cent. in the number of corporations taxed, and an increase of 147 per cent. in the amount collected. More than 6,000 corporations were taxed in 1901, the receipts from them having been nearly \$5,000,000, and the cost of collection but 0.6 per cent. Of the collections this year, \$2,104,132.42 was received from savings-banks and trust companies under the new law. The receipts from taxable transfers were the greatest since the passage of the original act, with the exception of the preceding fiscal year, when about \$250,000 more was collected. It will be remembered, however, that the year 1900 was remarkable for the payment by one estate of nearly \$2,000,000. The number of estates paying a tax in the past fiscal year was 3,059, and 368 of these were of non-resident decedents, whose estates paid a total tax of \$595,594.06. The holdings of State lands in forest preserves amounted, on Oct. 1, to 1,372,000 acres. About \$1,250,000 was expended for maintenance of the House of Refuge for Women, at Bedford, and the Hospital for the Care of Crippled and Deformed Children, at Tarrytown, during the first year that these institutions have come under the care of the Comptroller.

The State tax of 1902 was the lowest in the history of the State, $\frac{1}{16}$ of a mill, practically a total abolition of the direct tax, for if there had not been a constitutional provision compelling the payment of the canal-debt interest out of the money raised by direct taxation there would have been sufficient money to pay that also and leave a large surplus. The amount to be raised by the canal debt was \$748,071, based on the present State valuations and taxing them at $\frac{1}{16}$ of a mill.

Valuation.—The State assessors during the year were J. Edgar Leaycraft, George E. Priest, and Lester F. Stevens, each of whom receives a salary of \$5,000. According to the report of the Board of Equalization, the tax levy for the year beginning Oct. 1, 1902, was as follows: Albany, \$11,350; Allegany, \$1,881; Broome, \$4,268; Cattaraugus, \$3,021; Cayuga, \$4,205; Chautauqua, \$4,095; Chemung, \$3,263; Chenango, \$2,032; Clinton, \$1,198; Columbia, \$3,055; Cortland, \$1,528; Delaware, \$1,853; Dutchess, \$5,641; Erie, \$39,244; Essex, \$1,276; Franklin, \$1,387; Fulton, \$1,869; Genesee, \$2,995; Greene, \$1,642; Hamilton, \$376; Herkimer, \$2,669; Jefferson, \$4,195; Kings, \$98,613; Lewis, \$1,220; Livingston, \$3,316; Madison, \$2,000; Monroe, \$17,726; Montgomery, \$3,222; Nassau, \$3,554; New York, \$378,138; Niagara, \$5,120; Oneida, \$7,289; Onondaga, \$13,488; Ontario, \$3,737; Orange, \$5,428; Orleans, \$1,936; Oswego, \$3,421; Otsego, \$2,686; Putnam, \$929; Queens, \$13,387; Rensselaer, \$9,158; Richmond, \$6,814; Rockland, \$1,882; St. Lawrence, \$4,241;

Saratoga, \$3,292; Schenectady, \$2,691; Schoharie, \$1,398; Schuyler, \$869; Seneca, \$1,912; Steuben, \$4,033; Suffolk, \$5,663; Sullivan, \$755; Tioga, \$1,685; Tompkins, \$2,046; Ulster, \$3,331; Warren, \$973; Washington, \$2,319; Wayne, \$3,295; Westchester, \$19,597; Wyoming, \$1,880; Yates, \$1,353.

Taxation.—The Board of Tax Commissioners reported to the Legislature, on Jan. 29, that "it is probable in the current year it may be unnecessary to prepare an equalization table, as it is anticipated that the constitutional requirements of a small exaction for canal bonded indebtedness may be satisfactorily provided for without any direct tax levy." This will permit the State Board, in its annual conferences with the local assessors, to pay more attention to equalization between tax districts and to give instruction to assessors as to local duties. In 1902 the Tax Commissioners made 3,953 separate valuations of special franchises, aggregating \$268,017,770, an increase over the previous year of nearly \$12,000,000. On these valuations 164 writs of certiorari were issued, against 221 writs in 1901 and 278 writs in 1900.

Banks.—The superintendent's report on the condition of savings-banks for the year ending June 30, 1902, shows that these institutions hold \$1,051,689,186 for depositors, which is an increase of \$64,067,378. The aggregate resources of the savings-banks is \$1,167,683,337, and the amount of their surplus, figured on the market value of their stocks and bonds, is \$115,540,560, which is less by \$1,434,686 than on July 1, 1901. This decrease is believed to be due to a decrease in the estimated value of real estate, including banking-houses. The surplus on the par value of stocks and bonds is \$69,737,600, an increase of \$4,013,953. The number of open accounts increased by 99,871. The business of the banks shows a slight net loss in the ratio of growth. The total amount deposited was \$290,840,380, which was an increase of \$14,523,199. The amount withdrawn was \$259,674,822, an increase of \$16,503,185; thus the net result shows a greater gain by \$1,979,986 in the amount withdrawn than in the sums deposited. The figures show an increase from \$32,606,746 in 1901 to \$34,189,610, or \$1,582,864 increase in interest.

Insurance.—The annual report of the Superintendent of Insurance shows that the gross assets of life-insurance companies doing business in New York on Dec. 31, 1901, were \$1,879,624,546.08. Of this amount, New York State companies have \$1,139,511,409.27, an increase of \$97,193,577.38. The total liabilities of the companies, excluding gross surplus of \$159,718,603.04 and special funds of \$148,283,050.71, are \$1,571,622,910.33. The liabilities of the New York companies, as reported, are \$934,947,900.42; companies of other States, \$636,675,009.91. For New York companies the gross surplus (including \$3,290,000 of capital) is \$93,082,679.89; special funds, \$111,490,828.96. The aggregate receipts of New York companies were \$260,186,737.57; other States' companies, \$177,748,732.40, making the gross receipts \$437,935,469.97. The net excess of receipts over disbursements for 1901 was \$150,754,424.51. The total premium receipts for 1900 were \$316,846,293.11; for 1901, \$349,186,052.11. The disbursements of the year were \$287,181,045.46. In all \$135,674,468.11 was paid for claims, \$23,907,411.85 for lapsed and surrendered policies, \$23,811,648.62 in dividends to policy-holders, \$736,312.60 in dividends to stockholders, \$49,970,852.49 for commissions, \$25,123,885.91 for salaries and medical examiners' fees, and \$27,956,465.88 for miscellaneous purposes. This classification shows that \$183,393,

528.58 was paid to policy-holders, while the cost of management, including dividends to stockholders, was \$103,787,516.88. The New York companies issued 475,088 policies, insuring \$895,333,879, and terminated 227,929 policies, insuring \$516,329,117. The companies of other States issued 312,659 policies, insuring \$574,984,208, and terminated 164,137 policies, insuring \$311,973,047. The aggregate is 787,747 policies issued, insuring \$1,470,317,887, and 392,066 policies terminated, insuring \$828,302,164.

Excise.—The collection of the tax on liquors, or excise, is under the charge of a commissioner, and the incumbent during the year was Patrick W. Cullinan, who receives \$5,000, and whose term of office expires in 1905. His report, issued early in 1902, shows the total amount collected for the year ending Sept. 30, 1901, to be \$12,467,674.40. Of this amount the State's share was \$4,198,377.09, and the cities' and towns' share was \$8,126,669.05. The number of certificates issued was 30,585, the certificates surrendered numbered 3,750. The amount collected under the liquor-tax law from May 1, 1896, to Sept. 30, 1901, was \$73,604,425.93. Attention is called to the fact that the enforcement of the law and the prosecution of offenders rests upon local criminal authorities, as the 60 special agents of the department have no power of arrest, and their time is largely occupied in investigating matters relating to the collection of the liquor tax. Actions and proceedings have been brought and maintained in 43 counties, and the receipts resulting therefrom exceed \$58,000, being \$25,000 more than all expenses of litigation. In New York and Kings County the number of places claiming hotel privileges has been reduced from 3,514 to 2,187. The prevalence of sham hotels is shown to be due to local criminal authorities, who neglect or refuse to perform their duties, and therefore is not a cause for criticism of the law itself. Attention is called to the fact that persons holding liquor-tax certificates for short periods in the summer months at summer resorts, fairs, and picnics, and then surrendering them for rebates, do not pay a tax commensurate with the benefits received.

Education.—The Superintendent of Public Instruction is Charles R. Skinner, who receives a salary of \$5,000, and whose term of office continues until April 6, 1904. In 1902 1,191,110 children attended public elementary schools during some portion of the year, and the value of schoolhouses and sites was \$80,588,083.83. The secondary schools reported 91,583 students, and a total property of \$30,725,707.30. The institutions of higher learning, including professional, technical, and other special schools, reported 34,364 students, and a total net property of \$82,931,575.53. In 1902 the common schools and allied interests cost \$34,045,785.12, toward which the State appropriated \$4,929,101.49, a decrease of \$93,944.51 over 1901. The total expenditures for common schools and allied interests in 1902 increased over 1901 by \$30,437.21, while the cost of secondary education in 1902 was \$6,627,708.66, or \$924,991.14 more than in 1901. The total cost of higher education in 1902 was \$8,708,698.01, an increase of \$1,132,433.32. In the maintenance of the University of the State of New York, the cost was increased \$23,154.84. The total receipts other than appropriations were \$71,847.08, as compared with \$44,718.31 in 1901. Through the economies that have been practised, and through this increase of \$27,128.77, the regents were able to meet their most pressing needs. In 1902, excluding fees and unexpended balances, the increase in appropriations was \$36,812.13. Reports from New

York public high schools show that in 1901 \$143,288.92 was paid by 10,888 non-resident academic students.

Charities.—These are under the care of a board, consisting of 12 members, of which William R. Stewart is president. Their annual report is prepared from the sworn statements filed by the treasurers or other responsible officers of the charitable institutions under their supervision. According to the report, the number of beneficiaries in institutions subject to the inspection of the board on Oct. 1, 1902, was 60,804. The 14 State charitable institutions shelter 8,288 beneficiaries. The receipts of these institutions for the year ending Sept. 30, 1902, including balance on hand at the beginning of the year (\$66,577.72), amounted to \$1,374,886.21. Their expenditures aggregated \$1,265,795.01—\$994,525.35 for maintenance, \$244,015.96 for improvements—while \$27,253.70 was returned to the State Treasurer pursuant to the provisions of law. The private schools and institutions mainly supported by State appropriations and subject to the board's inspection care for 3,324 inmates. The receipts of these institutions for the year ending Sept. 30, 1902, were: From cash on hand, \$57,057.15; from public sources, \$691,216.42; from private sources, \$312,224.06; total receipts, \$1,060,497.63. Their expenditures aggregated \$917,259.63. In the year two special inquiries were conducted. The first of these, begun in May, 1901, has recently been completed. This had reference to compliance with those sections of the public-health law which relate to the better preservation of the health of children in institutions. The report says improved compliance with the law may be confidently expected as the result of the inquiry. Another investigation was the matter of examining the records of long-term inmates supported at public expense in children's institutions under private control. Of the 4,107 long-term inmates it was shown that the great majority are eligible for family life, either through placing out or adoption or by restoration to parents, relatives, or friends.

Labor Statistics.—The charge of matters pertaining to labor is under the care of a commissioner, who receives a salary of \$3,500. The present incumbent is John McMackin, whose term of office expires on Dec. 31, 1904. According to his report submitted to the Legislature for the year ending Sept. 30, 1901, the Bureau of Factory Inspection investigated 65,437 places, including 4,573 workshops in tenement-houses, resulting in orders for changes to conform to the law in 13,445 factories and bakeshops, and in orders for changes in appliances in 12,206 factories. A total of 1,034 complaints were investigated by the Department of Labor, of which 631 were sustained and 24 sustained in part, these complaints including charges of danger to employees by unsanitary conditions, unguarded machinery, and insufficient fire protection, illegal employment of women and children, and violation of the labor laws regulating the length of the working day and the rate of wages and methods of payment. Under the same head are reported the cases of 70 employers convicted and fined and 21 convictions where sentence was suspended. Concerning the maintenance of factories in tenement-houses, the report said most tenement-workers are employed in some branch of the clothing business, the only exception being 5,556 engaged in the manufacture of cigars, 140 on purses, and 105 on umbrellas; 62,030 were employed in the manufacture of men's and women's outer garments—clothing in the usual sense. Other branches were neck-

wear, 1,413; white goods, 675; artificial flowers, 870; feathers, 138; millinery, 436; hats and caps, 424; suspenders, 132; furs and fur goods, 366. Of the total number of workers whose sex was stated, 27,409 were males and 42,781 females; in New York city the proportion of women was smaller—27,859, compared with 20,896 men. The number of licenses revoked for illegal manufacture was 793. In 322 instances it was necessary to attach the tag "tenement-made" to goods that were being made under conditions prescribed by the law.

Prisons.—In his annual report for the year ending Sept. 30, Cornelius V. Collins, Superintendent of Prisons, says, with reference to the State prisons in Sing Sing, Auburn, and Dannemora, the health of the convicts was excellent, mortality was low; the industries were pursued diligently and with much more favorable financial results than in the preceding year. The most distinctive change in the method of administration in the treatment of the imprisoned population was the adoption and successful establishment of the system of paroling convicts. The daily average number of men in the three prisons was 3,235, against 3,384 in 1901, an apparent decrease of 149, but, counting as present the men on parole, there was an actual increase of 147. The separate figures showing the number of male convicts are: Auburn, 1,185; Clinton, 900; and Sing Sing, 998. The death-rate at Sing Sing was 0.58, at Auburn it was 0.85, at Clinton 1.60. The death-rate at Clinton is due to the fact that prisoners having consumption are transferred from other prisons to Clinton. Concerning the parole system, installed in October, 1901, the report says, of 757 initial applications for parole, 341 were granted. Of these, 48 were delinquent, 14 were returned to prison, 139 were discharged, and 154 paroles remained good at the end of the year. The results of the first year's operations of the parole law are very satisfactory, and seem to warrant the Legislature in extending the jurisdiction of the board so far as to embrace all first-term prisoners now confined in the State prisons and the Eastern New York Reformatory, except those under life imprisonment. The report says that the requisitions for the products of the prisons were more numerous in 1902 than in any other year since the present industrial system went into operation. The volume of the output was \$542,326.11, and the earnings \$94,755.03, and the superintendent provided employment for practically all the convicts in the prisons.

Canals.—The canals are under the charge of the Superintendent of Public Works, and the incumbent during the year was Charles S. Boyd. The failure of the Legislature to take favorable action on the canal bills left the condition of these waterways as they were a year ago. At a conference of the leaders of the dominant party in New York city in December it was agreed that the inner or Buffalo canal route should be recommended to the Legislature for 1903. It is estimated that the cost of improving the State waterways for a 9-foot 1,000-ton barge canal will be about \$80,000,000. According to Superintendent Boyd's report, the opening of the canals in 1902 was earlier than in twenty years previous, and navigation was maintained until Dec. 4, largely for coal shipments. In spite of the lengthened season, the total tons carried were 3,274,446, against 3,420,613 tons in 1901, a falling off of 146,167 tons. This loss is more than accounted for in through freight, for, whereas there was an increase in way freight east of 84,976 tons, the total decrease in through freight

was 210,219 tons, the loss being about equally divided between Eastern and Western shipments. The beginning of the shrinkage was coincident with the shutting down of the mines, for whereas May showed an increase in tonnage, in June there was a shrinkage from 522,980 tons in 1901, to 392,960 tons for 1902. There continued to be a falling off in coal shipments until November. There was a total decrease in six months of 406,109 tons. The settlement of the strike and the resumption of mining was directly reflected in shipments, the increase in coal shipments for November over the normal shipments of 1901 being 24,085 tons.

Railroads.—This department is cared for by three commissioners, each of whom serves five years and receives a salary of \$8,000. Their annual report for 1901 shows the length of electric lines of railroad in New York State to have been increased by 117.83 miles; 34 new street-railroad companies were incorporated, with an aggregate length of proposed railroad of 530½ miles, and steam-surface railroads increased their mileage from 28,843.30 miles to 32,119.42. The main lines of railroad were increased from 15,664.23 to 17,518.05. The passengers carried in New York State were 81,909,000; the freight carried in New York State was 123,561,749 tons; the train mileage was 191,487,808. The percentage of operating expenses to gross earnings increased from 66.99 in 1892 to 69.52 in 1896 and back to 68.80 in 1901. The accidents to persons were 2,345, resulting in the death of 795 and 1,550 injured. Of passengers, 16 were killed and 375 injured. The Railroad Commission has among its functions the investigation of the conditions pertaining to the railroads, and made an examination of the collision in the Park Avenue Tunnel, that occurred on Jan. 8, by which many lives were lost and several persons injured. They reported that the New York Central Railroad was responsible for the disaster, finding that the company had been negligent, derelict, and unprogressive in failing to take measures to increase its terminal facilities at the Grand Central station. Also, the company had been negligent in failing to examine more closely into the qualifications of new engineers, and failed to hold engineers to accountability for violation of running rules of the tunnel. Toward the close of the year the commissioners issued an order to the elevated railroad company, of New York city, to increase their passenger facilities by augmenting the number of trains.

National Guard.—The State militia is under the care of the Adjutant-General, on the Governor's staff, and the incumbent during the year was Nelson H. Henry, to whom Major-Gen. Charles F. Roe, the immediate commander of the Guard, reported its strength as follows: Commissioned officers, 859; enlisted men, 13,551; total, 14,410, divided as follows: General and staff officers, 62; signal-corps, 174; cavalry, 355; artillery, 1,395; infantry, 12,424; total, 14,410. Concerning the expulsion of National Guardsmen from labor-unions, Gen. Roe says: "In the course of the year it has been reported that two enlisted men have been expelled from labor-unions on account of their connection with the National Guard. On former occasions men have reported that they have been discharged by their employers on return from duties in aid of the civil authority. The welfare of the State and country demands that protection be afforded to the National Guard against actions so decisively against the best interests of the law-abiding and patriotic citizen, and it is recommended that, the law not

affording such protection, proper legislative action be taken to protect men who give services voluntarily for the welfare of the State."

State Library.—The State Library is in the Capitol in Albany, and is under the charge of Melvil Dewey. In his annual report it is shown that the library has grown from 461,740 volumes in 1902 to 482,697, of which 274,620 are in the State Library proper, 62,259 are in traveling libraries, and 145,818 are duplicates. The general appropriation for State Library and home education for 1902 was \$122,620, an increase of \$12,620. For maintenance \$103,589.90 was paid, an increase of \$8,005, and \$22,767 was granted to libraries, which is \$3,167.98 more than in 1901. For books \$15,138.83 was spent, \$4,610.72 for serials, \$5,383.17 for binding, and \$4,189.25 for pictures, etc. The library for the blind increases yearly, the circulation having risen to 1,903 from 1,820 in 1901. There are 407 active study clubs, of which 70 were added last year. There are in the university 209 libraries free for circulation, besides 107 registered libraries. The general summary for the year shows reports from 1,137 libraries, containing 6,975,540 volumes. They added 404,751 books in 1902. The 550 free lending libraries report 2,598,472 volumes, an increase of 173,212, or 7 per cent. In view of gifts accepted from Andrew Carnegie, these library payments will soon be considerably increased—in Amsterdam from \$400 to \$2,500, in Binghamton from \$2,311.39 to \$7,500, in Kingston from \$107.50 to \$3,000, in Gloversville from \$3,000 to \$5,000, in Johnstown from \$602.56 to \$2,500, in Schenectady from \$1,500 to \$5,000, and in Yonkers from \$2,000 to \$5,000. New York also, when her Carnegie branches are built, will advance from \$305,894.25 to \$520,000. Ninety-nine library gifts are reported for this State, \$124,780 in money, \$790,000 for buildings, 52,330 volumes, and 2,927 prints, etc. Of these, 24 gifts, amounting in value to \$671,000, were from Andrew Carnegie.

Stony Point Park.—On June 16, with appropriate ceremonies, occurred the dedication of Stony Point battle-field as a State reservation. This battle-field was purchased by the Legislature in 1897, and was placed in the custody of the American Scenic and Historic Preservation Society. The purchase was supplemented later by a large grant of money, which was placed at the disposal of the society, to be expended under its supervision for improvement of the battle-field. The exercises included a parade, which was reviewed by Gov. Odell; then the flag that first floated on July 4, 1900, from the top of the Eiffel Tower during the Paris Exposition was unfurled. Speeches were delivered, and there were present the West Point Cadets, with their band, a detachment of cavalry, a section of artillery, details from local organizations, and the National Guard.

Memorials.—On Sept. 1 there was erected in Watertown a memorial statue bearing the following inscription: "To Roswell Pettibone Flower. Born Aug. 7, 1835; died May 12, 1899; Representative in the Forty-seventh and Fifty-first Congresses, Governor of the State of New York, MDCCCXCIV." A granite slab leading from the entrance to the base of the pedestal contains the additional inscription: "Erected in Affectionate and Grateful Remembrance of His Noble Manhood, His Distinguished Public Service, and His Loving Kindness to All." The statue was designed by Augustus St. Gaudens, and cost \$25,000, which amount was raised by popular subscription. The granite pedestal was the gift of the late Mrs. Emma Keep-Schley, of New York.

On Sept. 19 there was unveiled a statue of heroic proportions on Culp's Hill, Gettysburg, to the memory of Henry W. Slocum, who commanded the right wing of the National army in that battle. The statue was erected by the State of New York, of which Gen. Slocum was a native. The pedestal is of granite, and from base to top the monument measures 31 feet. The model was executed by Edward C. Potter. The unveiling of the statue formed the principal feature of the thirty-third reunion of the Society of the Army of the Potomac.

Louisiana Purchase Exposition.—The Legislature authorized the appointment of a commission to take charge of the interests of the State in connection with the world's fair to be held in St. Louis in 1904, and appropriated \$100,000 for its expenses. The following twelve-named persons were appointed by the Governor to serve: Edward H. Harriman, of Manhattan, President; William Berri, of Brooklyn; Edward L. Bill, of New Rochelle; James H. Callanan, of Schenectady; Cyrus E. Jones, of Jamestown; Mrs. Harriet T. Mack, of Buffalo; Frank S. McGraw, of Buffalo; Lewis Nixon, of Manhattan; Louis Stern, of Manhattan; John K. Stewart, of Amsterdam; John C. Woodbury, of Rochester; and John Young, of Genesee.

Legislative Session.—The session of the Legislature began on Jan. 1, 1902, and continued until March 27. As elected, the Senate consisted of 35 Republicans and 15 Democrats, and the Assembly of 106 Republicans and 42 Democrats. Timothy E. Ellsworth was reelected President *pro tem.* of the Senate, and Samuel F. Nixon was again chosen Speaker of the Assembly. Among the more important measures enacted were the following:

Giving the United States authority to acquire land on Ward's island for a lighthouse station.

Giving the Board of Aldermen of New York city power over all terminals and stations, permitting the contractor to transfer his contract to operate the road, and changing the method of advertising in connection with condemnation proceedings.

Authorizing the Board of Taxes and Assessments of New York city to reduce an assessment found to be excessive.

Amending the law relative to the selection of trial jurors in New York County to insure the placing of non-voters on such lists.

Providing that New York city may spend annually \$3,000,000, instead of \$2,000,000 for repaving streets.

Authorizing New York city to appropriate \$5,000 annually for the Benefit fund of the former Volunteer Fire departments of the former towns of Flatbush, New Utrecht, Gravesend, and Flatlands.

Giving preference for appointment to the regular department to volunteer firemen whenever the paid Fire Department of New York City is extended into any part of Westchester County.

Appropriating \$80,000 to replace State property destroyed in the Seventy-first Regiment Armory.

Appropriating \$20,000 to replace property of the Seventy-first Regiment and the other military organizations destroyed in the fire of the Seventy-first Regiment Armory.

Authorizing the procuring of new grounds for the College of the City of New York, the cost not to exceed \$55,000.

Authorizing New York to appropriate \$25,000 for the American Museum of Natural History.

Authorizing Buffalo to issue bonds to the amount of \$350,000 for improving Buffalo river,

the city ship-canal, and Peck Slip, and lodging with the Common Council the power to determine the extent of such improvement.

Making an appropriation for the New York Zoological Society for the support of the New York Aquarium.

Reappropriating \$550,000 for the Sixty-fifth Regiment Armory at Buffalo.

Incorporating the Buffalo Zoological Garden.

Incorporating the city of Plattsburg.

Appropriating \$21,650 for enlarging the Forty-seventh Regiment Armory.

Authorizing the selection of Ausable Chasm as a part of the Adirondack State Park.

Providing for the appointment of a commission of three to examine wild and forest lands in Suffolk County, with a view of locating thereon a public park.

Appropriating \$500 for a survey of a proposed canal between Hempstead Bar and Jamaica Bay, Long Island.

Consolidating the Chautauqua Assembly, Chautauqua University, and the Chautauqua School of Theology under the title of the Chautauqua Institution.

Amending the university law relative to the establishment of public and free libraries.

Providing that medical students admitted to preliminary State medical examination must be nineteen years of age.

Providing for a new apportionment of the State school moneys, so that each city shall receive \$800; each village of a population of 5,000 employing a superintendent of schools, \$800; and each union school district with a population of 5,000 employing a superintendent of schools, \$800.

Placing the Knights of Columbus among the organizations recognized by the insurance laws.

Appropriating \$16,000 for a State monument on the Vicksburg battle-field.

Appropriating \$50,000 for the promotion of sugar-beet culture.

Providing for the appointment of 12 additional fish and game protectors.

Prohibiting the taking of shell-fish in the waters of the State by persons who have not been actual residents for at least six months.

Extending the close season for black and gray squirrels in Rensselaer County fifteen days, from Aug. 31 to Sept. 15.

Providing that the laws prohibiting the possession of game during certain seasons in this State shall apply to game taken outside of this State.

Permitting the use of other than brass baggage-checks by railroad corporations.

Providing that garbage crematories shall be operated with fuel that will dispose of the noxious gases arising from the consumption of garbage.

Making it a violation of law to throw rubbish on highways.

Prohibiting the sale of oleomargarine.

Providing for the management of the 14 State charitable institutions by the appointment of a fiscal supervisor, who shall receive \$6,000 per annum, and who shall be the purchasing and fiscal agent for all the charitable institutions.

Authorizing the State Superintendent of Prisons to expend \$3,000 a year in the maintenance of the bureau for the identification of criminals.

Imposing a penalty of not more than ten years' imprisonment or more than \$5,000 fine, or both, on persons who advocate anarchistic doctrines by speech, writing, or otherwise; also making it a misdemeanor, punishable by a fine of not more than \$2,000 or imprisonment of not more than two years, or both, upon editors or publish-

ers who permit the publication of books, newspapers, or serials advocating anarchy, and upon owners, agents, or occupants who harbor avowed anarchists.

Allowing deputy sheriffs to act as constables in enforcing the side-path laws.

Providing that no decree of divorce shall become final until three months after the date of the filing of the original judgment.

Providing that it shall be a misdemeanor to advertise, offering to appear or act as an attorney in divorce cases.

Providing that a married woman shall have a cause of action in her own right for labor or services performed by her.

Providing that trust funds may be invested in the securities in which savings-banks are now authorized to invest, and in mortgages to the extent of not more than 50 per cent. of the value of the property.

Extending the scope of insurance policies upon the lives of minors.

Repealing the amendment to the agricultural law which barred county fairs from State aid if held during the time of the State Fair.

Appropriating \$250,000 for extraordinary repairs to the canals.

Amending the Code of Civil Procedure relative to the lien of a judgment against real property.

Making uniform the public-health law relating to local boards of health.

Amending the agricultural law in relation to the prevention of disease in fruit-trees.

Amending the benevolent orders' law relative to joint corporations and their powers.

Providing that a society for the prevention of cruelty may operate in a county adjacent to that in which it was organized.

Regulating the speed of automobiles by providing that they shall not be run on country highways at a rate of speed greater than 20 miles an hour, or in villages or cities faster than 8 miles an hour, and making the first offense punishable by a fine not exceeding \$50, and each subsequent offense punishable by imprisonment or a fine, or both.

Defining the rights of minority stockholders in case of consolidation of corporations.

Providing for the appointment of a commissioner of jurors in Kings County by the two county judges, who are Republican, and the Democratic surrogate of Kings County. The commissioner is to serve five years at a salary of \$6,000.

Providing that the State Racing Commission shall pass upon the certificates of incorporation of all racing associations which intend to conduct running races.

The Governor authorized the appointment of a commission to inquire into the delays and expenses in the administration of justices in the counties of New York and Kings in the First and Second Judicial Districts, and to suggest legislation thereon, the commission to consist of seven persons and to make a final report to the Governor for transmission to the Legislature on or before Dec. 31, 1902, and submit such bill or bills as it may deem necessary to carry its recommendations into effect.

Political.—The Republican State Convention was held in Saratoga Springs on Sept. 23-24, which was called to order by State Chairman George W. Dunn, who nominated Lemuel E. Quigg as temporary chairman, while for permanent chairman Timothy E. Ellsworth was chosen later. The platform said concerning roads and canals: The canals provide a channel for com-

merce and enable New York city to hold the first rank both as the exporting and importing center of our country, while better highways bring the markets closer to the doors of the farmer. The two are equally important. The one obstacle to the successful consummation of necessary improvements is the constitutional prohibition against long extensions of the bonded debt of the State. The alternative is direct yearly taxation upon the people. The Republican party, having already, through economies and legislation, rendered a direct tax almost unnecessary, believes that these improvements should not be the cause of again imposing such a tax upon the people, and that without imposing unnecessary burdens upon individuals of other interests there should be an extension of time in which payment of the principal and the money for the payment of the yearly interest should be provided. With reference to trusts, it declared that, while we would encourage business enterprises which have for their object the extension of trade and the upbuilding of our State, we condemn all combinations and monopolies, in whatever form, having for their purpose the destruction of competition in legitimate enterprise, the limitation of production in any field of labor, or the increase of cost to the consumer of the necessities of life; and we pledge the party to the support of such legislation as will suppress and prevent the organization of such illegal combinations.

The following candidates were then nominated by acclamation: For Governor, Benjamin B. Odell, Jr.; Lieutenant-Governor, Frank W. Higgins; Secretary of State, John F. O'Brien; Treasurer, John G. Wickser; Attorney-General, Henry B. Coman; Comptroller, Nathan B. Miller; Engineer, E. A. Bond; Judge of the Court of Appeals, W. Edward Werner.

The Democratic State Convention was held in Saratoga Springs on Sept. 30, and was called to order by John B. Stanchfield, who subsequently yielded the chair to Martin W. Littleton, permanent chairman. The platform declared a belief in the revision of the tariff, and opposition to those corporate combinations, called trusts, that establish monopolies, destroy competition, control raw material, and increase the price of finished product. While the Philippine policy of the present administration was condemned, a recognition was announced of territorial expansion—the expansion of Jefferson and of Polk—and in the honorable acquisition of desirable territory that can be erected into States in the Union, and whose people are willing and fit or capable of becoming fit for American citizenship. Trade expansion by every peaceful and legitimate means was favored, but opposition to the seizing or purchasing of distant lands to be held as colonies was expressed. It advocated the national ownership and operation of the anthracite coal-mines by the exercise of the right of eminent domain, with just compensation to owners. It said: "Fuel, like water, being a public necessity, we advocate national ownership and operation of the mines as a solution of the problem which will relieve the country from the sufferings which follow differences between labor and capital in the anthracite mines."

The following-named candidates were then nominated: For Governor, Bird S. Coler; Lieutenant-Governor, Charles N. Bulger; Secretary of State, Frank Mott; Attorney-General, John Cunnene; Comptroller, Charles M. Preston; State Treasurer, George R. Finch; State Engineer and Surveyor, Richard P. Sherman; Judge of the Court of Appeals, J. Clinton Gray.

The election took place on Nov. 4, when the Republican candidates for Governor, Lieutenant-Governor, Secretary of State, Comptroller, Treasurer, and State Engineer and Surveyor were chosen by pluralities respectively of 8,803, 10,134, 11,890, 13,029, 11,541, and 11,977, while the Democratic candidates for Attorney-General and Associate Judge of the Court of Appeals were elected by pluralities of 9,466 and 14,821. Thirty-seven Representatives to Congress were elected, of whom 20 were Republicans. Of the 17 Democrats chosen, 16 were from New York city and 1 from Buffalo. A new Legislature was chosen, including in the Senate 28 Republicans and 22 Democrats, and in the Assembly 89 Republicans and 61 Democrats, a gain of 7 Democrats in the Senate and 26 Democrats in the Assembly.

NORTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution Nov. 21, 1789; area, 52,250 square miles. The population, according to each decennial census, was 393,751 in 1790; 478,103 in 1800; 555,500 in 1810; 638,829 in 1820; 737,987 in 1830; 753,419 in 1840; 869,039 in 1850; 992,622 in 1860; 1,071,361 in 1870; 1,399,750 in 1880; 1,617,947 in 1890; and 1,893,810 in 1900. Capital, Raleigh.

Government.—The following were the State officers in 1902: Governor, Charles B. Aycock; Lieutenant-Governor, W. D. Turner; Secretary of State, J. B. Grimes; Treasurer, B. R. Lacy; Auditor, B. F. Dixon; Attorney-General, R. D. Gilmer; Superintendent of Education, T. F. Toon, who died in February and was succeeded by James Y. Joyner; Commissioner of Agriculture, S. L. Patterson; Commissioner of Insurance, James R. Young; Adjutant-General, B. S. Royster—all Democrats; Geologist, Joseph A. Holmes; Librarian, M. O. Sherrill; Commissioner of Labor and Printing, H. B. Varner; Chemist, B. W. Kilgore; Corporation Commission, Franklin McNeill, Samuel L. Rogers, D. H. Abbott; Chief Justice of the Supreme Court, David M. Furches, Republican; Associate Justices, Robert M. Douglas, Republican, Walter Clark, Democrat, W. A. Montgomery, Democrat, Charles A. Cook; Clerk, Thomas J. Kenan, Democrat.

The State officers are elected for terms of four years, at the time of the presidential elections. The Legislature meets biennially in January of the odd-numbered years. The length of the session is not limited, but legislators are not paid for more than sixty days.

Finances.—The fiscal year ending Nov. 30 began with a balance from the previous year of \$18,262.52. From Dec. 1, 1901, to Nov. 30, 1902, there was received into the Treasurer's office \$1,907,958.68. This includes the \$200,000 loaned by the Park National Bank, of New York city. The disbursements in the fiscal year amounted to \$1,863,849.79, leaving a balance in the treasury on Dec. 1, 1902, of \$62,371.41. Outstanding warrants brought the actual balance down to \$30,213.59.

Among the larger items of expenditure in 1902 were: For interest on bonds, \$299,999; State hospitals, \$317,950; public schools, \$180,664; Agricultural Department, \$66,143; Judicial Department, \$69,539; deaf-mute and blind institutions, \$115,911; pensions, \$200,046.50; Soldiers' Home, \$12,000; university, \$37,500; Normal College, \$35,000; orphan asylums, \$15,000; experiment station, \$15,000; Agricultural College, Raleigh, \$64,511; Colored Agricultural College, Greensboro, \$23,250; normal schools, \$20,250; Corporation Commission, \$12,400; printing, \$20,568; Shell-Fish Commission, \$18,713.

Valuations and Taxes.—From the figures given out by the Corporation Tax Commission in

December it is learned that the value of real estate was fixed in 1901 for taxation at \$175,366,240, and of personal property at \$108,075,569, giving a total of \$283,441,809. On this the tax at 21 cents on the \$100 was \$595,227.79.

Other valuations were: Railroad companies, \$42,448,799; telephone companies, \$355,357.22; steamboats, canals, ferries, \$220,471.63; street-railways, \$756,360; electric-light and gas companies, \$93,623.46; telegraph companies, \$904,200; sleeping-car companies, \$181,720; express companies, \$189,573.69; water companies, \$84,429; corporate excess, \$5,837,442; building and loan stock, \$560,521; bank stock, \$6,147,703; total, including the above, \$341,222,009, and the total tax, \$716,566.21. The pension tax amounted to \$136,488.80; and the tax on 267,687 polls to \$32,122.44. Income and license and other taxes brought the total for the State to \$1,169,024.53. The school taxes, payable to county treasuries, amounted to \$1,139,219.03; the county taxes, to \$1,593,254.45; municipal taxes were \$1,149,902.68; total of all taxes, \$5,051,400.69. The State debt amounts to \$6,527,770. The bonded debts of the counties amount to \$1,195,817, and their floating debts to \$321,222; the bonded debt of the towns was \$4,091,659, and current liabilities, \$274,818.51.

Education.—The number of illiterates in the State, by the last census, was 386,251. In the percentage of children from ten to fourteen able to read and write, the State stands forty-third in the list, with 78.25 per cent.

An educational conference was held at Raleigh in April for the purpose of devising means for improving the public schools and awakening greater interest in education throughout the State. The superintendent named as the 3 greatest needs, improvement of the schoolhouses; consolidation of school districts; increase of the public-school fund by local taxation. About 57 per cent. of the school districts in North Carolina have a school population of fewer than 65 children, the minimum number prescribed by law. The work of consolidation of districts has been begun; in December the number had been reduced from 8,115 to 7,853. It was decided at the conference to hold educational rallies in all sections of the State, to have at these rallies inspiring educational addresses, and to have in attendance, in addition to the general public and all friends of education, the county superintendents of the 15 or 20 surrounding counties, and to conduct an institute and conference of these superintendents.

A comparison of the number of teachers at the beginning and at the end of the last decade shows that there was a movement toward the employment of more women as teachers in proportion to the number of men. In 1890 there were 2,659 white male teachers and 1,883 white female teachers. Of colored teachers there were male 1,513, and female 1,010. In 1900 there were only 2,428 white male teachers and 2,591 white female teachers. The colored male teachers numbered 1,131 and the colored female teachers 1,276. The average monthly salary was given as \$26.18 for men and \$23.14 for women. The receipts of the school fund for the year ending June 30, 1902, were \$1,311,301, and the disbursements \$1,276,036.

The State Normal and Industrial College, at Greensboro, graduated a class of 34 in May. The receipts from Oct. 1, 1900, to Sept. 15, 1902, were \$174,015.02, and the disbursements \$173,983.88.

The Board of Examiners of State Institutions found the conditions at the Normal Schools for Colored Teachers, at Plymouth, Goldsboro, and Franklinton very unsatisfactory, and censured the directors for neglect. Similar criticisms were

made upon the Colored Agricultural and Mechanical College. The examiners said:

"We next note that since the exclusion of girls the number of boys enrolled as students has somewhat increased, until now it is said to be as many as 95. We have tried to learn the actual average attendance, but have not been able to do so because no books have been kept. We have heard reports that it was as low as 40 and as high as 50."

The Executive Committee of the college praises its work, saying: "We believe that the college is offering the kind of education best suited to the colored people, and is doing a great work for them and for the State. It is not true that no books are kept at the college from which the attendance can be learned. There are now [November, 1902] in actual attendance 114 students and an enrolment of 121, which is growing almost daily. Every room in the college, including those formerly occupied by the girls, is full, none having less than 2, and some as many as 5 boys."

The regular appropriations are as follow: United States appropriation, \$8,250; North Carolina appropriation, \$7,500. In addition to this, the last Legislature appropriated \$5,000 for two years to help pay for the farm and help pay debts.

There were 369 students at the Agricultural College, at Raleigh, in May, and 450 in November. The Legislature appropriated \$20,000 for a textile building. The oldest student was sixty-nine years of age, the youngest fifteen. Nearly \$4,000 was earned by students in the year; the largest amount was \$161.95, and the smallest 15 cents, the average being \$16.95.

The State University had an enrolment in 1901-'02 of 565, the largest in its history. It has been decided to establish in Raleigh a college of medicine in connection with the university.

The Joseph K. Brick Agricultural, Industrial, and Normal School, to which Mrs. Julia Brick, of Brooklyn, N. Y., has given \$500,000, is on a farm between Whitakers and Enfield, near the Atlantic Coast Line. The Brick school is located in the heart of the largest negro population in the State. This is the only large sum of money given for negro education of late years that has come to any institution except those at Hampton and Tuskegee.

There are published in the State 293 newspapers. Only 28 are dailies; 180 are weeklies; 20 semi-weeklies; and 44 monthlies. In politics 142 are Democratic, and 17 Republican; many of the weeklies are religious, and some are technical.

Charities and Corrections.—A school for white deaf children is located at Morganton, and one for the colored at Raleigh. In the school at Morganton are 221 pupils. The number taught by the oral method is steadily increasing. The yearly per capita is \$174.67.

The board finds that while there are about 900 insane persons in the eastern district, there are only 404 patients in the Raleigh asylum. The others are either in the jails, in the county homes, or in charge of their relatives. The cost of maintenance per capita is \$15.13 a month.

The number of white blind children in the Raleigh institution is 160; of colored deaf and dumb and blind, 173. The annual per capita is \$175.18.

There must be in the western district about 1,548 insane persons. But there are only 782 in the Morganton hospital. There are on file 490 applications for admission, not one of which has been granted for lack of room. The annual cost per capita is \$151.40.

The hospital for insane negroes, at Goldsboro, has 470 patients. The cost per capita is \$9.16 a month.

There are 41 patients in the hospital for the dangerous insane, which is in the State Prison building. The cost per capita is \$114.98 a year.

In April there were 850 convicts in the charge of the State. Of these, 439 were at work on the Ohio River and Charleston Railroad. There are among the convicts 55 women, of whom 3 are white; 155 of the men are white, and 2 are Indians.

The net profit of the present administration has been \$20,643.28. In 1901 the prison failed of being self-supporting by the sum of \$32,773.

From July 1, 1901, to July 1, 1902, the number of criminal cases in the courts was 9,301—males 8,634, females 667—against whites 4,951, against negroes 4,339, against Indians 11. Convictions and submissions 6,418, acquittals 1,183, nolle prossed 1,594, otherwise disposed of 106.

Railroads.—The Corporation Commission this year reduced the passenger-fare rate over the Atlantic Coast Line Railroad, the Seaboard Air Line Railroad, and the Southern Railway. The commissioners' standard rate of 2½ cents a mile for second-class fare and 3½ cents a mile for first-class fare is now applied, in fact, to nearly every road in the State.

There are 3,681.95 miles of railroad in the State, an increase of 30.82 miles over last year. There were, however, 66.63 miles of new road built, but 35.81 miles were abandoned.

The aggregate earnings of the railroads were \$16,476,173.56; the operating expenses, \$10,187,100.64; the cost of roads, \$104,864,959; bonded debts, \$52,697,380; capital stock, \$77,877,115; taxes paid, \$547,262; number of employees, 11,401; amount of wages, \$4,452,590; accidents, 87 killed, 1,068 injured.

The gross earnings of the street-railways were \$531,019; operating expenses, \$408,338; number of passengers carried, 5,741,046.

The Supreme Court decided that the law passed by the last Legislature should not be construed to mean that the franchises were to be taxed separately from the tangible property.

Banks.—In 1899, when the banks were placed under the supervision of the Corporation Commission, there were 65 in the State. There are now 120—83 State, 23 private, and 14 savings. In 1902 the capital stock was \$3,513,564; deposits, \$14,046,775; gold, silver, and national-bank notes on hand, \$1,158,810; total resources, \$20,725,288.

Building and Loan Associations.—There are 30 building and loan associations, with assets amounting to \$2,020,676.

Insurance.—In the year ending Dec. 31, 1900, the total of premiums received by North Carolina companies was \$208,021.03, and the amount of losses paid \$52,817.98. For companies of other States doing business in North Carolina, the premiums received were \$765,082.49, and the losses paid were \$350,336.65. Premiums received by foreign companies doing business in the State amounted to \$369,162.16, and the losses paid were \$176,137.95.

Industries and Products.—Following are census statistics on farms in the State: Number, 224,637; value, \$194,655,920. Of the valuation 27 per cent. was in buildings and the remainder in land and other improvements than buildings.

The tobacco-crop of 1899 was 127,503,400 pounds, valued at \$8,038,691.

The cotton-crop of 1901-'02 was 550,000. The estimate for 1902-'03 was 650,000.

This State showed the largest yield of sweet potatoes in 1899. From 68,730 acres the product was 5,781,587 bushels, valued at \$2,119,956.

The wooded area of the State is 35,300 square miles.

The textile mills of the State show an increase for the year 1901. The number of mills enumerated is as follows: Cotton-mills, 226; woolen-mills, 11; knitting-mills, 41; carpet-mill, 1; jute-bagging mill, 1; silk-mills, 3; total, 283.

In 1900 the number of spindles in use was 1,481,771; it is now 1,694,163.

In the knitting-mills there are in use 3,814 machines, against 2,048 in 1900. The hours of labor for the operatives run from ten in the knitting-mills up to twelve and a half in the cotton-mills.

The number of operatives employed is as follows: 18,171 men, an increase of 21 per cent. over 1900; 18,377 women, an increase of 15 per cent.; 7,996 children under fourteen, an increase of 5 per cent.

In flour and grist mills \$2,905,310 was invested in 1900, and the product was valued at \$8,867,462.

The value of gold produced in 1901 was, approximately, \$55,500, and of silver \$12,180. The preliminary estimate for 1902 gives the gold value as \$91,713, and the silver as \$11,418. The agent in charge of precious stones says that in 1901 the deposit of rhodonite garnet in the Cowee valley, Macon County, was worked extensively. Mining for dark blue, green, and yellow beryl, for amethysts, and for emerald matrix was carried on in the State.

Highways.—A good-roads congress was held in Raleigh in February, and a State association was formed. Among the resolutions passed were one advocating greater use of convict labor on roads, one favoring instruction in road-building at the State colleges, and one asking for the creation of the office of highway commissioner, with an appropriation for supervision.

The State Fair.—The first State fair of North Carolina was held in 1862; the fiftieth anniversary this year was marked by an unusually fine exposition.

Historic.—A celebration was held on Guilford battle-ground, July 4, when a monument to Nathaniel Macon was unveiled and an oration on his character and services was delivered by the Hon. T. S. Pittman.

Elaborate preparations are making for celebrating, on Roanoke island, the landing and settlement of Sir Walter Raleigh's colonies and the birth of Virginia Dare (in August, 1587), the first Anglo-American.

Federal Appointment.—Considerable excitement has been raised over the question of the reappointment of Sam Vick, a colored man, postmaster at Wilson. The people of the town testify freely to his good character and capacity, and place their opposition frankly on the ground of his color. It is said there is not a white Republican in the town.

Lawlessness.—Reports have been published of the lynching of 4 negroes, 1 for criminal assault and 3 for murder. The negro lynched at Washington in March had poisoned the whole family of Dr. D. T. Tayloe, none of whom died. The Governor offered \$400 reward for the arrest and conviction of each member of the mob that lynched 2 negro brothers at Salisbury in June; they were believed to have murdered a young lady who had ordered them off her premises, though there seems to have been some room for doubt of the guilt of the younger, who was but fourteen years old. In the case of the negro lynched for criminal assault at or near Kinston, the coroner's jury found that he came to his death at the hands of parties unknown to the jury, and added: "In view of the enormity of the crime committed by said Tom Jones, alias Frank Hill,

we think they would have been recreant to their duty as good citizens had they acted otherwise."

Legal Opinions.—The justices of the Supreme Court contend that their salaries are not liable to taxation on the ground that the Constitution declares that their salaries are not to be diminished during their term of office, and the Attorney-General agrees with this opinion, which applies to the salaries of other State officials as well.

The decision against the antitrust law of Illinois probably invalidates that of this State as well.

Political.—At the State election, in November, a Chief Justice and 2 Associate Justices of the Supreme Court were to be chosen, for terms of eight years, succeeding Judges Furches, Clark, and Cook, and a member of the Corporation Commission to succeed D. H. Abbott, for a term of six years; also a Superintendent of Public Instruction.

The Democratic Convention, in Greensboro, July 16, nominated Walter Clark for Chief Justice and Henry G. Connor and Platt D. Walker for Associate Justices. Eugene C. Beddingfield was named for Corporation Commissioner and James Y. Joyner for Superintendent. The platform declared allegiance to the national platform of the party; congratulated the people upon the adoption of the suffrage amendment; commended the State administration; denounced the policy of "imperialism"; condemned trusts and Congress for not restraining them; favored the establishment of the Appalachian park; and favored nominations by primaries.

The Republican Convention met in Greensboro, Aug. 28, and nominated Thomas H. Hill for Chief Justice, D. H. Abbott for Corporation Commissioner, and D. A. Long for Superintendent of Instruction.

After approving the national administration and affirming allegiance to the party principles, the platform accused the Democrats of violating their preelected pledges in regard to reductions in expenses, number of offices, and salaries, and said further:

"They promised, by affidavit and otherwise, that no white man would be disfranchised under the amendment to our Constitution, but instead of observing their pledge with respect to this matter, the Democratic State chairman is now forced to admit that 18,000 white men will be denied the right to vote at the approaching election.

"We condemn them for their unwarranted effort to impeach 2 of our Supreme Court justices for purely partizan purposes, for following precedents established by the Supreme Court of this State in a long line of decisions covering a period of more than sixty years.

"We further condemn them for the enactment of legislation appropriating the money of the people for the purpose of defraying the expenses of persons indicted for violation of laws which they had sworn to obey, and for granting amnesty to such persons from prosecution in the State courts."

The convention was composed entirely of white men; contesting delegations of negroes were not seated in any instance.

Negro Republicans held a convention in October; they made no nominations, but adopted a set of resolutions condemning the treatment accorded them.

All the Democratic candidates for State offices were elected. For Chief Justice, Clark, Democrat, had 132,239 votes, and Hill, Republican, 71,275. All the 10 representatives in Congress are Democrats. The Legislature stands on joint ballot 144

Democrats, 22 Republicans, and 4 Independent Democrats. There was a tie in the Thirty-fourth Senatorial District, each candidate having 3,816 votes.

NORTH DAKOTA, a Northwestern State, admitted to the Union Nov. 2, 1889; area, 70,795 square miles. The population was 182,719 in 1890 and 319,146 in 1900. Capital, Bismarck.

Government.—The following were the State officers in 1902: Governor, Frank White; Lieutenant-Governor, David Bartlett; Secretary of State, E. F. Porter; State Auditor, A. N. Carlbloom; State Treasurer, D. H. McMillan; Commissioner of Insurance, Ferdinand Leutz; Attorney-General, O. D. Comstock; Superintendent of Public Instruction, J. M. Devine; Commissioner of Agriculture and Labor, R. J. Turner; Commissioners of Railroads, C. D. Lord, J. F. Shea, J. J. Youngblood; secretary, C. C. Hammond; State Land Commissioner, D. J. Laxdahl; Adjutant General, E. S. Miller; Geologist, Frank A. Wilder; Oil Inspector, L. W. Schruth; Superintendent of Public Health, H. H. Healey; State Examiner, R. E. Wallace; Veterinarian, J. W. Dunham; Chief Justice of the Supreme Court, Alfred Wallin; Associate Justices, N. C. Young, D. E. Morgan. All are Republicans.

The State officers are elected for terms of two years in November of the even-numbered years. The Legislature meets biennially in January of the odd-numbered years. The length of the session is limited to sixty days.

Finances.—The Governor says in his message: "I desire particularly to draw your attention to the improved condition of our State treasury and the reduction made in our State debt. On Jan. 1, 1901, there was less than \$10,000 in the general fund. The accounts against the State were six months past due, upon the Auditor's table were \$80,000 of funding warrants issued to pay current expenses, and more than \$150,000 of vouchers awaiting payment. It had been a common practice for the Legislature each two years to authorize the issuing of short-time warrants to square accounts. These warrants drew a high rate of interest, were not considered good by investors, and were often only sold upon the personal assurance of the officers issuing them that they would be taken care of. During the past two years \$270,000 of these warrants were issued. All these warrants have been gradually paid off, all other obligations of the State have been promptly met, and the biennial period closed with practically all bills paid and with a small balance in the general fund. During the same time, by a special tax, \$153,000 of asylum bonds have been paid off and the bonded debt reduced to that extent. This has been accomplished principally by reason of increased revenues. Our assessed valuation and tax levy for general purposes have grown very materially."

Valuations.—The valuation of all property in the State for purposes of taxation is \$133,880,414. The valuation in 1901 was \$124,592,521. The principal increase in valuation is in real property, which as equalized this year was more than \$7,000,000 above the value in 1901. The value of real property is \$85,195,928. In 1901 the total was \$77,858,024. Reduction of the assessed valuation of live stock kept down the total of personal property. Railroad property is valued at \$19,970,000. Telegraph property is equalized at \$219,465, telephone property at \$125,865, and express companies at \$143,665.

The rate of the general State tax is 4 mills; that of the bond interest tax, $\frac{1}{2}$ mill; for State institutions, 1 mill; and for schools, 2 mills. The

collections of taxes in the two years amounted to \$935,654.46 for general purposes.

Education.—The number of illiterates in the State in 1900 was 12,719. In the percentage of children from ten to fourteen able to read and write, this State stood twenty-ninth on the list, with 97.65 per cent.

The school census, 1902, shows a total of 103,728 children of school age, an increase of 7 per cent. over 1901. The support of the schools in 1901 cost \$1,670,093.28. There were 3,262 schools and 4,319 teachers in that year. The value of school property in 1901 was \$2,750,313.52. The public schools of the State have a land endowment worth \$50,000,000. The land endowments of the State educational institutions are: Agricultural College, at Fargo, supported largely by Congress, grant of 130,000 acres; State University, at Grand Forks, with school of mines in connection therewith, 126,080 acres of land; normal school at Valley City, with grant of 50,000 acres; normal school at Mayville, with a grant of 30,000 acres; School of Forestry, at Bottineau, no land grant; Scientific School, at Wahpeton, with a grant of 40,000 acres. Nearly 100 traveling libraries are in use in the schools.

Charities and Corrections.—The following are the State institutions with the extent of their land endowments; Hospital for the Insane, at Jamestown, a land grant of 20,000 acres; Soldiers' Home, at Lisbon, a grant of 40,000 acres; Blind Asylum, at Bathgate, a grant of 30,000 acres; Industrial School and School for Manual Training, at Ellendale, a land grant of 40,000 acres; Institution for Feeble-Minded, at Grafton, has a congressional appropriation of \$150,000, which with interest amounts to about \$31,000; State Penitentiary, at Bismarck, no land grant; State Reform School, at Mandan, a land grant of 40,000 acres; Deaf and Dumb Asylum, at Devil's Lake, a grant of 40,000 acres.

The new institution at Grafton is nearly finished. It will open with about 150 patients, many of whom will be transferred from other institutions.

Banks.—In the year the number of State banks increased from 138 to 176. The total deposits increased from about \$7,000,000 to more than \$10,000,000. The resources in September, 1901, were \$9,603,699.96; and in September, 1902, \$13,437,076.88; the loans and discounts increased from \$5,820,436.89 to \$6,482,721.64.

Building and Loan Associations.—There were of these in 1901 6, with 2,000 members and assets amounting to \$428,684.

Railroads.—Statistics show an addition of 120.72 to the railroad mileage of the State in 1901, and 98 miles in 1902. The total mileage is 3,330. The Soo road was extended this year from Braddock to Bismarck, a great advantage for the capital city. The opening of the road was celebrated there with enthusiasm Aug. 23. The line passes through an unusually productive country.

Insurance.—The life-insurance claims paid in the State in 1901 amounted to \$260,661.

Industries and Products.—From statistics given by the Commissioner of Agriculture for 1901, and a review of the progress of the State, are taken the following: Number of flouring-mills, 70; lignite-coal mines, 33; cheese factories, 8; creameries, 20; farms, 38,808; ranches, 6,150; combined farms and ranches, 20,150; tons tame and wild feed made, 926,005; acreage lost by hail, 1900, from one-fourth to total, 812,482; estimate of flax per acre, 10.15 bushels; estimate of wheat per acre, 12.25 bushels. The returns show a most

remarkable increase in such grains as corn, flax, barley, and rye, and the garden produce was nearly doubled in 1901 over 1900.

The estimates of crops in 1902 were: Wheat, 55,000,000 bushels; oats, 20,000,000; flax, 25,000,000; corn, 2,000,000. North Dakota is the leading State in the production of flax.

Tests of lignite for use on railroads, which were made this year, are reported to have proved that with engines constructed for the consumption of lignite this fuel is available for use on the road at a great saving over the fuel now used. The principal objection in the past, when tests of lignite have been made in railroad locomotives, has been that the draft has lifted the fire out of the fire-box and carried the live coals through the flues and out of the stack, rendering it difficult to keep a fire. This has been overcome in the construction of the engine with which the recent test was made. This engine has a brick arch over the fire-box, which prevents the lifting of the fire, which passes around the end of the arch, and then through the flues, keeping a steady and hot flame. All gases from the coal rise to the top of the arch, where they are consumed.

Land.—In North Dakota there are 15,071,477 acres of unappropriated lands, of which 10,121,977 acres are surveyed and 4,949,500 acres are unsurveyed. The reserved area embraces 8,325,490 acres, and the appropriated lands 26,513,113.

The wooded area is estimated at 600 square miles. In 1901 the State Land Commissioner sold lands that brought in cash payments of \$282,000 and represented a total cash value of nearly \$1,500,000. The common-school fund receives about \$200,000 in cash.

The State institutions received \$79,239, placed to the credit of their permanent funds, as follows: Agricultural College, \$16,160.23; Blind Asylum, \$4,522.18; Capitol building, \$9,813.09; School for the Deaf, \$6,144.98; Insane Hospital, \$2,496.12; Industrial School, \$4,935.96; Valley City Normal School, \$4,862.52; Mayville Normal School, \$2,817.52; Reform School, \$5,085.78; Scientific School, \$2,461.55; School of Mines, \$3,642.16; Soldiers' Home, \$4,585.90; university, \$11,063.07.

Fort Lincoln.—This new military post near Bismarck has been in progress of construction more than two years, but it is far from complete; when finished it will comprise 62 buildings. Only 3 are finished. These are the officers' quarters, the barracks, and the engine-house and water-works. All the buildings are of brick.

Grand Forks.—This city is to have a Carnegie library as soon as the subscription list for the lot, furnishings, etc., which is now nearly complete, is finished.

Legal Decision.—A law of 1901 which aimed to give those counties that had not taken advantage of the provisions of the Wood's bill for the collection of delinquent taxes by tax judgment and sale opportunity to act under the old law has been held unconstitutional by the Supreme Court, on the ground that it is special legislation.

Political.—At the Republican Convention, which met in Fargo July 23, the following candidates were nominated for the State election in November: For Governor, Frank White; Lieutenant-Governor, David Bartlett; Judge of Supreme Court, John M. Cochrane; Secretary of State, E. F. Porter; State Auditor, H. L. Holmes; State Treasurer, D. H. McMillan; Attorney-General, H. C. Frick; State Superintendent, W. L. Stockwell; Commissioner of Insurance, Ferdinand Leutz; Commissioner of Agriculture, R. J. Turner; Railroad Commissioners, J. F. Shea, C. J. Lord, and Andrew Schatz.

The Democratic nominations, made at Fargo Aug. 1, were: For Governor, Joseph E. Cronan; Lieutenant-Governor, Samuel K. McGinnis; Secretary of State, John Quarum; Auditor, John F. Morrison; Treasurer, James McDonald; Attorney-General, Michael J. Barrett; Superintendent of Instruction, Vilhjalmur Stevenson; Commissioner of Insurance, Frank A. Wilson; Commissioner of Agriculture, Oscar H. Will; Railroad Commissioners, Peter L. Pritchard, Charles P. Peterson, Oliver Knudson.

For Justice of the Supreme Court, the Republican candidate, John M. Cochrane, was adopted.

The platform declared strongly against the so-called railroad merger, pledged a resubmission of the prohibition law, favored initiative and referendum, demanded the repeal of the fellow-servant law, and called for the equal taxation of corporations.

The Prohibitionists met in small number at Hillsboro Aug. 6 and nominated J. G. Giverson for Governor and Charles H. Mott for Lieutenant-Governor; but the names were not on the ballot.

Representatives of the Socialists met at Fargo in July, and nominated the following State ticket: For Governor, Robert Grant; Lieutenant-Governor, Ralph W. Simpkins; Secretary of State, William Lamb; Auditor, L. P. Munter; Treasurer, William Olson; Superintendent of Public Instruction, William Ballou; Commissioner of Insurance, P. T. Sande; Commissioner of Agriculture and Labor, L. F. Dow; Railroad Commissioners, W. J. Bailey, Soren Madson, S. E. Haight.

The election resulted in the success of the entire Republican State and congressional ticket. For Governor the vote stood: White, Republican, 31,613; Cronan, Democrat, 17,576; Grant, Socialist, 1,245.

The Legislature will have 117 Republicans and 23 Democrats. For State Superintendent of Public Instruction there were cast about 4,000 more votes than for the other State officers, indicating that number of women's votes. If the vote of women in the State is comparatively the same as the male vote, only about one woman in twelve voted.

OHIO, a Central Western State, admitted to the Union in 1803; area (according to the Geological Survey), 41,060 square miles, of which 300 are water surface. The population, according to each decennial census since its admission, was 230,760 in 1810; 581,295 in 1820; 937,903 in 1830; 1,519,417 in 1840; 1,980,329 in 1850; 2,339,511 in 1860; 2,665,260 in 1870; 3,198,062 in 1880; 3,672,316 in 1890; and 4,157,545 in 1900. It ranks fourth among the States in point of population. Capital, Columbus.

Government.—The State officers during 1902 were: Governor, George K. Nash; Lieutenant-Governor, C. L. Nippert, and H. L. Gordon, vice Nippert, resigned; Secretary of State, L. C. Laylin; Treasurer, I. B. Cameron; Attorney-General, J. M. Sheets; Judges of Supreme Court, J. F. Burket, J. A. Shauck, J. L. Price, W. T. Spear, William Z. Davis, William B. Crew (appointed July 19 to fill vacancy caused by death of Marshall J. Williams, July 9); Clerk of Supreme Court, L. E. Emerson; Commissioner of Common Schools, Lewis D. Bonebrake; Dairy and Food Commissioner, Joseph E. Blackburn; Board of Public Works, Frank A. Huffman, Charles A. Goddard, Washington G. Johnston. All the State officers were Republican.

The term of the Governor, Lieutenant-Governor, Treasurer of State, and Attorney-General is two years, beginning in January of the even-numbered

years; of the Secretary of State, two years, beginning in January of the odd-numbered years; of the Dairy and Food Commissioner, two years, beginning in February of the odd-numbered years; of members of the Board of Public Works and Clerk of the Supreme Court, three years, beginning in February; of the Commissioner of Common Schools, three years, beginning in July; of the Auditor of State, four years, beginning in January of even-numbered years; of Judges of the Supreme Court, six years, beginning in February. All are elected in November. The Legislature meets biennially in January of the even-numbered years; there is no limit to the length of the session.

Finances.—The balance in the treasury to the credit of the general revenue fund at the beginning of the fiscal year, Nov. 16, 1901, was \$1,226,664.46; total receipts of general revenue fund during fiscal year, \$5,206,170.91; amount paid for revenue fund during year, \$5,269,098.42; total receipts of sinking-fund during year, including balance from previous year, \$804,781.72; total disbursements from sinking-fund, \$550,212.49; receipts of State common-school fund, including balance from previous year, \$2,111,735.80; expenditures from State common-school fund, \$1,829,924; receipts to credit of university fund from taxes, \$374,720.47; aggregate payment to universities during fiscal year, \$322,329.58; payments for support of other State institutions, \$3,148,571.91; total assessed value of real property in State, \$1,396,180,471; total assessed value of personal property, \$594,704,917; debt of State, bonded and other, \$200,000; unredeemable debt (school fund), \$4,729,936; aggregate debt of counties, municipalities, and school districts, \$106,368,137.

Military.—At the close of the fiscal year, Nov. 15, the total strength of the Ohio National Guard was 6,466, of which 26 were staff-officers, 5,667 in 2 brigades of infantry, 310 in naval brigade, 143 medical department and signal-corps, 220 artillery; 110 cavalry.

Railroads.—The report of the Commissioner of Railroads shows that in all classes of railroad business it was the greatest year in Ohio's history. At the end of the fiscal year, Nov. 15, the length of main line was 9,059 miles. With new second, third, and fourth tracks, the increase over the preceding year was 361 miles. The increase of capital stock was \$10,644,536.25. The total increase in capital stock per mile was \$564. Cost of equipment on lines operated in Ohio increased by \$14,739,959 for the entire lines and \$6,884,971 on the part operated within the State. Total earnings for the entire lines was \$240,407,738.18, an increase of \$20,193,927.34 or 9.17 per cent. Total earnings in Ohio from all sources, \$101,001,341.37, an increase of \$11,302,063.62, or 12.6 per cent. The percentage of earnings in Ohio to entire earnings is 42.42 per cent. There was an increase of \$7,591,567.53, or 12.39 per cent., in operating expenses on the entire lines, and \$3,711,215, or 13.01 per cent., in that part of the lines running through Ohio. Total number of passengers carried in Ohio, 1902, was 28,499,313, an increase of 1,989,021, or 7.50 per cent. Number of tons of freight transported, 1902, 132,113,976, an increase of 14,485,124 tons, or 12.31 per cent. Average receipts per ton, 54.5 cents, an increase of 1 cent. Freight earnings per mile, \$6,990.13, an increase of \$1,018.83, or 17.06 per cent. The total number of persons injured in 1902 was 8,092, an increase of 1,114, or 15.96 per cent. Of the 52 operating corporations within Ohio, 21 paid dividends.

Legislative Session.—The General Assembly was opened on Monday, Jan. 6, and closed its

regular session Monday, May 12. The Republicans had a majority of 9 in the Senate and 14 in the House. Several important laws affecting taxation and corporations were passed. Among them are these:

Requiring domestic and foreign corporations other than quasi-public corporations to file annual reports and pay annual fees of one-tenth of 1 per cent. on invested capital stock.

An amendment to the law relating to electric-light, gas, natural gas, express, telephone, telegraph messenger, railroad, pipe-line, waterworks, street, suburban, and interurban railroads and other corporations increases their annual tax from $\frac{1}{2}$ to 1 per cent. of the gross receipts for the business done in Ohio in the year next preceding the 1st day of May.

An addition to the Dow tax law providing for a stricter enforcement of the tax on the sale of liquors.

Providing that an action upon the liability of stockholders of corporations can only be brought within eighteen months after the date the obligation shall become enforceable against said stockholders.

Giving the Governor and the Secretary of State the power to remit penalties against foreign corporations for failure to comply with the corporation laws where good cause is shown for such failure or neglect; also providing that where two-thirds of the property or business of the foreign corporation is invested in Ohio, and the corporation pays one-tenth of 1 per cent. upon its authorized capital stock, the shares of stock of such corporation held in Ohio need not be returned for taxation.

Providing that a corporation may purchase or otherwise acquire and hold shares of stock in kindred, but not competing corporations, whether domestic or foreign.

Requiring owners of bank stock outside of Ohio to list their stock for taxation in Ohio.

Among the enactments of other character the most important are the following:

Providing that the action of a political party convention on a proposed amendment to the State Constitution may be expressed by affirmative or negative expression printed with the party ticket on the official ballot.

Establishing State normal schools at Ohio and Miami Universities.

Defining schools and colleges.

Authorizing an Ohio commission and building at the St. Louis fair and appropriating \$75,000.

Redistricting the State for congressional elections.

Making burglary of an uninhabited house a crime punishable by imprisonment for life.

Perfecting the child-labor law and fixing the age at fourteen years.

Providing stringent punishment for assault on a President, Vice-President, Cabinet officer, governor, or lieutenant-governor.

Requiring the registration of union labels.

Making safe-blowing a crime punishable with five to fifteen years' imprisonment.

Making it an offense to desecrate the United States flag.

Providing an official State flag for Ohio.

Providing that grade-crossings in cities may be abolished, the cost to be divided equally between the city and the railroad company.

Several "ripper" bills affecting municipalities were passed, but the subsequent action of the Supreme Court nullifying special enactments and the adoption of a general municipal code disposed of some of them.

The Legislature provided for the submission of amendments to the Constitution to the vote of the people at the November election, 1903: Giving the General Assembly greater powers in the matter of classifying subjects for taxation under the general laws of the State; the stockholders' liability amendment, which in effect abolishes the double liability laws of the Constitution; and providing for single legislative districts.

A special session was called by Gov. Nash, and was held from Aug. 25 to Oct. 22. The cause was the necessity for the enactment of a municipal code and the correction of an error in an act passed at the regular session, the effect of which was to prevent cases being appealed to the Supreme Court. Both objects were effected after nearly two months of discussion, and, in addition, a resolution was adopted submitting to the people in 1903 a constitutional amendment permitting the classification of cities into 3 divisions of over 100,000; between 25,000 and 100,000; and below 25,000.

Corrupt Practises in Elections.—A previous Legislature enacted a law to prevent corrupt practises in elections. After each election candidates were required, under penalty, to make sworn returns of their election expenses. The law was evaded by many candidates, and at last was openly violated by one candidate, who declared it to be unconstitutional. The case was taken to the Supreme Court, which, Jan. 28, sustained the constitutionality of the law. A few weeks later the Legislature repealed the enactment.

Court Decision.—A complete revolution in legislation for municipalities was effected by the decisions of the Supreme Court in cases coming before it from Cleveland and Toledo. These decisions destroyed a system that had grown up year by year for half a century, and reversed the position which the court had held from the beginning until recently. The Constitution provides that "the General Assembly shall pass no special act conferring corporate powers," and in another section that "all laws of a general nature shall have a uniform operation throughout the State." Immediately after the adoption of the Constitution the Legislature classified the municipalities into cities of the first and cities of the second class—those having a population of more than 20,000 being of the first class, and the remainder with a population of over 5,000 being in the second class—incorporated villages, and incorporated villages for special purposes. Successive Legislatures subdivided these classes, and finally substituted a policy of isolation instead of classification, while the courts sanctioned many of the acts, but this "was done with reluctance and on the grounds of public policy." Recently the Supreme Court, in some minor cases, showed a disposition to check the progress of special legislation, and in the cases brought to oust the Police Board of Toledo and the entire municipal government of Cleveland, except the mayor, on the ground that the acts creating them were applicable to the respective cities only, a position was taken that left every municipality in the State without a legal government. In the decision made in the latter part of June the court declared the present classification of the municipalities of the State to be repugnant to the Constitution and that the entire municipal code of Ohio must be revised and brought into harmony with the fundamental law of the State. This was followed, four months later, with a decision in a school case which practically destroyed all the special school laws of the State and made necessary the enactment of a general school code as well as a general municipal code. In both in-

stances execution of judgment was suspended that the Legislature might have time to act.

The Municipal Code.—The new municipal code provides for the government of cities and villages. All municipalities of 5,000 and over are cities. All others are villages. The organization of a city includes a mayor, president of council, or vice-mayor, treasurer, solicitor, and auditor. The last-named official is elected for a three-year term. The others are elected for two-year terms. Part of the council are to be elected on a general ticket and the greater number from wards of a specified population. Councilmen are elected for two-year terms, but half of them are retired each year. The real government of the city is practically vested in two boards, the board of public service and the board of public safety. The latter has charge of the police and fire departments, and the former of all the other departments of public service. The board of public safety is to be bipartisan and composed of 2 or 4 members, as the council may determine. The appointment is vested in the mayor, subject to confirmation by two-thirds of the council. If not so confirmed, the Governor appoints. The board of public service, of 3 or 5 members, as the council may provide, is elected by the people on a general ticket for two-year terms. This body is given unchecked control, the power of the council being, with the exception of confirming the board of public safety, exclusively legislative. Civil service is expressly limited to the fire and police departments. In addition there is a board of health of 5 members appointed by the mayor, who is president of this board, and a bipartisan sinking-fund and tax commission of 4 members, also appointed by the mayor.

Political.—The Republican State Convention was held in Cleveland, May 28. The following ticket was nominated after a sharp contest: For Secretary of State, Lewis C. Laylin; Judge of Supreme Court, William B. Crew; Member of Board of Public Works, William Kirtley, Jr.; Dairy and Food Commissioner, Horace Ankeney. The platform adopted was of great length, but was almost wholly devoted to national affairs.

The Democratic State Convention was held at Cedar Point, near Sandusky, Sept. 3. The candidates, with 1 exception, were nominated by acclamation, there being 1 ballot for the office of Dairy and Food Commissioner. The nominations were: For Secretary of State, Herbert S. Bigelow; Judge of Supreme Court, Michael Donnelly; Member of Board of Public Works, Joseph J. Pater; Dairy and Food Commissioner, Philip H. Bruck. The platform—after a preamble in which "continued allegiance to the Democratic party of the nation" was declared, and "the principles laid down in the last national platform adopted at Kansas City, and faithfully and ably represented in the presidential campaign of 1900 by William Jennings Bryan," were reaffirmed and approved—dealt exclusively with State affairs, the several resolutions setting forth the principles of "home rule and just taxation," and pledging the party to the accomplishment of these purposes in municipal and State affairs.

The Socialist party held its State convention in Columbus, May 30, and nominated a full State ticket as follows: For Secretary of State, Max S. Hayes; Judge of Supreme Court, George P. Maxwell; Member of Board of Public Works, William C. Edwards; Dairy and Food Commissioner, George Flummerfelt. The platform called for municipal ownership, reduction of hours and increase of wages, governmental insurance of working people against sickness or accident, compul-

sory education, woman suffrage, and the initiative and referendum.

The Socialist-Labor party held its State convention in Cleveland, May 30, and nominated a ticket as follows: For Secretary of State, Theodore Adams; Judge of Supreme Court, Samuel Borton; Member of Board of Public Works, John R. Fraser; Dairy and Food Commissioner, William Garritty. The platform called for the recognition of no class but the laboring class, and denounced the present methods of capital. It said no good can come from a political party to the laboring classes except it be a revolutionary party.

The Prohibitionists put the following ticket in nomination: For Secretary of State, Andrew L. White; Judge of Supreme Court, Albert L. Talcott; Member of Board of Public Works, Samuel W. Dunlap; Dairy and Food Commissioner, George W. Mace.

The contest between the 2 leading parties was of unusual interest and had some novel spectacular features. It was regarded as a trial of strength between Mayor Tom L. Johnson, of Cleveland, who had dominated the Democratic Convention and directed the campaign, and United States Senator Marcus A. Hanna, of Cleveland, who held the same position toward the Republican Convention and campaign. Mayor Johnson visited all parts of the State with an immense circus tent and a red automobile, making addresses, in which he confined himself to State issues and almost wholly to the subject of unequal taxation and the under-assessment of quasi-public corporations. The peculiar feature of these addresses was the severity with which he scored Democratic as well as Republican officials for what he declared to be unfaithfulness to the public interests. Senator Hanna followed him over part of the route, scoring him for what the Senator asserted to be gross misrepresentations of the facts. The result of the campaign was the election of all the Republican candidates, Laylin's plurality being 90,465; Crew's, 93,939; Kirtley's, 95,209; Ankeney's, 86,135. For the head of the ticket the Republican vote was 436,171; the Democratic, 345,706; the Prohibition, 12,336; the Socialist, 14,270; the Socialist-Labor, 2,983.

OKLAHOMA, a Territory of the United States, organized in 1890; area, 38,715 square miles. The population in 1890 was 61,834; in 1900 it was 398,331. In 1902 it was estimated at 600,000. Capital, Guthrie.

Government.—The following were the Territorial officers during 1902: Governor, Thompson B. Ferguson (from Dec. 9, 1901); Secretary, William Grimes (from May 14, 1901); Treasurer, Cassius W. Rambo (from Oct. 1, 1901); Auditor and Superintendent of Public Instruction, L. W. Baxter; Bank Commissioner, Paul F. Cooper; Chief Justice of the Supreme Court, John H. Burford; Associate Justices, B. F. Burwell, Clinton F. Irwin, Bayard T. Hainer, Frank Gillette, James K. Beauchamp, and J. L. Pancoast; United States Marshal, William D. Fossett; Delegate to Congress, Dennis T. Flynn; his successor, B. S. McGuire, was elected Nov. 4. All are Republicans.

The chief executive officers of the Territory are appointed by the President. A Territorial election is held in November of the even-numbered years, when the voters elect a Delegate to Congress and members of the Legislature, which holds biennial sessions, beginning in January of odd-numbered years.

Finances.—The report of the Territorial Treasurer, on Nov. 30, showed a balance on hand of \$648,440.15; the total receipts during the year, \$1,426,900.19; total expenditures, \$778,460; the

interest on Territorial funds amounted to \$27,074.06; balance on hand Dec. 1, 1901, \$372,105.32; increase for 1902 of \$276,334.83. The total amount of warranted indebtedness on Nov. 30 was \$684,176.69; deducting the balance on hand in treasury would leave only \$35,799.39 indebtedness, or about 6 cents per capita. The year was the first in the history of the Territory in which the income from taxation was sufficient to pay the running expenses of the Government and a portion of the accumulated debt. During the year \$168,414.33 of warrants were redeemed; the interest paid on these was \$28,894.89. Territorial funds are deposited in banks which have been made depositories under authority of law. Funds are protected by securities required by law. Warrants were issued on the treasury for \$406,989.68. The delinquent Territorial tax, covering eleven years, amounts to \$232,597.55. The assessed valuation of the Territory is \$72,677,423. This amount represents only about one-fourth of the real value of the property when estimated on a cash basis, which would be about \$300,000,000.

Education.—The amount spent by the Territory from various school funds in the treasury in the year for educational purposes amounted to \$246,850.19; for two years past, \$465,828.61; for all other purposes in the two years, \$362,692.97. In the year 2,278 public schools were taught, with an aggregate enrolment of 116,971, and \$502,277.65 was paid to teachers. There were 1,802 pupils graduated from common schools. There was apportioned during the year among the counties, as a Territorial common-school fund, \$267,105.14. The fund for common schools arises from the leasing of Territorial school lands, and in the year the receipts amounted to \$614,905.55 for that fund.

The new building for the State University, at Norman, has been completed at a cost of \$90,000. The main building, completed several years ago, was burned recently, with but \$35,000 insurance. The total enrolment in 1902 was 359. The faculty consists of 30 members. A gymnasium, costing \$10,000, is under way. The geological department has reported on the geology and flora of the Territory, and is now collecting material for a report on gypsum and salt deposits. The university geologist has been designated a federal geologist.

The Agricultural and Mechanical College, at Stillwater, has resources amounting to \$53,000 annually; of this, \$37,500 comes from the Government out of the Hatch and Morrill funds; \$15,000 goes exclusively to the experiment station, solely for experimentation and the publication of results; the enrolment was 435, with 20 graduates. In the year \$45,000 was expended in additional buildings and equipment.

The Territorial Normal School, at Edmond, had an enrolment of 483. Three additional buildings have been necessary to accommodate the school's growth.

The Northwestern Normal, at Alva, had an enrolment of 593. It has an income of \$40,000 annually, and much new equipment has been added.

The Southwestern Normal School has been located at Weatherford, and bids are asked for the erection of the building, costing \$53,000.

The University Preparatory School, at Tonkawa, began its first year Sept. 1, with an enrolment of more than 200.

Throughout Oklahoma a system of separate schools is maintained.

The Colored Agricultural and Normal School,

at Langston, had an enrolment of 211. It is also partially supported from the Government Hatch and Morrill funds.

At Chillico the Government has an industrial school for Indian children, the attendance being about 400. Government schools for Indians are also maintained at Absentee, Arapaho, Cheyenne, Fort Sill, Kaw, Osage, Otoe, Pawnee, Ponca, Rainy Mountain, Cantonement, Red Moon, Riverside, Sauk and Fox, and Seger, with a total enrolment of more than 2,000.

There are also 4 mission Indian schools, with an enrolment of 225.

The fund for the School for the Blind amounts to \$7,193, remaining in the treasury inactive; the number of persons who would be beneficiaries of this fund is too small to warrant any attempt toward an institution for them.

Railroads.—In 1902 568 miles of railway were constructed in Oklahoma, the greatest number in any State of the Union for that year. Important extensions are being made by several roads. There were 1,413.23 miles of railroad returned for taxation in March; also 179 miles of side-tracks. The assessed valuation of railroad property amounted to \$6,339,462. The building of 5 railroads simultaneously into Guthrie is an illustration of the amount of work that is being done. Twenty-three railroads were chartered in Oklahoma in 1902, with capital stock exceeding \$25,000,000.

Commerce.—There were shipped out of the Territory in the year 6,442 car-loads of cattle, 18,593 of wheat, 210 of corn, 308 of oats, 65 of castor-beans, 2,252 of hogs, 700 of cottonseed, 1,209 of hay, 4,842 of flour, 391 of horses and mules, 1,846 miscellaneous, and 164,653 bales of cotton. The imports amounted to 1,091 car-loads of farm machinery, 1,862 of flour, 2,883 of home-seekers' goods, 7,225 of coal. Oklahoma annually exports thousands of car-loads of flour and wheat to Europe and South Africa.

Live Stock.—There were returned for taxation in March 280,939 horses, 58,142 mules, 959,816 cattle, 38,308 sheep and goats, and 189,218 swine.

Population.—The assessors' returns for 1902 show Oklahoma to have 541,480 population, an increase of 153,149 over 1901. Estimates now place the population at 600,000.

Public Lands.—This year 3,068,502 acres of public lands were homesteaded, leaving 3,777,883 acres still open for settlement under the homestead laws; more than 3,000,000 acres of that are in Beaver County. Congress will be asked to extend the free-home measure over all these lands.

All the 2,055,000 acres of school lands, the property of the Territory for the support of schools, are now leased, the rentals for 1902 amounting to \$300,000.

Agriculture.—The wheat-crop of 1902 amounted to 30,000,000 bushels; corn, 65,000,000 bushels; cotton, 10,000,000 bales; potatoes, 150,000 bushels; melons, 170,000 crates; peanuts, 50,000 bushels; oats, Kafr-corn, sweet potatoes, broom-corn, alfalfa, sorghum, timothy, clover sugar-beets, and all manner of fruits are grown in abundance.

Farm Lands.—There were listed for taxation in 1902 6,344,662 acres of farm lands, an increase of 1,792,815 over 1901.

Resources.—The Wichita mountains produce copper, lead, zinc, gold, silver, magnesia, calcium, cobalt, nickel, manganese, barium, antimony, arsenic, aluminum, sulfur, and oil. Extensive oil developments have been made at Granite and in

the Osage Indian reservations; immense deposits of salt are found in Blaine, Woods, and Woodward Counties, where are several Government saline reserves; granite is found in great beds near Granite and in Blaine County; and cement beds are inexhaustible in the Keechi hills and near Sterling. The oil strata are heavily charged with gas. Plants for developing mineral products have been erected at Granite, Wildman, Lawton, Okeas, and Bartlesville, Indian Territory, near the Osage reservation.

Portions of Oklahoma are heavily timbered with oak, elm, walnut, pecan, hickory, sycamore, cottonwood, ash, cedar, etc. Within the year walnut timber has become one of the leading products of the Territory. Oklahoma furnishes a large part of the world's pecan-crop.

Indians.—The number of Indians in Oklahoma is 12,893, a decrease of 26 from 1901. Nearly 300 Arizona Apaches are held at Fort Sill by the Government as prisoners of war. Numbered by tribes, there are 1,800 Osages, 220 Kaws, 557 Poncas, 370 Otoes, 54 Tonkawas, 638 Pawnees, 479 Sauks and Fox, 91 Iowas, 1,722 Pottawatomies, 509 Shawnees, 2,808 Cheyennes and Arapahoes, 1,134 Kiowas, 1,407 Comanches, 164 Apaches, and 940 Wichita and affiliated tribes. The Osages are the only Indians unallotted at present. They own 1,400,000 acres, and the annual interest on their fund in the Government Treasury is \$150,000, making them the richest people on earth, the per capita wealth being about \$18,000.

Cities.—There are 20 cities of the first class in Oklahoma, with a population 36 per cent. greater than in 1900. The valuation of town property returned for taxation in 1902 was \$11,629,198.

Manufactures.—There are 10 cottonseed-oil mills and 250 cotton-gins in Oklahoma; 2 cotton compresses; 228 grain-elevators, with a total capacity of 2,857,000 bushels; 48 flouring-mills, with a total daily capacity of 8,760 barrels. There are 231 manufactories of all kinds in the Territory.

Penitentiary.—Under contract the Oklahoma convicts are cared for by the State of Kansas at 35 cents each daily. There were 287 convicts from Oklahoma in the Kansas prison the last week in December. The Governor has asked an annual appropriation of \$40,000 for this purpose for 1903-04.

The Insane.—Under contract the insane of the Territory are cared for by the Oklahoma Sanitarium Company, at Norman, at a cost of \$200 per annum for each patient; the past year cost the Territory \$65,000 for this purpose. The average number of patients was 299.

Deaf-Mutes.—These are cared for and educated under contract with H. C. Beamer, at Guthrie, at a cost for the year of \$14,206.48. The highest attendance in the year was 60.

National Guard.—The Oklahoma National Guard consists of 12 companies of infantry, 1 battery, and 1 troop of cavalry, with a total strength of 825 men. The annual encampment was at Kingfisher in August.

Banks.—The consolidated report of the State banks at the close of business on Dec. 13, 1902, showed 202 banks reporting, a total of 206 doing business in the Territory; average reserve held, 50 per cent.; loans and discounts, \$4,913,095; overdrafts, \$360,410; stock and bonds, \$212,541; due from banks, \$2,926,689; cash on hand, \$816,233; cash items, \$197,356; furniture and fixtures, \$352,474; real estate and mortgages, \$22,378; total resources, \$9,801,399; capital stock paid in, \$1,647,932; surplus, \$186,432; undivided profits, \$403,138; deposits, \$6,701,334; demand certifi-

cates, \$589,505; cashier checks outstanding, \$39,074; due to banks, \$153,314; bills payable, \$59,721; bills rediscounted, \$20,743. The number of national banks is 66; average reserve held, 18.47 per cent.; total deposits in national banks, \$11,028,635.23; average deposit per capita in national banks, \$22; average deposits in both national and Territorial (State) banks, \$37.67; total deposits in all banks in Oklahoma, \$17,729,969. The excessive amount of deposits held by the 66 national banks over the amount held by the State banks may be accounted for to a large extent from the fact that many national banks of the Territory are used as reserve agents by the Territorial (State) banks.

Statehood.—Oklahoma is claiming eligibility to statehood. The claims are based on population, education, and wealth. The Republican party in Oklahoma made the campaign of 1902 on the issue of statehood for Oklahoma alone and at once. The Democratic party made the issue single Statehood for Oklahoma and Indian Territory. The Indian Territory is alleged to be unfitted for statehood at this time, because the lands are still largely held in common by the Indian tribes. Legislation looking to statehood in the Fifty-seventh Congress was handicapped by the conditions that grew out of the uniting of the remaining Territories in one bill. There were objections against Arizona and New Mexico, which militated against Oklahoma. Recognizing that ultimate single statehood with Indian Territory is inevitable, the advocates of immediate statehood for Oklahoma are not radical in their demands.

Political.—Gov. William M. Jenkins retired at the close of 1901, and was succeeded by Thompson B. Ferguson, an original Oklahoman, of those who made the run for homes. The "home-rule" idea has been followed by the Government in the appointment of all officers in the Territory. Congress created two more places on the Oklahoma Supreme bench, and Associate-Justice M'Attee retired. Associate-Justices Gillette, Beauchamp, and Pancoast (all Oklahomans) were nominated by the President. C. H. Thompson resigned as United States marshal, and was succeeded by another original Oklahoman, William D. Fossett.

OREGON, a Pacific coast State, admitted to the Union Feb. 14, 1859; area, 94,560 square miles. The population was 13,294 in 1850; 52,465 in 1860; 90,923 in 1870; 174,768 in 1880; 313,767 in 1890; and 413,536 in 1900. Capital, Salem.

Government.—The following were the State officers in 1902: Governor, Theodore T. Geer; Secretary of State and Auditor, Frank I. Dunbar; Treasurer, Charles S. Moore; Attorney-General, R. D. N. Blackburn; Superintendent of Public Instruction, J. H. Ackerman; Adjutant-General, C. U. Gantenbein; Chief Justice of the Supreme Court, Charles E. Wolverton; Associate Justices, Robert S. Bean and Frank A. Moore; Clerk, J. J. Murphy—all Republicans.

The term of the State officers is four years, and they are elected in June of even-numbered years—alternating with the presidential elections. In June of all the even-numbered years members of Congress, the Legislature, and a justice of the Supreme Court are elected. The Legislature holds biennial sessions, beginning in January of odd-numbered years, and continuing forty days. It consists of 30 Senators, elected for four years, and 60 Representatives.

Finances.—The valuation of property for taxation at the end of 1902 was \$150,000,000. The State tax levy amounted to 6.51 mills. Hereafter

the taxes will be assessed by the several counties at a ratio fixed by law.

The receipts of the treasury for 1901 were \$2,867,746.60; disbursements, \$1,889,134.64; balance Dec. 31, \$828,297.25.

The Treasurer's report for the six months ending June 30, 1902, gives the receipts for that time, including the balance at the close of 1901, as \$2,031,534.62; disbursements, \$762,269.32; balance July 1, 1902, \$1,269,265.30. The receipts of the general fund were \$633,696.32; disbursements, \$426,832.92. The receipts of the common-school fund were, principal, \$380,458.08; interest, \$119,909.98; disbursements from the principal, \$244,706.38; and from the interest, \$6,189.54. The other principal item, which marked a considerable increase over the income from the same source of the preceding year, was \$15,133.55 added to the 5-per-cent. United States land-sale fund.

The Treasurer's report covering the six months ending Dec. 30, 1902, gave the receipts for that period, including the balance on hand July 1, as \$2,135,998.72; disbursements, \$1,013,202.61. The balance on hand Jan. 1, 1903, was \$1,122,796.11, of which \$234,687.76 was in the general fund and \$724,772.25 in the common-school fund, the money in the general fund being sufficient to pay all warrants up to the time of the receipt of the spring taxes. The receipts of the general fund in the second half-year were \$341,137.98; disbursements, \$396,084.40. The common-school fund receipts were, principal, \$351,197.05, interest, \$117,721.04; disbursements from the principal, \$323,300.04; and from the interest, \$220,901.94.

Resources and Products.—An estimate of the increase of wealth accruing to the State from five of its principal industries—lumber, wheat, wool, hops, and salmon—reaches \$25,000,000. This amount, together with the results from other smaller industries, marks 1902 as the most prosperous year in the history of the State.

A report on the forests by Henry Gannett, of the Geological Survey, estimates the timber in the State to be 213,398,000 feet, board measure, an average stand per acre of timbered land of 12,200 feet. A wide difference exists between the sections west and east of the crest of the Cascade mountains, the former being 17,700 feet per acre and the latter but 4,700 feet. Red fir constitutes 66 per cent. of the Oregon timber, while of pine, including the yellow and sugar varieties, there is 18 per cent.; of spruce, 5 per cent.; hemlock, 5 per cent.; and cedar, 2 per cent. The report gives a startling estimate of the loss sustained by the State through forest fires. The areas of burned timber (not including those of 1902) comprise not less than 6,095 square miles, where approximately 54,000,000,000 feet of timber has been destroyed. The burned sections west of the Cascades, which are well watered, are in some stage of reforestation. Other sections, burned from twenty-five to fifty years ago, bear no vegetation larger than brush and ferns.

No authoritative report of the lumber-cut of 1902 has been published, but a conservative estimate places the cut at 1,000,000,000 feet, valued approximately at \$10,000,000.

Statistics published by the Department of Agriculture of the United States giving the acreage, production, and value of the principal farm-crops of the United States in 1902, give the following for Oregon: Of winter wheat, from an acreage of 398,845, the production was 8,774,590 bushels, with a total value of \$5,878,975. Spring wheat—acreage, 378,532; production, 6,737,870 bushels; total value, \$4,514,373. Oats—acreage, 281,955; production, 8,092,108 bushels; total value, \$3,

317,764. Barley—acreage, 281,955; production, 8,092,108 bushels; total value, \$3,317,764. Corn—acreage, 17,045; production, 398,853 bushels; total value, \$263,243. Rye—acreage, 11,026; production, 147,748 bushels; total value, \$107,856. Potatoes—acreage, 35,724; production, 3,679,572 bushels; total value, \$2,023,765. Hay—acreage, 343,537; production, 700,815 tons; total value, \$5,242,096. Flaxseed—acreage, 2,300; production, 15,640 bushels; total value, \$19,081.

On June 1, 1900, the farms of the State numbered 35,837, and were valued at \$132,337,514. Of this amount 14.5 per cent. represents the value of buildings and 85.5 per cent. the value of land and improvements other than buildings. The number of farms in 1900 was 40.4 per cent. greater than in 1890, while the gain in acreage was 45.8 per cent. The value of all live stock on farms and ranges June 1, 1900, was \$33,917,048, of which 32.6 per cent. represents the value of meat cattle other than dairy cows; 25.5 per cent. that of horses; 22.3 per cent. that of sheep; 12.1 per cent. that of dairy cows; 3.1 per cent. that of swine; and 4.4 per cent. that of all other live stock.

Increase was reported in the dairy industry, the production of milk showing an increase of 94 per cent., the quantity of butter increasing 69.4 per cent., and that of cheese 75.9 per cent. The production of wool has gained 83.8 per cent. in ten years, the improvement in the grade of sheep being shown in the increase in the average weight of fleeces from 6.3 pounds in 1890 to 8.6 pounds in 1900. The increases in the acreage devoted to the several cereals in the last decade were: Wheat, 57.9 per cent.; oats, 19.5 per cent.; buckwheat, 60.8 per cent.; barley, 60.1 per cent.; rye, 47.4 per cent.; and corn, 40.4 per cent. Since 1890 the total number of orchard trees in the State has increased from 1,757,893 to 5,314,232. Of this increase, 49.8 per cent. has been in plum- and prune-trees, and 32.2 in apple-trees. Small fruits, vegetables, and sugar-beets showed a satisfactory increase.

In 1900 15,434 acres devoted to hops produced 14,675,577 pounds. The product of hops for 1902 was unofficially estimated at 80,000 bales, which would add \$2,500,000 to the wealth of the State.

The salmon product of Columbia river and the coast streams for 1901 amounted to 21,123,739 pounds. Of this amount, Columbia river, State of Oregon side, yielded 16,752,121 pounds. The waters of the State also yield sturgeon, shad, smelt, catfish, tomcod, bass, herring, flounders, perch, and carp. Of those species, the product for 1901 amounted to 572,990 pounds. The yield of oysters, clams, and crawfish was 837,550 pounds.

The growth of manufacturing industries along the rivers and the attention given to land irrigation has resulted in the building of barriers, dams, and other obstructions that prevent the salmon from ascending the rivers to their spawning-grounds, and restrict the feeding areas of the young fish, which remain several months in fresh water after being hatched.

The estimated value of the salmon pack for 1902 was \$2,500,000.

The fruit-crop for 1901 was the best in the history of the State, and was valued at \$2,375,000; that of 1902, falling somewhat below the high mark, still yielded \$2,239,000. Apples and prunes were the largest and most valuable products, each yielding more than \$800,000. The finest Oregon fruits are shipped to the Atlantic States, England, and France. Large sales of prunes were made this year to French buyers, owing to the almost total failure of the crop in France.

The Food and Dairy Commissioner's biennial report shows the value of the butter and cheese output in 1902 to be \$1,897,000. Of creamery butter 4,000,000 pounds were produced; 3,500,000 pounds of dairy butter; and 2,225,000 pounds of cheese. The output has increased 50 per cent. in two years. Cheeses are sold in California at an advance of 3 to 5 cents over the native product. Butter is sold along the Alaskan coast. Economical administration of the department resulted in a saving of \$1,500 out of the \$7,800 appropriated by the Legislature.

At the end of October approximately 10,000 tons of beets had been cut, and the sugar product amounted to 23,000 sacks, with a further product of 2,000 sacks made from brown sugar. This yields 2,500,000 pounds of high-grade sugar.

In May \$15,113.55 were disbursed to the various counties of the State, this amount being the 5-per-cent. fund derived by the State from the Government in the sale of public lands within the State for the year ending June 30, 1901. The division of the fund is made in proportion to the respective acreage of the counties. Multnomah County, with one-fourth the population of the State, received the smallest amount, only \$69.90, since its area is but 281,920 acres.

Progress in manufacturing is noted by C. H. McIsaac, secretary of the Manufacturers' Association, who estimates the value of goods made in Oregon in 1901 to be about \$60,000,000. Portland manufactures most of the furniture for the Pacific-coast towns. The value of the output of woolen-mills in 1901 was more than \$1,000,000. The ship-building industry has doubled in ten years. Exports of sashes, doors, and blinds reached the value of \$1,000,000 in 1901.

The people of western Oregon are giving increased attention to grazing, believing that their section is better adapted for the production and maintenance of live stock than for either fruit-growing or general farming. The shortness of the season does not afford the farmer time to develop his crops, and makes it difficult for him to compete with sections of the country where conditions are more favorable. The plentiful rains which last late in spring and come early in autumn, provide a forage crop ample for the maintenance of large herds. The recent rapid growth in the dairy industries and the production of beef and pork for exportation attest the wisdom of this change.

The output of gold in Oregon in 1902 amounted to \$1,860,465; that of silver, \$63,600.

Insurance.—The annual report of the Secretary of State as *ex officio* Insurance Commissioner, issued on April 1, showed that there were doing business in Oregon 59 fire and marine, 35 life and accident, 6 plate-glass, and 2 steam-boiler insurance companies, and 9 surety companies. Under the law requiring the payment of a 2-per-cent. tax on net premiums, \$33,988.40 were collected. Licenses amounted to \$5,927.36. Prior to 1901 the receipts from insurance companies went into the common-school fund, but an act of the Legislature of that year directed that this money be turned into the general fund.

Education.—In 1902 there were 138,466 children of school age in the State, an increase of 2,648 over the previous year: The number enrolled in the public schools was 100,659, an increase in one year of 2,914. The total enrolment for 1902 at the State Agricultural College, at Corvallis, was 488, an increase of 52 over the previous year. Of this number, 29 students come from other States and countries. Portland had about 750 more school-children in 1902 than in

1901; the number of pupils registered Nov. 8 was 11,799.

A statement from the Secretary of State shows that Oregon has raised in taxes for the State University and the Agricultural College in the past fourteen years \$709,001.32; in addition to this, \$226,359.18 accruing from the interest fund gives a total of \$935,360.50, as the cost of these institutions. The amount raised by taxes in 1901-'02 was \$183,717.08.

A scarcity of teachers was reported by the Superintendent of Education, owing to the fact that teachers' wages had not kept pace with the increased wages in other occupations. Young men particularly have abandoned teaching in the past few years. The average wage of male teachers is \$47.58 a month; of female, \$37.61 a month. These amounts are an increase of a little less than \$2 over 1901, but the cost of living has increased in a higher proportion.

The illiteracy statistics of the Census Bureau shows that 99.58 per cent. of the children of Oregon between ten and fourteen years of age were able to read and write in 1900. This places Oregon third in the Union in this respect.

Indian-War Veterans.—The veterans of the Indian wars of 1855-'56 have petitioned the Legislature for back pay to the amount of \$300,000, asking that bonds be issued to that amount on the credit of the State. The Constitution specifies that the "Legislative Assembly shall not loan the credit of the State, nor in any manner create any debts or liabilities which shall, singly or in the aggregate, with previous debts or liabilities, exceed the sum of \$50,000, except in case of war, or to repel invasion, or to suppress insurrection." It is maintained that this provision of the Constitution is inapplicable in the present case, since the obligation to the volunteers was assumed under Territorial law, and the Federal Constitution prohibits any State making a law that shall impair the validity of contracts. The contrary argument maintains that, if the obligation is not already outlawed by the statute of limitations, it is binding upon the National Government, since Oregon was a Territory and not a State when the debt was incurred, and the Government has already met somewhat less than a fourth part of the pay offered to volunteers, which was at the rate of \$2 a day. The petition, which has received signers in all parts of the State, assumes that the United States will redeem the \$300,000 bonds.

Rivers and Harbors.—At the first session of the Fifty-seventh Congress the bill passed providing for work on rivers and harbors contained an appropriation of \$2,589,000 for Oregon and Columbia river. The annual report of the Chief of Engineers relative to Oregon river and harbor works contains the following as most important among its items: The amounts expended on the projects of 1884 and 1893 toward the improvement of Columbia river at its mouth was \$1,968,753.14; that expended on the present project \$233,474.47, making a total of \$2,202,227.61 to June 30, 1902. Work carried on the past year has been done with the view to facilitating early operations under additional appropriations, such as repairing the washed-away parts of the jetty tramway and making surveys to determine the changes in the course of the river channel.

Two hundred and twenty-five thousand dollars was appropriated toward the "Portland-to-the-Sea" project, which proposes a 25-foot channel to the sea by construction of controlling works and dredging. The estimated cost is \$2,796,300, with \$175,000 as the cost of a new dredge and

accessories, and \$50,000 for maintenance. Dredging at various shoal places was the only work done in the year. The channel depth between Portland and Astoria has been increased 5 feet, with good navigable width. The maximum draft that could be carried on June 30, 1902, at mean low-water over the shallowest part of the river was about 19 feet.

The Navigation Committee of the Chamber of Commerce of Portland reported in January the unsatisfactory condition of the pilot and towage service at the mouth of Columbia river. The pilotage is all done by 9 men, who pool their earnings and control a pilot schooner, which they monopolize. They pay 10 per cent. of the pool's earnings to the Oregon Railroad and Navigation Company for transportation. The rate on all tonnage that passes the bar, whether piloted or not, is compulsory and is fixed by law. The chamber asserts that the inefficiency of the service would be corrected by competition, and recommends that the pilot commissioners grant licenses to all applicants who prove themselves competent, and also appoint a competent man to act as superintendent of pilots.

Fire and Frost.—Destructive forest fires occurred in September in Oregon and Washington, involving a total loss of \$12,767,100 as estimated by a field agent of the United States Bureau of Forestry. Of this amount, \$3,910,000 was sustained by Oregon. The estimate includes the value of timber, farm property, and sawmills and their products which were destroyed. Eighty-six families were made homeless and 200 others suffered partial losses. Farm property worth \$315,000 and sawmills aggregating \$149,000 were burned. The burned area covered 170,000 acres, and 2,124,000 feet of standing timber was destroyed. Unextinguished camp-fires of berry-pickers and hunters, the careless burning of slashings, and in one instance the sparks from a locomotive, were the causes. The Cascade forest reserve, which is patrolled by rangers, escaped damage.

Severe frosts occurred in February, with immense damage to winter wheat. Umatilla County suffered to the extent of 100,000 acres killed, necessitating reseeding.

Legal Decisions.—In a suit to restrain public officers from collecting interest as part of a claim against a suspended bank where public funds had been deposited, the Supreme Court ruled that it is a felony for a public officer to loan public funds, with or without interest, but this does not inhibit a mere deposit in a bank for safe-keeping, the money being at all times subject to order. Where funds so deposited are lost by the failure of the bank, the claim against the bank becomes a personal one when the officer makes the loss good from his personal funds, and until this is made good the claimant has no right to interest.

State Fair.—The fair of 1902 was the most successful on record of these exhibitions, promoting the live-stock industry as well as other agricultural work. The receipts were \$29,240.56; the disbursements, \$26,282.79; leaving a net profit of \$2,957.77. After paying \$1,530.54 for improvements and \$1,086.43 on old outstanding warrants, the treasury had \$393.60.

Scalp Bounty.—Between March, 1901, and June, 1902, the appropriation of \$50,000 by the Legislature of 1901 for the payment of coyote-scalp bounties was exhausted, and additional claims to the amount of \$13,965 were audited and allowed. At the present rate, the bounty law will cost the State \$117,197 in two years. The law requires the counties to pay one-third of the

bounty; but Baker County decided to discontinue the payment of the bounty on the ground that the destruction of the coyote removes the deadly enemy of the jack-rabbit, whose ravages to crops are worse than those of the coyote.

Public Lands.—In the first nine months of 1902 the receipts from payments on State lands amounted to \$264,636.21. Of this amount, \$240,937.85 resulted from the sale of school lands alone; the remaining \$23,698.36 was received from sales of land taken on foreclosure of mortgage loans from the school fund. Nearly all the school land disposed of is sold on the instalment plan, one-fifth of the purchase price being paid down, the remainder drawing interest at the rate of 6 to 8 per cent.

Two classes of public land exist in Oregon—Government land and State land. Government land is further classified as agricultural, timber, desert, or mineral, with specific terms for the acquisition of each; State land, though similar to the Government land, is acquired at the uniform rate of \$1.25 an acre.

About 6,000 square miles in the Strawberry and Blue mountain regions of eastern Oregon have been temporarily withdrawn from settlement or entry of all public lands, with a view to their ultimate creation into a forest reserve. This action is taken not only to preserve the timber, but to secure an adequate water-storage and conservation in view of the increasing number of irrigation projects.

Indians.—The Indian appropriation bill passed by Congress in February contained \$104,650 for the school at Chemawa, of which \$91,850 goes to the support of the 550 pupils, \$1,800 for the superintendent's salary, \$6,000 for sewerage, and \$5,000 for general repairs.

The Indians of the Umatilla reservation refused to obey the orders of Indian Commissioner Jones that they should cut off their long hair and lay aside their brilliant blankets for the clothes of the whites, looking upon the order as an infringement of their legal rights. They cite the case of an Indian who a few years ago recovered \$200 damages for the loss of his hair, cut by order of the Court of Indian Offenses, as a penalty for drunkenness.

Labor Day.—The first Labor Day proclamation in the history of Oregon was issued by Gov. Geer, Aug. 13.

Political.—The election of State officers in June resulted in a Republican victory for all nominees but that of Governor. In this case, George E. Chamberlain, the choice of the Democrats, won by a narrow majority. The other officers elected are as follow: Supreme Judge, Robert E. Bean; Secretary of State, Frank I. Dunbar; State Treasurer, Charles S. Moore; Superintendent of Public Instruction, J. H. Ackerman; Attorney-General, A. M. Crawford; State Printer, J. W. Whitney; Representatives to Congress, Thomas H. Tongue and J. N. Williamson.

The vote on a proposed amendment to the State Constitution, providing for the initiative and referendum, was carried by a vote of 62,024 in favor to 5,668 opposed.

The platform adopted by the Republicans at their convention, April 2, contains the following planks: A demand and insistence upon the passage by Congress of the Mitchell-Kahn Chinese exclusion bill; a recognition of the right of labor to organize and combine for mutual protection under the law, and a recommendation that the Legislature enact all necessary legislation to protect labor in all its rights and privileges, with a further recommendation that Congress create a

department of labor in charge of a secretary, with a seat in the Cabinet; a demand that the next Legislature pass a law placing all public officers of the State upon reasonable salaries, not to be increased during incumbent's term of office, and a prohibition of any further compensation or fees; a call for the creation of a mining bureau to promote the development of the mineral resources of the State; a recommendation to Representatives and Senators to endeavor to secure the speedy opening of Columbia river between The Dalles and Celilo, the clearing of all obstructions in the river from its mouth to the head of navigation, and the improvement of coast harbors and streams within the State; a protest against the entertainment of any plan, scheme, or proposition for leasing the public domain either to individuals or to corporations, believing that the public lands should be held in trust for the use and benefit of all the people under the homestead laws; a request for legislation to foster and support the fishing industries; a demand and insistence upon the passage by Congress of the Grout oleomargarine bill; a declaration of approval of the primary law passed by the Legislature in 1901, and a request that it be extended so as to apply to primary elections in all election precincts throughout the State; a recommendation that United States Senators be elected by popular vote.

The convention passed resolutions urging upon Congress immediate action on the bill to pension Indian war veterans of Oregon and Washington.

The recent growth of the Socialists as a party may be seen by a comparison of the vote for President in 1900 with the vote this year for Secretary of State, viz., Socialist vote in 1900, 1,466; in 1902, 5,589. The Prohibition vote increased from 2,536 in 1900 to 4,935 in 1902.

The plank relating to salaries of State officers brings again into notice a matter that has been agitated for a number of years at each succeeding election. The Constitution of the State, framed when there were hardly 50,000 people in Oregon, fixed a limit to the salaries of officials. The salary of the Governor, for instance, is \$1,500. In recent years no men could be found to serve for the small salaries named by the Constitution, and these amounts have been increased by allowances and fees, passed by successive Legislatures as compensation for "extra services." The Governor actually receives \$4,250 per annum, and for clerical assistance he has \$1,200; his secretary receives \$1,800. The new Governor, in order to force the Legislature to fix reasonable salaries for all officers of the State, threatens to veto any measure providing for fees or perquisites; and, moreover, insists that, should the Legislature not repeal the laws now in force which give fees to State officers, he will take whatever may be necessary to prevent the collection of the money allowed by law in violation of the Constitution.

The initiative and referendum amendment to the Constitution was passed at the November election. Every bill for an act must be introduced with the words "Be it enacted by the people of the State of Oregon." If the bill meets the approval of the people, it may stand as law after the Legislature enacts it; if they disapprove, they may reject it under the referendum clause of the amendment. Moreover, should the Legislature fail to pass any law that the people want, they may enact it themselves at the polls. The same power which enables the people to pass a law also enables them to amend the Constitution independently of Legislative action. By the

amendment just voted, it only requires that any proposed amendment shall receive, in order to become a part of the Constitution, a majority of all the votes cast in reference to it, instead of, as formerly was the case, a majority of the votes cast at the election. The minority rule in cases of the application of the referendum, for it requires but 5 per cent. of the voters to compel the submission of a measure enacted by the Legislature. The consequence is, that an act which really meets with favor from a majority of the voters may be held up as long as eighteen months because 5 per cent. of the voting population wish to express their opposition.

PENNSYLVANIA, a Middle State, one of the original thirteen, ratified the Constitution Dec. 12, 1787; area, 45,215 square miles. The population, according to each decennial census, was 434,373 in 1790; 602,366 in 1800; 810,091 in 1810; 1,047,507 in 1820; 1,348,233 in 1830; 1,724,033 in 1840; 2,311,786 in 1850; 2,906,215 in 1860; 3,521,951 in 1870; 4,282,891 in 1880; 5,258,014 in 1890; and 6,302,115 in 1900. Capital, Harrisburg.

Government.—The following were the State officers in 1902: Governor, William A. Stone; Lieutenant-Governor, J. P. S. Gobin; Secretary of the Commonwealth, William W. Griest; Secretary of Internal Affairs, James W. Latta; Treasurer, James E. Barnett; Auditor-General, E. B. Hardenbergh; Attorney-General, John P. Elkin; Adjutant-General, Thomas J. Stewart; Superintendent of Public Instruction, N. C. Schaeffer; Insurance Commissioner, Israel W. Durham; Commissioner of Banking, Frank Reeder; Secretary of Agriculture, John Hamilton; Commissioner of Forestry, J. H. Rothrock; Dairy and Food Commissioner, Jesse Cope; Zoologist, H. T. Fernald; Factory Inspector, James Campbell; Veterinarian, Leonard Pierson; Librarian, George E. Reed; Superintendent of Public Buildings and Grounds, T. L. Eyre; Chief Justice of the Supreme Court, J. B. McCollum; Associate Justices, J. Hay Brown, James T. Mitchell, William P. Potter, John Dean, D. Newlin Fell, and S. L. Mestrezat; Prothonotaries, Charles S. Greene, William Pearson, and George Pearson; Justices of the Superior Court, C. E. Rice, J. A. Beaver, William D. Porter, George B. Orlady, P. P. Smith, William W. Porter, and John I. Mitchell. N. C. Schaeffer and Judges McCollum and Smith are Democrats; the others are Republicans.

The Governor, Lieutenant-Governor, and Secretary of Internal Affairs are elected in even-numbered years for a term of four years; the Treasurer in odd-numbered years for a term of two years. The Secretary of the Commonwealth, the Attorney-General, and the Adjutant-General are appointed by the Governor at pleasure, and the Superintendent of Public Instruction for four years. The Legislature holds biennial sessions, beginning in January of odd-numbered years. Senators are elected for four years, and Representatives for two years.

Finances.—In September, 1901, the Treasurer reported a balance in the general fund of \$10,789,956.54. The public debt, Dec. 1, was \$6,815,299. The appropriations for 1900 and 1901 amounted to \$10,617,765.78, and for 1901 and 1902 to \$13,975,877.46. The receipts at the treasury from Nov. 1, 1900, to Nov. 1, 1901, were \$17,727,432.46; total expenditures, \$16,669,399.05, leaving a balance, including the general and sinking funds, of \$7,708,022.18. The amount collected and expended for the support of the poor was \$2,946,732; construction and repair of streets and roads, \$10,936,410; maintenance of common schools, not including the money received from the State treasury,

\$13,001,441; for other purposes, \$30,856,147; total amount of taxes collected for all purposes, \$58,740,731. Personal property yielded a tax of \$3,608,415.

Valuation.—The value of all real estate Nov. 30, 1901, was \$3,218,593,792, including both taxable and exempt from taxation, the valuation of real estate exempt from taxation being \$527,461,732. The aggregate value of all property subject to taxation for county purposes was \$3,063,047,023, and the amount of tax derived therefrom \$23,316,707. The aggregate value of property subject to State taxation was \$761,337,664, from which the State derived a tax of \$3,055,208.

Education.—In the year ending June 2, 1902, the number of pupils enrolled in the State was 1,163,509; teachers employed, 30,640; directors in charge of schools, not including Philadelphia, 15,289; graded schools, 17,162; superintendents, 139. The average daily attendance was 871,958; wages paid to teachers, \$11,831,871.38; cost of text-books, \$825,477.77; total expenditures, \$23,027,678.82; State appropriation for the school year, \$5,550,000. There was a net increase of 17 districts, 537 graded schools, and 1,205 female teachers, with a decrease of 609 male teachers. The increase in the number of pupils was 1,985. In the State normal schools the elementary course has been extended from two to three years. The compulsory-education law of 1901 appears to be more effective than any similar law previously enacted in the State. In February the twenty-third anniversary and fourteenth commencement of the Carlisle Indian Industrial School were held. The school had an enrolment of 1,050, of whom 355 were on farms in the State. The graduating class included 42 boys and girls.

Building and Loan Associations.—For 1900 and 1901 the number of building and loan associations in Pennsylvania was returned as 1,115, with a total membership of 281,980, and assets amounting to \$110,493,510. For 1901 and 1902 the number of associations is given as 1,168; membership, 299,573; assets, \$110,817,281. Pennsylvania has a far greater number of these associations than any other State in the Union, Ohio, which ranks next, having 757.

Banking.—The annual report of the Banking Department for 1901 shows the number of State banks to have been 107; trust companies, 155; savings institutions, 16; total, 278, an increase of 50 since 1900. The increase for the year of cash on hand and due from banks and bankers was \$13,373,072.92; increase of loans, \$54,233,104.56; increase of investment securities, \$34,885,183.41; increase of capital, \$15,135,580.17; increase of surplus, \$11,476,022.82; increase of undivided profits, \$5,867,757.85; increase of deposits, \$76,093,989.36. The amount of trust funds invested was \$483,819,432.04; uninvested, \$12,082,631.97; total, \$495,902,064.01. The average of deposits to each depositor, for all institutions, was \$516.03; the number of deposit accounts was 836,319.

Insurance.—From the annual report of the Insurance Commissioner it appears that in 1901 the companies of the State issued 9,951 policies, insuring \$26,198,743 upon the lives of residents of the State, an increase over the preceding year of 471 policies and \$2,635,772 insurance. Companies of other States issued 654,415 policies in this State, insuring \$206,292,735.12, making an aggregate by all companies of 664,366 policies, insuring \$232,491,478.12, an increase of 17,942 policies and \$13,763,303.12 insurance. The total of losses paid by all life companies in this State in 1901 was \$14,161,749.61, of which home companies paid \$1,797,864.16, and companies of other States \$12,-

363,885.45. Pennsylvania companies had in force at the close of 1901 200,850 policies, insuring \$491,844,590, against 178,624 policies, insuring \$446,206,264 at the close of the year 1900, and a total net premium income of \$18,795,725.67, against \$17,148,353.82 in 1900. The total income from all sources was \$24,064,016.84 in 1901, against \$21,607,397.38 in 1900. The entire expenditures of Pennsylvania life companies in 1901 were \$15,175,770.84, of which \$10,341,534.12 was paid to policyholders. The entire income of assessment life companies of Pennsylvania for 1901 was \$149,169.89. The expenditures were \$134,491.33. The assessment companies of other States doing business in this State, and reporting, showed in 1901 a total income of \$18,910,871.70 and expenditures amounting to \$18,868,669.80. The fire and marine companies in 1901 numbered 32, with assets of \$45,490,199; liabilities, \$25,204,980; capital, \$10,902,875; surplus, \$9,382,334; total receipts, \$21,901,647; losses paid, \$11,632,381; dividends paid, \$1,183,581; total disbursements, \$20,779,589; risks in force, \$2,852,180,526.

Railroads.—The annual report of the president of the Pennsylvania Railroad for 1901 showed that the road was never in better financial condition. With all the improvements made and \$5,000,000 set aside for others, the company was able to declare its regular 5-per-cent. dividend and an extra dividend of 1 per cent. It also ordered to be built 19,000 new cars. The gross earnings of all lines east and west of Pittsburgh for 1901 were \$198,626,878, an increase over 1900 of \$23,390,524. The net earnings were \$64,913,491, an increase over 1900 of \$10,175,414. After all expenses and deductions there was left a balance of \$10,857,672, which was distributed among the stockholders in a 6-per-cent. dividend. In 1902 the company made a substantial advance of wages to its employees.

Industries.—Pennsylvania produced 7,364,295 gross tons of pig-iron in 1901, an increase over 1900 of 992,607 tons. The market or realized value of the production for 1901 was \$106,883,000, against \$105,449,923 in 1900. The average yearly earnings for all wage-earners, skilled and unskilled, \$586.24, was an increase over 1900 of \$47.74.

The production of 7,959,720 gross tons of all kinds of steel for 1901 was an increase over 1900 of 1,702,945 tons. The 4,319,144 tons of Bessemer was an increase over 1900 of 830,575 tons. The production of 1,406,532 gross tons of rails in 1901 was an increase over 1900 of 208,434 tons.

The capital invested in the tin-plate works manufacturing their own black plate was \$10,525,000 for 1901, an increase over 1900 of \$753,112. The production of 435,628,000 pounds of black plate for tinning was an increase over 1900 of 123,626,000 pounds.

Fourteen firms or ownerships in the State had active cement plants in 1901, with a capital invested of \$19,271,981, and a total production, based on barrels, of Portland, natural, and improved cement, of 7,955,669, the market or realized value of which was \$7,334,891.

In 1901 Pennsylvania had 200 active tanneries. The 12 bituminous coal districts of the State in 1901 produced 80,914,236 tons of coal. The 8 anthracite districts have more than 30,000 more employees than the 12 bituminous districts, though the bituminous districts have more mines and produced more coal. This as well as the greatly increased ratio of machinery and cost in all departments is accounted for by the difficulty in mining anthracite compared with bituminous coal.

Coal-mining in 1902 was seriously interrupted

by the great strike of miners in the anthracite region. (See **STRIKE OF THE COAL-MINERS.**)

About 70 per cent. of the entire coke product of the country is credited to Pennsylvania, which, in 1901, produced 14,355,917 short tons, an increase of nearly 1,000,000 tons over 1900.

Charities and Corrections.—On Sept. 30, 1901, the number of insane under commitment was 11,748, of whom 6,121 were men and 5,627 women. At the corresponding date in 1900, the aggregate number of insane in all institutions in Pennsylvania was 11,249, an increase of 499. The private institutions and sanitariums contained 729 patients at the close of the year, 290 of whom were men and 439 women. Of the insane persons, in all classes of institutions, on Sept. 30, 1901, 11,380 were white and 368 colored.

The number of convicts in the penitentiaries Oct. 1, 1900, was 1,911; to which were added in the year 1902, being 29 more than the commitments of the previous year. Number discharged, 1,040; leaving on Sept. 30, 1901, 1,595, being 316 fewer than at the corresponding date of the previous year. The number of juvenile delinquents residing in the reformatories on Sept. 30, 1901, was 1,459, a decrease of 94 from the number at the corresponding date of the previous year. Of the 724 convicts sentenced to the penitentiaries in 1901, 518 were convicted of crimes against property, and 206 of crimes against persons.

Lawlessness.—Besides the numerous acts and outbreaks of lawless violence during the coal strike of 1902, other deeds of lawlessness were reported. At the end of January 2 murderers, under sentence of death, escaped from the jail at Pittsburg by overpowering and wounding the guards. They were assisted in escaping by the wife of the warden, who fled with them, and was herself injured by the officers who killed the convicts while they were resisting recapture.

At Chester, in February, a mob attacked the police station in an attempt to lynch a negro who had killed a policeman. The attack of the mob was repelled by the police.

In June a mob at Harrisburg stoned the police and aided a negro prisoner to escape from their custody.

A desperate attempt to lynch a prisoner by a mob in Butler County, on Sept. 13, was foiled by officers of the law, who repelled the mob's attack upon the jail.

In September riots occurred at Lebanon, growing out of labor troubles, and it required the presence of militia to quell the disturbances.

Mining Disaster.—More than 100 men lost their lives in July at Johnstown, through an explosion in the mine where they were at work. The explosion was caused by fire-damp, and all but a few of the deaths were due to effects of the after-damp.

The New Capitol.—The contract for building the new State Capitol has been executed, and ground was broken in November. The cost agreed upon was \$3,505,656.

Political.—The Republican State Convention, which met in Harrisburg, June 11, nominated for Governor Samuel W. Pennypacker, of Philadelphia, whose chief competitor for the nomination was John P. Elkin, Attorney-General of the State. The other State officers nominated were William M. Brown for Lieutenant-Governor and I. B. Brown for Secretary of Internal Affairs. The platform declared hearty approval and support of President Roosevelt, and pledged the convention to his nomination in 1904; it favored immigration laws whereby anarchy shall be driven from this country and the American working man be pro-

tected against unfair labor from abroad; and it approved the recommendation of President Roosevelt that the United States should enter into reciprocal trade relations with Cuba. The Philippine policy of the Government was strongly commended; adherence to the protective policy was demanded "in so far as it protects and tends to develop the industries and interests of the American people"; and the convention recommended "proceedings to check the growth of unlawful combinations intended to raise the price of commodities at the expense of the consumer."

The State Convention of the Democrats was held in Erie, June 25. Robert E. Pattison, who twice since 1883 had been elected to the office, was nominated for Governor, George W. Guthrie for Lieutenant-Governor, and James Nolan for Secretary of Internal Affairs. The platform was restricted to State issues, ignoring all national questions. Honesty in administration, deliverance of the State from the evils of lobbying, bribery, corrupt franchises, "pinch" legislation for blackmailing, etc., was promised in the event of Democratic success. The conduct of the Republicans while in recent control of the State was severely denounced, and the charge was made that "the selection of a United States Senator (at the session of the Legislature in 1901) was accomplished in a carnival of corruption and bribery."

The candidate of the Socialist-Labor Party for Governor was William Adams, the Prohibitionists nominated S. C. Swallow, and there were other minor tickets in the field. The tickets nominated by the Union party at rival factional conventions were both declared invalid by a legal decision. Owing to lack of campaign funds the chairman of the State Committee of the People's party announced, on Sept. 30, the withdrawal of that party's ticket.

At the November election Judge Pennypacker was elected Governor by a plurality of 156,410, and the other Republican candidates received large majorities, while a Legislature was elected with 144 Republican majority on joint ballot. Three-fourths of the congressional delegation elected are Republicans.

A commission appointed by the Legislature of 1901 to compute the vote cast at the November election of that year for State Treasurer announced in January, 1902, that Frank G. Harris was elected to that office by a vote of 435,040 and a plurality of 45,570 over E. A. Coray, the Fusion nominee. Mr. Harris assumed office the first Monday in May, 1902, to serve for two years.

A noteworthy event was the retirement, at the close of the last Congress, of the venerable Galusha A. Grow, of Pennsylvania, at the age of seventy-nine, after a public career of more than half a century. In the early days of the civil war he served with success as Speaker of the House. The first important bill drawn by him was the free-homestead act giving land to actual settlers of Government territory. He retired from Congress in 1863, and was returned to the House thirty years afterward as Congressman at Large, and in this capacity has served his State for ten years.

RHODE ISLAND, a New England State, one of the original thirteen, ratified the Constitution May 29, 1790; area, 1,250 square miles. The population, according to each decennial census, was 68,825 in 1790; 69,122 in 1800; 76,931 in 1810; 83,015 in 1820; 97,199 in 1830; 108,830 in 1840; 147,545 in 1850; 174,620 in 1860; 217,353 in 1870; 276,531 in 1880; 345,506 in 1890; and 428,556 in 1900. Capital, Providence.

Government.—The following were the State officers in 1902: Governor, Charles Dean Kimball;

Lieutenant-Governor, George L. Shepley; Secretary of State, Charles P. Bennett; General Treasurer, Walter A. Reed; Attorney-General, Charles F. Stearns; Auditor and Insurance Commissioner, Charles C. Gray; Commissioner of Education, Thomas B. Stockwell; Adjutant-General, Frederick M. Sackett; Railroad Commissioner, E. L. Freeman; Commissioner of Industrial Statistics, Henry E. Tiepke; Record Commissioner, R. Hammett Tilley; Factory Inspectors, J. Ellery Hudson, Helen M. Jenks; Surgeon-General, George H. Kenyon; Inspector of Beef and Pork, James R. Chase; Inspector of Lime, Herbert Harris; Commissioners of Sinking-Funds, John W. Danielson and Henry B. Metcalf; Inspector of Cables, S. B. Hoxsie, Jr.; Inspector of Scythe Stones, W. H. Comstock; Chief Justice of the Supreme Court, John H. Stines; Associate Justices, Pardon E. Tillinghast, George A. Wilbur, Horatio Rogers, W. W. Douglas, Edward C. Dubois, and John T. Blodgett; Clerk, B. S. Blaisdell. All the State officers are Republicans.

Charles Dean Kimball, elected Lieutenant-Governor, succeeded Gov. William Gregory, who died on Dec. 16, 1901. George L. Shepley, having duly qualified as the Deputy Chief Executive of the State, took the oath of office as Lieutenant-Governor on Feb. 18.

The State officers are elected annually in November, the term beginning in the following January. The Legislature holds annual sessions, beginning in January. The length of the sessions is not limited, but the legislators can draw pay for only sixty days.

Legislative Session.—On the last day prior to the recess, April 4, the following laws were passed: A ten-hour law for street-railway employees, a free transfer-ticket act, a fifty-eight-hour law for women and children.

A law was passed providing for the building of State roads, and in pursuance thereof the State Board of Public Roads was organized on April 16. The "merger" bill was passed, creating the Rhode Island Company, which is expected to acquire and control the local traction, gas, and electric lighting corporations.

The divorce law, as amended by the General Assembly, went into effect on July 1. It requires of petitioners a domicile in the State of more than two years, instead of one year as before, and contains several other provisions tending to render divorces more difficult.

Amendments of the Constitution were submitted to the electors, the most important of which were Article XII, relieving the Governor and Secretary of State, respectively, from the duty of presiding over and keeping the records of the Senate, and Article XIII, securing to the minority party in the city of Providence a representation in the Legislature through the election of Assemblymen by wards or voting districts, in the same manner that aldermen or councilmen are chosen. These articles were defeated at the November election.

Judicial Decision.—One of the most important opinions from the United States Circuit Court for the district of Rhode Island in recent years was given by Judge Arthur L. Brown on the subject of the condemnation of lands in the town of Jamestown for Government purposes. The plaintiffs, James W. Newlin and Annie Ruff, owned neither the land taken by the United States nor the land adjoining it. But as the restrictive provision of the deeds of land in the Ocean island plat (including their lands and the lands appropriated for military purposes) forbade the location of any slaughter-house, forge, places for selling or compounding liquors, etc., on the plat, they con-

tended that their restrictive rights and "negative easements" were destroyed; and, furthermore, if the United States should abandon its use of the lands taken and convey its title to private individuals, its grantees would have the right to carry on any of the offensive trades mentioned in the Highland deeds. The claim for compensation was about \$350,000. Judge Brown held that the claimants had no property rights under their deeds to prevent such a use as the United States intends to make of the lands. "There is a clear distinction," he said, "between injurious acts done by private individuals for their own benefit and working injurious consequences, and acts, perhaps equally injurious, done for a public purpose in the execution of a public duty."

LUIGI F. G. GARVIN,
GOVERNOR OF RHODE ISLAND.

Industries.—The Providence Ice Company, which was organized over a year ago, and which took up the active operation of the majority of the ice interests in Providence about Jan. 1, has been absorbed by the New England Consolidated Ice Companies, the capitalization of which is \$14,000,000. The new company is made up, to a considerable extent, of the same men who were identified with the organization of the Providence Ice Company.

The American Screw Company, of Providence, has absorbed the Massachusetts Screw Company, of Holyoke, Mass. The new plant will be removed to Providence and run in connection with the two large plants that the company already operate there. The producing capacity of the new plant will be at least 200,000 gross daily, though it is far smaller than either of the plants already in operation.

The largest foundry in the State is being erected by the Brown & Sharpe Manufacturing Company. The buildings will cover an area 380 by 380 feet. When the foundry is completed, 300 men will be added to the 2,000 already employed.

The census report shows Providence to be first in jewelry, silverware, and screws, and second in worsted goods, oleomargarine, and flies. The other towns of Rhode Island compare favorably in special industries among the leading manufacturing centers of the nation, Pawtucket ranking seventh and Warwick tenth in cotton goods, Attleboro fourth and North Attleboro fifth in jewelry.

Coal.—Coal was discovered at Phillipsdale, East Providence, some years ago. But the mine was neglected until the recent high price of coal made mining in this locality advisable. The mine has been proved to contain an abundance of good hard coal, and mining will be undertaken on an extensive scale as soon as the engine which has been erected has pumped out the water.

The Cranston coal-mine, which has been worked at intervals since 1864, is also about to be developed by the New England Briquette Coal Company, which has erected an extensive plant. All Rhode Island coal findings are said to develop better coal the deeper it is obtained from the surface.

Real Estate.—A summary of real-estate transactions in Providence and Pawtucket, based on the Providence City Hall records, reflects the general prosperity of the community. Conveyances show a gradual increase for the past five years, 1901 being 20 per cent. in excess of 1897. Real-estate mortgages, though fewer in number and amount in 1901 than in 1899, gain 5 per cent. in number and 11 per cent. in amount over 1898, and exceed those of 1900 by \$50,000, excluding several trust mortgages recorded in that year. Discharges of real-estate mortgages show an increase of 14 per cent. in number and 30 per cent. in amount over 1898. Chattel mortgages were larger than in 1900, but were less than in 1898 by 20 per cent. in number and 22 per cent. in amount. There were 2,580 real-estate conveyances recorded in 1901. The total number recorded in 1900 was 2,375.

A total gain of \$5,071,140 in the real and personal property valuation of Providence was reported by the tax assessors, whose labors for the year were completed Sept. 2. Of this total gain \$2,177,920 was in real estate and \$1,893,220 in personal property, a contrast to the valuation of 1901, in which there was a gain in real estate of \$2,439,100, and a loss in personal property of \$1,754,480.

Insurance.—In his report for the year, dated Feb. 15, 1902, the Insurance Commissioner recommended the creation of the office of State fire marshal, and urged other reforms. The report gives a summary of the condition of Rhode Island stock companies, which shows that while their admitted assets have increased by \$41,456, their liabilities have increased by \$256,631, and their surplus shows a decrease of \$215,176. The report shows that 60 per cent. of the total amount of premiums collected in the State from both fire and marine business last year was paid for losses. The report contains a statement of the condition of other insurance companies doing business in the State, showing a decided improvement over the figures of the preceding year for United States branches of foreign fire-insurance companies, the percentage of losses incurred to premiums received being materially reduced. The business of the mutual fire companies shows a decrease of \$66,198,257 in the amount of risks written, \$422,813 in the amount of premiums received, and an increase of losses incurred of \$104,109. The business in the mutual fire companies of other States reporting shows an increase of more than 100 per cent. over the figures of 1900.

Education.—The school census shows a material gain over the figures of 1901. The enumeration was as follows: Public schools, 25,207; Catholic schools, 4,569; select schools, 583; no school, 3,922; total enumeration, 34,922. This was a gain over 1901 of 4.8 per cent. The attendance showed a gain of 4.5 per cent. in the public schools, of 9.1 per cent. in the Catholic schools, and 21.7 per cent. in the select or private schools. The number attending no school was exactly the same in 1901, viz., 3,922.

The Rhode Island Institute of Instruction held its annual meeting in Providence, Oct. 23, 24, 25, and attracted more than the usual number of visitors from the New England and Atlantic States. The proceedings were of more than ordinary interest, the exhibit of educational methods being particularly important.

Brown University.—The opening of the academic year, Sept. 17, was marked by a large number of new courses of study, showing a wider range and broader selection in electives than heretofore; among them a new course in mineralogy, a course

of research work in economic problems, in which the laboratory method is applied to economics, a new course in Greek and Roman life, and several new courses in history and advanced German. Extensive additions were made during the summer to the equipment of the chemical laboratory. The entering class was the largest in the history of the institution.

The university received \$100,000 from the estate of George L. Littlefield for the establishment of the George L. Littlefield professorship. All the estate, exceeding \$500,000, was to go, after certain bequests were paid, to Brown University to establish a fund to be known as the George L. Littlefield fund.

At the beginning of the year John D. Rockefeller offered to give the college \$75,000 for a building for social and religious purposes, provided \$25,000 were raised before the next commencement. This sum having been collected, a suitable site on the university ground was selected for the building.

The university celebrated, June 17, the one hundredth anniversary of the graduation of Henry Wheaton, a native of Rhode Island; distinguished as a lawyer, author, diplomat, and writer on international law.

Rhode Island Hospital.—The deficiency account of the hospital stood at \$110,815.07. This was the excess of the expenditure over the income since Sept. 30, 1880. The patients admitted in 1901-'02 numbered 3,282. The hospital received a bequest of \$4,000 from the George L. Littlefield estate.

Harbors.—By the river and harbor bill Rhode Island secured \$100,000 for improving Point Judith harbor, \$30,000 for a harbor of refuge at Block island, and \$50,000 for Great Salt Pond harbor, Block island.

The work on the naval coaling station at Portsmouth Grove was so far advanced in December that it was expected to be in commission next summer. The framework for the great steel shed was already in place. The pier was built and used as a landing-place for material, and the work of putting on the T-head was in progress. Along this head there will be room for the largest and heaviest ships of the navy to be tied up.

Foot and Mouth Disease.—Immediate action was taken by the State Board of Agriculture, at a meeting on Nov. 23, to check the foot and mouth disease, which had suddenly made its appearance among the cattle, sheep, and hogs of northern Rhode Island. As the disease had established itself in a very virulent form, attacking whole herds, the board decided to take prompt measures for its extirpation, anticipating the next appropriation.

Political.—At the Democratic State Convention, in Providence, Oct. 4, the following nominations were made: For Governor, Lucius F. Garvin; Lieutenant-Governor, Adelard Archambault; Secretary of State, Frank E. Fitzsimmons; Attorney-General, Dennis G. Holland; General Treasurer, Clark Potter. A State platform was alone recommended by the State convention, which left national issues to be taken up by the congressional convention that was to follow. The platform declared that the paramount issue was "the redemption of the State of Rhode Island from the hands of those who have used, and still intend to use, the executive and legislative branches of the State government for their own personal aggrandizement"; that legislation "has been in the interest of the quasi-public corporations, and has gone so far as even to divide with these corporations the sovereign power of the State." It declared that the truest principles of government require

the initiation and referendum; demanded the abolishment of all property qualification for voting; home rule for cities and towns; municipal ownership of public utilities, street-railroad, electric and gas lighting plants; education by enforcement of the laws of compulsory education and providing of sufficient funds to allow every child eligible to attend school; equal taxation of corporate and private property, and the enforcement of the factory-inspection law. It opposed government by injunction and favored the election of Senators of the United States by the people. It censured the amendment to the Constitution, because it was a special law, appertaining solely to the city of Providence, but declared the readiness of the Democratic party to cooperate with the Republican party in giving the State a district representation, not only of the cities but of the towns.

At the Republican State Convention in Providence, Oct. 9, these candidates were nominated: For Governor, Charles Dean Kimball; Lieutenant-Governor, George L. Shepley; Secretary of State, Charles P. Bennett; Attorney-General, Charles F. Stearns; General Treasurer, Walter A. Read. The platform indorsed the administration of President Roosevelt, especially "his wise attitude with reference to our relations with the new republic of Cuba"; declared his record merits nomination for President in 1904; praised the army's work in the Philippines; reaffirmed the wisdom of the American protective system; called for summary treatment of evils growing out of trusts; said tariff readjustment should be left to a Republican Congress; commended the scheme of education and ultimate self-government established in the Philippines; and referred at length to what the party has done for the State. It commended to the electors the articles of amendment of the Constitution submitted to them by the Legislature, and accused the Democracy of opposing the articles, although conceding them to be meritorious. It approved the administration of Gov. Kimball and applauded "his action in calling to the assistance of the civil authorities the militia of the State for the protection of citizens and property from lawlessness and mob violence."

The Prohibitionists held their convention on Sept. 21, and nominated for Governor William E. Brightman; Lieutenant-Governor, Cyrus A. Aldrich; Secretary of State, William G. Lawton; Attorney-General, James A. Williams; General Treasurer, John W. P. King.

At the election, Nov. 5, the Democratic candidates for Governor and Lieutenant-Governor, Lucius F. C. Garvin and Adelard Archambault, were elected. Dr. Garvin's total vote was 32,279. His plurality over Gov. Kimball, who received 24,541 votes, was 7,738. The rest of the nominees for State offices on the Republican ticket were elected. The House remained Republican, with a decreased majority, 37 Republicans to 35 Democrats. The Senate contains 27 Republicans and 11 Democrats.

SOUTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution May 23, 1788; area, 30,570 square miles. The population, according to each decennial census, was 247,073 in 1790; 345,591 in 1800; 415,115 in 1810; 502,741 in 1820; 581,185 in 1830; 594,398 in 1840; 668,507 in 1850; 703,708 in 1860; 705,606 in 1870; 995,577 in 1880; 1,151,149 in 1890; and 1,340,316 in 1900. Capital, Columbia.

Government.—The following were the State officers in 1902: Governor, Miles B. McSweeney; Lieutenant-Governor, J. H. Tillman; Secretary of State, Marion R. Cooper; Treasurer, R. H. Jennings; Comptroller, J. P. Derham; Attorney-

General, G. Duncan Bellinger; Superintendent of Education, John J. McMahan; Adjutant-General, J. W. Floyd; Geologist, Earle Floam; Directors of the Dispensary, Leon J. Williams, H. H. Evans, A. F. H. Dukes; Railroad Commission, J. C. Wilborn, chairman, and Messrs. Garris and Wharton; Liquor Commissioner, H. H. Crum; Chief Justice of the Supreme Court, Henry McIver; Associate Justices, Y. J. Pope, Eugene B. Gary, Ira B. Jones; Clerk, U. R. Brooks. All are Democrats.

The State officers are elected in November of the even-numbered years, for terms of two years. The Legislature meets annually in January; it consists of 41 Senators and 124 Representatives.

Finances.—The Governor's message to the Legislature of 1903 gives the following as to financial conditions: The income to the State for the year ending Dec. 31 was not sufficient to meet its obligations. The Governor and the State Treasurer were forced to borrow the full amount of the \$300,000 authorized by the last Legislature.

The following statement furnished by the State Treasurer shows the condition of the finances of the State at the close of the fiscal year, Dec. 31, 1902: The cash receipts for the fiscal year ending Dec. 31, 1902, were: Cash balance, Dec. 31, 1901, \$237,743.25; back taxes, \$1,601.12; general taxes, 1901, \$693,023.22; general taxes, 1902, \$325,709.51; railroad assessments for Railroad Commission, \$7,468.45; income tax, \$413.90; fees from office of Secretary of State, \$12,160.02; incorporation fees, \$70; annual insurance license fees, \$12,150; graduated insurance license fees, \$16,345.28; privilege fertilizer tax, \$81,749.94; loans (borrowed on notes of Governor and Treasurer), \$349,420.14; insurance sinking-fund, \$4,385.25; State permanent school fund, \$2,203.82; State special school fund (dispensary), \$142,755.91; Morrill fund (from United States Government), \$25,000; commissioners sinking-fund (ordinary); Loans returned, \$33,860.75; interest on loans, \$1,812.20; agent Sinking-Fund Commission, \$11,106.49; sinking-fund reduction, \$138,042.44; dispensary, South Carolina, \$2,113,821.75; refunds, sundry accounts, \$2,659.52; total, \$4,214,402.76.

The disbursements included: Legislative expenses, \$44,255.47; educational and charitable institutions, \$297,300.94; Colored Normal, Industrial, Agricultural, and Mechanical College, \$29,617.93; pensions, \$200,108.80; artificial limbs, \$1,999.26; State permanent school fund, \$2,247.05; State special school fund (dispensary), \$82,224.73; public printing, \$21,064.73; quarantining the State, \$7,041.02; maintaining militia, \$7,688.86; South Carolina Interstate and West Indian Exposition, \$17,955.97; election expenses, \$21,523.45; interest on public debt, \$274,066.68. The total expenditures were \$3,783,605.05; cash balance Dec. 31, 1902, \$430,797.71.

DUNCAN G. HETWARD,
GOVERNOR OF SOUTH CAROLINA.

Valuations.—The total valuations for assessment in 1902 were \$195,537,061, of which \$107,010,298 was real, \$61,018,560 personal, and \$27,508,203 railroad property. The total increase for the year is \$6,203,952.

Education.—The number of illiterates in the State by the last census was 338,659. In the percentage of children from ten to fourteen able to read and write South Carolina stands forty-ninth in the lists of States and Territories, with 70.44 per cent. The compulsory-education bill did not pass the Legislature. The average number of weeks of the school term in 38 out of 40 counties was twenty-one for the white and 14.27 for the colored schools. The average value of schoolhouses is \$178. The average monthly salary of teachers is given as \$25.78 for men and \$24.29 for women.

In the session of 1901-'02 of South Carolina College 215 students were matriculated. Of these, 23 pursued the classical course, 47 the literary course, 33 the scientific course, 38 the normal course, 34 the special course, 32 the law course, 10 the graduate course. The men students numbered 186; women, 29.

The report of the Citadel Military Academy shows an enrolment of 129, with 36 graduates in June. The estimate for support for the year is \$25,000.

The attendance at Clemson Agricultural College has grown from 350 in 1896 to 530 in 1902. In April 69 of the 74 members of the sophomore class left the college because their petition for the reinstatement of a classmate who had been suspended for breaking a rule was not granted. The dissatisfaction spread to other classes, and the trustees, after a hearing, reinstated the suspended student. The president then resigned, but the trustees voted not to accept the resignation. He did, however, retire, and the college year 1902-'03 began with a new administration.

The State College for Colored Students, at Orangeburg, had an enrolment of 624 students. The estimated cost for the year 1902-'03 is \$23,320.27, of which the income covers \$18,315.15, leaving only about \$5,000 for the State to contribute; \$5,000 more is needed to finish and equip the new building on which \$5,000 has so far been spent.

In Winthrop Normal and Industrial College for Girls the number of officers, teachers, and assistants was 43, compared with 38 for the previous session, and the enrolment in the college, not including 90 pupils in the model school and kindergarten, was 456, against 372 for the previous year. The amount required for ordinary expenses is \$63,539; tuition and other fees amount to \$10,974, leaving more than \$52,000 to be provided by the State.

Other colleges in the State sent out graduates as follow: Newberry, 11; Erskine, 11; Due West Female College, 26; Furman University, 14; Greenville Female College, 17.

The State Medical College gives 7 free scholarships to young men and women appointed by the Governor, one from each congressional district.

Charities and Corrections.—In 1902 506 new patients were admitted to the State Insane Hospital; the daily average was 1,134, and the whole number under treatment 1,611. The institution is overcrowded.

At the State Penitentiary 183 new convicts were received, 194 were discharged, 30 were pardoned, 11 escaped, and 45 died. Dec. 31 there were remaining 701.

The total receipts, including balance, were \$84,-

069.21; the current expenses, \$62,657.07; for permanent improvements, \$4,300 was expended. The balance, Dec. 31, was \$17,112.14, in addition to which \$6,300 had been earned but not collected, and \$12,000 worth of farm-products were on hand.

Militia.—The numerical strength of the volunteer troops, including all branches of the service, rank and file, is 3,060, composed as follows: Three regiments of infantry, 1 regiment of cavalry, 1 company of artillery, and 3 divisions of naval reserves.

The Dispensary.—Of this institution the Governor says:

"For the first time since the dispensary law was enacted it was not an issue in the political campaign for the governorship the past year, as all the candidates for Governor were pledged to its support and to the strict enforcement of the law. The greatest opposition to the system of State control of the sale of liquors is in the larger cities. As a result, there is illicit sale of liquor in these cities, and there will continue to be until public sentiment in these communities grows more strongly in favor of the dispensary system and jurors regard more sacredly their oath and convict persons who are proved guilty of the violation of the law. The business the past year has increased, which may be taken as an evidence that the people are becoming more in sympathy with the law, rather than that the consumption of whisky is increasing.

"The amount to the credit of the school fund on Nov. 30, 1902, was \$652,829.22, but not available, as it was in stock. The stock on hand Nov. 20 was: In county dispensaries, \$406,195.05; in State dispensary, \$324,328.12; total, \$730,523.17. Under the act of the last Legislature requiring the directors to pay to the State Treasurer quarterly the profits to the credit of the school fund three payments have been made aggregating \$92,755.91. The same act requires that the profits to the credit of the school fund carried as stock shall be reduced by semiannual payments to \$400,000 by Jan. 1, 1904. Under this requirement \$100,000 have been paid to the State Treasurer the past year. The following figures show the total net profits for the year ending Nov. 30, 1902, from the sale of liquor and beer: From whisky to towns and counties, \$382,688.36; from beer to towns and counties, \$60,515.40; total, \$443,198.76; net profit to the State, \$123,699.07; total net profit, \$566,897.83."

In connection with the dispensary, the State has a claim against the Government for taxes alleged to have been illegally collected. The contention is that the Government can not tax the agencies of a State government.

Industries and Products.—According to the census reports of 1900, there were 155,355 farms in South Carolina, averaging 90 acres. The average farm of the white farmer was 145.7 acres, that of the negro farmer, 44.4 acres. There were 69,954 white farmers and 85,401 negro farmers; 31,120 whites owned their farms, and 15,503 negroes could show titles for theirs; 2,934 whites were part-owners, and so were 3,376 negroes; 393 whites were owners and tenants, as also were 91 negroes. There were 874 white managers of farms and 180 negro managers. The white cash tenants numbered 14,612, the negro cash tenants 42,434; the white share tenants were 14,021 in number, the negro share tenants 23,817. Fifty-five per cent of South Carolina's farmers were negroes.

The total value of the farms was \$153,591,159, of which \$99,805,860 represented the value of land

and improvements, excepting buildings; \$26,955, 670, value of buildings. The labor to work the farms cost \$6,107,700.

Of the farms, a large majority, 112,822, were devoted to cotton-raising, and these were worked by 46,137 whites and 66,885 negroes. The growth of the mill industry, drawing labor away from the fields, has retarded progress in farming.

The report of the cotton-crop of 1901-'02 credited this State with 925,000 bales, against 911,000 the year next preceding. The consumption in the State mills was 614,066 bales, an increase of 103,579. The number of mills was 134, with 57,852 looms and 2,179,328 spindles.

The tobacco-crop of 1899 was valued at \$1,297,293, the State standing tenth in the value of the crop. The value of the sweet-potato crop the same year was \$1,528,205.

South Carolina claims to have the only tea plantation in America, and its product is said to bring the highest price of any sold here.

From a view of mill construction in 1901 it appears that there were established here 6 textile mills, with 1,200 looms and 62,748 spindles. In the first eleven months of 1902 the Secretary of State issued charters and commissions to 18 new cotton-mills, with a total capitalization of \$3,880,000.

In the first half of the year 4 new cottonseed-mills were established, with \$110,000 capital.

The question of child labor in the mills is attracting much interest. The growth of the cotton-mill industry has been phenomenal—from \$2,500,000 capital in all textile industries twenty years ago to \$35,000,000 at present. And this has drawn attention and raised the question how much cheap labor has had to do with the rapid progress. Naturally those interested in the prosperity of the mills do not credit the opponents of child labor with motives of unmixed philanthropy. So far it seems that there has been no State legislation against it; a bill introduced at the session this year was defeated. According to the mill-owners, the number of children under twelve employed is less than 4 per cent. Twelve years is, however, a rather low age limit.

The royalties from the phosphate industry this year were a little less than those of 1901—about \$25,000.

The State-House.—This building, so long unfinished, was completed and accepted in May. The recent outlay upon it was \$173,623.

Railroads.—The mileage of the railroads is more than 3,000, the gross earnings nearly \$12,000,000, and the income, less operating expenses and taxes, near \$4,000,000.

The alleged discrimination of the Southern Railway Company against the city of Charleston had a thorough hearing and investigation, resulting in a decision not wholly in favor of either side.

The Southern Railway has taken in four roads, all but one of which were already operated by it. The Atlantic Coast Line and the Plant system were consolidated also.

Banks.—The aggregate capital of new banks organized this year, up to Dec. 13, is \$671,000.

Insurance.—The preliminary report of the American insurance companies doing business in the State shows a total of premiums in 1901 of \$941,746, and of losses paid \$534,712. The foreign companies received \$316,117.80 in premiums, and paid \$198,826.47 in losses.

Lawlessness.—Four negroes were implicated in the murder of a woman at New Road, near Charleston, in June. One was killed while trying to escape arrest; two of the others were lynched.

An atrocious murder was committed near Troy

in December. W. K. Jay, a young farmer, was shot in his own yard by a negro or his wife, both of them living on the place. Both of the negroes were lynched at midnight.

Legislative Session.—The General Assembly was in session from Jan. 14 to Feb. 22. W. F. Stevenson was Speaker of the House.

At the opening of the session the Governor sent in vetoes of two of the acts of the session of 1901. One was a local bill; the other was the act repealing the antifree-pass act.

The dispensary officials were all reelected: H. H. Crum for Commissioner, Leon J. Williams for chairman, and H. H. Evans and A. F. H. Dukes members of the Board of Control.

Ira B. Jones was reelected Associate Justice of the Supreme Court. For Circuit Judges, Charles G. Dantzler, James Aldrich, R. O. Purdy, R. C. Watts, G. W. Gage, and J. C. Klugh were elected.

W. B. Love and W. D. Mann were reelected directors of the Penitentiary; and John T. Sloan and Robert MacFarland trustees of the South Carolina College; J. E. Breazeale and Willie Jones were elected trustees of Winthrop College; and for trustees of Clemson College, L. A. Sease, Augustine T. Smythe, W. D. Evans, and John S. Garris were elected; and for trustees of the State Colored College A. L. Dukes and Cole T. Blease. Miss L. H. Laborde was elected to fill the unexpired term of the former State librarian.

The acts and joint resolutions of the session numbered 175.

The congressional districts were redivided.

A constitutional amendment was proposed. It is for the relief of townships that issued bonds for railroads that have not been built or have been abandoned. The amendment provides for destroying the corporate existence of the townships, abolishing all township affairs, and removing all corporate agents. The United States courts have held that the obligation is legal, so that the townships saw no other way to obtain relief. Eight townships were affected.

An act "to further define connecting lines of common carriers and fix their liabilities" was passed. The object of the act is to facilitate the collection for loss or damages to freight by shippers and consignees, by requiring the delivering carrier to make settlement, instead of compelling the one who claims from finding out the particular carrier by which the loss or damage was sustained.

Other acts affecting railroads were: To provide the measure of damage to which any common carrier may be held for the conversion to its own use of any property held by it on consignment or in course of consignment; to incorporate the French Broad and Southern Railroad Company; to authorize the consolidation or merger of the capital stocks, franchises, and properties of the Asheville and Spartanburg Railroad Company, the South Carolina and Georgia Railroad Company, the South Carolina and Georgia Railroad Extension Company, and the Carolina Midland Railway Company under the laws of this State, and to authorize and empower such consolidated company to make a lease of its railroad properties and franchises to the Southern Railway Company; and to require electric street-railway companies to provide cars with vestibules for the protection of motormen.

The existing road law having been pronounced unconstitutional, in that it had different service on the roads for different counties, an amendment left the exact number of days to the county commissioners, and fixed a maximum and a minimum service.

Among the acts affecting corporations were: An antitrust bill prohibiting the formation of pools, trusts, combinations, confederations, etc., to regulate prices, and declaring those entering such combinations to be guilty of conspiracy to defraud; providing for an unlimited number of directors for banking and trust corporations and to enable such corporations to divide the same into two classes—active and advisory—and prescribe distinct duties for each class; and empowering cities and towns to give exclusive franchises to persons or corporations furnishing water or light thereto, respectively, under certain conditions.

The House passed a resolution calling for a commission to examine into the advisability of establishing a State fertilizer plant to be operated by convicts. The object, or one object, was to establish competition against the Virginia-Carolina Chemical Company, now controlling most of the fertilizer factories and regulating the prices.

The amount for Confederate pensions was raised to \$200,000. Bills were passed to regulate county aid to ex-Confederate soldiers, and to prevent their disfranchisement; the office of county pension commissioner was created, and the duties of county pension boards defined and regulated. The act exempting ex-Confederate soldiers and sailors from taking out licenses as hawkers or peddlers was amended by making it apply to towns and cities. Certain broken granite columns lying on the State-House grounds were given to women's organizations to be used for Confederate memorial purposes. The wearing of the Southern Cross by others than those entitled to wear it was prohibited. The purchase of 300 volumes of *The Confederate Woman's Book*, to be placed in the libraries of the public institutions and colleges of the State, was ordered.

A concurrent resolution declaring "that the thanks of every true American citizen is due to that great naval chieftain Winfield S. Schley, his officers and men, for their gallant conduct in the harbor of Santiago, on July 3, 1898," was passed.

Other enactments were:

Declaring the code as submitted by the Code Commissioner the only general statutory law of the State.

To define train-robbing and fix the punishment therefor.

To establish Lee County.

To amend an act to regulate the carrying, manufacture, and sale of pistols, and to make a violation of the same a misdemeanor.

To regulate the qualifications of non-resident executors.

To require certain agricultural investigation and experimentation in the coast region by Clemson College.

To provide for the running of public schools on a cash basis.

To amend the act to regulate the rate of interest upon contracts arising in this State for the hiring, lending, or use of money or other commodity.

To require municipalities to provide drains for surface water.

To provide for the preservation of valuable documents and papers of the State.

To regulate the catching and sale of oysters, clams, and terrapins, and to provide a county inspector.

To amend the statute prohibiting sale and shipping of partridges for five years, so as to include deer and wild turkeys in its provisions.

Fixing the State tax levy at 5 mills.

Extending the provisions of the statute on kidnapping so as to make it applicable to any case of taking away a minor without the consent of the parent or guardian.

Appropriating \$2,000 for artificial limbs for veterans.

The Governor recommended the enactment of a compulsory education law.

A bill to that effect was introduced in the Senate, but failed by 2 votes.

A bill to abolish child labor was defeated in the House by the same majority—2 votes. Most of the votes in favor came from outside the mill counties. A ten-hour labor law was defeated also.

A resolution for a constitutional amendment making the legislative sessions biennial was lost.

The Quarrel of the Senators.—The incident related on page 761 of the *Annual Cyclopædia* for 1901 had as a sequel the fight between the two Senators from this State on the floor of the Senate, Feb. 22, which is given in the article Congress in this volume.

The Lieutenant-Governor.—This official has come prominently before the public in two instances in which his official responsibility was not concerned, but which have had greater notoriety from the fact of his holding a State office. Early in the year he had raised money to present a sword to Major Micah Jenkins, a soldier who served with distinguished gallantry with the Rough Riders and was highly praised by the President in his written history and in a letter to Lieut.-Gov. James H. Tillman, who had a sentence or two from the letter engraved upon the scabbard of the sword. It was arranged that the President should present the sword during his intended visit to the exposition at Charleston. When the invitation to the dinner for Prince Henry was recalled from Senator Tillman, his nephew, the Lieutenant-Governor, telegraphed to the President that the invitation to him to present the sword was withdrawn. As far as is known, the other contributors were not consulted. Tillman was a candidate for the office of Governor in the State campaign and was strongly opposed by the editor of a Columbia newspaper, *The State*, N. G. Gonzales, who was fatally shot by Tillman in the street when walking home, unarmed, from his office, Jan. 1, 1903. One of the incidents of the quarrel between the men was in relation to a ruling made by the Lieutenant-Governor while presiding in the Senate. He ruled that a motion to postpone indefinitely was not debatable. When the decision was questioned he telegraphed to Senator Frye and Speaker Henderson and declared that both had pronounced his ruling right. This was taken up by the editor of *The State*, who upon inquiry received a denial from each of those presiding officers, both of whom said they had answered that the motion was debatable. He published the correspondence.

Political.—As there is practically no opposition to the Democratic ticket at the State election, the interest centers in the primaries. These were held Aug. 26 to nominate a successor to Senator McLaurin, and candidates for State offices. The candidates for the office of United States Senator were A. C. Latimer, D. S. Henderson, George Johnstone, William Elliott, J. J. Hemphill, J. G. Evans. For the State officers the following were in the field: For Governor, W. H. Timmerman, M. F. Ansel, D. C. Heyward, W. J. Talbert, J. H. Tillman; Lieutenant-Governor, C. L. Blease, J. T. Sloan, F. B. Gary; Attorney-

General, W. F. Stevenson, U. X. Gunter, Jr.; State Treasurer, R. H. Jennings; Secretary of State, J. T. Gantt, J. H. Wilson, J. Thomas Austin; Superintendent of Education, O. B. Martin, J. J. McMahan; Comptroller-General, W. H. Sharpe, A. W. Jones, G. L. Walker, N. W. Brooker; Adjutant- and Inspector-General, J. D. Frost, G. D. Rouse, Paul E. Ayer, J. M. Patrick, J. C. Boyd; Railroad Commissioner, James Cansler, A. C. Jepson, B. L. Caughman, H. J. Kinard, J. G. Wolling, W. B. Evans, J. G. Mobley, H. H. Prince, Thomas N. Berry, J. C. Wilborn.

The candidate for Treasurer had no opposition. Mr. Gunter was chosen for Attorney-General and Mr. Martin for Superintendent of Education. For the other offices none received majorities, and a second primary was held in September to decide between the highest two in each case.

In November the following votes were cast: For Governor, Heyward, 31,608; Lieutenant-Governor, Sloan, 30,200; Secretary of State, Gantt, 30,704; Attorney-General, Gunter, 30,667; Treasurer, Jennings, 30,653; Comptroller-General, Jones, 30,653; Superintendent of Education, Martin, 30,653; Adjutant- and Inspector-General, Frost, 30,654; Railroad Commissioner, Caughman, 30,667. The proposed constitutional amendment was carried by a vote of 26,454 yeas to 1,365 nays.

The highest vote was only about one-third of the total vote in the primary.

SOUTH DAKOTA, a Western State, admitted to the Union Nov. 2, 1889; area, 77,650 square miles. The population was 328,808 in 1890 and 401,570 in 1900. Capital, Pierre.

Government.—The following were the State officers in 1902: Governor, Charles N. Herreid; Lieutenant-Governor, George W. Snow; Secretary of State, O. C. Berg; Treasurer, John Schamber; Auditor, J. D. Reeves; Attorney-General, John L. Pyle, who died Feb. 22, and was succeeded by A. W. Burt; Superintendent of Public Instruction, E. E. Collins; Commissioner of School and Public Lands, David Eastman; Adjutant-General, S. J. Conklin; Insurance Commissioner, H. C. Shober; Public Examiner, Henry M. Cooper; Oil Inspector, Emil Brauch; Railroad Commission, Messrs. Kirkpatrick, Smith, and Le Cocq; President of the State Board of Agriculture, John Armstrong; Secretary of the Historical Society, Doane Robinson; Veterinarian, Dr. Foster; Chief Justice of the Supreme Court, Dick Haney; Associate Justices, Dighton Corson, H. G. Fuller; Clerk, Miss Jessie Fuller. All are Republicans.

State officers are elected for terms of two years in November of the even-numbered years. The Legislature meets biennially in January of the odd-numbered years.

Population.—The census of the counties, which has not before been given here, is as follows: Armstrong, 8; Aurora, 4,011; Beadle, 8,081; Bon Homme, 10,379; Brookings, 12,561; Brown, 15,286; Brulé, 5,401; Buffalo, 1,790; Butte, 2,907; Campbell, 4,527; Charles Mix, 8,498; Clark, 6,942; Codington, 8,770; Custer, 2,728; Davidson, 7,483; Day, 12,254; Deuel, 6,656; Douglas, 5,012; Edmunds, 4,916; Fall River, 3,541; Faulk, 3,547; Grant, 9,103; Gregory, 2,211; Hamlin, 5,945; Hand, 4,525; Hanson, 4,947; Hughes, 3,684; Hutchinson, 11,897; Hyde, 1,492; Jerauld, 2,798; Kingsbury, 9,866; Lake, 9,137; Lawrence, 17,897; Lincoln, 12,161; Lyman, 2,632; McCook, 8,689; McPherson, 6,327; Marshall, 5,942; Meade, 4,907; Meyer, 26; Miner, 5,864; Minnehaha, 23,926; Moody, 8,326; Pennington, 5,610; Potter, 2,988; Roberts, 12,216; Sanborn, 4,464; Spink, 9,487; Stanley, 1,341; Sully, 1,715;

Turner, 13,175; Union, 11,153; Walworth, 3,839; Yankton, 12,649; Cheyenne River Indian Reservation, 2,367; Pine Ridge Indian Reservation, 6,287; Rosebud Indian Reservation, 5,201; Standing Rock Indian Reservation (part of), 1,658; total, 401,570.

The census returns of bachelors and spinsters of twenty years and upward gives: Bachelors, 39,704; spinsters, 13,475.

Finances.—The bonded debt of the State is \$588,300. The rate of taxation is \$8.20 on the \$1,000. The State tax collections for the last quarter of 1902 were \$148,623.95, exceeding those of the year before by \$12,000.

The liabilities of all the counties at the close of the last fiscal year was \$4,432,568, an increase of \$121,899 in one year.

The assets and resources of all the counties, consisting of county property, unpaid taxes, and cash on hand, is \$4,939,462—an increase of \$63,492 in one year.

The expenditures of all the counties for the year amounted to \$1,376,655, an expenditure of \$218,609 greater than that of the previous year.

Valuations.—The total valuation of the State, as left by the Board of Assessment and Equalization, is \$187,531,381, which is an increase of \$14,324,648 over the final returns of 1901.

This is said to be much too low; a law passed some years ago restrains the Board of Equalization from raising the valuations beyond a certain amount over the county returns. Consequently, the revenues are insufficient to meet the growing needs of the State.

The assessment rolls show the acreage of real estate listed for assessment to be 19,247,746 acres, an increase from 1901 of 244,276 acres. The valuation of this is placed at \$111,311,994, an increase of \$10,777,584. The average returned price per acre is \$5.78, an increase of 50 cents. The valuation of town lots is returned at \$19,093,064, an increase of \$1,700,838.

A total of 1,218,297 cattle were returned for assessment, an increase of 139,634, with a valuation of \$15,767,412, an increase of \$823,814. There is an increase of 27,737 in the number of horses returned, making the total 374,361, with a valuation of \$7,677,778, an increase of \$116,394. The number of sheep returned shows an increase of 61,700, making a total returned of 590,663, with a valuation of \$1,053,982, an increase of \$37,656. The number of hogs returned is 311,980, an increase of 83,123. The value is given at \$844,596, an increase of \$115,438.

Education.—The number of illiterates in the State in 1900 was 14,832. In the percentage of children from ten to fourteen able to read and write, South Dakota stood eighteenth in the list, with 99 per cent.

The December apportionment of the interest and income fund to the schools of the State from the officer of the Commissioner of School and Public Lands was \$70,268.04, or 54 cents per capita on the school population. The June apportionment was a total of \$270,923.45, or a per capita of \$2.54.

The State has a large surplus of school moneys lying idle, which under the law can only be invested in certain bonds.

In the past two years 129 new country school-houses have been built. For the year ending June 30 the average wages of male teachers in rural schools was \$36.07, against \$34.70 in 1901, and the average for the female teacher in the rural schools was \$32.31, against \$31.17 the year before.

The Aberdeen Normal School had an enrolment

of 81 Sept. 25. The dedication exercises were set for Oct. 23.

The attendance at the Agricultural College, at Brookings, in the year ending in June was 600, having grown to that number from 150 six years ago.

Yankton College had an attendance of 289, excluding duplicates in departments, as follow: College, 54; academy, 117; conservatory of music, 103; art, 28; elocution, 20; shorthand, 15; domestic science, 9. At the twentieth annual commencement, in June, the graduates in the various courses were: College, 7; academy, 17; music, 1; elocution, 3; physical training, 7; shorthand, 2. A bust of Dr. D. K. Pearson, of Chicago, whose last gift to the college was \$50,000, was unveiled. In 1901-'02 the college received \$25,000, mostly from Eastern friends for permanent improvement and endowment. Of this, about \$18,000 is being put into a gymnasium and athletic field. The total assets of the institution are now \$280,000.

Charities and Corrections.—The buildings of the public institutions are in general overcrowded. At the Insane Hospital there were 570 patients in October, while the building can not well accommodate more than 400. It is stated that the State has made several liberal appropriations for the hospital in the past ten years. It has built two cottages, the power-house, and the large rear center building, which was completed last year. But with one exception not one increase has been made in the number of rooms for the patients.

The institution at Redfield for the feeble-minded, which was opened in 1901, is likewise inadequate for the accommodation of all the applicants.

There is a movement to separate the boys' and girls' department of the Reform School, at Plankinton, and placing the girls in charge of women exclusively.

The report of the State Penitentiary in November gave the number of convicts, June 30, as 160. The year ending June 30, 1900, there were 134. The per capita cost of maintenance for 1901-'02 was \$215.35, against \$267.11 the previous year.

Industries and Products.—The Census Bureau Bulletin on Agriculture in South Dakota shows that in the census year, 1900, there were 52,622 farms in the State, valued at \$220,133,190, and covering an area of 19,070,616 acres, or about 39 per cent. of the total area. The live stock held on the farms is valued at \$12,218,650, making the total value of farm property for the State \$297,595,302.

An estimate of the crops of 1902 gives, for wheat, 38,000,000 bushels; oats, 20,000,000 bushels; flax, 9,000,000 bushels; corn, 40,000,000 bushels.

Articles of incorporation were filed in August at Pierre of the Farmers' National Cooperation Exchange Company with a capital of \$50,000,000. The purpose of the corporation is to buy, sell, and deal in grain, provisions, live stock, and all kinds of produce, on commission and otherwise, and for the purpose build and equip grain-elevators, warehouses, cold-storage plants, stock-yards, and whatever may be necessary to carry on the business of the corporation.

The value of the manufactured products of the State was given in the census year as \$12,000,000.

The gold produced in 1901 was valued at \$6,479,500, and the silver at \$46,800. The preliminary estimate for 1902 was: Gold, \$7,298,057; silver, \$182,372.

It was reported, Dec. 31, that one of the richest gold discoveries made in Custer County of recent years has just been made on the Roosevelt group of the Grantz Gold-Mining Company, 8 miles

from Custer. It was in an old shaft, started several years ago, abandoned by the former owners, and recently cleaned out and explored. A drift of a few feet from the shaft encountered quartz, liberally sprinkled with free gold.

Oil has been discovered 30 miles from Sisseton, and preparations are making for establishing works there. A discovery of natural gas is reported near Aberdeen.

The fees of the department of the Secretary of State for 1902 amounted to \$22,408.05. Of this amount \$17,119 was paid for charters of domestic corporations; \$907.20 by foreign corporations; \$353.90 by banks; \$1,160 by notaries; and the remainder was miscellaneous fees.

Insurance.—The statistics of 1901 show the following figures: Fire-insurance, premiums received, \$518,925.50; losses paid, \$233,361.48; life-insurance, premiums received, \$631,347.84; losses paid, \$110,354.24; fraternal companies, receipts, \$237,249.57; losses paid out, \$283,611.92; accident-insurance, receipts, \$13,635.11; losses, \$10,201.27; South Dakota Mutual Fire Companies, premiums received, \$144,548.04; losses paid, \$55,576.20.

The commissioner says in his annual report: "The statistics of this department for the past thirteen years show that an average of 49.7 per cent. of the premium receipts of the fire companies collected in this State has been sufficient to pay all losses sustained, and that for the past year but 44.9 per cent. was required for losses. This is premium receipts alone, and does not include receipts from other sources, such as interest from invested surplus."

Land.—The wooded area of the State is 2,500 square miles. The Land Commissioner recommends that the herd law, which prevails on the eastern side of the river, should be extended over the State, thus covering the cattle country west of the river where the free range has been in vogue. He takes the position that all the State lands are being used for grazing. He says that the State is the owner of 1,088,940 acres of common school and endowment lands in the free-range section of the State. On the other hand, stockmen argue that the adoption of the herd law would result in disaster, not only to the cattle industry west of the river, but to the interests of the State as well. They call attention to the fact that the western part of the State is entirely a stock country, excepting small tracts that may be irrigated and farmed. They say that to cut off the free-range privileges and compel stockmen to herd would practically wipe out the cattle industry.

Political.—For the State and congressional election in November 4 tickets were filed—Republican, Democratic, Prohibition, and Socialist.

The platform adopted at the Republican Convention, June 4, approves the national administration, favors the settlement of disputes between capital and labor by arbitration, alludes to the good faith of the United States in giving Cuba independence, rejoices over the pacification of the Philippine Islands, denounces partizan attacks upon the behavior of the United States soldiers, and highly commends the State Government and the Representatives of the State in Congress.

The Democratic and Populist Conventions, June 25, reached an agreement upon fusion and united upon a ticket to be known as the Democratic. The platform reaffirms the principles of the Kansas City platform, denounces the Fowler currency bill and the workings of the so-called text-book trust in the State, denounces the State Legislature for the change in the Australian ballot law limiting the number of parties represented

on the ballot, denounces the Legislature for the repeal of the law allowing each county commissioner district to elect its own members, favors Government control of the railroads and public utilities, and favors the election of United States Senators by direct vote of the people.

The nominations for the State offices are given below in the same order of parties as above:

For Governor, Charles N. Herreid, John W. Martin, H. H. Curtis, John C. Crawford.

For Lieutenant-Governor, George W. Snow, Everett Smith, W. J. Edgar, Erik Shakstad.

For Secretary of State, O. C. Berg, Edward S. Ashley, G. H. Brown, Clarence Brothers.

For State Auditor, J. F. Halliday, Thomas W. Taubman, A. H. Tasker, G. Frank Walker.

For State Treasurer, C. B. Collins, Louis Chladek, Knute Lewis, A. E. Clark.

For Commissioner of School and Public Lands, C. J. Bach, W. H. Minahan, D. W. Noble, Weber T. Pierce.

For Railroad Commissioner, D. H. Smith, Hiram B. Rose, H. W. Reinecke, E. B. Case.

For Attorney-General and Superintendent of Public Instruction there were no Prohibition candidates. Those of the other parties were:

For Attorney-General, Philo Hall, William A. Lynch, S. H. Cranmer.

For Superintendent of Public Instruction, George W. Nash, N. P. Small, David McClellan.

The Republican candidates were elected. The vote for Governor stood: Herreid, Republican, 48,196; Martin, Democrat, 21,396; Curtis, Prohibition, 2,245; Crawford, Socialist, 2,620.

TENNESSEE, a Southern State, admitted to the Union, June 1, 1796; area, 42,050 square miles. The population, according to each decennial census since admission, was 105,602 in 1800; 261,727 in 1810; 422,771 in 1820; 681,904 in 1830; 829,210 in 1840; 1,002,717 in 1850; 1,109,801 in 1860; 1,258,520 in 1870; 1,542,369 in 1880; 1,767,518 in 1890; and 2,020,616 in 1900. Capital, Nashville.

Government.—The following were the State officers in 1902: Governor, Benton McMillin; Secretary of State, John W. Morton; Treasurer, Beau E. Folk; Comptroller, Theodore F. King; Superintendent of Agriculture, Thomas H. Paine; Superintendent of Instruction, Morgan C. Fitzpatrick; Adjutant-General, W. M. Brandon; Attorney-General, George W. Pickle; Commissioner of Labor, Robert A. Shiffett; Live Stock Commissioner, W. H. Dunn; Factory Inspector, Martin J. Noonan; Railroad Commissioners, N. W. Baptist, J. N. McKenzie, and Thomas L. Williams; Prison Commissioners, W. M. Nixon, W. A. Carter, and John S. Denton, who succeeded A. J. McWhirter; Librarian, Jennie Lauderdale; Chief Justice of the Supreme Court, David L. Snodgrass; Associate Justices, W. C. Caldwell, John S. Wilkes, W. K. McAllister, W. D. Beard; Clerk, A. W. McMillin; Justices of the Court of Chancery Appeals, M. M. Neil, S. F. Wilson, R. M. Barton, Jr.; Clerk, James Turney. All are Democrats.

State elections are held biennially in November of the even-numbered years. The Legislature meets biennially in January of the odd-numbered years.

Education.—The condition of education received more than usual attention in 1902. With a school population of 753,198, the number of pupils enrolled in the State was 488,655, and the average daily attendance, for the average school term of less than five months, was 330,692. The average yearly salary of the country public teachers was \$133. Both political parties have pro-

posed reforms that will put more pupils into the schools, and for eight months in the year. It is proposed to increase the permanent school fund, which is the same now that it was thirty years ago, by increasing the State levy for school purposes from 15 to 25 cents on the \$100, and by legislation that will permit school districts to levy special school taxes, also by forcing into the schools all children who should attend by some form of a compulsory school law. The need for the special training of primary teachers is felt particularly. The Peabody College for Teachers and the summer institutes and schools are exerting a helpful influence, but the demand is greater than they can meet with their present limited resources.

Industries.—According to the last census reports by W. H. Wiley, chief of the bureau of chemistry of the Department of Agriculture, Tennessee takes eleventh place in the aggregate value of the flour produced, the number of barrels being 3,512,985, and their value \$13,220,609. Tennessee has 337 establishments handling 16,546,155 bushels of wheat, valued at \$11,778,868. Tennessee takes a higher rank in the excellence of the flour made. In this list its flour is quoted at \$3.76, the average value being given at \$3.39.

Tennessee is shown by the last census returns to rank ninth in the lumber industry, its product being larger than that of any Southern State except Arkansas. The value of the product is given as \$18,000,000.

The largest iron blast-furnace in the South was put in blast at La Follette by the La Follette Coal, Iron, and Railway Company in April. It will have a daily capacity of 250 to 400 tons of pig-iron, and is expected to result in a large and rapid growth for that section of East Tennessee.

The census report on printing and publishing gives Tennessee the highest position among Southern States in this department of industry. The aggregate circulation of the Tennessee publications per issue is 3,131,017. Tennessee outranks 40 States by 500,000 to 3,000,000. Only 7 States outrank Tennessee. Tennessee had 251 newspapers and periodicals, classed as follow: 16 daily, 6 semiweekly, 187 weekly, 28 monthly, and 10 quarterly.

Agriculture.—The committee of agricultural experts appointed to make a report to the Nashville Chamber of Commerce on a State fair did so on April 18. Its description of the agricultural situation was startling and pessimistic. It compared the yield of grain in bushels in 1870, 1890, and 1900, showing that in these years respectively the yield of corn was 41,343,614, 63,635,350, and 59,997,760; that of wheat, 6,188,916, 8,300,789, 8,292,727; of oats, 4,513,315, 8,775,814, 5,326,244; of barley, 75,068, 63,868, 19,539. For the same decades the yield in the number of horses was 247,254, 331,842, 308,073; of mules, 102,983, 203,639, 139,163; of cattle, 643,696, 965,339, 526,325; of hogs, 1,828,690, 1,922,912, 1,570,154; of sheep, 826,783, 54,996, 251,735. The report shows also that since 1900 there has been a loss on every item, and a material loss on all except horses. It says: "The growing of small fruits and truck-farming have been successfully developed, and certain localities and individuals here and there have increased the yield of their fields and maintained the high standard of their studs, herds, and flocks; but, on the whole, Tennessee, from an agricultural standpoint, has made no substantial progress since 1875."

Another fact brought out is that for the decade 1890-1900 the increase in the population of the State outside of the cities and incorporated

towns is but 157,193, and from this, the report holds, should be deducted at least 61,000 in certain counties where mines, etc., have been opened, leaving 96,113, which increase, it says, "is undoubtedly domiciled for the most part in villages and towns unincorporated, or in the suburbs of cities and incorporated towns." It shows that of the 10,000 increase in Davidson County, for example, outside of Nashville, perhaps fully 6,000 are suburban residents. It recommends the establishment of an annual State fair as a remedy for the present agricultural depression.

According to the report issued by the Census Bureau on July 7, the farms of Tennessee on June 1, 1900, numbered 224,623, and were valued at \$265,150,750. The value of farm implements and machinery on the same date was \$15,523,670, and of live stock \$60,818,605. These values added to that of farms make the total value of farm property \$341,202,025. The total value of farm-products for 1899 was \$106,166,440. It is approximately twice that for 1889, but a part of this increase is doubtless due to a more detailed enumeration in 1900 than in 1890. The total land area in Tennessee is 41,750 square miles, of which 76.1 per cent. is included in farms. The increase in the total value of farm property since 1890 was \$28,310,375, or 9 per cent.; the increase in the value of land improvements and buildings was \$22,450,210, or 9.3 per cent.; in that of implements and machinery, \$5,295,790, or 53.3 per cent.; and in that of live stock, \$54,375, or 0.9 per cent. All counties reported an increase in the number of farms in the last decade, and nearly two-thirds of the counties reported an increase in total farm area. The average size of farms varies from 54.8 acres in Shelby County to 182.1 in Fentress County. As a rule, the counties with the largest acreage in cotton have the smallest farms. Nearly 85 per cent. of the farms are worked by white farmers; 15.1 per cent. by colored farmers. Of the white farmers, 64.4 per cent. own all or part of the farms they operate, and 25.6 per cent. operate farms owned by others. For colored farmers the corresponding percentages are 25.8 and 72.2.

Railroads.—In April the Mercantile Trust Company of St. Louis made an arrangement by which it undertook to finance the Tennessee Central Railroad. The mortgage is dated July 1, 1902, and secures a maximum of \$15,000,000 fifty-year 5-per-cent. gold bonds, coupons payable January and July, bonds being redeemable at 5 per cent. premium on and after July 1, 1907, at the option of the company. The bonds to be immediately issued amount to \$5,000,000, sufficient to cover the lines already completed at the rate of \$25,000 a mile. The Tennessee Central operates now from Lebanon to Emory Gap, 127 miles. The object of the line is to develop the 400,000 acres of coal land in the Lebanon region.

Insurance.—The report of the State Insurance Commissioner shows that the receipts from reported companies up to Dec. 31, 1901, amounted to \$2,502,736, and the losses to \$1,825,442. Thirteen companies withdrew from the State during the year and no reports were had from them. There were also three companies from which there had been no statement. The commissioner estimates the total receipts at \$2,575,000, and the losses at \$2,000,000.

Forestry.—The Tennessee Forest Association, which held its first annual meeting in November, 1900, has rapidly attained an important position, numbering among its members the foremost citizens of the State. It has already done something to arrest deforestation by disseminating informa-

tion respecting the growth, protection, and utilization of forests, and by showing the evils resulting from forest destruction. It held its second annual meeting at Monteagle on July 21. The papers read on the occasion have still further stimulated the interest in the movement throughout the State.

Prisons.—The State Board of Prison Commissioners submitted to the Governor on Jan. 30 their report for the fiscal year ending Dec. 1, 1901. It covered every department of prison affairs and gave minute items of expenses and receipts. During the year the net profits of the main prison were \$71,064.10; the net profits of the Brushy mountain mines, \$100,979.75. The balance in treasury from the main prison, \$46,223.94; the balance in treasury from the Brushy mountain mines, \$77,338.49. The total cash balance was \$123,562.43. It was shown by a comparison with the years 1899 and 1900 that the earnings of the main prison for 1901 were \$30,753.19 more than in the former, and \$18,158.45 more than in the latter. The earnings of the Brushy mountain mine were \$16,359.73 more than in 1899, and \$74,443.24 less than in 1900. The net balance of cash deposits by the main prison for 1901 were \$26,073.30 more than in 1899 and \$17,242.81 more than in 1900. The net balance of cash deposits by the Brushy mountain mines for 1901 were \$2,679.41 more than for 1899 and \$48,917.63 less than for 1900. The decreased profits from 1900 shown in the operation of the Brushy mountain mines may be accounted for by the fact that, while the output of coke in 1900 was 49,714.95 tons, in 1901 it was 50,067.01 tons. The reduction in profits for 1901 by reason of the decreased market price of coke alone was \$52,570.35. The average price received for coke in 1900 was \$2.80 per ton, yielding a net profit of \$1.8826, while in 1901 the average selling price of coke was \$1.96, yielding a profit of \$0.8316 per ton. The difference in the profits on coke for the two years was \$1.05 per ton in favor of 1900. This difference on the output of 50,067.01 tons is the amount above stated, \$52,570.35.

Mining Disaster.—The worst disaster in the history of Tennessee mining occurred at Coal Creek on May 19, when 226 men and boys met instant death at the Fraterville coal-mine, 2 miles west of Coal Creek, as the result of a gas explosion. It was the general opinion that the calamity was due to negligence.

Rain-Storms.—The most destructive rain-storms that had occurred for years took place in the central and southern portions of Middle Tennessee on March 29, doing enormous damage to railroad and other property. Small streams rose rapidly to heights they had never attained before. In Giles County they were 11 feet higher than in the great freshet of 1856, and several buildings not touched then were washed away. Railroad bridges, trestles, and hundreds of dwellings were carried off, and many wagon bridges were lost. All traffic on the railroads was necessarily suspended south of Nashville. Many lives were lost, in some instances whole families being drowned.

Legal Decisions.—On May 27, Judge Clark, of the United States Circuit Court, Knoxville, handed down an opinion in the case of Rogan, Noce & Smith, of Rogersville, Tenn., vs. Virginia-Carolina Chemical Company et al., in which he holds that the plaintiffs' claim for damages from the defendant, to the amount of \$5,000, on the ground that the defendant company has created a combine in this and other States in the fertilizer business, is not well founded. He holds

that chapter cxcviii, Tennessee Acts of 1891, and chapter xciv, Tennessee Acts of 1897, on which the suit is predicated, have been repealed; also, that these repealed laws, which constitute the Tennessee antitrust legislation, are in contravention of the Federal Constitution and void, because they interfere with commerce between the States mentioned. Judge Clark says that had the suit been brought on the Sherman antitrust law, he would have passed upon it.

The Supreme Court handed down a decision, March 7, on the test case of *Benedict Brothers vs. Davidson County et al.*, in which suit was involved the taxation of sawlogs and lumber made from logs that were the product of the soil of Tennessee. The case was decided in favor of the plaintiffs, with right to recover. The suit involved the question of taxation of millions of dollars' worth of property which had heretofore been exempt. The opinion was delivered by Justice Wilkes; Judge Beard offered a dissenting opinion.

Justice McAllister rendered a decision on Feb. 13 in a suit that had an interest for organized labor throughout the State. The State Comptroller, acting under the advice of the Attorney-General, refused to issue a warrant for the first month's salary of M. J. Noonan, State Shop and Factory Inspector, on the ground that while the amended act of the last General Assembly appointed an inspector at an annual salary of \$1,200, payable monthly, instead of fees to be paid by the factories inspected, no provision had been made in the appropriation bill for the purpose. The contention of Mr. Noonan was that the act of 1901 placing the inspector on a salary amounted in law to an "appropriation," as this term is used in the Constitution of the State, and that the law that fixed the salary fixed the manner of payment and the time. The Supreme Court affirmed the ruling of the lower court, which had sustained the contention of the inspector. As the laboring classes regarded the duties performed by the inspector as essential to the welfare of those working in shops and factories, they attached much significance to the decision.

Proposed Constitutional Changes.—During the last session of the Legislature several bills and resolutions were passed to amend the State Constitution. These proposed amendments provide for electing the Secretary of State, Treasurer, and Comptroller by the people for four years; for local road, fence, and stock laws; for preventing municipalities from incurring indebtedness exceeding 10 per cent. of the value of taxable property; for special assessments on parts of property for local improvements; for exemption of new industries from taxation for a period of not exceeding ten years; for election of the Governor for a term of four years instead of two, as at present; and for an increase of the terms of sheriff, trustee, and register to four years, but making them ineligible to a second term immediately succeeding the first.

Political.—The Democratic State Convention met on May 29 and nominated James B. Frazier for Governor and J. Neil McKenzie for Railroad Commissioner. The State Judicial Convention on the following day nominated for the Supreme Court John K. Shields, John S. Wilkes, W. K. McAllister, W. D. Beard, M. M. Neil; for Court of Appeals, R. M. Barton, S. F. Wilson, John M. Taylor.

The platform approved "the principles of the platform adopted by the last national convention of the Democratic party"; condemned the Re-

publican policy in the Philippines; declared against an increased standing army, favoring State militia; denounced Republican extravagance; supported the construction of the Nicaragua Canal; expressed sympathy for the Boers; favored liberal commercial relations with Cuba; approved Gov. McMillin's administration; approved the public-school system and the textbook law; called for the establishment of good roads; declared in favor of holding a State fair, and of the Legislature setting apart an adequate sum for the purpose; demanded a revision of the State laws on the inspection of coal-mines and factories to afford better protection for the laboring classes.

The Republican State Convention met in June and nominated Judge H. T. Campbell for Governor and J. J. Elliott for Railroad Commissioner. The platform approved the measures inaugurated by the national Republican party, through President McKinley, and being carried out by President Roosevelt, together with the policies, touching both home and foreign relations; attacked the Democratic administration of State affairs, and demanded such changes and reforms as would be in harmony with true republican ideas; insisted on fee reform, a revision of the election laws on a plan which it suggested, and on the improvement of the public-school system; declared for extending the operation of the 4-mile law to towns having 5,000 inhabitants; and favored the adoption of several amendments to the Constitution.

All the Democratic nominees were elected in November. The entire vote in the State was 160,149, which was 22,235 less than in 1898. The vote for Governor was as follows: J. B. Frazier, Democrat, 98,954; H. T. Campbell, Republican, 59,002; R. S. Cheves, Prohibitionist, 2,193.

TEXAS, a Southern State, admitted to the Union Dec. 29, 1845; area, 265,780 square miles. The population, according to each decennial census since admission, was 212,592 in 1850; 604,215 in 1860; 818,759 in 1870; 1,591,749 in 1880; 2,235,523 in 1890; and 3,048,710 in 1900. Capital, Austin.

Government.—The following were the officers of the State for the year: Governor, Joseph D. Sayers; Lieutenant-Governor, J. N. Browning; Secretary of State, John G. Tod, appointed by the Governor; Treasurer, J. W. Robbins; Comptroller, R. M. Love; Superintendent of Public Instruction, Arthur Lefevre; Commissioner of Agriculture, Jefferson Johnson; Railroad Commissioner, L. J. Storey; Adjutant-General, Thomas Scurry; Commissioner of the General Land Office, Charles Rogan; Attorney-General, C. K. Bell; Chief Justice of the Supreme Court, Reuben R. Gaines; Associate Justices, Thomas J. Brown and F. A. Williams; Clerk, Charles S. Morse—all Democrats.

The term of State officers is two years. They are elected on the Tuesday after the first Monday in November of the even-numbered years. The Legislature meets biennially on Jan. 2 of the odd-numbered years. The session may continue indefinitely, but the members receive \$5 per diem for the first sixty days, after that \$2 per diem. There are 31 Senators, elected for four years, and 128 members of the House of Assembly, elected for two years.

Finances.—The Legislative Investigating Committee completed the counting of the bonds in the State treasury on April 26. The amount of bonds was found to be \$11,119,236.40, classified as follows: To the credit of the permanent school fund, State bonds, \$2,187,200; railroad, \$1,603,317; county, \$5,937,273.35; city, \$209,387.55; independ-

ent school district, \$93,500. To the credit of the permanent university fund, State bonds, \$579,700; to the credit of the Blind Asylum land sales account, State bonds, \$115,500; to the credit of the Deaf and Dumb Institute land sales account, State bonds, \$61,000; to the credit of the Lunatic Asylum sales account, State bonds, \$111,700; to the credit of the Agricultural and Mechanical College fund, State bonds, \$209,000; to the credit of the Orphan Asylum land sales account, State bonds, \$11,200; special loan tax certificates of public debt, \$79,409.50; escheated estates notes, \$1,079.

Valuations.—The totals of the taxable real and personal property in Texas, reported by the Comptroller, Nov. 12, showed a decrease in livestock values, but an increase in implements, machinery, tools, money, and credits. Of the land, 139,040,030 acres were valued at \$437,215,410, an increase of 3,238,761 acres, valued at \$14,901,609; town and city lots, \$210,103,181, an increase of \$11,273,226; 1,555,872 horses and mules, \$38,026,646, an increase of 21,362 head, decrease \$1,555,994 in value; 7,575,390 cattle, \$74,228,489, increase 680,493 head, decrease \$339,947 in value; 14,749 jacks and jennies, \$469,631, an increase of 231 head, decrease \$7,099 in value; 1,521,834 sheep, \$2,071,297, increase 16,407 head, decrease \$34,697 in value; 458,712 goats, \$524,019, increase 4,855 head and \$6,137 in value; 1,014,315 hogs, \$1,608,593, decrease 394,161 head and \$850,304 in value; 28,808 dogs, \$183,348, decrease 1,644 head, increase \$19,232 in value; railroads, 10,681 miles, \$77,227,725, increase 640 miles and \$3,276,660; rolling-stock of railroads, \$10,386,232, increase \$383,374; city street-railroads, 285 miles, \$1,346,401, increase 54 miles and \$200,911; telegraph and telephone lines, 23,890 miles, \$2,508,365, decrease 3,933 miles, decrease \$71,289 in value; steam, sailing, and other vessels, 200, \$365,300, increase 5 and decrease \$85,525 in value.

Banking.—In December there were 345 national banks in operation in the State. Outside of the reserve cities, Dallas and Houston, the total capital was \$23,100,260; surplus, \$6,164,632.93; individual deposits, \$65,006,668.96. For Dallas and Houston the principal items were: Dallas—capital, \$1,050,000; surplus, \$1,061,000; individual deposits, \$6,718,037; national-bank deposits, \$2,161,634; State and private banks, \$340,018; United States deposits, \$584,579. Houston—capital, \$1,450,000; surplus, \$850,000; individual deposits, \$6,538,666; national-bank deposits, \$1,965,396; State and private banks, \$685,521; United States deposits, \$100,000. The banks of Texas are in an exceptionally good condition.

Education.—The Treasurer's report showed that the school fund aggregated \$40,283,330.84. This amount represents notes, obligations, and other securities purchased, resulting from the sale of 21,905,906 acres of its select and choicest land, including its timber, of which 14,694,426 acres have been sold since the act of 1895 became law. There are still unsold 22,080,225 acres, but most of it is in the extreme western part of the State, and on the Rio Grande, where, from excessive droughts, the lack of water, or the general topography of the country, the land may never become valuable. As great as is the demand for land for grazing, there are about 7,500,000 acres lying idle.

The remedies proposed by the State Land Commissioner in his biennial report, filed in November, were to raise the minimum price to \$2 an acre, except for watered land, and raise that to \$3 an acre; to sell no land except at public outcry, and then only to actual settlers; and to sell no land below the minimum price fixed by law, and none unless a certain number of bidders are present.

The attendance of students at the opening of the State Agricultural College, in Bryan, at the opening, Sept. 10, was the largest known in the history of the institution. The work on the new chemical and veterinary laboratory was finished, and the building was ready for occupancy Oct. 1.

The summer session of the University of Texas, in Austin, closed July 26, and was the most successful ever conducted. The number of students enrolled was 262.

The Penitentiary.—The records of the State Penitentiary, Sept. 25, showed the number of convicts that were killed in the past few years while attempting to escape. In 1901 the number was 16. During the term of Gov. Culbertson, who preceded Gov. Sayers, the number was 37, and during the three terms before him the number was 88.

Agriculture.—The bulletin issued by the United States Census Bureau, July 7, showed that the farms of Texas in 1900 numbered 352,190 and were valued at \$691,773,613. Of this amount 14.5 per cent. represents the value of buildings, and 85.5 per cent. the value of the land and improvements other than buildings. The total value of farm-products for 1899 was \$239,823,244, of which amount 30.4 per cent. represents the value of animal products, and 69.6 per cent. the value of crops, including forest products, cut or produced on farms. The total acreage of farm-land has increased rapidly, being twice as great in 1900 as in 1890.

The value of live stock on farms and ranges, June 1, 1900, was \$240,567,955, or 25 per cent. of the total value of farm property. Of this amount, 59.5 per cent. represents the value of meat cattle other than dairy cows, 14.3 per cent. that of horses, 10.4 per cent. that of mules, 8.3 per cent. that of dairy cows, 3.2 per cent. that of swine, 1.7 per cent. that of sheep, 1.5 per cent. that of poultry, and 1.1 per cent. that of all other live stock.

The Boll-weevil.—The ravages caused by the boll-weevil, especially in the last two months of the year, were so disastrous that the United States Secretary of Agriculture was of opinion it might be necessary, in the work of extirpating the insect, to plant other crops. By this the world's cotton market would be materially affected. A report issued by the vice-president of the Santa Fé Railway estimated the cotton-crop along the Santa Fé and the International and Great Northern at 40 per cent. less than last season. The boll-weevil was responsible for at least 90 per cent. of the damage. The weather after Nov. 21, the date on which the report was issued, was still more unfavorable to the staple. A congress of cotton-growers of the State was held at Dallas, Dec. 17. Its principal object was to collect data that should prove the necessity of obtaining the passage of relief measures by Congress and the State Legislature, the present situation not only giving rise to a serious problem in the cotton industry, but being a menace to the entire South as well as to Texas.

Though still confined to Texas, says the report, the territory occupied by the cotton boll-weevil includes about 28 per cent. of the cotton acreage in the United States. This acreage in 1900 produced 34 per cent. of the total crop of this country, or one-fourth of the crop of the world for that year. This region is bounded on the north by the Red river and on the east by the pine forests of the divide between the Trinity and Sabine rivers. It includes the 22 counties which, in 1899, according to the twelfth census, produced 40,000 bales or more each. A conservative statement would place the loss that the insect caused to Texas in 1902 at \$10,000,000.

It is wholly beyond possibility that the weevil is ever to be exterminated. Its history in Mexico and since reaching Texas, as well as the history of many related injurious insects, offers no hope that it will ever be much less destructive than now. Nevertheless, it has been demonstrated that cotton can be grown profitably by means of a few expedients in planting and managing the crop where the insect is present.

During the season the division of entomology was engaged in field experiments to demonstrate that cotton can be produced successfully in spite of the boll-weevil. Some of this work was conducted on the plantation of Col. E. S. Peters, in the Brazos valley, near Calvert. This valley is, on account of its low and moist situation, the presence of timber, and the almost exclusive production of cotton, the most seriously-affected portion of the boll-weevil territory. In fact, the most favorable conditions possible for the multiplication of insects are there present. In none of the field did any of the insects, aside from the weevil, cause any considerable damage. The boll-worm was present, but did very little injury; the sharp-shooter was scarcely noticed, and the leaf-worm did not appear in sufficient numbers to warrant poisoning. To summarize the results of these experiments: 1, Early planted cotton, with a thorough cultivation, produced two-thirds of a bale per acre; 2, early planted cotton, with careless cultivation, produced one-ninth of a bale per acre; 3, early planted cotton, with fair cultivation, produced one-half of a bale per acre; 4, Late planted cotton, with wide rows, produced about one-fourth of a bale per acre; 5, late planted cotton, with narrow rows, sprayed thoroughly, yielded about one-fourth of a bale per acre.

In a report submitted by Congressman Slayden, Dec. 17, to the House Committee on Agriculture, the loss due to the boll-weevil in 1902 was placed approximately at 500,000 bales, with about \$25,000,000. This report was based on information gathered by the managers of the several Texas railroads that run through the infested section. The entomologist of the Texas State Agricultural College figured, Aug. 17, the loss at \$21,250,000.

Rice.—In a bulletin issued by the University of Texas, Dec. 12, detailed statements were given of the capacity, acreage, and cost of installing almost every separate rice-farm in the State. The report is of special interest to the people of the coast country of Texas, which, in the past two years, has developed greatly as a rice-growing center, and which bids fair to be the largest in the world. It exhibits the acreage sowed in rice by counties, the total being 182,170 acres. On account of failure to secure an adequate supply of water, it is believed that not more than 150,000 acres can be harvested. According to a conservative estimate, the probable yield for the season would be 1,450,000 sacks.

The Oil-Fields.—The report of the United States Geological Survey, Oct. 25, declares that the Spindle Top oil-rock contains about one-fourth of its volume in oil. At an estimate of 1 barrel obtained for every 26 cubic feet for Spindle Top, and a little less for other fields, there should be a yield equal to Baku, in Russia, and a much greater output than that at any other American field. The report says that the apparent consensus of opinion among chemists who have examined the field is that the Gulf Coast petroleum is unsuited for the production of illuminating oil, and that it is doubtful if it can be made to yield good lubricating oil on a commercial basis. Its value as a source of asphalt and gas oil is as yet undetermined. Experiments seem to establish

both its availability and its economy as a generator of steam. The estimate of the average daily flow of 162 wells now operating on Spindle Top is not to exceed 12,000 barrels.

The oil industry of South Texas was greatly advanced by the discovery of oil at several points outside of Spindle Top. The steel, earthen, and wooden storage at Spindle Top, Jan. 1, 1903, was 13,253,000 barrels. The oil in storage Dec. 1, 1902, was 8,670,000 barrels. The oil in storage Jan. 1, 1903, was 9,470,000 barrels.

Legal Decisions.—On May 26 the Supreme Court decided the case of the State of Texas *vs.* the Houston and Texas Central Railway Company *et al.*, from Travis. This was a suit instituted to recover 170,880 acres in Lipscomb County, located and surveyed by virtue of certificates issued to the railroad company under several acts granting 16 sections of land to any railroad company for every mile of road constructed and operated. The lands were granted the railroad company for miles of sidings constructed, and not main line. However, its recovery was sought on these grounds: First, that at the time the sections of railroad were completed for which the certificates were issued the law which authorized a grant of lands to railroads had ceased to be operative by its own limitation and had also been repealed by the Constitution of 1869; second, that the certificates by virtue of which the lands in controversy were located were issued for side-tracks, and that the law did not authorize the issue of certificates for sidings; and third, that if the grants were valid the title thereto had been forfeited by failure of the company to alienate them within the time prescribed by the statutes which authorized the grant. The court decided in favor of the company. Had it decided otherwise, the titles to 10,000,000 acres would have been placed in jeopardy, but as it is they are safe, and innocent third parties, who purchased the lands, will not suffer.

A decision rendered by the Court of Appeals, Nov. 19, was of special importance on account of the effect it must have on many other suits filed by the Attorney-General to recover land held by virtue of Mexican land grants, more than 1,000,000 acres being in controversy. The suit—O'Connor *vs.* the State of Texas—was to recover 19,410 acres in Webb County, out of an original Mexican land grant of 300,000 acres, title to which the State contested, alleging that it had not been legally confirmed. The original grantees filed suit in the district court of Webb County within three years after the passage of the act of 1860, as provided therein, to confirm title, and secured the judgment sought. The State attacked this judgment as irregular and void and not having been rendered by a "court of proper jurisdiction." O'Connor answered that even if said judgment was invalid the act of the Legislature of 1881 validated his title. The court sustained O'Connor's contention, holding that the act of 1881 did confirm title, and therefore rendered judgment in his favor.

Confederate Reunion.—About 12,000 Confederate veterans held their annual reunion at Dallas on April 23. Gen. Gordon, commander-in-chief, called the convention to order. Among the resolutions adopted was one withdrawing the support of all Confederate veterans from Grail University because of an alleged disparaging article by a professor of that institution on Southern women. Another called for the preparation of school histories that would do justice to "Southern leadership, Southern character, Southern environment, and Southern development." The report on the

Davis monument fund showed that there was \$35,000 on hand, but that \$40,000 more was needed. A proposal to change the Confederate Memorial Day from June 3, the birthday of Jefferson Davis, failed, but a resolution was passed allowing any State desiring a different date to take individual action. The Credentials Committee reported that 707 camps had paid their per capita tax, and were entitled to 2,252 votes, while 748 camps were reported in arrears. The report of the Committee on Battle Abbey showed that of the \$200,000 necessary for the reconstruction of the museum the treasury has now \$176,053. Gen. Gordon was reelected commander-in-chief. About 150,000 persons attended the reunion from all parts of the South. New Orleans was chosen as the next meeting-place.

Change of Boundaries.—On Dec. 6 a report was filed in the State Land Office describing the work done under the act of Congress of 1901 requiring the Secretary of the Interior to establish the one hundredth meridian, which forms the eastern boundary of Texas from Red river, in Childress County, north to and including Lipscomb County. It was first understood that the new line would give Texas a strip of 8 miles of Oklahoma; but the report fixes the meridian so that Texas loses a strip of land three-fourths of a mile wide, taking off that much of the eastern edge of Lipscomb, Hemphill, Wheeler, Collingsworth, and Childress Counties, a total loss of 112½ sections or 7,200 acres, which has always been regarded as part of Texas.

The same condition prevails on the west side of the State, the entire length of the Panhandle, United States surveyors having fixed the one hundred and third meridian, which forms the western boundary of Texas, so that a strip of 3 miles is taken from all the border counties, making a total of about 300,000 acres.

New Mexico also disputes the boundary-line extending from the westernmost point of Texas east along the northern edge of El Paso, Reeves, Loving, and Winkler Counties, to the point where it turns north, it then being in the 3-mile controversy.

Lawlessness.—On March 7 a party of whites went at night to the home of Nathan Bird, a negro farmer living near Prairie Lea, and demanded his son, but were refused. The son was accused of having beaten a white boy and broken his arm. The party then shot and instantly killed the father. They carried away the son, and are believed to have killed him, as no trace of the boy has since been found.

At Hemstead, Oct. 21, 2 negroes, Reddick Barton and Jim Wesley, were tried for criminal assault and murder, convicted and sentenced to death. The people were unwilling to wait for the delay of thirty days prescribed by law to take place between the sentence and its execution. They seized one prisoner in the court, the other in the jail, and hanged them from the arm of a telegraph-pole in the public square.

A negro named Dudley Morgan was burned alive at the stake at Lansing, May 22. When it was learned that he was on a train being brought to Lansing to be identified by the woman he had assaulted, about 200 men, armed with Winchester rifles, surrounded the train as it entered the city, seized the negro, and conducted him to the spot where the execution was to take place. Morgan confessed having committed the crime, and after he was chained to the rail with his hands and legs free, the members of the mob began to take ties from a fire already started and burn out his eyes, and held the red-hot and burning timbers

to his neck, burning his clothes off and other parts of his body. The negro was tortured until death came to his relief, the crowd all the while crying "Let him die slow." A large number of women from all parts of the surrounding county were present at the spectacle.

Disasters.—On March 7 the Southern Pacific train No. 9 went into a ditch 25 miles west of Sanderson. The wreck took fire and 12 persons were consumed by the flames before aid could reach them, and 28 were injured, many of whom died. The wreck occurred in the middle of the night.

Several fires occurred at Dallas after 3 o'clock in the morning, April 20. Two men were fatally injured. The Dorsey Printing Company, one of the largest establishments of the kind in the South, was destroyed. The losses aggregated about \$500,000.

A terrible cyclone struck Goliad on May 18, completely destroying the western part of the city—a strip 3 miles wide and 1 mile long. The dead numbered about 125. The number of those injured was about the same, not more than half of whom were expected by the physicians to recover.

A fire occurred at Temple, Aug. 10, in which the Landon Hotel and the block in which it was situated were reduced to ashes. Ten guests of the hotel were burned to death, and a great many others were injured.

The Santa Fé express was wrecked by a broken rail 16 miles from Brownwood, and about 30 persons were injured, some fatally.

Destitution along the Rio Grande.—In April it became known that more than half of the 11,000 people in Starr County, and of the 6,000 people in Zapata County, were in a destitute condition. No corn had been raised for two years. The drought began fourteen years previously, and had grown worse year after year. The destitute region is from 50 to 100 miles from the nearest railway points, and the inhabitants were without horses. As soon as the situation became known, successful efforts were made by State officials and private individuals to relieve the distress.

Galveston.—The value of the year's business exceeded that of any previous year. The total value of the business of the port for 1902, both export and import, was \$347,993,163, the corresponding figures for 1901 being \$253,771,552. The bank clearings for the year were \$389,104,000, compared with \$378,435,800 for 1901. The custom-house receipts for the year were \$263,508, compared with \$169,064 for 1901. The value of Galveston's foreign exports for 1902 was \$92,756,044, compared with \$106,526,508 for the preceding year. This decrease was due to the diminished crops of cotton and grain.

In 1902 181,335 tons of oil cake and meal, valued at \$4,075,357, were exported through Galveston, compared with 256,582 tons, valued at \$5,568,449, for 1901. In 1902, 3,740,566 gallons of cottonseed oil, valued at \$1,244,678, were exported, compared with 4,933,371 gallons, valued at \$1,502,307 for 1901.

Lumber to the value of \$523,302 was exported, compared with a valuation of \$479,457 on lumber exported in 1901. The live-stock exports were valued at \$247,892, compared with \$199,717 for 1901.

The foreign imports through Galveston in 1902 were valued at \$1,312,394, compared with \$1,048,888 in 1901. The coastwise trade was more than doubled during the year, and the Southern Pacific Steamship service was inaugurated, as well as a regular service to Brownsville and Port Arthur. A feature in the foreign tonnage was the size of

ships. Two hundred ships, with a net tonnage of 533,017, entered the port, and 300 ships, with a tonnage of 722,791, cleared. During the year 1901, 291 ships, representing a tonnage of 645,024 entered, and 347 ships, representing a tonnage of 786,100, cleared.

This year \$1,715,217 was spent in Galveston for permanent improvements. The appropriation made by Congress for deepening and widening the channel in the inner harbor was \$300,000; for repairing the jetties, \$750,000. Including the seawall and Government projects money is available to the amount of \$3,136,283 for improvements in 1903.

Political.—The Prohibition Convention met in Dallas, July 4. The platform consisted simply of a denunciation of the liquor traffic and the Government's participation in it through the licensing system.

In the platform of the Socialistic Convention, Dallas, July 4, the acceptance of the principles of Socialism was held to be the only solution of the labor and capital question. Labor conditions, especially as they affected children, was held to be worse in Texas than in the East and North.

The platform adopted by the Populist Convention, at Fort Worth, Aug. 12, reaffirmed the national platform of the party, and called particular attention to the initiative and referendum as the only method by which the people could express themselves fully and freely on political questions. The name of The Allied Populist Party of Texas was adopted, and an invitation was extended to the laboring people to unite with that body.

The platform of the Democratic Convention, which met in Austin, July 17, declared faith in the principles of the party as set forth in the Kansas City platform; pointed out the dangers of imperialism, centralization, trusts, monopolies, mergers, and other combinations as being hurtful to the people; commended the efforts of the Senators and Representatives in Congress from the State for their efforts in aid of tariff reform; of a canal connecting the Atlantic and Pacific Oceans; of election of Senators by direct vote of the people, and the securing of appropriations for the improvement of waterways and harbors; urged them to oppose every attempt to establish a branch banking system; approved the administration of Gov. Sayers; praised him for the splendid financial condition of the State and the reduction of taxes; commended the condition and management of State eleemosynary institutions; favored a law providing for the improvement of the public roads of the State and the employment thereon and upon the farms of the State of short-term convicts; supported the reenactment of the uniform text-book law and liberal appropriations for educational institutions; requested the Legislature to provide for the establishment of textile schools as a department of industrial education in the Agricultural and Mechanical College; favored the submission of a constitutional amendment authorizing the chartering of State banks of discount and deposit; demanded the enactment of a law prohibiting the employment of children under twelve years of age in factories using machinery; approved the Louisiana Purchase Exposition project; favored legislation to prohibit free passes on railroads; declared for uniform election primaries, and fixed the second Saturday in July, 1904, as the date for holding primaries in every county.

The platform of the Republican Convention, Fort Worth, Sept. 11, approved the acts and policies of the present national administration; declared Theodore Roosevelt to be the unanimous choice of the Republicans of Texas as the candi-

date for President in 1904; congratulated the people of Texas upon the generous recognition given to the seaports and harbors of that State by a Republican administration and a Republican Congress; favored the establishment of a port of entry adjacent to the Beaumont oil-field, and favored national and State aid for the protection of the rivers and valleys of the State from overflows; demanded freedom of speech and protection for the newspapers of the State; recommended the introduction of industrial education into the normal schools, orphans' homes, and, where possible, into the public schools; opposed the employment of child labor in factories and like institutions; condemned the Democratic party for its advocacy of sumptuary and restrictive laws; and condemned the employment of convict labor on farms and in factories in competition with free labor.

The candidates of the Democratic party for Governor and Lieutenant-Governor, S. W. T. Lanham and George D. Neal, were elected. The vote for Governor was: Lanahan, 218,959; Burkitt, 56,678. All the Democratic candidates for the Senate (31) were elected; 127 Democrats were elected for the House, and 1 Populist, the Democratic majority on joint ballot being 158.

UTAH, a Western State, admitted to the Union Jan. 4, 1896; area, 84,970 square miles. The population in 1900 was 276,749. Capital, Salt Lake City.

Government.—The State officers in 1902 were as follow: Governor, Heber M. Wells, Republican; Secretary of State, James T. Hammond; Auditor, Charles S. Tingey; Treasurer, John De Grey Dixon; Attorney-General, M. A. Breeden; Superintendent of Public Instruction, A. C. Nelson; Adjutant-General, Charles S. Burton; Librarian, Lilburn P. Palmer; Bank Examiner, Walter J. Beatie; Coal-Mine Inspector, Gomer Thomas; Engineer, A. F. Doremus; Fish and Game Commissioner, John Sharp; Food and Dairy Commissioner, Moroni Heiner; Justices of the Supreme Court, James A. Miner (Chief Justice), R. N. Baskin, and George W. Bartch; Regents of the State University, James Sharp, Frank Pierce, Waldemar Van Cott, Mrs. Emma J. McVicker, Mrs. Rebecca E. Little, Joseph T. Kingsbury, Moses Thatcher, Thomas R. Cutler, and W. W. Riter; Commissioner of Statistics, Charles De Moisey; Secretary of the Board of Health, Dr. T. B. Beatty; Secretary of the Land Board, Byron Groo.

The term of the State officers is four years. They are elected at the time of the presidential elections. The Legislature meets biennially in January of the odd-numbered years; the session is limited to sixty days.

Education.—According to the yearly statistics compiled in the office of the State Superintendent, in 1902 there was a school population of 76,466. This includes all between the ages of six and eighteen, and shows a decrease over the preceding year of 97. The expenditures for school purposes in 1902 were \$1,459,446.06. In 1901 they were \$1,359,721.70, a per capita of \$19.10 and \$17.77 respectively. The maintenance expenses of the schools make the annual cost of education per capita \$5.20.

In the financial condition of the public schools there has been a gradual improvement ever since statehood, and the revenues derived from the sale of Government lands, set aside for school purposes, is constantly increasing. The receipts for 1902 and the preceding year were drawn from the following sources: State tax of 3 mills, county school tax, district levy, and special tax and sinking-fund tuition. The funds for 1901 amount-

ed to \$1,285,454.12; for 1902 to \$1,433,897.06. The number of teachers employed in the former year was 1,531, and last year 1,593. The average salary for male teachers in 1901 was \$65.65, and for females \$45.08. In 1902 these amounts were increased to \$66.81 and \$48.12 respectively. The number of schoolhouses was increased from 634 to 711. The value of school property in the State in 1901 was \$3,065,605.02. In 1902 there was an increase of \$155,554.62. The number of graduates was increased from 1,710 in 1901 to 2,051 in 1902.

The report of the University of Utah, at Salt Lake, shows that in the school year of 1901-'02 there was an enrolment of 778 students—388 men and 390 women. The total registration for 1902-'03 was 814, of whom 401 are men and 413 women. Of these, 75 are in the School of Arts and Sciences, 86 in the State School of Mines, 73 in the State Normal School, and 87 in the State Normal Kindergarten, with 466 in the preparatory school and 114 in the summer school. Of the total number, 26 come from outside Utah. The State School of Mines, established in 1901, has grown greatly, and the regents announce that an improvement of the course is contemplated and an enlargement of the school. The Branch Normal School, at Cedar City, Dec. 1, 1902, had an attendance of 225, an increase of 60 over the previous year, and the State Agricultural College, in Logan, also showed a large increase in attendance, the enrolment for the year 1902-'03 being 516.

Finances.—There has been a steady improvement in the finances with each succeeding year since statehood, and the present condition is very gratifying. While there has been a gradual improvement in valuations of taxable property, which insures additional revenue, the demands upon the State are likewise increasing, especially in regard to educational, charitable, and penal institutions. In 1901 the valuation of taxable property in the State was \$112,583,130. The value for last year is given as \$118,019,462. The bonded indebtedness of the State is \$900,000, all due for bonds issued during Territorial days. By reason of a constitutional provision, the total bonded indebtedness of the State can at no time exceed \$1,100,000. The State has no floating indebtedness. In 1901 the gross tax was \$900,702.82, and the net tax charged was \$900,448.31. In 1902, with a total valuation of \$118,019,462, the gross tax was \$920,551.71, and the net tax charged was \$920,093.78. In 1901 the value of personal property, all animals excluded, was \$17,007,114. Last year it was \$18,521,875. The receipts from all sources for 1901 were \$1,283,722.42, and the disbursements \$1,205,163.62. In 1902 the receipts were \$1,409,256.47, and the disbursements \$1,449,654.68. Warrants are outstanding to the amount of \$24,491.76. The cash on hand in the treasury Dec. 31, 1902, was \$565,259.31. On an estimated valuation of \$120,000,000 for the biennial period of 1903-'04 the State Auditor estimates the total requirements at \$1,673,250.14, and the estimated revenue for this period is \$1,532,597.87.

Railroads.—The mergers of 1902 were felt in Utah, with the result that at the end of the year there were fewer actual wage-earners in the employ of the railroad systems in Utah than there had been twelve months before. On the other hand, there was far more construction. The Central Pacific has under way, between Ogden and San Francisco, improvements for which \$20,000,000 has been appropriated. Included in this is the great Lucin Cut-Off across the bosom of the Great Salt lake, which will cost several mil-

lion dollars. The Oregon Short Line is constructing what is known as the Leamington Cut-Off, with its 117 miles of track and road-bed. The Lucin Cut-Off will shorten the distance to San Francisco 102 miles. Other construction under way or accomplished is a line of the Oregon Short Line from Corinne to Brigham City, and the building by the Rio Grande Western of the first 20 miles of the cut-off from Salina to connect with a point near Green River, Utah.

Mining.—The metal output of Utah in 1902 was \$20,985,337.82, an increase of \$3,404,879.94 over 1901. The output in detail was as follows in 1902: Lead, 146,978,597 pounds, at 4 cents a pound, \$5,879,143.88; copper, 26,373,780 pounds, at 11.59 cents, \$3,048,608.10; silver, 15,892,733 ounces, at 52.15 cents, \$8,160,325.84; gold, 194,863 ounces, at \$20 an ounce, \$3,897,260; total, \$20,985,337.82.

The dividends paid by Utah metal mines in 1902 amounted to \$5,025,500, an increase over the previous year of \$578,600.

One new smelter, with a daily capacity of 1,500 tons, and another of 1,000 tons capacity, have been completed in the Salt Lake valley; work has begun on a 1,500-ton smelter at Lewiston, Beaver County, on one of 100 tons capacity near St. George, and on another of 50 tons daily capacity at Cashin.

The development has been greatest in the copper and gold mines of Beaver County, and the silver, lead, gold, and copper mines of Park City. New producing properties have been opened up in various districts, despite the reduction in price of both copper and silver.

Iron County, Utah, contains some of the largest high-grade iron deposits in the world, and capitalists have taken up the work of developing these resources, with a view to establishing iron-manufacturing plants in the State.

This year 191 new mining companies were organized under the laws of the State, with a total capitalization of \$60,945,900.

Salt.—The production and refining of salt is yearly growing in importance. In the Great Salt lake there is an apparently inexhaustible supply of this commodity. Among the largest plants on the shores of the lake is that of the Inland Crystal Salt Company, which in 1902 produced 30,000 out of the 35,000 tons shipped out of Utah. Of this output, mining companies in this and adjoining States use nearly 50 per cent. in the milling of their ores, and the rest is marketed.

Beet-Sugar.—With 12,907 acres planted in sugar-beets, 155,485 tons were produced and fed into the mills of the Utah Sugar and the Amalgamated Sugar Companies. The average yield per acre was 12.05 tons, and 31,800,000 pounds of sugar was produced. In the season of 1902 \$400,000 was paid out for beets alone by the Utah Sugar Company, and the monthly pay-roll at the mill exceeded \$25,000. The contract price for beets hauled into the shed was \$4.75 for the Utah Sugar Company and \$4.50 for the Amalgamated.

Coal.—The State has several large mines and innumerable smaller ones in many counties, but they convey no adequate idea of the vastness of the coal deposits. For hundreds of miles in the southern parts of the State the outcroppings are mute testimonials of the great bodies of fuel under the surface. The coal of Utah is not excelled by that of any coal-producing State in the Union. It is of two classes—steam-producing and coke-making. The coke industry of the State is in its infancy, the production for 1902 being 128,524 tons, against 51,607 for the preceding

year. About 60 per cent. of the coke was used in the State, and the remainder in adjoining States.

The production of coal in Utah in 1902 was 1,641,436 tons, against 1,152,224 tons in 1901. The value of the product, based on its price at the mines, \$1.50 a ton, was \$2,462,154 this year, against \$1,828,336 in 1901. In 1902 1,883 men were employed in the coal-mines. In 1901 there were 1,724. The number of accidents in Utah coal-mines was 21, against 26 in 1901. The fatalities numbered 9, against 7 in the preceding year. Eight new mines were opened in 1902, 2 in Carbon County and 6 in Emery.

Live Stock.—The statistics for 1902 show a decrease in the number of live stock, but an increase in value, this being due to the fact that in the past year the stock growers have been encouraged by State and county aid to enhance the value of their property by breeding up. The State fair, given partly under the auspices of the State, is especially responsible for this change. In 1901 there were 72,072 horses and mules in the State, valued at \$1,530,761. Last year there were 70,335, valued at \$1,688,916. In 1901 the cattle numbered 206,734, valued at \$3,734,672. The number decreased last year to 204,179, valued at \$3,479,752. In 1901 1,831,383 Utah sheep were valued at \$4,737,832. In 1902 the number fell off to 1,585,801, and their value to \$3,637,269. The swine in 1901 numbered 16,688, and were valued at \$51,666. The following year they numbered 16,016, and their valuation was \$54,285. The poultry, including turkeys, geese, ducks, and chickens, numbered last year 588,518. There were 19,329 stands of bees, which produced 957,025 pounds of honey.

Farm Labor.—Farm-hands to the number of 3,221 earned \$1,130,430, an average per month of \$29.25. The women on farms, numbering 646, earned \$83,330, and their average wages per week was \$2.48. Both men and women received board and lodging in addition.

State Lands.—When Utah became a State, Congress granted to her certain tracts of land for the support of public institutions. Sales of State land have continued through the year, and the funds have been invested as rapidly as possible. Dec. 31, 1902, the investments of the several land-grant funds aggregated \$718,188.50, as follows: Agricultural College, \$33,578.25; Deaf and Dumb School, \$14,780.03; Insane Asylum, \$20,906.96; Institution for the Blind, \$8,686.20; Miners' Hospital, \$9,014.10; Normal School, \$13,778.45; public buildings, \$10,289.60; reservoirs, \$82,377.01; Reform School, \$22,522.45; general school fund, \$290,615.99; School of Mines, \$25,484.25; university, \$186,365.01. The rates of interest vary from 3.75 to 7 per cent. The investments are in farm mortgages and in Government and municipal bonds. The land sold for \$1.25 an acre and upward, much of it being paid for in 10 annual instalments.

Fish and Game.—In the two years 1901-'02 the State Fish and Game Commissioner planted 4,722,000 fish fry in the waters of the State. The fry were principally those of the eastern brook trout, with some Montana grayling, landlocked salmon, and native trout. The product came largely from the State fish hatcheries, with some importations from other States. Trout in the mountain streams and black bass in the lakes have been found to thrive best. In the two years 953,540 pounds of fish, valued at \$24,687.18, were taken for commercial purposes from Utah and Panguitch lakes. No account was kept of the fish taken from the streams and other lakes,

or of those caught for private use. Of these, the black bass at 15½ cents a pound and the trout at 20 cents a pound were the most valuable. Many fish were lost through irrigation ditches and canals, and still more were killed by sawdust from the sawmills along the streams.

There has been a slight decrease in the number of deer. This is due to the hunters and to the fact that the sheep are destroying the ranges in the State, driving the deer elsewhere. Antelope are holding their own, and even increasing a little in number, owing to the strict law against their being killed at any time. The elk are nearly all gone, except in the high peaks of the Uintah mountains in the northeastern part of the State. Mountain sheep are practically extinct, although a few have been seen in Beaver County. Of the game-birds, the sage-hen is still plentiful, despite the large number of hunters. The blue grouse, pine-hen, or fool-hen, is holding its own. The sharptail grouse or prairie-chickens are decreasing, while the ruffed or drummer grouse are becoming rare. The "Bob White," or eastern quail, has been almost exterminated. California Valley quail are increasing in numbers, as are the Dixie quail or Gambell's partridge. Chinese pheasants are propagating rapidly and keeping ahead of the hunters. More stringent game-laws have kept down the slaughter of wild ducks and geese, and they appear to be in about the same condition they were in two years ago. The number that may be shot by one person in a day is limited to 40 birds, and all hunting during the breeding-season is forbidden. The ducks and geese are extremely plentiful in the vicinity of the lakes.

Irrigation.—The passage of the national irrigation law gave a fresh impetus to irrigation in Utah. The most important of the single events in this line was the acquirement by the Utah Sugar Company of the property of the Bear River Irrigation and Ogden Water-Works Company. This latter company owned large irrigation works and a great tract of irrigable land in Bear river valley. The new owners have begun the work of extending the canals, and are bringing large numbers of farmers into the region. The State Engineer, in his annual report, mentions projects that are to be carried out, with or without federal aid. The most important of these is the enterprise for the development of Utah lake as a storage-reservoir. It is proposed to raise the level of the lake by means of dikes, and increase the flow into it by diverting Strawberry creek into Diamond Fork, thence into Spanish Fork and Utah lake. A 3½-mile tunnel through the Wasatch mountains would be needed to accomplish this. The enterprise was approved by the State Irrigation Congress, which met in Salt Lake City, Feb. 26 to March 1, and again in April. This congress was called by the Governor, and representatives were sent from every county. The irrigation policies of the State and nation were discussed, and it was decided to ask the help of the United States Government for the Utah lake enterprise. Among the new irrigation enterprises mentioned by the State Engineer is one to construct a reservoir in Bear river valley of the storage capacity of 320,000 acre-feet, the construction of an immense canal in the eastern part of the State, drawing water from Grand river, the building of an immense reservoir in Sanpete County, and the further utilization of Weber river.

State Institutions.—Special attention is given to manual training by the management of the State Industrial School in Ogden. The boys are

\$919.58, and the aggregate available for distribution was \$90,427.08.

The sales of liquor for the year preceding Feb. 1, 1902, were \$356,622.20; profit, \$33,609.91; excess paid State, \$2,759.43. Towns are required to pay into the State treasury any excess of profits over 10 per cent. of the total sales of liquor.

Charter fees for incorporations under general law received in the fiscal year amounted to \$2,495; collateral inheritance taxes, \$55,066.77; corporation taxes levied on savings-banks, \$195,547.23; on savings-banks and trust companies, \$70,296.36; on appraisals of railroad companies, \$4,445; on gross earnings of railroad companies, \$119,198.75; on transportation companies, \$6,248.78; on express companies, \$2,418.05; on telephone companies, \$5,912.57; on telegraph companies, \$1,678.91; on loan and investment companies, \$55; on foreign fire-insurance companies, \$11,145.69; on domestic fire-insurance companies, \$6,655.43; on foreign life-insurance companies, \$26,936.44; on domestic life-insurance companies, \$6,436.72; on assessment life associations, \$47.37; on foreign fidelity and casualty insurance companies, \$2,860.92; on domestic fidelity and casualty insurance companies, \$85.64; license taxes levied on Vermont corporations, \$9,322; on corporations of other States, \$2,211; on foreign insurance companies, \$4,885.

Resources and Products.—The Crop Reporter, published by the authority of the Secretary of Agriculture of the United States, gives the acreage, production, and value of the principal farm-crops of this State for 1902: Corn, 57,718 acres, production 1,258,252 bushels, value \$855,611; spring wheat, acreage 1,725, production 32,430 bushels, value \$35,349; oats, acreage 77,780, production 3,111,200 bushels, value \$1,337,816; barley, acreage 12,954, production 384,734 bushels, value \$234,688; rye, acreage 1,943, production 32,837 bushels, value \$25,284; buckwheat, acreage 10,356, production 258,900 bushels, value \$144,984; potatoes, acreage 27,133, production 2,550,502 bushels, value \$1,479,291; hay, acreage 926,878, production 1,177,135 tons, value \$11,359,353; tobacco, acreage 191, production 343,800 pounds, value \$48,132.

Education.—Among the provisions made by the Legislature at its session in 1902 the following are the important ones referring to education: "Every town containing 2,500 inhabitants shall maintain a high school or furnish higher instruction for advanced pupils as hereinafter provided.

"The board of school directors shall provide for the instruction of advanced pupils in higher branches of study in the high school or schools of the town. When no high school is maintained by a town, the board of school directors shall provide such instruction for such pupils in the high school of an incorporated school district or in an academy of the town. When no high school or academy exists within the town, the board of school directors shall provide such instruction for such pupils in the high schools or academies of other towns within or without the State.

"A sum not exceeding \$200 is appropriated annually to aid in defraying the expenses of the annual meeting of the State Teachers' Association.

"The sum of \$15,000 shall first be reserved from the amount of the State school tax paid by the several cities and towns into the treasury of the State. The remainder shall be distributed among the cities and towns in proportion to the number of legal schools maintained.

"The sum reserved shall be divided among the towns which raise the higher per cent. of tax for school purposes, in order to equalize taxation and

afford equal school privileges as nearly as possible, at the discretion of the State Treasurer, the State Superintendent of Schools, and the examiner of teachers for Washington County. But no town shall receive any portion of this money unless said town shall raise at least 50 cents on the dollar on the grand list of said town for school purposes."

Montpelier.—Statistics regarding the growth of Montpelier in the past ten years have been compiled. There were 317 dwelling-houses erected, apart from remodeled houses or barns. There have been 60 other buildings erected for business, including blocks, manufacturing plants, etc. In addition to these over \$200,000 has been expended in the erection of public buildings from which no taxes are derived. The valuation of real estate in 1901 was \$3,064,930, and in 1891 \$1,599,300.

Legislative Session.—The following is an abridged statement of the more important acts passed by the Legislature at its biennial session in October, 1902:

No person shall, in order to aid or promote his own nomination, or the nomination of another person, as a candidate for public office, pay or contribute any money except for personal expenses for traveling, for writing and printing any letter, circular, or other publications not issued at regular intervals, whereby he may state his positions or views upon public or other questions; for stationery and postage, for telegraph, telephone, etc. No publisher of any newspaper shall accept payment for the support or advocacy in such newspaper or publication of the nomination of any person as a candidate for public office in this State.

Money loaned at a rate of interest not exceeding 3 per cent. per annum to any town, city, village, or incorporated school district by individuals living in such town, city, village or incorporated school district shall be exempt from taxation.

Women twenty-one years of age may be elected or appointed to the office of clerk of a town or to the office of treasurer of a town, or to both of said offices, and may be appointed town superintendent of schools.

No automobile or other motor vehicle shall be run on any public highway outside the limits of a city or town at a speed exceeding 15 miles an hour, and no such vehicle shall be run on any public highway within the limits of a city or town at a speed exceeding 6 miles an hour.

Every physician engaged in the practise of medicine in Vermont shall submit to the secretary of the State Board of Health the names and addresses of all persons under his treatment for tuberculosis, and thereafter each case within one week after applying for treatment.

An act relating to the counting of votes.

Amendments to the acts providing for taxation of corporations.

The rents, issues, and products of the real estate of a married woman were exempted from attachment or execution for the debts of her husband.

Trust companies were authorized to act as executors and in other fiduciary capacities.

The sale of commercial fertilizers and commercial feeding-stuffs was placed under special regulations.

A board of cattle commissioners was created.

Amendments were made to the statutes relating to the practise of medicine and surgery. The practise of osteopathy was legalized.

Registration of births, marriages, divorces, and deaths shall hereafter be made by the use of special blanks.

The following are the important items of the

proposed local-option license law, pending the result of the vote upon the referendum, Feb. 2, 1903:

"The warrant of every town meeting to be held on the first Tuesday of March, 1903, and annually thereafter shall contain an article providing for a vote upon the question 'Shall licenses be granted for the sale of intoxicating liquors in this town?' The selectmen of a town voting in favor of license shall, upon the application of 6 voters, call a special town meeting to determine the kind of license to be issued."

The bill provides for 7 classes of licenses to be granted at fees ranging from \$1,200 for a saloon to \$10 for a druggist who can sell for medicinal purposes.

Political.—Four candidates for the governorship were in the field—John G. McCullough, Republican; Percival W. Clement, Fusion; Felix N. McGettrick, Democrat; Joel O. Sherburne, Prohibition. A split in the parties was caused by the agitation over the new license local-option measure favored by the Republicans. Those adhering to the prohibitory law enacted in 1852 supported the candidacy of Clement.

The platform adopted by the Republicans at their convention recognized the fact that the enormous business of the country, in its various departments, can now only be done by combination, corporate or individual, and disclaimed a spirit of unreasoning hostility to such combinations, but favored the utmost vigilance—legislative, judicial, and executive—in guarding the public abuse of combined power, the swift and sure punishment of greedy offenders of any sort, strict safeguards against overvaluation, issue of fictitious stock, and demanded publicity of exact and verified statements by the official managers of corporations and combinations that shall clearly show the public their exact financial condition.

The referendum resolution favoring a license and local-option measure to displace the prohibitory law of 1852 declares:

That the Republican party of Vermont adheres to its long-cherished belief that unrestricted traffic in intoxicating liquors is a public evil, and that the material modification of existing law on that subject should be made only after thorough discussion and mature deliberation by the people. And we request the State Legislature at its next session to make provision for ascertaining the will of the people by direct vote upon the acceptance or rejection of a license and local-option law.

The platform also favored a law regulating primaries.

At the State election in September the following vote was polled: McCullough, 31,829; Clement, 28,069; McGettrick, 7,252; Sherburne, 2,460. A majority is 34,606, and therefore the election of Governor and Lieutenant-Governor devolved upon the Legislature. The 3 remaining State officers received the full party vote. The officers finally chosen were: Governor, John G. McCullough; Lieutenant-Governor, Zed S. Stanton; Secretary of State, Frederick G. Fleetwood; Treasurer, John L. Bacon; Auditor, Horace F. Graham; Adjutant-General, William H. Gilmour; Superintendent of Education, W. E. Ranger—all Republicans.

VIRGINIA, a Southern State, one of the original thirteen, ratified the Constitution June 25, 1788; area, 42,450 square miles. The population, according to each decennial census, was 747,610 in 1790; 880,200 in 1800; 974,600 in 1810; 1,065,116 in 1820; 1,211,405 in 1830; 1,239,797 in 1840; 1,421,661 in 1850; 1,596,318 in 1860; 1,225,163 in 1870; 1,512,565 in 1880; 1,655,980 in 1890; and 1,854,184 in 1900. Capital, Richmond.

Government.—The following were the State officers in 1902. Governor, Andrew J. Montague; Lieutenant-Governor, Joseph E. Willard; Secretary of State, D. O. Eggleston; Attorney-General, W. A. Anderson; First Auditor, Morton Marye; Second Auditor, Josiah Ryland, Jr.; Treasurer, A. W. Harman, Jr.; Superintendent of Public Instruction, Joseph W. Southall; President of the Supreme Court of Appeals; James Keith; Justices, S. G. Whittle, John A. Buchanan, George M. Harrison, and Richard H. Cardwell. All are Democrats.

Five of the State officers—Governor, Lieutenant-Governor, Secretary of the Commonwealth, State Treasurer, and Superintendent of Public Instruction—are elected by the people. They each serve four years. The election for these officers took place in November, 1901. The Auditor of Public Accounts is elected by the joint vote of the two houses of the General Assembly, to serve four years. The Legislature meets biennially, the second Wednesday in January following the election. There are 36 Senators and 86 members of the House.

Finances.—The following is a synopsis of the financial operations of the treasury for the fiscal year ending Sept. 30, 1902: Balance Oct. 1, 1901, \$854,490.92; received in fiscal year 1901-'02, \$3,795,093.42; balance Oct. 1, 1902, \$739,392.72. The disbursements were: Literary fund, \$291,215.57; interest on public debt, \$843,896.37; sinking-fund, \$1,077.72; Miller fund, \$75,094.17; total balance in the treasury to the credit of the several funds, Oct. 1, 1902, \$1,029,800.72. In addition to the above the United States direct tax fund has to its credit \$1,162.74.

Population Statistics.—The Census Bureau reports that in 1890 there were 165,630 Virginians living elsewhere than in the State of their birth. The Census Bureau has compiled tables—one giving the number of black Virginians living in other States, the other the number of negroes from other States living in Virginia. The tables show that in 1900 the total number of negroes born in Virginia was 878,988; living in Virginia, born there, 825,544; born in Virginia, living in other States, 253,444. Total number of negroes living in Virginia, 660,570—that is, in 1900 there had emigrated from Virginia 253,444, and immigrated to Virginia 35,026. In the decade between 1890 and 1900 the negro population of Richmond decreased from 32,330 to 32,230.

Resources and Products.—The Crop Reporter, published by the authority of the Secretary of Agriculture, gives the following statistics of the acreage, production, and value of the principal farm-crops of the State in 1902: Corn—acreage, 1,879,348; production, 41,345,656 bushels; value, \$21,499,741. Winter wheat—acreage, 637,806; production, 3,635,494 bushels; value, \$2,872,040. Oats—acreage, 222,074; production, 3,886,295 bushels; value, \$1,632,244. Barley—acreage, 2,655; production, 48,586 bushels; value, \$26,236. Rye—acreage, 26,147; production, 251,011 bushels; value, \$165,667. Buckwheat—acreage, 20,862; production, 346,309 bushels; value, \$207,785. Potatoes—acreage, 50,531; production, 3,789,825 bushels; value, \$2,198,098. Hay—acreage, 472,913; production, 501,288 tons; value, \$6,807,491. Tobacco—acreage, 182,359; production, 136,769,250 pounds; value, \$12,309,232. The definite amount and value of the cotton-crop is not given in the report; but it is estimated that Virginia produces 248 pounds of lint cotton to the acre under cultivation. The average of the 14 producing States is 188.5 pounds per acre, and Virginia stands sixth in order of amount.

The Census Bureau issued a preliminary report on the manufacturing industries of Virginia. It shows for the State a total of 8,245 establishments in 1900, an increase of more than 39 per cent. in the decade. The total capital was \$103,512,855, an increase of 63 per cent.; average number of wage-earners 72,527, increase 35 per cent.; total wages, \$22,396,060, increase 41 per cent. The miscellaneous expenses were \$12,258,244, an increase of 65 per cent.; cost of materials used, \$74,762,749, an increase of 44 per cent.; value of all manufacturing products, including custom work and repairing, \$132,735,620, increase 50 per cent.

Education.—The Department of Public Instruction announced the apportionment of the State school funds for 1901-02, as being at the rate of 28 cents and 4 mills per capita of the school population. The whole amount apportioned, is \$196,325.23. This apportionment is made on account of the appropriation by the General Assembly under act approved March 7, 1900, and the accumulated interest on investments of the Literary fund.

The second apportionment of State funds for the public schools was made Nov. 1, 1902, the amount, much greater than the first, being \$806,761.10. The per capita of school population was \$1.167.

The State Board of Education declined to renew the contracts for two books on the public-school list—namely, Fiske's History of the United States and Our Country, a history of the United States, written by Cooper, Estell, and Lemmon. This action is based upon the determined effort made for years by the Confederate veterans and others to remove from the public schools of the State every history that is objectionable to Confederates, their contention being that Fiske's history and Our Country do not represent fairly the war of secession. A large number of the teachers in the public schools are favorable to Fiske's history and also to Our Country for pedagogic reasons. They declare that these two histories offer more abundant material for classroom purpose, and present the subject in better form for teachers and pupils.

An address delivered by Gov. Montague at Charlottesville, July 8, before the Virginia teachers and superintendents, contained the following statistical facts, based upon Superintendent Southall's biennial report: Of 6,056 county schools for whites, 2,658 fall below the legal, required, average attendance of 20 pupils to the school. Out of 2,032 colored schools, only 498 fall below the required average. The Governor referred to the necessity of industrial training for the negroes. He said the wisest act of the State board would be to abolish the classical department at the Petersburg Colored Normal and create an industrial department in its place.

The following are among the provisions of the new Constitution relative to education: "No appropriation of public funds shall be made to any school or institution of learning not owned or exclusively controlled by the State or some political subdivision thereof; provided, first, that the General Assembly may, in its discretion, continue the appropriations to the College of William and Mary; and that counties, cities, towns, and districts may make appropriations to non-sectarian schools of manual, industrial, or technical training. The appropriations for institutions of learning for the two fiscal years ending Sept. 30, 1902, and Sept. 30, 1903, were as follow: Medical College of Virginia, \$5,000; State Female Normal School, \$15,000 and \$12,500 for new building;

University of Virginia, \$50,000 and additional for amount expended on hospital, to be refunded to State; Virginia Military Institute, \$25,000; Virginia School for Deaf and Blind, \$40,000 and \$20,000 for new buildings; Polytechnic Institute, Blacksburg, \$25,000 and an additional sum of \$25,000 for new buildings; Virginia Normal and Collegiate Institute, \$15,000, provided that it be converted into an industrial school; William and Mary College, \$15,000 and \$5,000 for electric-light plant; public schools, \$200,000.

Penitentiary.—The report of the joint commission appointed to investigate the conditions existing at the Penitentiary contains the following statements: "Its condition (overcrowded) is almost inconceivable to the human mind, and it would be difficult indeed to conceive of any penal institution being permitted to continue under such intolerable conditions. Visitors from all parts of the country—from Florida to Maine—have turned away from the contemplation of its sickening horrors in wonder and amazement that the State of Virginia would countenance the continuance of such dreadful conditions."

The report says the death-rate, as ordinarily reported, does not convey an accurate idea of the hygienic condition of the prison, as many are annually pardoned because of broken health, and most of them die soon after being liberated. The commission is of the opinion that it is absolutely necessary that the prison be removed to a place near a large city to procure ample protection against fire and to have the military at hand in case of serious trouble. On the subject of convict labor, the report says the consensus of opinion seems to be that it is better to have the men at some contract work in the manufacture of articles of commerce than to have them brought into competition with local State labor.

The minority report goes very fully into a penological discussion. It does not excuse the overcrowded condition of the prison, but it insists that it has not been so productive of evils as the majority says.

The appropriations for criminal expenses for the fiscal years ending Sept. 30, 1902, and Sept. 30, 1903, as reported from the House Committee on Finance, are: Transportation of convicts to Penitentiary, \$6,000; expenses of juries, witnesses, and prison associations, \$240,000.

Legal Decision.—The Supreme Court affirmed the judgment of the Circuit Court establishing the responsibility of a railroad company for accident to a passenger traveling on a free pass, arguing that the company agreeing to carry the passenger came under the duty to transport him safely, and the agreement by which it undertook to relieve itself from the consequences of the negligence of its servants was void as against the policy of the State, which is to enforce with equal hand the performance of those duties upon which the safety of her citizen depends.

An interesting case in which an opinion was delivered is that involving riparian rights and the accretion of property as a result of changes in a river boundary. A lot in Lynchburg that was condemned for canal purposes in 1836 originally embraced about 2 acres. The changes in the channel of the river enlarged this to about 4 acres, when in 1896 the complainant sought to acquire title to the extra 2 acres, contending that the condemnation did not extend to the river. The defendant instituted chancery proceedings, setting up a title to the accretions and increment of land as well as to the tract originally conveyed. The Court of Appeals held that by purchase the defendant is a fee-simple riparian pro-

prietor, empowered to take, *jure alluvionis*; and that the water-line of James river, however much it may shift, is the boundary of the property purchased.

Lawlessness.—Lynchings of negroes occurred at Leesburg and at New Glasgow, Amherst County, the victims being accused of the murder of white men. Satisfactory evidence was not forthcoming of the guilt of the man who was executed at Leesburg.

Political.—The convention called to frame a new Constitution for Virginia completed its work, and on May 29 proclaimed it by a vote of 48 to 38, after it had voted down by decisive majorities propositions to submit the work of the convention to the present or full electorate and to the new or restricted electorate. Accordingly, Gov. Montague issued his proclamation on June 29 to the people of Virginia to recognize and support the new instrument, and also called the Legislature in extra session on July 15 to put the Constitution into effect. The following are the most important sections:

In controversies respecting property, and in suits between man and man, trial by jury is preferable; but the General Assembly may limit the number of jurors for civil juries in circuit and corporation courts to not less than 5 in cases now cognizable by justices of the peace, or to not less than 7 in cases not so cognizable.

Every male citizen of the United States, twenty-one years of age, who has been a resident of the State two years, of the county, city, or town one year, and of the precinct in which he offers to vote, thirty days, next preceding the election in which he offers to vote, has been registered, and has paid his State poll-taxes, as hereinafter required, shall be entitled to vote for members of the General Assembly and all offices elective by the people; but removal from one precinct to another, in the same county, city, or town shall not deprive any person of his right to vote in the precinct from which he has moved, until the expiration of thirty days after such removal.

There shall be general registrations in the counties, cities, and towns of the State during the years 1902 and 1903 at such time and in such manner as may be prescribed by an ordinance of this convention. At such registrations every male citizen of the United States having the qualifications of age and residence required in section 18 shall be entitled to register, if he be

1. A person who, prior to the adoption of the Constitution, served in time of war in the army or navy of the United States, of the Confederate States, or of any State of the United States, or of the Confederate States; or,

2. A son of any such person; or,

3. A person who has paid to the State for the year next preceding that in which he offers to register taxes aggregating at least one dollar on property owned by and assessed against him; or

4. A person able to read any section of this Constitution submitted to him by the officers of registration and to give a reasonable explanation of the same; or, if unable to read such section, able to understand and give a reasonable explanation thereof when read to him by the officers.

After the 1st day of January, 1904, every male citizen of the United States having the qualifications of age and residence shall be entitled to register, provided:

1. That he has personally paid to the proper officer all State poll-taxes assessed or assessable against him under this or the former Constitution for the three years next preceding that in which he offers to register, or, if he come of age at

such time that no poll-tax shall have been assessable against him for the year preceding the year in which he offers to register, has paid \$1.50, in satisfaction of the first year's poll-tax assessable against him; and,

2. That, unless physically unable, he make application to register in his own handwriting, without aid, suggestion, or memorandum, in the presence of the registration officers, stating therein his name, age, date, and place of birth, residence and occupation at the time and for the two years next preceding, and whether he has previously voted, and, if so, the State, county, and precinct in which he voted last.

Any person registered under either of the last two sections shall have the right to vote for members of the General Assembly and all offices elective by the people, subject to the following conditions:

That he, unless exempted by section 22, shall, as a prerequisite to the right to vote after the 1st day of January, 1904, personally pay, at least six months prior to the election, all State poll-taxes assessed or assessable against him, under this Constitution, during the three years next preceding that in which he offers to vote; provided that, if he register after the 1st day of January, 1904, he shall, unless physically unable, prepare and deposit his ballot without aid, on such printed form as the law may prescribe; but any voter registered prior to that date may be aided in the preparation of his ballot by such officer of election as he himself may designate.

No person who, during the late war between the States, served in the army or navy of the United States, or the Confederate States, or any State of the United States, or of the Confederate States, shall at any time be required to pay a poll-tax as a prerequisite to the right to register or vote; nor shall the collection of the State poll-tax assessed against any one be enforced by legal process until the same has become three years past due.

Sec. 23 enumerates the persons disqualified for voting, such as obtain in most States with the addition of persons who, while citizens of this State, after the adoption of this Constitution, have fought a duel with a deadly weapon, or sent or accepted a challenge to fight such a duel, either within or without this State, or knowingly conveyed a challenge, or aided or assisted in any way in the fighting of such duel.

All elections by the people shall be by ballot; all elections by any representative body shall be *viva voce*, and the vote recorded in the journal thereof.

The General Assembly may prescribe a property qualification not exceeding \$250 as a prerequisite for voting for other than members of the General Assembly.

Every person qualified to vote shall be eligible to hold any office of the State, or of any county, city, town, or other subdivision of the State, except as otherwise provided in this Constitution. Men and women eighteen years of age shall be eligible to hold the office of notary public.

The legislative power of the State shall be vested in a General Assembly.

The Senate shall consist of not more than 40 and not less than 33 members, elected quadrennially on the Tuesday succeeding the first Monday in November.

The House of Delegates shall consist of not more than 100 and not less than 90 members, elected biennially.

The members of the General Assembly shall receive for their services a salary to be fixed by

law; but no act increasing such salary shall take effect until after the end of the term for which the members voting thereon were elected.

The General Assembly shall meet once in two years on the second Wednesday in January next succeeding the election of the members of the House of Delegates, to continue sixty days; but with the concurrence of three-fifths of the members elected to each house, the session may be extended for a further period not exceeding thirty days.

The Governor shall hold office for a term of four years, to commence on the 1st day of February next succeeding his election, and be ineligible to the same office for the term next succeeding that for which he was elected.

The Supreme Court of Appeals shall consist of 5 judges, any 3 of whom may hold a court. It shall have original jurisdiction in cases of *habeas corpus*, *mandamus*, and prohibition; but in all other cases in which it shall have jurisdiction it shall have appellate jurisdiction only.

The assent of at least 3 of the judges shall be required for the court to determine that any law is, or is not, repugnant to the Constitution of this State or of the United States; and if, in a case involving the constitutionality of any such law, not more than two of the judges sitting agree in opinion on the constitutional question involved, and the case can not be determined, without passing on such question, no decision shall be rendered therein, but the case shall be reheard by a full court.

The judges of the Supreme Court of Appeals shall be chosen by the joint vote of the two houses of the General Assembly. They shall, when chosen, have held a judicial station in the United States, or shall have practised law in this or some other State for five years. They shall be elected for terms of twelve years.

The General Assembly shall set apart as a permanent and perpetual literary fund the present literary fund of the State; the proceeds of all public lands donated by Congress for public free-school purposes; of all escheated property; of all waste and unappropriated lands; of all property accruing to the State by forfeiture and all fines collected for offenses committed against the State and such other sums as the General Assembly may appropriate.

The State tax for schools may not be less than 1 mill on the dollar, nor more than 5 mills.

Each separate school district may raise additional sums by a tax on property not to exceed in the aggregate 5 mills on the dollar in any one year for establishing and maintaining schools, with the provision that primary schools be maintained at least four months in the year before schools of a higher grade receive appropriation.

The General Assembly may provide for the compulsory education of children between the ages of eight and twelve years.

White and colored children shall not be taught in the same school.

A board of directors, consisting of 5 members, is charged with the management and control of the State Penitentiary and prison farms. A special board of directors, consisting of 3 members, is provided for each of the 4 State hospitals, and these special boards are constituted a general board for the control of all the hospitals for the insane in the State.

A permanent commission to consist of 3 members, to be known as the State Corporation Commission, appointed by the Governor, subject to confirmation by the General Assembly, is to hold office for six years. One of the commissioners

must have the same qualifications that are prescribed for judges of the Supreme Court of Appeals. The commission becomes a department of the government through which shall be issued all charters and amendments or extensions thereof for domestic corporations, and all licenses to do business in this State to foreign corporations, and through it will be carried out all the provisions of the Constitution, and of the laws made in pursuance thereof, for the creation, visitation, supervision, regulation, and control of corporations chartered by and doing business in the State. It shall from time to time prescribe and enforce against all transportation and transmission companies such rate charges, classifications of traffic, and rules and regulations, and shall require them to establish and maintain all such public service, facilities, and conveniences as may be reasonable and just. It has the power and authority of a court of record, to administer oaths, to compel the attendance of witnesses, and the production of papers, to punish for contempt, and to enforce compliance with any of its lawful orders or requirements. Appeals from its rulings may be taken in the manner in which appeals are taken to the Supreme Court of Appeals from the inferior courts.

Free passes are forbidden except to members and officers of the State Corporation Commission for their personal use while in office.

The General Assembly shall enact laws preventing all trusts, combinations, and monopolies inimical to the public welfare.

The General Assembly may levy a tax on incomes in excess of \$600 a year; may levy a license tax upon any business that can not be reached by the ad valorem system; and may impose franchise taxes.

The General Assembly shall levy a capitation tax of, and not exceeding, \$1.50 a year on every male resident of the State not less than twenty-one years of age, except those pensioned by this State for military services.

Railroad and canal property must be assessed for taxation, like any other property; and the companies shall also pay a franchise tax of 1 per cent. on gross receipts.

Amendments to the Constitution may be proposed in the General Assembly, and if they shall be agreed to by a majority of the members they shall be referred to the General Assembly at its first regular session held after the next general election of members of the House of Delegates, and shall be published for three months previous to the time of such election. If, in the General Assembly so next chosen as aforesaid, they shall be agreed to by a majority of all the members elected to each house, then the General Assembly must submit them to the people, and if the people shall ratify them by a majority of the electors qualified to vote for members of the General Assembly voting thereon, such amendments shall become part of the Constitution.

WASHINGTON, a Pacific coast State, admitted to the Union Nov. 11, 1889; area, 69,180 square miles. The population, according to each decennial census since admission, was 349,390 in 1890 and 518,103 in 1900. Capital, Olympia.

Government.—The following were the State officers in 1902: Governor, Henry G. McBride, in place of John R. Rogers, deceased (see Annual Cyclopædia for 1901, page 464); Secretary of State, S. H. Nichols; Treasurer, C. H. Maynard; Auditor, J. D. Atkinson; Attorney-General, W. B. Stratton; Land Commissioner, S. A. Calvert; Superintendent of Public Instruction, R. B. Bryan; Adjutant-General, E. H. Fox—all Republic-

ans except Rogers and Fox, who are Democrats; Chief Justice of the Supreme Court, James R. Reavis; Associate Justices, R. O. Dunbar, Mark A. Fullerton, T. J. Anders, Wallace Mount, W. H. White, H. E. Hadley; Clerk, C. S. Reinhart—all Republicans except Reavis and White, who are Democrats.

State officers are chosen for terms of four years, at the time of the presidential elections. The Legislature meets biennially in January of odd-numbered years. It was composed of 34 Senators and 80 Representatives, until at the regular session of 1901 the number of Senators was increased to 42 and the number of Representatives to 93.

Valuation.—The taxable wealth of the State for 1902, as equalized by the State board, is as follows: Land, including town and city lots, exclusive of improvements, \$151,460,883; improvements on land, town and city lots, \$46,740,031; land, town and city lots, including improvements, \$198,200,934; personal property, \$45,888,131; railroad-tracks, \$16,851,073; total valuation of real and personal property, including railroad-tracks, \$260,940,138. The board, at the close of its meeting, Sept. 22, announced the general fund levy, as fixed at $2\frac{1}{2}$ mills of the valuation fixed by the State Board. The military-fund, interest-fund, and school-fund levies are fixed by law at one-fifth of a mill each for interest and military purposes, and 5 mills for school fund.

The total amount that will be raised for State purposes this year is \$1,982,718, in addition to the amounts realized from interest on the permanent school funds, from the tide-land sales and rentals, and from 10 per cent. of liquor licenses. The amount expected to be raised for each fund is: General fund, \$574,067; school fund, \$1,304,701; interest fund, \$52,189; military fund, \$52,189.

Finances.—The quarterly report of the State Treasurer showed a cash balance in his hands at the close of business, Dec. 31, 1902, of \$986,742.17. Some of the principal funds into which this amount was divided were: General fund, \$2,835.12; military fund, \$98,106.48; school fund, \$344,368.63; current school fund, \$166,887.62; revolving fund, Penitentiary, \$152,044.81; State Library, \$20,446.55; Scientific School, \$26,033.77; State Capitol Commission, \$97,247.86.

The biennial report of the Treasurer, issued in October, shows that the indebtedness of the State of Washington has been reduced \$131,496.34 in the past two years.

The following is the statement of indebtedness at the close of the last biennial period, Sept. 30, 1902: General fund warrants outstanding, \$45,741.19; interest on same, estimated, \$192.65; State bonds held by permanent school fund, \$1,165,000; accrued interest on same, \$78,092.68; State funding bonds outstanding, \$60,000; accrued interest on same, \$875.04; total, \$1,349,631.56; less cash on hand in general fund, \$5,161.62; actual indebtedness, \$1,344,469.94; indebtedness reduced, \$131,496.34.

The report shows that the greatest part of the indebtedness, which in 1900 was in general-fund warrants drawing 5 per cent. interest, which interest was paid to individuals and warrant buyers, has been transferred to State bonds, which draw but $3\frac{1}{2}$ per cent. interest, and the interest goes to the permanent school fund. More than half of the State funding bonds, which were held by Eastern investment companies and drawing 5 per cent. interest, have also been wiped out.

The Commissioner of Public Lands, S. A. Calvert, issued a comparative statement of the volume of business transacted by his department, which discloses that during the past two years the

receipts from the principal money-producing department of the State Government exceeded the receipts during the preceding two years by more than one-third, the increase amounting to \$300,000 in round numbers. The receipts for the two years ending Sept. 30, 1902, were \$1,204,005.89.

Products and Resources.—The Crop Reporter, published by authority of the Secretary of Agriculture of the United States, gives the following statistics of Washington in acreage, production, and value of the principal farm crops in 1902: Corn, acreage 10,014, production 230,322 bushels, total value \$149,709; winter wheat, acreage 308,315, production 7,923,696 bushels, total value \$5,150,402; spring wheat, acreage 757,139, production 15,748,491 bushels, total value \$10,236,519; oats, acreage 154,006, production 7,115,077 bushels, total value \$3,486,388; barley, acreage 140,075, production 6,121,278 bushels, total value \$2,815,788; rye, acreage 2,910, production 51,798 bushels, total value \$33,151; potatoes, acreage 31,288, production 4,255,168 bushels, total value \$1,616,964; hay, acreage 322,864, production 739,359 tons, total value \$6,602,476.

On Nov. 29 State Grain Inspector J. W. Arrasmith presented his biennial report. It showed that in the period between Sept. 1, 1900, and Aug. 31, 1902, the number of cars of wheat inspected at the 3 points of inspection in the State—Tacoma, Seattle, and Spokane—was 37,541, or approximately 35,268,540 bushels; oats, 2,265 cars or 3,125,700 bushels; barley, 1,432 cars or 1,346,290 bushels; rye, 28 cars or 33,100 bushels; total amount of grain, 41,266 cars or 38,763,620 bushels.

A revised bulletin of the Census Office giving statistics of manufactures shows that in 1900 there were in Washington 1,814 manufacturing establishments, with an invested capital of \$25,178,732 and a total value of manufactured product for the census year of \$40,645,726.

The Director of the United States Mint estimated the State's production of gold in 1902 as amounting to \$434,100, and of silver \$360,400.

Mining in Washington is slowly recovering from the depressing effect of the temporary diversion of capital to Alaska. In the year ending Aug. 25 the Seattle Assay Office received the following quantities of gold and silver from neighboring fields: Alaska, \$3,476,759; Idaho, \$5,670; Oregon, \$4,904; Washington, \$68,684; British Columbia, \$627,678; Yukon Territory, \$11,097,118.

The hop-crop for 1902 was estimated at 38,000 bales.

The value of the output of the fisheries industry for 1902 is estimated by Fish-Commissioner T. R. Kershaw in his annual report at \$6,730,870, including salmon packed, fresh, salt, and smoked fish, shell-fish, and all fish products. The number of cases of salmon packed in the year is given at 777,484. The commissioner reports that as a total this is under the output of last year.

The report shows that there is invested in the industry in the State of Washington the sum of \$6,819,818, an increase of \$2,457,348 in the past two years. There are 7,615 whites and 2,055 Chinese and Japanese employed in the industry, and their annual earnings are \$2,502,550.

Possibly one of the most important subjects touched upon in the entire report is the declaration of Mr. Doane, that the several years' experiments have developed the fact that Eastern oysters will not propagate in Washington waters under natural conditions. The Eastern oysters will spawn profusely, but the spat will not set or thrive. The greatest difficulty to overcome is the low temperature of the waters of the Sound. The average temperature of the water is about 10° lower

than in the Atlantic spawning-grounds, and the Sound waters are also subject to sudden changes that result in a much greater range of temperature than is conducive to the life of the Eastern oyster spat.

Education.—The apportionment of school funds made for the quarter ending March 31, 1902, was the largest in the history of the State, being at the rate of \$0.0485 per day's attendance. The total amount apportioned was \$692,478.50. King County received the largest sum, \$127,266.81.

The number of school-children in the State in 1901 was 152,541; in 1902, 167,902. The number enrolled in the public schools in 1901 was 123,391; in 1902, 136,645.

Charities and Corrections.—The first biennial report of the State Board of Control was issued in December, and covered six months of the administration of the Board of Audit and Control and eighteen months of the present board.

From the tables prepared by the board the following figures in relation to the population and average daily cost per capita are taken: Western Washington Hospital, average number during term, 747.15; average daily cost per capita, \$0.3548; Eastern Washington Hospital, average number, 366.48; average cost, \$0.4139; State Penitentiary, average number, 514.50; average cost, \$0.3470; State Reform School, average number, 168.75; average cost, \$0.3323; State Soldiers' Home, average number, 192.04; average cost, \$0.4686; State School for Defective Youth, average number, 157.50; average cost, \$0.5061.

There has been an increase at all the institutions except the State Reform School and the Soldiers' Home, which have shown a small decrease.

The increase in the population of the State Penitentiary, amounting to 29 per cent. from April, 1901, to April, 1902, is explained by the Board of Control as due to the fact that the population of the State has largely increased, particularly in the cities, where crime is more prevalent. King County alone sent 100 persons to the Penitentiary this year.

Congressional Appropriations.—Somewhat more than \$2,500,000 were appropriated by Congress for public works in this State at the session in June. In addition to the direct appropriation, the indirect Government expenditures bring the State's allotments up to more than \$3,000,000. Approximately \$1,000,000 was appropriated for river and harbor improvements in the State, and a total of \$1,112,500 for Puget Sound Navy-Yard. Nine thousand dollars was appropriated to make timber tests under Government supervision, \$59,200 for lighthouses and other aids to commerce, \$100,000 each for Government building sites at Tacoma and Spokane, and \$150,000 additional for Seattle's public building.

Legal Decisions.—The Supreme Court handed down a decision that a Japanese can not become a citizen of the United States. The point came up in the matter of the admission of a young Japanese lawyer to the bar of the State, there being a law making citizenship a qualification for admission. The main point was whether a native of Japan could become a citizen of the United States, and whether the Superior Court of Pierce County acted within its jurisdiction in granting naturalization papers to the Japanese in question. The court decided that the two races mentioned by the Constitution as now eligible to citizenship under the general naturalization laws are white persons and persons of African (negro) descent and nativity. When the naturalization law was enacted the word "white" applied to the race commonly referred to as the Caucasian race.

The State of Washington failed to secure a recognition of its claims in the contest over the estate of John Sullivan in King County, an application for a writ of mandamus directed against the Superior Court of King County being denied by the Supreme Court. The estate, valued at \$500,000, was contended for by a large number of alleged heirs.

The contention of the State of Washington was that Sullivan, who died intestate, left no heirs to his property, and that it therefore had escheated to the State. The Supreme Court held that the proper remedy is by appeal from the order of the court denying the State's petition.

In August, prior to the State elections, the Supreme Court handed down two decisions involving the same questions, and for that reason consolidated at the argument. They were applications for a writ of mandamus to the Governor, requiring him to issue his proclamation for the election of a Governor, a Lieutenant-Governor, and 3 Justices of the Supreme Court at the general election in November. It appears from the petitions that John R. Rogers and Henry McBride were, at the general election held in November, 1900, elected to the offices of Governor and Lieutenant-Governor, respectively. That on Dec. 26, 1901, the Hon. John R. Rogers died, and respondent Henry McBride thereupon took the oath of office and became acting Governor. The relator in the suit maintained that there was a vacancy in the office of Governor and also of Lieutenant-Governor. Furthermore, the Legislature of 1901 having passed an act increasing the number of judges of the Supreme Court from 5 to 7, appointments were made to fill the vacancies created by the act. The relator further maintained that the terms of office of the 2 judges so appointed would expire on the second Monday of October, 1902, and complained that the Governor refused to issue his proclamation for the election of a Governor, Lieutenant-Governor, and 2 Supreme Court Justices, at the general election, held in November.

The mandamus proceedings, approved by the Governor, were instituted to test the validity of the legislative act, and the questions concerning the governorship and lieutenant-governorship were included in order to secure an opinion concerning them. The first question presented was: Does the death of the Governor cause a vacancy in that office which may be filled by an election for the unexpired term, and, if not, does the office of Lieutenant-Governor become vacant when the incumbent assumes the duties of Governor?

The court argued that "it is not shown how an office can be vacant and yet there be a person, not the deputy, or *locum tenens*, of another, empowered by law to discharge the duties of the office, and who does in fact discharge them. It is not explained how, in such a case, the duties can be separated from the office, so that he who discharges them does not become an incumbent of the office. And, in the second place, how a person can fill the office of Governor without being Governor." Its decision was: "The Constitution having provided that in case of the death of the Governor the duties of the office shall devolve upon the Lieutenant-Governor, there is no vacancy in the office of Governor. When the Lieutenant-Governor, by virtue of his office and of the command of the Constitution, assumed the duties of Governor on the death of Gov. Rogers, the office of Lieutenant-Governor did not thereby become vacant, but the officer remained Lieutenant-Governor entrusted with the powers and duties of Governor."

As to the incumbency of the Lieutenant-Governor

or, the court continued: "It is argued, however, that since it is made the duty of the Lieutenant-Governor under the Constitution to be presiding officer of the State Senate, and as such to approve all bills passed by that body, he must as Governor review and approve or reject bills which as Lieutenant-Governor he has already approved. These duties are no doubt inconsistent, but this argument we think is fully met by another provision of the Constitution which provides in substance that when the Lieutenant-Governor shall not act as Governor the Senate shall choose a temporary president. The Lieutenant-Governor, therefore, when the duties of Governor devolve upon him, is relieved of the duties of presiding officer of the Senate."

The Legislature of 1901 passed an act increasing temporarily the number of judges of the Supreme Court from 5 to 7, and authorizing the Governor to appoint 2 judges whose terms of office should end on the first Tuesday after the first Monday in October, 1902. The grounds upon which the mandamus proceedings were based were twofold; 1, That when the increase was once made, no decrease could be made; and 2, that the temporary increase made was in conflict with the constitutional term. The court's decision was as follows: "The act in question does not attempt to change or modify the terms of judges elected. It undertakes to create a vacancy and to terminate the vacancy at a fixed time before an election can take place and before an elective term may begin, and this we hold may be done because there is no fixed constitutional appointive term."

Forest Fires.—In Washington 434,000 acres were burned over by forest fires in June. It is estimated that 5,026,800,000 feet of Douglas spruce was killed, representing a value of \$5,026,800. Other timber to the value of \$725,000 was destroyed. The total loss in Cowlitz, Clark, and Skamania Counties, where the fires were most disastrous, was \$6,600,800, and in the other burned areas \$2,256,300.

Soldiers' Monument.—The Legislature of 1901 appropriated \$2,500 for the erection of a monument to commemorate the valor of the dead of the First Washington Regiment, United States Volunteers, of which there are 11 resting in the State plot in the Masonic Cemetery, in Olympia. The monument was placed in position in March. The pedestal is of native granite, 16 feet high, surmounted by a bronze figure of a United States volunteer in the service uniform worn in the Philippines, making the whole structure nearly 23 feet high. The bronze figure was modeled after a photograph of one of the members of the First Washington Regiment. The inscription is as follows: "The State of Washington erects this Monument in Memory of her Valiant Sons."

Political.—At the elections, Nov. 4, Hiram E. Hadley was chosen Associate Justice of the Supreme Court, and Francis W. Cushman, Wesley L. Jones, and Will E. Humphrey, members of Congress, all of whom are Republicans. Both branches of the Legislature chosen are Republican by large majorities.

The new Capitol annex was delayed in construction on account of the failure to receive steel trusses for the domes. Up to August the building had cost \$335,892.18, and the expenses of the commission had been \$2,293.33. This amount embraces the contracts already made; something in addition will be demanded for fixtures.

WEST VIRGINIA, a Southern State, admitted to the Union June 19, 1863; area, 24,780 square miles. The population, according to each decennial census since admission, was 442,014 in

1870; 618,457 in 1880; 762,794 in 1890; and 958,800 in 1900. Capital, Charleston.

Government.—The following were the State officers in 1901: Governor, A. B. White; Secretary of State, W. M. O. Dawson; Treasurer, Peter Sillman; Auditor, Arnold C. Scherr; Attorney-General, Romeo H. Freer; Superintendent of Schools, Thomas E. Miller; Adjutant-General, S. B. Baker; Librarian, S. W. Stark; Bank Examiner, C. B. Kefauver; Secretary of the Board of Agriculture, J. O. Thompson; Labor Commissioner, I. V. Barton; Mine Inspector, J. W. Paull; Game and Fish Warden, E. F. Smith; Presiding Judge of the Supreme Court of Appeals, M. H. Dent; Associate Judges, Henry Brannon, H. C. McWhorter, George Poffenbarger. All the State officers are Republicans except Judge Dent.

State officers are elected for terms of four years at the time of the presidential elections, and are inaugurated on the 4th of the following March. The Legislature meets biennially in January of the odd-numbered years.

Finances.—The receipts in the Treasurer's office for the fiscal year ending Sept. 30, 1902, were: State fund, \$1,804,738.25; general school fund, \$458,903.16; school fund, \$85,346.48; total, \$2,348,987.89. The disbursements were: State fund, \$1,670,346.54; general school fund, \$460,058.19; school fund, \$162,129.10; total, \$2,292,533.86. In addition to this there was to the credit of the State, Sept. 30, 1902, stocks, bonds, other investments of the school fund, \$650,336.44. The amount paid out for criminal charges for the year was \$180,438.45.

The chief sources of income for the year ending Sept. 30, 1902, were these: Licenses, \$324,321; corporation licenses on charter, \$399,845; railroad taxes, \$101,321.45; interest on deposits and stocks and bonds, \$72,675; sundries, fines, etc., \$29,324.42; capitations, \$163,415.75; land, \$298,875.25; buildings on land, \$45,254.20; lots, \$42,109.50; buildings on lots, \$89,340.54; intangible personal property, \$140,250.15; tangible personal property, \$75,890.90.

Militia.—The Adjutant's report for 1902 gives an enrolment of 1,545 men in the State militia, with 156,000 available.

Education.—In 1902 there were employed 8,445 teachers in the public schools, which numbered 6,478. The enrolment was 276,234; the total cost of the schools was \$2,890,500; the enrolment of the State University at Morgantown and the two preparatory schools at Montgomery and Keyser was 1,675, the university enrolment being 899. There are 6 normal schools, chief among which is the Carshall Normal School at Huntington, which had an enrolment of 630 students alone in 1902, that being the largest number that ever attended this institution.

Public Institutions.—The State in 1902 maintained the following institutions: Asylum for Incurables at Huntington; insane asylums at Weston and Spencer; Deaf, Dumb, and Blind Asylum at Romney; Boys' Reform School at Pruntytown; Miners' Hospitals at Welch, McKendree, and Fairmont; colored institutions at Bluefields and Kanawha; Home for Girls at Salem; Storer College at Wheeling.

The Asylum for Incurables had 3 fine new buildings added in the year, as well as large powerhouses, electric-light plants, laundries, etc., which together cost \$85,000.

In 1902, 250 United States prisoners were received at Moundsville, and 320 State prisoners were received at the Moundsville Prison. The expenses of the institution were much less than the profits from its various workshops. This

State is one of the few in the Union whose prison is more than self-supporting.

The West Virginia Historical and Antiquarian Society reports for the year 1902 more than 1,100 volumes, 950 pamphlets, and many valuable manuscripts and maps, and a large collection of valuable autographs. The museum contains nearly 20,000 relics and curios and a fine exhibit of the timber, coal, marble, granite, building-stones, fire and brick clay, and other products of the State, with specimens of its manufactures.

Resources and Profits.—West Virginia stands second in the production of coal in 1902; 26,000,000 tons of coal were mined, 415 mines being in operation in 54 counties. More than 400 electrical machines were used in various mines during the year, which greatly reduced the number of miners. Almost one-eighth more coal would have been produced this year had it not been for the great strike of the United Mine-Workers, which extended over a period of nearly four months, during which time almost every mine in the New River field, the greatest coal-producing territory in the State, was idle, and almost half of those in the great Flat Top and Norfolk and Western fields. The average wages of a miner in West Virginia is about \$52 a month.

The United States Steel Corporation is just completing one of the largest operations almost in the world in McDowell County, not far from the town of Welch. It will employ, in 1903, almost 10,000 men alone, and will build two branch lines of railway connecting with the Norfolk and Western in the Flat Top field. It will have the greatest coke-producing plant in the world, outside of Pennsylvania. In the production of coke, West Virginia is nearing the first rank. In 1902 nearly 3,750,000 tons of coke were produced, valued at more than \$4,000,000, the ovens being in operation two hundred and eight days. The State stands first in the production of petroleum, 22,000,000 barrels being produced in 1902. The development of oil is drifting to the southern section of the State, and the Parkersburg field promises soon to rival that of the Sistersville territory. Great oil-wells were discovered through the year in the southern tier of counties bordering on the Ohio and Big Sandy rivers, and some fine gas-producers have also come in during the year in the southern section of the State.

The greatest source of wealth of the State is its timber, there being fully 15,000 square miles of fine timber lands. The largest mills in the world for hardwood are in Pocahontas, Randolph, and McDowell Counties in this State. The output of poplar for the year was 180,000,000 feet; of spruce, 75,000,000; of oak, 50,000,000.

Fruit-growing is attracting much attention, some of the largest orchards in the central west being in Randolph and Mineral Counties, especially in the former.

Railroads.—The State has more than 3,500 miles of railway in operation, and surveys were completed in 1902 which will add fully another thousand miles. The chief lines to run surveys through the State in 1902 were the Wabash and Norfolk and Western. The former will have a line extending entirely across the State, while the latter is building a branch 120 miles along the Tug and Big Sandy rivers.

Political.—In 1902 the State elected 5 Congressmen, a new congressional district having been added by the last apportionment. The Congressmen elected were all Republicans.

WISCONSIN, a Western State, admitted to the Union May 29, 1848; area, 56,040 square miles. The population, according to each decen-

nial census since admission, was 305,391 in 1850; 775,881 in 1860; 1,054,670 in 1870; 1,315,497 in 1880; 1,688,880 in 1890; and 2,069,042 in 1900. Capital, Madison.

Government.—The following were the State officers in 1902: Governor, Robert M. La Follette; Lieutenant-Governor, Jesse Stone, died May 16, 1902; Secretary of State, William H. Froehlich; Treasurer, James O. Davidson; Attorney-General, Emmett R. Hicks; Superintendent of Education, Lorenzo D. Harvey; Railroad Commissioner, Graham L. Rice; Insurance Commissioner, Emil Giljohann; Adjutant-General, C. R. Boardman; Dairy and Food Commissioner, H. C. Ademas; Labor Commissioner, Halford Erickson; Bank Examiner, E. I. Kidd; Health Commissioner, F. M. Schultz; Fish and Game Warden, J. T. Ellarson; Tax Commissioners, Norman S. Gilson, George Curtis, W. J. Anderson; Forest Warden, C. E. Morley; Chief Justice of the Supreme Court, J. B. Cassoday; Associate Justices, John B. Winslow and Joshua E. Dodge (Democrats), Charles V. Bardeen, and Roujet D. Marshall; Clerk, Clarence Kellogg. With the exceptions mentioned, all are Republicans.

State officers are elected for terms of two years in November of the even-numbered years. The Legislature meets biennially in January of the odd-numbered years. It consists of 33 Senators and 100 Representatives.

Finances.—The balance in the general fund at the close of the year was \$235,884.54. In the last two years no transfer from the trust funds to the general fund was made for meeting temporary deficits. The treasury was able to keep the trust funds fully and profitably invested. In order to maintain this condition, it was found necessary by the executive to delay the expenditure of some extraordinary appropriations in 1901, when legislative expenses were met, and until revenues were received for 1902.

The State Tax Commission issued its report, Oct. 24, on the assessed valuation for the year 1902. The total value of personal property for the State was \$277,969,027; and the value of all property \$1,504,346,000.

Banking.—The State Bank Examiner's statement of the condition of the banks at the close of business on Sept. 15 included both State and private banks. The loans and discounts were \$55,133,591.63; unpaid capital, \$974,233.74; overdrafts, \$740,252.55; banking house, \$1,252,524.88; real estate, \$833,055.62; furniture, \$368,561.10; securities, \$6,597,811.66; cash items, \$247,488.32; checks, \$498,496.12; due from banks, \$13,910,953.71; currency, \$2,040,305.74; specie, \$1,872,630.70; nickels and cents, \$24,688.42; revenue stamps, \$120,738.87; total, \$84,615,453.17. Liabilities—Capital stock, \$8,684,48.90; surplus, \$1,544,808.64; undivided profits, \$1,441,693.01; deposits, \$24,536,504.13; certificates, \$32,030,888.36; saving deposits, \$13,837,812.58; due banks and bankers, \$1,585,265.76; dividends unpaid, \$3,859.43; certified checks, \$39,569.76; cashier's checks outstanding, \$152,414.93; bills rediscounted, \$571,064.86; bills payable, \$187,048.73; total, \$84,615,453.17.

Education.—The report of the Board of Regents of Normal Schools, issued in December, gave the following as the sources from which the income for the support of the normal schools of the State is derived: A fixed annual appropriation; special appropriations; interest on capital fund; tuitions; book rents, sales of all kinds, which is placed by law under the entire control of the board.

In the biennial period from July 4, 1900, to July 1, 1902, inclusive, there was distributed a

total of \$689,333.31, being \$483,084.71 more than in the preceding biennium. This excess is shown by an increase of \$48,579.02 in the item of buildings, and an increase of \$20,535.19 is also shown in salaries.

The report shows a slight decrease in attendance during the past two years.

The annual report of the State Superintendent, Dec. 4, showed that there was \$1,681,636.10 to be distributed to the various schools and colleges. The rate per capita for each person of school age residing in the State, June 30, was \$2.236.

The entering class at the State University in September was the largest in its history. The total registration, Sept. 25, was 1,711, compared with 1,657 for the corresponding time last year; number of new students was 704, against 653 last year. The completion of Agricultural Hall gives the university an exceptionally fine equipment. It cost \$150,000, and is believed to be the finest structure of the kind in the United States. It can easily accommodate 750 students. The largest increase for the year was in the college of engineering, for which more than 600 entered. One of the new features in the engineering college this year was the introduction of a five-year course, the aim of which is to add a general education in art and literature to a thorough scientific education.

Industries.—From statistics collected in December it was shown that the manufacture of cheese increased largely in 1902. There were 1,600 cheese factories in the State, which manufactured more than 70,000,000 pounds of cheese that year, valued at \$7,000,000. Wisconsin manufactured one-fourth of the cheese produced in the United States. The growth of the industry was especially shown in the northern part of Wisconsin.

In wood-pulp, Wisconsin is fifth in output—nearly \$11,000,000 worth.

The tobacco-crop was reported, Dec. 6, to be the largest ever grown in the State, both as to acreage and the number of cases. The acreage approximated 35,000. The damage from worms and grasshoppers was very slight. Conservative buyers estimated the yield at $4\frac{1}{2}$ cases, or 1,350 pounds, per acre.

In carriage and wagon making Wisconsin, with its 436 establishments, is surpassed only by Pennsylvania, New York, and Ohio. The notable thing is the increase since 1890—from 158 establishments. The capital engaged in this industry is \$6,200,000.

The State ranks fourth in leather, the value of the product being \$20,000,000, nearly twice what it was ten years ago. Half of the product comes from Milwaukee.

In agricultural implements Wisconsin stands fourth, the value of the product being nearly \$8,000,000. Racine is exceeded in the country by only Chicago and Springfield.

Railroads.—The average net earnings of the railroads for Wisconsin in 1900, 1901, and 1902 were \$15,483,762 each year; the net earnings of the Northwestern and St. Paul systems for 1902 amounted to \$11,331,368.44 for the road in Wisconsin.

Agriculture.—The secretary of the State Board of Agriculture in his annual crop report, compiled in December, showed that less than one-third of the corn-crop of Wisconsin for the past season was marketable. The acreage and yield were about the same as in the previous year, but the quality was inferior.

Only 30 per cent. of the corn reported could be classed as "merchantable."

Of the 169,795 farms in Wisconsin, 146,799, or 86.5 per cent., are operated by their owners; 10,249, or 6 per cent., by tenants who pay rent in cash; and 12,747, or 7.5 per cent., by tenants who work on shares.

Charities and Corrections.—The State Board of Control gives a statement of the average population and the per capita cost per week in each of the several charitable, penal, and reformatory institutions under the supervision of the board, from Oct. 1, 1901, to June 30, 1902. The inmates in the State Hospital for the Insane numbered 413; the per capita cost per week was \$5.40; in the Northern Hospital for the Insane 599, the per capita cost was \$4.51; in the School for Deaf 202, the per capita cost was \$4.69; in the School for Blind 111, the per capita cost was \$6.03; in the Industrial School for Boys, 399, the per capita cost was \$4.39; in the State Prison 562, the per capita cost was \$3.28; in the State School 147, the per capita cost was \$5.78; in the Home for Feeble-Minded 484, the per capita cost was \$3.59; in the State Reformatory 149, the per capita cost was \$5.16. The increase in the number of insane in the State is not accurately shown here because of the system of transferring the care of this class to county asylums. The number of patients in county asylums is 3,684 and the number cared for in the Milwaukee Hospital for Insane is 527.

Fish and Game.—The report of the State Fish and Game Warden shows the operations of that department from May 22, 1901, to Dec. 31, 1902. Instead of being a tax upon the treasury, this department has become a source of revenue to the school funds of the State, approximating \$5,000 a year. At the same time the department has furnished a more adequate protection to fish and game than has been heretofore known. This protection has been afforded solely through collection of license fees from those who are benefited by the service. In the last two years the State Warden shows the protection to fish and game by increasing his force during those seasons when the laws are most subject to violation and by reducing the number of deputies after the close of the deer-hunting season and while inland lakes are not available to net fishermen. One result of the more strict enforcement of the law is a material increase in license fees. In the past year there were 270 arrests for violation of the fish and game laws; and nearly \$5,000 was collected through fines and by sale of confiscated fish and game.

Legal Decisions.—On Jan. 31 the Supreme Court of the State entered an order permitting the Attorney-General to file an information and begin an action to restrain the receiver of the Bayfield and Iron River Railway from tearing up the track and dismantling the road. This is one of the most important decisions rendered by the court in recent years. An action was begun by the federal court to foreclose the mortgage upon said road. The usual judgment of foreclosure and sale was entered. The special master appointed to make the sale was not able to sell the road for the price designated by the court. The judgment apparently threatened a conflict between the Wisconsin courts and federal authority. But a decision was handed down, April 4, by the United States Supreme Court, at Madison, asserting that jurisdiction in the matter rested with the federal court alone, and an order was made directing him to take up the track and sell the rails, ties, etc., thus destroying a public highway. The citizens of Bayfield County, claiming that such order to destroy the road was void, then made application to the Circuit Court of

said county for an order enjoining the receiver from tearing up the road, and the court granted the application. The special master, upon attempting to tear up the road, was met by the sheriff of Bayfield County with the injunction, and prevented from dismantling the road. The sheriff, district attorney, and six other citizens of Bayfield County were then brought before the federal Circuit Court upon contempt proceedings, and were adjudged guilty of contempt of court, the sheriff and district attorney being punished by imprisonment in the county jail for sixty days and the other 6 fined \$250 each.

On March 14 Judge Siebecker rendered a decision in the case of *The State of Wisconsin ex rel. Peter Batz et al. vs. C. A. Lewis, village clerk, etc.* The relators, as owners of the Farmers' and Merchants' Bank of Sun Prairie, were assessed \$25,000 on their personal property under the head of "Money, notes, mortgages, etc." They asked to have their assessment reduced to about \$3,000. The board of review released them entirely from the assessment on moneys, notes, bonds, mortgages, etc., and assessed them \$25,000 on the capital stock of the bank. They immediately brought certiorari proceedings in the Circuit Court to set aside this assessment, declaring that they had had no capital stock of the bank, except real estate, and were not liable to taxation again upon this property. It was contended on the part of the village that the law makes capital stock of a bank personal property, and that under the statute it must be assessed as such in municipality where the bank is located. Judge Siebecker sustained the contention of the attorneys for the village.

Oneida Indians at Green Bay.—The Secretary of the Interior, Oct. 16, reversed his ruling, made a year previously, in connection with the claim of the Wisconsin Oneida Indians to participate in the judgment rendered in favor of the New York Indians against the United States Government by the Supreme Court. By this ruling the Indians living at Green Bay will receive about \$300,000.

Political.—The platform of the Prohibitionists in convention in Milwaukee, June 19, declared that "annihilation and complete overthrow of the legalized saloon system, and the absolute prohibition of manufacture, sale, importation, exportation, and transportation of intoxicating liquors is the one paramount political issue before the American people."

The Socialist platform reaffirmed the allegiance of the party to the principles of international socialism, and its adherence to the national platform adopted at Indianapolis, and pledged itself to such changes as the nationalization of all trusts, national ownership of railroads, telegraph, telephone, express and steamship lines, and granting every wage-worker over sixty years of age who has earned less than \$1,000 a year a pension of not less than \$12 a month.

The Republican State Convention met in Madison, July 18, and nominated: For Governor, Robert M. La Follette; Lieutenant-Governor, James O. Davidson; Secretary of State, Walter L. Howser; State Treasurer, John J. Kempf; Attorney-General, L. M. Sturdevant; Superintendent of Public Instruction, Charles P. Cary; Insurance Commissioner, Zeno M. Host; Railway Commissioner, John W. Thomas; Register of Deeds, George W. Stover; Surveyor, W. L. Marcy. The platform adopted the last Republican State platform, and reaffirmed its principles; approved the administration of Gov. La Follette; regretted "the failure of the last Legisla-

ture to enact those laws pledged to the public by demands of the Republican party through the platform in its last State convention"; condemned "the pernicious activity of federal officials in this State, in flagrant disregard of civil-service laws, in attempts to forestall and control the convention action of the party to which they owe their preferment, and in assisting professional lobbyists before the Legislature and elsewhere in the work of defeating legislation in repudiation of party pledges." Its approved the work of the Tax Commission.

The Democratic State Convention met in Milwaukee, Sept. 3, and nominated: For Governor, David S. Rose; Lieutenant-Governor, John Wat-tawa; Superintendent of Public Instruction, Karl A. Mathie. Regarding trusts, the platform said: "We believe that the State should not grant of its sovereign power to corporations to be exercised in the unlawful oppression of the people, and we hereby pledge ourselves to cause to be instituted and prosecuted with vigor such proceedings in the courts by information, quo warranto, or otherwise, as shall be necessary to forfeit and annul the franchises of any corporation created under the laws of the State, which shall violate the law by unlawfully destroying competition or controlling the price of material or of business in this State."

All the Republican candidates for State offices were elected. The returns for Governor were: La Follette, Republican, 193,420; Rose, Democrat, 145,818; Seidel, Socialist-Democrat, 15,957; Drake, Prohibitionist, 9,657; Puck, Social-Labor, 787. The Republicans elected to the Senate numbered 30; the Democrats, 3. The Republicans elected to the Assembly numbered 75; the Democrats, 24.

WYOMING, a Northwestern State, admitted to the Union July 10, 1890; area, 97,800 square miles. Population in 1890, 60,705; in 1900, 92,531. Capital, Cheyenne.

Government.—The following were the State officers during the year: Governor, De Forest Richards; Secretary of State, Fennimore Chatterton; Treasurer, Henry G. Hay; Auditor, Le Roy Grant; Superintendent of Public Instruction, T. T. Tynan; Attorney-General, J. A. Van Orsdel; Adjutant-General, Frank A. Stitzer; Supreme Court—Chief Justice, Samuel T. Corn, Democrat; Associate Justices, Jesse Knight and Charles N. Potter, Republicans; Clerk, William H. Kelley, Democrat.

The term of State officers is four years, and they are elected in November of the second year following presidential elections. The Legislature meets in January of the odd-numbered years; the session is limited to forty days.

At the November, 1902, election all the State officers, except the Treasurer, who, under the Wyoming law, can not serve two consecutive terms, were reelected, being the first State officials to succeed themselves. All are Republicans, excepting the two named Democrats.

Finances.—The Treasurer's statement of Sept. 30, 1902, shows a net balance in the general fund, after allowing for outstanding warrants, of \$86,122.89, a net gain of \$54,552.18 over 1901. The Treasurer's cash statement is as follows: Cash balance Oct. 1, 1902, \$253,037.96; receipts from all sources, \$477,893.12; disbursements, \$388,636.53. This shows an increase in cash balance of \$34,331.56 over the cash balance of 1901; also a net gain in disbursements of \$1,759.70 during the year.

Every department of State, county, municipal, and school government in the State is on a cash basis. The bank deposits amount to \$8,385,426.27,

an increase in deposits over 1901 of \$2,157,764.27, giving Wyoming a per capita deposit of approximately \$88.

Valuation and Taxation.—The Treasurer's report shows the total valuation of property within the State in 1902 to be \$43,348,356; number of cattle 487,489, valuation \$8,175,072; number of sheep 3,296,318, valuation \$6,777,606.05. The taxes levied in 1902 were as follow: State, \$243,901.03; county, \$350,327.50; general school, \$61,049.33; interest on county bonds, \$64,292.79; library tax, \$3,742.29; judgment and State deficiency, \$8,763.23; special school, \$178,787.69; payment of school-bond interest, \$17,434.12; payment of county bonds, \$51,278.72. Total, \$974,576.70.

State Lands.—The rentals for State lands increased from \$86,618 in 1901 to \$92,337.09 in 1902. The receipts from sale of State lands given by Congress decreased from \$22,095 in 1901 to \$5,549 in 1902. The State owns 3,001,905.48 acres of school sections. Of this amount 1,297,001.36 acres have been leased.

Irrigation and Agriculture.—In 1902 3,415 miles of new ditches were constructed in the State, at a cost of \$1,873,284, and nearly 1,000,000 acres of arid land were reclaimed. The State's agricultural products were valued at \$4,275,000. Fruit orchards yielded handsome profits for the first time, and fruit-growing is now well established. There was produced in the State 33,000,000 pounds of wool, valued at \$3,960,000.

Mining.—The year was a banner year in copper-mining, although the output did not exceed that of 1901. Many new mines were opened up, however, and these properties are now ready to produce the red metal. Probably the most important event in the State's mining history was the completion of the Southern Wyoming Aerial Tramway, from the Ferris-Haggarty copper-mine at Battle Lake to Grand Encampment, 16 miles, it being the longest aerial tramway in the world; and the completion of a 500-ton concentrating and smelting plant at Grand Encampment. These improvements cost approximately \$1,000,000. The Standard Oil interests purchased heavily in the Wyoming copper-fields this year, and now own many of the copper-producers. The output of copper was valued at \$1,700,000; iron, \$413,000; silver, \$50,000; gold, \$783,000; platinum, \$3,100; soda, \$25,000; oil, \$212,000; coal, \$6,369,176.25. The total value of the mineral output was \$9,555,276.25.

Much progress was made in the development of the State's oil-fields. In the Uinta fields about 15 drilling-rigs were in operation, and 4 flowing-wells were established; in the Popo-Agie fields 2 producing-wells were added to the number, making 8 all told; in the Salt Creek fields 3 more producing-wells were secured, making 12 there; in the Bonanza fields a lubricating oil even richer than that found in the Uinta fields the previous year, which was pronounced the richest oil ever found in the world, was discovered. One well was drilled and a strong flow of oil encountered at a depth of less than 1,000 feet. English and other foreign syndicates are securing large tracts of oil-land in the State and have already begun operations.

URUGUAY, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 19 members, elected for six years in the departments which they represent by electoral colleges, and a House of Representatives containing 69 members, elected for three years by the votes of all adult male citizens who can read and write. The President of the republic is elected for four years. Juan Lindolfo Cues-

tas was elected President for the term beginning March 1, 1899. The Vice-President is Juan Carlos Blanco. The Cabinet at the beginning of 1902 was composed as follows: Minister of War and Marine, Gen. Pedro Callorda; Minister of the Interior and Justice, Eduardo McEachen; Minister of Agriculture, Industry, Public Instruction, and Public Works, Gregorio L. Rodriguez; Minister of Finance, Diego Pons; Minister of Foreign Affairs and Worship, Dr. German Roosen.

Area and Population.—The area of Uruguay is 72,110 square miles. The population was estimated on Dec. 31, 1900, at 930,680. Of 90,199 foreigners enumerated in the imperfect census of March 1, 1900, 24,720 were Brazilians, 24,349 Italians, 23,352 Spaniards, 9,140 Argentinians, 4,186 French, 994 Swiss, 708 Germans, and 675 French.

Finances.—The revenue in the year ending June 30, 1900, was \$15,209,024 in silver. The revenue for the financial year 1902 is estimated at \$16,160,000, of which \$10,000,000 came from customs, \$1,829,000 from a property tax, \$934,000 from trade licenses, \$786,000 from factory taxes, \$431,000 from internal revenue, \$615,000 from stamps, \$200,000 from bank profits, \$324,000 from posts and telegraphs, and \$1,041,000 from other sources. The expenditure was estimated at \$16,160,996, of which \$371,893 were for Congress, \$65,976 for the Presidency, \$144,450 for the Ministry of Foreign Affairs, \$2,301,978 for the Ministry of the Interior, \$986,292 for the Ministry of Finance, \$1,139,336 for the Ministry of Public Works, \$1,750,522 for the Ministry of War and Marine, \$364,130 for judicial expenses, and \$9,036,419 for national obligations. Extra 2½-per-cent. import and export duties have been imposed to raise means for improving the port of Montevideo, but they do not figure in the budget, nor does the revenue and expenditure of the municipality of Montevideo. The amount of the national debt on Jan. 1, 1901, was stated to be \$125,506,953, made up of \$99,660,680 of external, \$3,656,775 of international, and \$22,189,498 of internal obligations. The Council of Foreign Bondholders in London calculated the amount of the foreign debt on June 30, 1901, at £21,126,100. The total public debt in 1897 was \$121,427,447, and on June 30, 1902, it had grown to \$123,843,694. A permanent army of 231 officers and 3,273 men is kept up, and an armed police force of 3,200 men.

Commerce and Production.—The raising of cattle and sheep is the main industry, but agriculture is advancing. The exports of wool in 1900 were 39,872 metric tons; of wheat, 39,872 tons; of corn, 486 tons; of wheat flour, 18,129 tons. The production of wine was 23,541 hectoliters. The yield of gold in 1899 was 66 kilograms.

The total value of merchandise imports in 1900 was \$23,978,203 in gold, and of exports \$29,388,187. The dutiable imports were \$22,678,054 in value out of a total importation of \$25,652,788 in 1899, and \$33,956,940 out of a total exportation of \$36,574,164 paid duties. The duties collected in 1900 amounted to \$9,433,269. The imports of articles of food and drink in 1900 were \$7,321,318; of tobacco, \$210,421; of textile goods, \$4,106,063; of clothing, \$1,302,443; of raw materials and machinery, \$7,253,877; of miscellaneous merchandise, \$3,284,081. The exports of live animals were valued at \$534,216; animal products, \$26,606,528; agricultural products, \$1,669,617. The exports of jerked beef was \$6,042,345 in value; of extract of beef, \$1,319,157; of hides and skins, \$8,183,052; of tallow, \$1,661,799; of wool, \$8,024,959. The imports of coin in 1900 were \$1,833,388 and the exports were \$3,054,652. Of the total imports in 1899 \$21,876,987, and of the exports \$23,340,239, passed

through the port of Montevideo. In 1901 there was a small decrease in imports, the total value being \$23,691,932, compared with an average of \$24,850,000 for the preceding six years. Exports declined to \$27,731,126 owing to a failure in the wheat-crop and a fall in the price of jerked beef in Brazil.

Navigation.—The number of vessels engaged in foreign trade entered at Montevideo during 1900 was 1,206, of 2,318,954 tons; cleared, 1,033, of 2,052,723 tons. In the coasting and river trade the number entered was 2,020, of 507,110 tons; cleared, 2,063, of 508,986 tons. Work on the improvement of Montevideo harbor began in July, 1901.

Railroads, Posts, and Telegraphs.—The railroads have a total length of 1,080 miles. The cost of construction was £11,150,857, of which \$5,750,418 has a guarantee of 3½-per-cent. interest from the Government, covering 882 miles.

The telegraph-lines in 1899 had a length of 4,525 miles, including 1,030 miles of railroad telegraphs.

The post-office forwarded 10,814,176 letters, 310,324 postal cards, 32,190,525 printed enclosures, and 1,436,889 parcels in 1900.

Political Affairs.—President Cuestas, who, unlike his predecessors, has not added to the public debt, began in 1901 to curb the ambition of mili-

tary politicians aspiring to play a part in the next administration by enforcing discipline in the army. The commercial and industrial development of the country is hampered by the enormous foreign debt incurred for wasteful and extravagant purposes, the interest of which is a heavy drain on the country's resources, represented by an average annual adverse balance of trade of \$7,300,000. The heavy import and export duties cripple external commerce. The harbor works at Montevideo are being pushed forward. In July 2 Senators were ordered to be banished and several military officers to be arrested on a charge of plotting the assassination of the President. The Senate protested against the unconstitutional violation of parliamentary immunity. The President justified the decree as necessary for public safety, and promised to communicate the details of the conspiracy to the Chambers as soon as the inquiry was completed. The Chambers demanded an immediate full explanation of his illegal action. The Government then withdrew the decree of banishment and set the officers free without presenting any proofs of the alleged conspiracy. Señor McEachen resigned from the Cabinet to become president of the Bank of the Republic and on Oct. 16 Diego Pons left the Ministry.

UTAH. (See under UNITED STATES.)

V

VENEZUELA, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 40 members, 2 from each state, elected for four years by the state Legislatures, and a House of Representatives of 62 members, elected for four years by the popular vote, 1 Representative to 35,000 of population. The President is elected for two years by the Federal Council of 19 members, who are elected for the presidential term by the Congress. Gen. Cipriano Castro, appointed provisional President in October, 1899, was in due form elected President of the Republic in October, 1901. The Cabinet appointed on April 10, 1901, was composed as follows: Minister of the Interior, Gen. J. A. Velutini; Minister of Foreign Affairs, Dr. Eduardo Blanco; Minister of War and Marine, Gen. Ramon Guerra; Minister of the Treasury, Ramon Tello Mendoza; Minister of Public Instruction, Dr. Felix Quintero; Minister of Public Works, Juan Otañez; Minister of Fomento, Gen. F. Arocha Gallegos. An act for the reestablishment of the 20 states, which were reduced to 8 in 1864, was passed in 1899, and provision was made for their autonomous administration until the new federal Constitution is completed.

Area and Population.—The award of the Court of Arbitration given on Oct. 3, 1899, reduces the area claimed for Venezuela by about 60,000 square miles, which are now included in British Guiana. The Schomburgk line was adopted as the boundary except at coast, where the line starts from Punta Playa, instead of at the mouth of the Amakuru, thus giving to Venezuela the lower Barima river; and at the Cuyuni river, where the boundary ascends the Wenamu, instead of following the Cuyuni up to its source, thus giving to Venezuela the Cuyuni gold-fields. The total area of the republic is estimated at 593,943 square miles. The population at 2,444,816.

Finances.—The revenue is collected and disbursed, under a contract made in April, 1897, for five years, by the Bank of Venezuela, which receives a commission of 2 per cent. on money col-

lected and on disbursements and makes advances to the Government up to 6,000,000 bolivars at 8 per cent. interest.

The consolidated external debt on July 31, 1901, amounted to £2,638,200, besides £257,224 of unpaid interest. It consists of Venezuela's share in the old debt of Colombia, the share amounting originally to £2,794,796, converted in 1881 to £2,750,000 of new consolidated bonds. Besides this debt 48,962,000 bolivars of bonds for the settlement of arrears of railroad guarantees were issued at 5 per cent. in 1896, equivalent to £1,939,090, on which £336,634 of interest were due, making the total foreign debt £5,171,148. The internal debt amounted to 110,000,000 bolivars, besides 10,175,000 bolivars for water-works at Caracas.

The Army and Navy.—The permanent army was reorganized in 1900 in 30 battalions of about 300 men, which were stationed in 20 towns and in other federal posts and on the ships. Every Venezuelan between the ages of eighteen and forty-five years is enrolled in the militia, and in times of civil war as many as 60,000 men have been called into the field. The naval force consists of 3 steamers and several small gunboats.

Commerce and Production.—Sugar, coffee, cacao, and grain are cultivated in the coast regions, live stock grazes on the rich pastures farther inland, and from the forests of the remote interior are brought down rubber, copaiba, vanilla, tonga beans, and other tropical products. The live stock is estimated at 191,079 horses, 89,186 mules, 312,810 asses, 2,004,257 cattle, 176,668 sheep, 1,667,272 goats, and 1,618,214 hogs. The exports of coffee in 1900 were 10,300,565 kilograms from La Guayra, 14,995,724 kilograms from Puerto Cabello, 13,107 kilograms from Ciudad Bolivar, and 20,829,464 kilograms from Maracaibo; of cacao, 5,766,160 kilograms from La Guayra, 525,187 kilograms from Puerto Cabello, 38,481 kilograms from Ciudad Bolivar, and 184,456 kilograms from Maracaibo; of hides, 1,075,028 kilograms from La Guayra, 636,363 kilograms from Puerto Cabello, 1,495,937 kilograms from

Ciudad Bolívar, and 338,039 kilograms from Maracaibo. There were 1,253,342 kilograms of rubber exported from Ciudad Bolívar, and 43,211 kilograms of tobacco; 18,774 head of cattle from Puerto Cabello and 6,496 from Ciudad Bolívar; 35,169 kilograms of goat- and deer-skins from Ciudad Bolívar, 836,128 kilograms from Puerto Cabello, and 125,866 kilograms from Maracaibo; 53,892 kilograms of copra from Puerto Cabello; 5,421,550 kilograms of fustic, 1,781,612 kilograms of dividivi, 4,099 kilograms of cinchona bark, 36,587 kilograms of copaiba, 42,901 kilograms of fish sounds, and 274,553 kilograms of sugar from Maracaibo; and 1,316 kilograms of gold bullion, valued at \$589,000, from Ciudad Bolívar. Feathers for millinery are an important article of export. The principal imports are provisions, textiles, hardware, coal, petroleum, timber, and machinery. Coffee is exported to the United States, France, and Germany; cacao to France, Spain, and Germany; hides to the United States; rubber and feathers to Great Britain.

Navigation.—Maracaibo was visited in 1900 by 403 vessels in the foreign trade, Puerto Cabello by 262, La Guayra by 205, Ciudad Bolívar by 73.

The merchant marine in 1900 consisted of 18 sailing vessels, of 2,836 tons, and 12 steamers, of 2,567 tons.

Railroads and Telegraphs.—There are 529 miles of railroads. A new line to connect Yaritagua with Puerto Cabello was contracted for in 1899.

The telegraphs have a length of 3,882 miles.

Insurrection.—The revolution that was started in the beginning of 1902 for the overthrow of President Castro was headed by M. Matos, the wealthiest of Venezuelans, who purchased the British steamer *Ban Righ*, loaded her in Europe with rapid-fire guns for her own armament and field-guns, many thousand rifles, and a vast quantity of ammunition for the army. A large force embarked at Trinidad, the steamer was converted into a warship bristling with guns, her name changed to the Bolívar, and after she had sunk the only serviceable vessel of the Venezuelan navy that Castro sent to capture her, Matos could land his expeditions at any part of the Venezuelan coast that he desired and bring all the supplies he wanted from Trinidad. Castro had enemies in various parts of the country ready to join in the insurrection. The forces of Matos consisted of 15,000 men, divided into 25 sections. They occupied the strategic positions where the Government was weak or unpopular, and threatened to advance on Caracas from the Cumana district and from the Colombian border. Revolutionists rose in bands in many places. When the expedition arrived on Jan. 2 and landed 5,000 Mausers the Government force of 560 men at Coro joined the rebel Generals Urbina, Fernandez, and García. Generals Guzman, Monogros, and Platero, of the revolutionary army, had their way in Carabobo and Guarico. Generals Batalla and Fernandez Cedenó rose against the Government, and the latter twice defeated the Government troops in Carabobo. Gen. Vasquez headed a successful rising at Carupano. The Government troops had difficulty in putting down an insurrection in Maracaibo. The rebels were victorious near Barquisimeto. A severe engagement was fought without result near Uchire. Contributions were levied on foreigners by the authorities in various places. Many prominent men, including ex-ministers Pulido and Urbanejo, were arrested at Caracas. On Feb. 27 the Venezuelan Congress elected Gen. Castro

as President for another term of six years to begin on Feb. 20. An invasion from Colombia under Rangel Gardiras was checked near Lafrias. President Castro sent troops to meet the revolutionists who laid siege to Barcelona, Carupano, and Cumana and held the port of Tucacas. The revolutionists, who numbered 3,500 men, defeated Gen. Escalante on April 3 near Carupano, where he lost 350 men. On the following day he was attacked and routed near El Pilar. The rebels took Barquisimeto. Gen. Ramon Castillo with 2,200 men marched out against them. He was attacked on April 22 near San Antonio, and fatally wounded in the beginning of the engagement, upon which the newly levied troops of his force deserted to the enemy and the others retreated. The Government forced every able-bodied man into the army. Gen. Vincente Gomez led a third army against the rebels at Carupano, which was attacked on May 6 by sea and by land. He also was wounded and his troops were routed on May 6, losing 115 dead and 210 wounded. The Government gunboats shelled the town without the usual notice in spite of the protests of the foreign residents. A new invasion was aided by the Colombians, and 4,000 men crossed the border. The revolutionists compelled a Norwegian steamer to carry troops and munitions from Barancas to Bolívar, and afterward the vessel was attacked and Capt. Meling killed by Government troops. La Guayra was attacked by a band of revolutionists on June 7, and the Government forces shelled them from the forts and the warship *Miranda*, compelling them to retire. Gen. Matos had his army in the field by this time, fully organized and equipped, and he began a systematic advance on Caracas. In June he issued a proclamation in which he announced a provisional Government, with himself as President, Pedro Ezequiel Rojas as Minister of Foreign Affairs, and Generals Perez and Pedro Duchaine as commanders of the armies in the field. The 30 per cent. duty was declared abolished with regard to West Indian imports. He moved with 3,000 men to Urica, leaving 3,000 still in the State of Bermudez. Coro was held by Vice-President Ayala with a strong force, but on June 20 he capitulated. Insurgents fought the Government troops in the streets of Barcelona early in August and captured the town, killing Gen. Bravo and 60 men. On both sides 8 generals, 23 colonels, and 167 men were killed and many houses were destroyed. German, Italian, British, and American warships were at La Guayra and Puerto Cabello, where the revolutionists were active. The commanders were ordered to send vessels to Barcelona, where the insurgents were sacking the stores of foreign merchants and did not spare the foreign consulates. Ciudad Bolívar was blockaded by Government vessels. Germany, Great Britain, and France protested against the blockade on the ground that it was ineffective. By the middle of August the revolutionary party obtained possession of Puerto Cabello. The Government forces after a bombardment took Carupano. Ciudad Bolívar was next bombarded. The *Restaurador* advanced into close range before firing, flying the American flag. For this Minister Bowen demanded and received an apology from the Venezuelan Government. On Aug. 22 about 700 rebels entered Carupano and fought all day with 1,000 Government troops under Gen. Velutini. On Aug. 28 the advance guard of the revolutionary army attempted to take Taguay, but was repelled with a loss of 200 men. The rebellion made progress, however. The German railroad was cut, and 600

soldiers who attempted to reestablish traffic were driven away near Los Teques, which the rebels captured. On Aug. 29 they were joined near Ocumare by 550 soldiers, who brought their general as a prisoner. Gen. Matos long made his headquarters at Barcelona. Insurgents rose in the vicinity of Caracas and had a fight on Sept. 5 with the Government troops. The advanced guard of the revolutionary army, consisting of 4,000 men, under Generals Mendoza, Batalla, and Riera, were met Sept. 11 by 4,100 troops under Gen. Garrido, who had succeeded Gen. Guerra as Minister of War. When the insurgents had taken Angostura and other interior towns the Government authorities took forcible possession of two steamboats of the American company to serve as transports. When 1,100 rebels advanced to take Cumana the garrison of 350 men retired. The revolutionists collected the customs at Bolivar, Cumana, Cano, Colorado, Guiria, Coro, and Barcelona. They received a large shipment of Mausers and ammunition and some field-guns from Germany. They cut the English railroad near La Guayra. Wherever the revolutionists held a seaport President Castro declared it closed and proclaimed a blockade. His gunboats were useless for maintaining a blockade of even one port, and therefore the British and German governments refused to recognize any blockade, and their cruisers protected vessels trading with the ports and in the Orinoco river. The rebels at Barcelona attempted to force a loan from the American consul, who is a Venezuelan citizen, but desisted when the American naval authorities interfered for his protection. Telegraph communications in the interior were blocked by them since early in the rebellion. The Government arrested the employees of the French Cable Company at Carupano and cut the cable. President Castro issued a proclamation denouncing Gen. Matos as a traitor who offered to hand over the financial administration of the country to foreign capitalists and ordering him to be tried as a private. While Gen. Matos advanced to Camatagua, in the state of Miranda, 50 miles south of Caracas, intending to form a junction with the army of Gen. Luciano Mendoza, who had till now avoided a pitched battle and succeeded in harassing and wearing out Castro's troops, Gen. Mendoza had arrived at Tocuyito with the main body of his troops. Gen. Castro, who was at Ocumare, concentrated his troops, withdrawing those that were posted to stop Matos, and with a force of 3,600 men he marched with astonishing celerity to Valencia. Gen. Mendoza thereupon retreated toward Villa de Cura. Valencia was saved from falling into the hands of the insurgents, but the stratagem only delayed matters. Gen. Matos, finding the way clear, marched through Ocumare and San Sebastian, hoping to effect a junction with Mendoza near Villa de Cura. Gen. Castro earlier succeeded in joining forces with Gen. Garrido and had an army as strong as that of the veteran Gen. Luciano Mendoza, whom he feared more than Gen. Matos. Gen. Mendoza attacked Castro at La Victoria, and there was savage fighting that lasted a week. Gen. Gomez arrived with reinforcements for Castro on the second day. The wounded perished without care under the tropical sun. The revolutionary army numbered about 8,000, Castro's not quite so many. After many hundreds had been killed on both sides Gen. Mendoza on Oct. 17 abandoned his positions and retreated. Gen. Castro himself, with a rifle in his hands, repeatedly led the assault, to inspire his men with his own courage and energy. The

rebels received reenforcement on the fourth day and completely invested La Victoria, which would have fallen if the Government forces had not received fresh ammunition by railroad. The rebel losses were reported to be 1,600 in killed and wounded, and those on the Government side 1,400. The rebels attacked Carupano and retreated after a hard fight. President Castro still remained at La Victoria with 5,000 men. The revolutionists returned and renewed the attack. When Vice-President Gomez withdrew all the troops from Caracas, the seat of government was transferred to a provisional capital in the Guacai-puro district. It is the custom of Venezuelans in their civil wars to spare their beautiful capital. The revolutionists had about 10,000 troops cantoned at San Sebastian, San Juan de los Moros, Cua, Ocumara, and Villa de Cura, forming a ring of stations around Caracas. Desertions had greatly reduced Gen. Castro's forces, but he still had a formidable and trustworthy force in his 5,000 Andine troops. The revolutionists succeeded in cutting communications between La Victoria and Caracas and destroying the railroad. They attempted to take Los Teques, but were repelled. Soon after they were placed on the defensive. Gen. Castro, having learned that they were short of ammunition, began to press them, and drove them from several of their positions. The rebel troops posted in front of La Victoria were routed and pursued toward Guarico. The bodies commanded by Gen. Rieva and Gen. Mendoza dissolved on the approach of the Government troops. The whole organized rebel army broke up into guerrilla bands that disappeared on the appearance of the Government troops. Gen. Matos fled to Curaçoa. Gen. Rolando kept 900 men together, with whom he fell back on Lezama. The ministers returned to Caracas. President Castro's troops reoccupied Coro and Cumana. Ciudad Boliver was still held by Gen. Ferrera and Barcelona by Gen. Pablo Guzman. An armistice was declared after Barcelona had been recaptured.

French Claims.—Before the Matos expedition was fitted out the French claim of indemnities for maltreatment and property losses of French citizens during the revolution of 1892 were brought once more to the attention of President Castro's Government, which was anxious to resume diplomatic relations with France and settle the claims that had caused a rupture in March, 1895, fearing that France would impose duties on cacao by way of reprisal. A protocol was signed relating to the resumption of normal diplomatic intercourse, a treaty of commerce and navigation with the favored-nation clause was negotiated, and an agreement was made referring the claims of French citizens to the arbitration of Señor Leon y Castillo, Spanish ambassador at Paris, acting with one representative of each of the two countries. The protocol was ratified on April 18. Claims to the amount of 2,000,000 francs antedating the last revolution were excluded from the arbitration. The claims to be determined and settled amounted to 54,000,000 francs, including 18,000,000 francs for the railroad running from Maracaibo, which was practically destroyed. It was proposed to assign the receipts of one or two custom-houses to the payment of these debts.

German Claims.—When the Venezuelan Government showed a willingness to settle the French claims, Germany, at the time when the revolutionary preparations were in progress, became urgent in demanding the satisfaction of the claims of German citizens. There were claims for

indemnification of losses incurred during the civil wars, amounting to 1,500,000 marks. These claims, analogous to the French, the President appointed a commission to examine, and also similar claims of Americans, Frenchmen, and Italians. There were other claims for goods supplied by German merchants. Lastly, there was the defaulted interest on the loan of 50,000,000 francs, two-thirds of it held by a German banking institution, while the remaining third was divided about equally between French and British capitalists. The loan could not be placed on the market because in 1897 Venezuela failed to meet her obligations. The interest and sinking-fund in arrears amounted to over 9,000,000 francs. Germany and the other countries interested declined to recognize the jurisdiction of President Castro's commission. The German Government recognized as valid about 40 claims for losses in the revolution of 1898, amounting to 1,700,000 francs. The damage arose from the failure of the Venezuelan Government to pay for goods supplied to the troops, from requisitions made in war time, from looting, and from forced loans. On Jan. 24, 1901, the Venezuelan Government ordered the claims to be submitted to a commission, from which appeal could be taken to the Venezuelan Supreme Court. This commission rejected some of the claims and reduced others. Damages suffered previous to May, 1899, it refused to recognize on the ground that the party of President Castro had committed them and the present Government was not responsible. It also proposed payment in a revolutionary loan. Germany refused to accept the decision. Early in 1902 the Venezuelan Government passed another law, but it was open to the same objection. The Venezuelan Government took the ground that money claims of foreigners must be decided by Venezuelan laws on the same basis as claims of Venezuelan citizens. The German Government declared that if a diplomatic settlement was precluded it would examine the claims of Germans for itself and demand payment of those that it found just. President Castro said that a special act of Congress would solve the difficulty and offered to lay the claims before Congress. The German Government declined to submit them to the Venezuelan Congress, and after having investigated them demanded payment of the total amount. In the disturbances of 1901 and 1902 damages have been suffered to the amount of 3,000,000 francs falling on Germans. Great Britain, Italy, the Netherlands, Spain, and the United States united with Germany in finally rejecting the decree of January, 1901. While Germany was pressing the claims of her citizens in the spring of 1902 several German war-ships were sent to the coast of Venezuela. At the approach of summer they went to more salubrious stations.

Quarrel with England.—President Castro has had chronic difficulties with the British authorities of Trinidad growing out of the smuggling trade that is rendered profitable by the high import duties and the still more profitable trade in contraband of war and transport for revolutionists. The low island of Patos, between Trinidad and the Venezuelan shore, a convenient base for smuggling, was claimed by Venezuela, but Great Britain disputed the claim. In January, 1901, the Venezuelan revenue officers seized a boat-load of goods from a Trinidad fisherman who ran in there to escape capture in Venezuelan waters. A sloop was seized and burned. Another sloop loaded with valuable goods took refuge in Patos in August, 1901, and the crew

buried the goods, but the revenue officers landed and seized them and arrested the crew. In January, 1902, a British sloop was seized and detained in the Barima river. In May a British vessel suspected of filibustering was destroyed by a Venezuelan gunboat in the harbor of Pedernales. Later a vessel believed to have landed a cargo of arms was chased and captured on the high sea, taken into port, and confiscated. In each case the British Government demanded explanations, and would not accept such as were offered nor acknowledge that the islet of Patos was Venezuelan territory. In cases where the Venezuelan Government could not defend its officers it put off discussion till a more convenient opportunity. On July 27 the British minister to Venezuela recited all the incidents complained of and intimated that unless Venezuela gave assurances that no such unwarrantable acts would recur and promptly paid compensation his Government would take steps to obtain reparation. The Venezuelan minister on Aug. 2 replied that the incidents on the island of Patos were already disposed of, Venezuela having established her right to the island without opposition from Great Britain based on legal grounds, and that the rest were settled or on the way to a settlement, but when the Ban Righ committed her injurious acts and the authorities of Trinidad showed open partiality in a sense hostile to the peace of Venezuela the President decided to postpone dealing with these matters until he should receive an answer to complaints and remonstrances he had laid before Great Britain in consequence of the attitude of the British authorities in connection with that vessel. These remonstrances were contained in notes presented on Feb. 28, March 8, March 13, and April 5. The British note complained of conduct of the Venezuelan consul in Trinidad, and this the Venezuelan minister said should be considered in connection with the partiality of the colonial authorities. On Nov. 11 the Venezuelan Government was informed that if it persisted in its refusal to discuss the complaints the British Government would be obliged to consider what steps should be taken for the protection of British interests. The Venezuelan reply, dated Nov. 18, expressed regret that the complaints with regard to the Ban Righ and the attitude of the Trinidad authorities had not been examined and called attention to the eagerness of the British Government to discuss matters that were of secondary importance when contrasted with the paramount interest felt by Venezuela in obtaining recognition and respect for claims arising from the grave injuries caused by the Ban Righ and the facilities afforded to the revolutionaries by the colonial authorities in Trinidad, which claims have been met by a most unfair refusal of the British Government to consider the matter. The British flag was raised in September over the island of Patos, which is about a mile long and a third of a mile broad and is uninhabited, but has been a resort for smugglers and fishermen. The Venezuelan Government protested against this, reiterating its claim by sovereignty over the island. On Dec. 2 the British minister at Caracas presented a peremptory demand for the satisfaction of British claims. The Venezuelan acting Minister of Foreign Affairs, Dr. Lopez Baralt, in his reply again complained that reparation was not made for the injury inflicted by the Ban Righ and stated that, the Venezuelan treasury being exhausted, it was impossible for the moment for the Government to meet its debts, but as soon as peace was reestablished in the country it would not be nec-

essary to remind the Venezuelan Government of its obligations.

Anglo-German Blockade.—On July 23 Lord Lansdowne, British Minister of Foreign Affairs, suggested to the German ambassador at London joint action of the two governments to obtain satisfaction for their respective claims against Venezuela. The German Government proposed a joint naval demonstration. A blockade of La Guayra, Puerto Cabello, and Maracaibo was suggested by the naval authorities, or, as an alternative, the seizure of all the gunboats of Venezuela, until the demands were complied with. Lord Lansdowne preferred the latter plan, as a blockade was open to objections. On Nov. 11 Germany agreed to join Great Britain in addressing an ultimatum to Venezuela and acceded to the plan of seizing the gunboats as the first step. Before embarking, however, in a project of joint coercion the German Government desired to have it understood that the British and German claims should stand or fall together, that neither claim could be settled without an equally satisfactory settlement of the other, and that neither Government should be at liberty to recede except by mutual agreement. The British minister agreed that each Government should support the other's demands, and should not desist from doing so except by agreement. The British Government divided its claims into three classes, placing in the first rank cases of unjustifiable interference with the liberty and property of British subjects and with British vessels, next injury to property in the revolutions, and last claims of bondholders. It was not desired, however, to distinguish them in making the demands upon Venezuela, but to obtain a general settlement, as it was believed that to advance any one class of claims or to specify any particular amount would diminish the chance of obtaining reparation in all cases. If the Venezuelan Government returned an unsatisfactory answer or none at all to its last note the British Government was ready to proceed to coercive measures. If the seizure of the gunboats failed to produce the desired effect, England and Germany could then consider what should be the next step. On Nov. 28 President Castro, in conformity with an act of Congress, appointed a new commission to examine all claims of foreigners, but none were presented. The British and German governments each sent 6 vessels of war to the coast of Venezuela. On Dec. 7 the German *chargé d'affaires* von Pilgrim-Baltazzi and the British minister W. H. D. Haggard each presented an ultimatum. If a satisfactory reply were not immediately forthcoming the German Government threatened to take measures for the satisfaction of German claims. The English note demanding the immediate satisfaction of British claims was of similar tenor. The German note declared Venezuela's reply of May 9 relative to claims arising out of the civil wars of 1898 and 1900 to be unsatisfactory, the Venezuelan argument that internal legislation excludes diplomatic intervention to arrange the claims of foreigners being contrary to international law. The treaty with Colombia to which the Venezuelan Government appealed is valid only between Germany and Colombia, and moreover does not exclude diplomacy, and Venezuela herself had made diplomatic agreements with France, Germany, and Spain relative to the payment of claims arising out of revolutions. The decree of Jan. 24, 1901, does not constitute a guaranty for a just solution of the claims. The present Government of Venezuela can not evade responsibility for acts

of its predecessors. The submission of the claims to the commission or the Supreme Court was declared inadmissible because the commission had arbitrarily rejected or cut down claims that had been presented, and judges of the Supreme Court had been removed who had given judgments unwelcome to the Government. Furthermore, the decree provided for payment in valueless certificates of debt. The notes demanded the immediate payment of war claims amounting to 1,718,816 bolivars and the recognition of the claims arising out of the present civil war, the loan raised by a German syndicate to build an abattoir at Caracas, and the 5-per-cent. Venezuelan loan of 1896 issued to redeem the guaranteed interest on the bonds of the German railroad, which would be submitted to a mixed commission to determine their amount and provisions for payment. The English note asserted that full explanation had been given regarding the Ban Righ, exonerated the Trinidad officials, and demanded a promise of immediate payment of the shipping claims and those arising from the civil wars and the ill-treatment and imprisonment of British subjects. A sum equal to that to be immediately paid to Germany was demanded, and any surplus over the amount of these claims when ascertained would be reserved for the payment of the other claims and the guaranteed railroad debt. These other claims England was willing to refer to a mixed commission for a decision as to their amount and the guarantee to be given for their payment. The reply of President Castro rejected the points raised in the German note, denied that Venezuela had ever refused to pay well-founded claims, and said that the Venezuelan tribunals were still open to claimants. To England he replied that no British claims had yet been formulated, and suggested that if there were any such they should be put in concrete form and brought before the competent tribunals. Before committing itself to overt action the German Government had exchanged views with the Government at Washington, giving an assurance that it did not intend to occupy territory or a coaling station, and inquired if there would be objections to its taking active measures to secure the collection of debts due to German citizens on account of violation of their concessions and destruction of their property consequent upon the internal dissensions of Venezuela. The State Department replied in substance that the United States would never undertake to shelter the American republics against the results of their misdeeds or violations of international law, but any punishment inflicted by a European power must not include the seizure of American soil. President Castro appealed to the United States to intervene for the prevention of hostilities which he represented as a violation of the Monroe doctrine. The United States minister at Caracas, Herbert W. Bowen, informed him that the United States would not interpose to avert the forcible collection of debts due so long as no permanent occupation of Venezuelan territory was attempted by European powers. On Dec. 8, on the expiration of the limit of twenty-four hours set in the ultimatum, the British and German legations were closed, their interests being placed in charge of United States Minister Bowen, and the diplomatic representatives of the two powers went on board their war-ships at La Guayra. On Dec. 9 the German war-ship Panther entered the harbor of La Guayra and cleared for action, while cutters from the fleet went alongside of the four vessels of the Venezuelan navy that were there and de-

manded their surrender. The Venezuelan officers and crews left the vessels, which were then towed outside. The Gen. Crespo, the Totumo, and the Margarita the Germans sunk in the night. The reason given was, they were not sufficiently seaworthy to undertake the voyage to Trinidad alone, while to tow them thither would impede the freedom of action of the German fleet. The German ships Falke and Panther then steamed away to Carupano to seize the Venezuelan vessel that was blockading the mouth of the Orinoco. This blockade the British and German defied after officially pronouncing it null, before coercive steps were taken in the matter of the claims, by sending war-vessels up the Orinoco river, against which action President Castro formally protested. The representatives of France and Italy joined in the declaration that the blockade was ineffective, but the United States minister declined to identify himself with them in its notice. The President replied to the seizure of the fleet by arresting all the British and German residents in Caracas, and such was the spasm of resentment for the aggressive acts of the two powers that their citizens were for the moment safer in prison than in their homes against the mob which damaged the German legation building and some European property. The President ordered the imprisonment of all Britons and Germans in the country, but on the urgent remonstrance of Mr. Bowen he released them on the following day and had them escorted to ships that took them away. The Ossun, a French steamer that had been chartered by the Venezuelan Government, was the only vessel found at La Guayra that was not sunk by the allies. The Venezuelan flag-ship Bolivar was seized at Port of Spain. On Dec. 10 the troop-ship Zamora was taken, and on Dec. 12 the gunboat Restaurador, formerly the American yacht Atlanta, was seized at Guanta. The ship Topaze at Puerto Cabello was compelled by a mob to lower the British flag. The commander of the British cruiser Charybdis demanded reparation. Before receiving a reply he shelled the forts, which responded feebly. When the guns were silenced a landing party destroyed with dynamite and fire the Libertador Castle and made a prisoner of the commandant. In retaliation the allies bombarded the town. The officials of the English harbor corporation at La Guayra were threatened with violence by a mob and also with arrest by Venezuelan soldiers before British marines were landed to rescue them. The Italian Legation had examined the claims of Italians for compensation and pronounced claims amounting to 336,000 francs to be valid. The Italian colony in Venezuela numbers 7,000 persons. The Venezuelan Government did not anticipate coercive action from Italy because, in the treaty concluded with that country on June 19, 1861, it is stipulated that in case of claims for damages arising out of revolutionary acts Italians shall receive the same treatment as that accorded to Venezuelans. President Castro, in appealing for the diplomatic intervention of the United States, complained because the powers had acted before they had resorted to the Venezuelan courts for a decision on their monetary claims, which were insignificant in amount and entirely disproportionate to the efforts made to collect them by force, and because they had proceeded to hasty and violent measures before the resources of diplomacy were exhausted. Germans who had laid claims before the Venezuelan tribunals have in many cases obtained awards. The Venezuelan Government contended that it is a recognized principle of international law that when the courts of a coun-

try are open to claims for damages against the Government, diplomacy shall not be resorted to until the claims have been presented to the court and there has been a manifest denial of justice or unusual delay or a violation of international law. This doctrine was accepted by the delegates to the Pan-American Congress at Mexico. Another principle of international law that Germany and Great Britain set at naught forbids armed intervention for the collection of public debts or guaranteed interest.

Italy determined to join in the naval hostilities, and sent the cruiser Giovanni Bausan. The Italian minister to Venezuela on Dec. 13 forwarded an ultimatum analogous to those presented by Great Britain and Germany. Italy first proposed to Germany and Great Britain to be associated with them in the measures they were about to take, and in any arrangements that might be made, as the claims of Italians were of the same nature as those pressed on behalf of Germans and British. This proposal was favorably received. Commodore Scheder selected La Guayra as the center of the movements of the German ships. Each commander took a different part of the coast and neither was responsible for the acts of the other except when they acted in concert. The squadron sent by Great Britain under the command of Vice-Admiral Douglas was much the stronger, having a tonnage of 23,000 tons and 1,700 available men in the crews. The Italian naval force arrived on Dec. 16. The United States sent to Trinidad two squadrons to observe developments and to be ready to defend American interests or protect American lives and property, consisting of the Kearsarge, Alabama, Massachusetts, Iowa, and Scorpion, under Rear-Admiral Higginson, and the Chicago, Newark, and Eagle, commanded by Rear-Admiral Sumner. After a few days most of the vessels returned to their station in Porto Rico. A wave of patriotic enthusiasm swept over Venezuela. All citizens fit for military duty enrolled themselves in the militia, even those belonging to the revolutionary party. The people everywhere pledged themselves to buy no British or German goods while the differences remained unsettled and foreign military forces menaced Venezuela. When the news of the bombardment of Puerto Cabello reached the capital 10,000 men surrounded the Government building clamoring for arms to repel the invaders. The Government ordered the enrolment in the militia of men between the ages of eighteen and forty-five, and Gen. Ferrer formed an entrenched camp between La Guayra and Caracas, which was occupied by 3,000 troops under the Minister of War and Gen. Modesto Castro. President Castro issued a proclamation granting amnesty to all political offenders and restoring confiscated estates. The Venezuelan consul at Port of Spain in Trinidad closed his office and departed. The German cruiser Panther attempted to enter the harbor of Maracaibo to take out the only war-ship not yet seized, which was moored along the wharf. Gen. Bello, the commandant at the old Spanish castle of San Carlos, fired a warning shot. The German vessel did not go in and take the Venezuelan vessel until the Vineta, Falke, and Panther of the German squadron shelled the fort. The old guns of the Venezuelans responded and did some damage to the nearest German vessel. The vessels departed, but returned two days later and demolished the fort. The village of San Carlos was destroyed and some of the inhabitants were killed.

On Dec. 12 President Castro requested Minister Bowen to arrange a settlement with the allies.

A blockade of the coast of Venezuela was declared on Dec. 20. The Germans blockaded the ports from La Guayra to the Colombian frontier, the British the strip of coast eastward to the frontier of Demerara. The American merchant steamer Caracas, which had started on a voyage to La Guayra, was permitted to enter the port, but before half the cargo was discharged the German naval authorities on Dec. 23 compelled her to leave. On the same day the British, German, and Italian Cabinets, to which the Venezuelan proposal to arbitrate had been transmitted from Washington with an offer of the good offices of the United States, accepted arbitration in principle. The powers consented to arbitration of their claims by The Hague tribunal, subject to certain conditions which it was first necessary to discuss. When the proposal was first made through Minister Bowen the British and German governments at the suggestion of Germany offered to submit the whole dispute to the arbitration of the President of the United States. President Roosevelt was urged by them to undertake the task, but on Dec. 27 he definitively declined and suggested the International Court of Arbitration at The Hague as the proper tribunal. The American minister to Venezuela, who left Caracas on Jan. 11, 1903, and arrived in Washington on Jan. 20, conducted the negotiations with Count Quadt, the German *chargé d'affaires* at Washington, Sir Michael Herbert, the British ambassador, and Signor Mayor des Planches, the Italian ambassador. Baron Speck von Sternburg soon arrived to take charge of the German negotiations. The claims for which guarantees were demanded amounted to 31,600,000 francs. The German claims were 8,750,000 francs, the English 22,500,000 francs. The blockading fleets landed men and seized the custom-houses at Carupano, Cumana, Guanta, La Guayra, and Puerto Cabello. A large number of merchant vessels belonging to Venezuelans and of cargoes destined for Venezuela were seized by the blockading squadrons, and the captured ships were moored at Margarita island. Italy sent a second ship and undertook the blockade of the coast of Tucacas and Coro. Mr. Bowen, after his arrival in Washington, suggested that the details connected with the claims be settled directly by him as the plenipotentiary of the Venezuelan Government, an office he was authorized by the State Department to assume for that purpose, and the British, German, and Italian representatives at Washington. This proposal was promptly accepted by the three powers. The chief conditions made by the allied governments were cash payments of their claims of the first line and adequate guarantees for the settlement of the others. Mr. Bowen proposed that all countries having claims against Venezuela should have share in the proceeds of the customs duties, which have been the chief source of revenue for the Venezuelan Government, and hence were the only satisfactory guarantee Venezuela could offer. President Castro offered to pledge a sufficient proportion of the customs receipts on condition that all the foreign claims should share *pro rata*. In satisfaction of the demands of immediate cash compensation for acts of violence he offered to raise a certain sum of money covering a part of the claims. Germany, supported at first by England, demanded that the cash claims should be paid out of the receipts of the custom-houses at La Guayra and Puerto Cabello before any other debts. Italy supported Germany throughout. To give claims asserted by force a priority over those settled by diplomacy Mr. Bowen contended would encourage warlike action in the col-

lection of claims. The British minister, who had taken umbrage at the suggestion of Minister Bowen that this would mean a continuance of the Anglo-German alliance for six years, was disposed to yield this point. Objections were made on behalf of France, who contended that her claims were already settled and payment arranged for. Mr. Bowen's proposal was that 30 per cent. of the customs revenues of the ports of La Guayra and Puerto Cabello be set apart as a fund for the liquidation of claims made by all foreign governments against the Government of Venezuela. This was separate from and in addition to a fund of 13 per cent. of the customs revenue of all the ports to be applied to the payment of the prior claims of France and some other nations which antedated the Castro administration and had been adjudicated and arranged previously. The proposal contemplated the supervision of the customs administration by officials appointed by Belgium, a neutral power having no navy, which had a large aggregate of pecuniary claims. Other creditor nations, besides Belgium, France, England, Germany, and Italy, are Spain, Norway, Sweden, Netherlands, and the United States. When the representatives of the three powers insisted that the 30 per cent., or a part of it, be applied to the payment of their cash demands before the claims of other powers were paid Mr. Bowen proposed to refer the question of their preferential treatment to The Hague Court of Arbitration. The ambassadors suggested arbitration by President Roosevelt, who again declined to act. The claims for which the 13 per cent. of the customs duties was reserved amount to 70,000,000 francs. No payments to these creditors had been made for a year. France filed additional claims amounting to 65,000,000 francs, and Belgians claimed 55,000,000 francs. Venezuela offered to pay each of the blockading powers as an evidence of good faith \$27,500 on the day when the blockade is raised. Great Britain was willing to accept the final offer, and to let the question of preference be decided by The Hague tribunal, but Germany and Italy still held out for a percentage of the customs revenue to be reserved for the satisfaction of their original cash demands, amounting to \$340,000 and \$360,000 respectively. England and Italy finally agreed to accept a cash payment of £5,500 each. The German Cabinet insisted on \$340,000, which Mr. Bowen conceded under protest. The protocols provide that the blockade shall be lifted immediately. Venezuela shall set aside 30 per cent. of the customs of the two ports for the payment of claims to all countries, which money shall accumulate till the court of The Hague decides the question of preferential treatment and until all claims have been adjudicated, when *pro rata* payments shall begin and continue monthly. If Venezuela defaults in the payment of one instalment Belgium shall administer the customs at the two ports until all claims as adjusted by mixed tribunals shall be satisfied.

Renewal of the Rebellion.—The blockade, which cut off President Castro's revenue and prevented his getting supplies of ammunition, was the opportunity of the revolutionists, who still maintained a small army in the field under Gen. Rolando and held the Tuy valley. Gen. Matos despatched a new expedition from Curaçao to the Goajira peninsula. Gen. Manuel Antonio Matos had already expended \$2,000,000 in arming, feeding, and paying the army of 10,000 men that took the field in the summer. He had distinguished himself by bringing the Government out of financial crises as Minister of Finance under President Crespo and President Andrade, and he

denounced the Castro administration as corrupt. President Castro's Government confiscated his large coffee and cacao plantations and his shares in the Bank of Venezuela and the Bank of Caracas. After the blockade food rose to high prices and the Government and national bank soon expended all the money that was left and had no means of raising more. For the first time since 1892 the soldiers could neither be paid nor properly fed. Gen. Rolando gathered 1,200 revolutionists at Lezama, Gen. Riera an equal number at Coro, and other bands assembled in the neighborhood of Barquisimeto. Gen. Antonio Fernandez, in command of the revolutionary forces,

inflicted a severe defeat at Guatire on the Government troops commanded by Gen. Modesta. President Castro sent Gen. Campbell Acosta with 1,500 Andine troops to check the rebel advance if possible. The coasts of Tucacas and Coro, held by the revolutionists, were not blockaded by the allies, and they were able to import arms and ammunition and other supplies freely after Castro's navy was captured. Some of the generals who had fought for the revolution in the former campaign were conciliated by receiving commands in the Venezuelan army.

WEST AFRICA. The coast of Africa from the southern border of Morocco to the mouth of the Congo has in recent times been occupied by European powers which formerly neglected the defense of their few scattered trading stations. The effective occupation of the coast regions was followed by extraordinary exertions to establish claims over the interior. At last the whole of the interior of northern Africa between Barbary and the Congo region from the west coast to the western limits of the Egyptian Soudan has been partitioned into spheres of influence. Germany occupied Togoland and Cameroons in 1884 and in the same year France declared a protectorate over the coast between Cameroons and the Congo, having had factories on the Gabun for forty years, and a British protectorate was proclaimed over the region where the Royal Niger Company claimed to have made political treaties with several hundred native chiefs and tribes. The Germans and the French, as well as the English, were active in explorations and scientific missions which had for their secret object the establishment of treaty relations with the natives of the interior. This era of private expeditions, supported by associations of the advocates of colonial expansion in each country, was succeeded by one of military operations to make good uncertain claims of protectorates based on treaties with native potentates, and by diplomatic negotiations and the delimitation of spheres of influence after a number of international incidents which created ill feeling between the nations that were actively engaged in extending their dominions in northwestern Africa. The doctrine of the Hinterland could no longer be applied when the expeditions of rival powers clashed in the far interior of West Africa in the bend of the Niger, on the upper Binue, and in the region of Lake Chad. The French, advancing from Senegal eastward and from the Ivory Coast and Slave Coast northward, later northward from the Congo and southward from Algeria; the British, controlling the maritime Niger and the navigable Binue, spreading out from their base on these rivers and penetrating simultaneously from the Gold Coast and eastward from Sierra Leone and Senegambia; the Germans, pushing up from Cameroons, endeavoring to establish a foothold on the Binue and Lake Chad, and striving at the same time to establish their influence in the bend of the Niger by occupying the Hinterland of Togoland—all converged toward the same regions, and in the race for the Niger region and the Central Soudan the political and military agents intrigued with the savage enemies of the rival powers, and when military expeditions met in the interior hostile

collisions were not always avoided, though they were glozed over by expedient diplomatic explanations. France and Germany first came to an understanding and signed a convention in December, 1885, by which Germany conceded to France the regions inland from the Cameroons east of 15° of east longitude, reserving the southwest bank of the Shari from 10° of north latitude down to Lake Chad. In the same year Germany made an agreement with Great Britain and a supplementary one in 1886, abandoning pretensions on the Binue and securing access to Lake Chad and the recognition of rights over Admawa. France arranged a delimitation with the Congo State, in a convention concluded in 1885, supplemented by further arrangements in 1887. The boundary of Portuguese Guinea was settled by a convention concluded by France on May 12, 1886. Germany retired from the contest for the Niger regions and the states of the Soudan, being content with a commercial route to Lake Chad. The Anglo-German agreement of August, 1886, defined as the limit between the British and German spheres a line from the Cross river to the Binue east of Yola, fixed by a further agreement on Nov. 15, 1893, at a point 30 miles east of that town. The struggle for the bend of the Niger and the race for Lake Chad was continued by France and Great Britain. On Aug. 5, 1890, an Anglo-French agreement was reached. This agreement defined the limit between the British and the French spheres on the River Niger as a line from Say on the Niger to Barua on Lake Chad drawn in such a manner as to comprise within the sphere of the British Niger Company all that belongs to the Kingdom of Sokoto. This gave to each power access to Lake Chad, but did not decide the fate of the Mohammedan states surrounding that body of water, which then possessed more formidable powers of defense than they had after the conqueror Rabah had overrun these countries; neither did the convention settle the boundaries in the bend of the Niger west of Say, where French and British were busily extending their influence, and the French put a considerable military force into the field to contend with Ahmadu, Samory, and other powerful natives rulers who blocked their progress. In 1889, 1893, and 1895 conventions were signed by France and Great Britain delimiting certain parts of their contiguous possessions in accordance with the advance of effective occupation. The French had not only Senegal as a base but the Ivory Coast, which they occupied in 1883, having had factories on that coast for forty years. In 1894 they conquered Dahomey and aimed to join this territory, the Ivory Coast, and the Senegal protectorate together, leaving

the British Gold Coast, Sierra Leone, and Gambia isolated enclaves. To check this plan the British subjugated the Ashantis behind the Gold Coast in 1896 and the Royal Niger Company began to organize an army. Germany, in February, 1896, recognized the French claim to Bagirmi and definitely accepted the Shari as the limit of the German sphere in the region of Lake Chad. Political and military undertakings having exhausted the resources of the Niger Company and the situation becoming critical on the frontiers, the British Government bought out the chartered company, and on June 14, 1898, concluded a more definite and complete agreement with France, which after long negotiations over details was ratified on June 13, 1899. The spheres of France and Great Britain, both east and west of the Niger, are delimited in this convention. Between the British Gold Coast protectorate and the French Ivory Coast the line is continued from the terminal point of the frontier laid down in the convention of July 21, 1893, which was at the point on the river Volta where it is intersected by the parallel of 9° of north latitude. It ascends this river northward to its intersection by the parallel of 11° of north latitude, then turns to the east, diverging so as to leave Sapele to Great Britain. The boundary between Dahomey and the British colony of Lagos was delimited in 1895 from the sea to the intersection of the river Ocpara by the parallel of 9° of north latitude. The boundary between the French and English spheres proceeds from that point in a northerly direction until it meets the river Niger 10 miles above Gere, runs up the Niger 7 miles, then continues northward, following the Dallul Mauri, to a point 100 miles from the city of Sokoto, from which it follows the arc of a circle with that radius eastward round that city on the north until its second intersection with the parallel of 14° of north latitude, whence it runs due east 70 miles, then south to 13° 20' of north latitude, then east again 250 miles, then north to 14° of north latitude, then east to the meridian that passes 35' east of the town of Kuka on Lake Chad, and then follows this meridian to the shore of the lake. The French effort to obtain access through their own territory to the maritime Niger was frustrated, but the British Government agreed to lease for thirty years to France for commercial purposes a piece of land on the right bank of the Niger, between Lealaba and the confluence of the Moussa and Niger, and one on one of the mouths of the Niger and to extend for that period the same treatment as regards river navigation and tariff and fiscal matters to French as to British persons and merchandise. The line between British Nigeria and German Cameroons is continued from a point on the Binue 5 miles below the confluence of the Faro in a straight line to the intersection of the parallel of 10° of north latitude with the meridian of 13° of east longitude, and thence to a point on Lake Chad east of the town of Kuka. The boundary between German Togoland and Dahomey, by the agreement of July 23, 1897, between France and Germany is the river Mona up to 7° of north latitude and on the north the parallel of 11° of north latitude and the White Volta as far as 10° of north latitude. In the Anglo-German negotiations the Salaga country behind Togoland and the Gold Coast was left undivided for a long time and was treated as a neutral zone until an agreement was reached on Nov. 14, 1899, fixing the Daka river as the dividing line up to 9° of north latitude, the line to be drawn beyond that point by a mixed com-

mission in such manner as to leave Yendi and Chakosi on the German and Mauprui and Gambaga on the English side. On March 29, 1901, an agreement between France and Spain was ratified reducing the area that Spain claimed south of Morocco, leaving the entire Sahara in the French sphere, from the western frontier of Egypt to the Spanish coast strip at Rio de Oro. In compensation France conceded the Spanish claim to the coast district on the Bight of Biafra from the boundary of the German Cameroons to the Rio Muni, with a boundary inland at 11° 20' east of Greenwich. In the same agreement France secured the right of preemption to all the Spanish territories in West Africa and the islands adjacent to the coast.

French Possessions.—Including the Sahara, with an estimated area of 1,544,000 square miles, the French possessions, stretching from the Congo and Ubangi to the borders of Algeria, Tunis, and Tripoli and from the Atlantic to the Egyptian frontier, have a total area estimated at 3,050,000 square miles, and an estimated population of 23,380,000. The administration of French West Africa was reorganized on Jan. 1, 1900. The boundaries of Senegal, the Ivory Coast, French Guinea, and Dahomey were extended, and the Soudan was placed under a military administration independent of the civil administration of Senegal, but under the political direction of the Governor of Senegal, who is Governor-General of French West Africa. The colony of *Senegal*, where a French settlement has existed since 1637, now extends inland 900 miles to within the bend of the Niger. Under the direct administration of the Governor are the communes of St. Louis, Dakar, Goree, and Rufisque, which have a total population of 42,200. Local administrators are placed over 9 circles which have a population of 61,000. The territory under immediate French protection and control has an area of about 1,000,000 square miles, but the total area of the colony and protectorate is 200,000 square miles, with 3,200,000 inhabitants, including the new circles of Kayes, Kita, Sata-dugu, Bammuko, Segu, Jenne, Niore, Gumba, Sokolo, and Buguni. Scattered among the districts under French administrators are some native states whose friendly chiefs have been left undisturbed. These have a population of 80,000. The colony sends a Deputy to the French Chamber. The Governor in 1902 was N. E. Ballay, residing at St. Louis, which has a population of 20,000. The military force in 1900 was 2,600 men, of whom 1,180 were natives. The Government maintains 9 elementary schools in the 4 towns, with 67 teachers and 1,986 pupils, of whom 568 are girls; also schools of agriculture and horticulture. The natives can weave and make pottery and jewelry, and they cultivate millet, corn, and rice, and keep cattle, sheep, goats, and camels. The local revenue in 1901 was 4,644,730 francs, and expenditure the same. The production of earthnuts in 1900 was 140,000 tons. Coconuts, kola, rubber, gums, and castor-oil are other products. Gold, silver, mercury, and copper are found. Earthnuts, gums, and rubber are the chief exports. The total value of imports in 1900 was 46,805,000 francs, and of exports 42,925,000 francs. The ports were visited by 352 vessels, of 460,227 tons. A railroad, 163 miles long, connects Dakar with St. Louis and Rufisque, and one from Kayes, the head of navigation on the Senegal river, had been built through to Bamaku on the navigable Niger, 357 miles, in the beginning of 1902, and was pushed through to Timbuktu in the autumn. A graving dock has

been built at Dakar capable of taking in the largest war-ships, and heavy guns have been mounted in the fortress. There are 1,500 miles of telegraphs and 40 miles of telephones. A cable will be laid between Dakar and Brest.

The *Military Territories* are (1) the bend of the Niger and the town of Timbuktu on the northern bank, which has a population of 12,000, with residences at Dori, Macini, and Yatenga; (2) the district about the source of the Niger, with residences at Mossi and Gurunsi; (3) the district from Zinder on the Niger to Lake Chad, including the river ports of Say, Koni, and Maradi. The chief cultivated products in the upper Niger region are millet, rice, wheat, and earth-nuts. Wild products are rubber and gum, which are exported. The area of the military territories is about 700,000 square miles, with 4,000,000 inhabitants. The military forces in West Africa in 1902 consisted of 31 European officers, 3,043 European non-commissioned officers and privates, and 6,836 native troops; total, 9,910 officers and men. In the region of Lake Chad there were besides 140 European and 722 native troops. The expenditure of France on West Africa amounted to 15,574,173 francs, and on the Lake Chad territory to 1,793,621 francs in 1902.

The Sultanate of *Bagirmi*, between Lake Chad and the Shari, has an area of 65,650 square miles, including tributary territory. A French Resident was received at Massenia in 1897. Afterward Rabah expelled the Sultan. He was defeated and killed by French troops in February, 1900, and the former Government was restored under French protection. The *Sahara* has a normal population estimated at 550,000. Including the Libyan desert, the area is about 1,544,000 square miles. The semi-civilized state of *Wadai* is about 170,000 square miles in extent, with 2,000,000 inhabitants.

In August, 1901, Capt. Dangeville with 230 Spahis of the Chad command marched 180 miles in six days, often through water waist-high, surprised Fadlullah, the son and successor of Rabah, in his fort at Gudjba, killed him and 500 of his men, captured his brother Ebe and 1,500 men, and liberated 5,000 slaves, while the French loss was only 1 man killed and 6 men wounded. The defeat of Rabah had cleared away the last formidable adversary of the French in the Soudan, and now that the remnant of Rabah's power was crushed they were for the moment without enemies and had established their dominion or influence over every country except Wadai, the most powerful of the Mohammedan states, with which the whites had as yet no communications. In Wadai a revolution occurred early in 1902. The Sultan Ahmed was overturned after a fierce battle, and Mohammed Dudu, son of the former Sultan Yussef, came to the throne. On Nov. 9, 1901, a column of 200 men marching toward Mao, northeast of Lake Chad, was attacked by a band of followers of the Sheik el Senussi. Capt. Billot and 5 men were killed, while the assailants were repelled with heavy loss. Lieut.-Col. Destenave thereupon established a post in Nguri and one in Ngagana, the latter in touch with the post on the Shari. The chief was supposed to belong to the Senussi sect that is the most active and influential religious body in this part of Africa. Later it was believed that the incitement to the anti-Christian movement came from a certain sheik called el Senussi, who was a brother-in-law of Rabah. The French have endeavored to cultivate good relations with the Senussis, and the head of this sect has never countenanced hostilities against Christians or pagans. The Senussis are influential among the

desert tribes of the Sahara, have been predominant in Wadai for ten years, and in the central Soudan they have opened schools, the greatest number among the Tubus of Kanem, northeast of Lake Chad. These were the people who attacked the French party. On Jan. 20, 1902, the French were attacked again, and both sides lost severely. Instead of fleeing at the first onset, as the blacks do, the Arabs charged the French square repeatedly and fought till they were practically exterminated, standing before the fire of the artillery and the bayonet charge that was necessary to secure the victory. The French captured the town of Bir Alali, the home of the chief whose followers had attacked them, and established a post there, giving him back his town uninjured as a proof that peace and friendship were wanted rather than hostility. Messengers were sent to Sidi-el-Mahdi, the head of the Senussis, asking him the meaning of the hostile attitude of his adherents in Kanem. He replied in March that the aggressive acts were not committed by his desire, that he wished to be on friendly terms with the whites. Sidi-el-Mahdi, who was a brother of Mohammed-el-Mahdi, the late head of the sect, who died in 1895, and a son of Mohammed-el-Mahdi, its original founder, who died in 1860, died himself in the summer, and designated one of his nephews as his successor, his children still being too young. The Arabs and the Sahara tribes were made uneasy by the presence of the French in Kanem, whether the Senussis, who have hitherto confined their efforts to peaceful missionary and reformatory labors, were or were not the instigators. On June 1 the garrison at Bir Alali, near Lake Chad, was attacked by 1,000 Tuaregs, who were repulsed with a loss of 100 men, and returned to the upper Ubangi. The post of Government Commissioner at Lake Chad was abolished in July and the territory was made a province of the French Congo, and thus placed under civil rule. In dealing with the organized semi-civilized states of the Soudan the Government preferred to have the action of military officers under the control of the Governor-General of the Congo. A further advance eastward toward Wadai in the face of such resistance requires a stronger force than the French had on the ground. The question of communications is the most important one. The French some years ago endeavored to make themselves masters of the principal caravan routes in the rear of Tripoli and Benghazi. The project was abandoned because the Turks strengthened their garrison in Tripoli. The good understanding since reached with Italy regarding Tripoli prevents any renewal of the efforts to make this part of the Sahara French. The route from the Congo is the shorter, but it is an impossible one on account of the long distances where human portage is necessary. Large quantities of ammunition have been brought to Say from Senegal by railroad and steamboat. The French were dissatisfied with this route to the central Soudan. The boundary which they obtained from the British, following an arc 100 miles from Sokoto, appears to leave them nothing but desert. This was not yet known because the exact location of Sokoto was uncertain. The trade with the Soudan has always been carried on over the desert by the Arab merchants of Tripoli. It is for this reason mainly that the French desire to be on friendly terms with the Senussis, as these control the caravan routes. The trade with Bornu was destroyed by Rabah, who devastated and depopulated the country and seized the stocks of the Tripolitan merchants.

The *French Congo* has an area of about 450,000 square miles and a population variously estimated at from 8,000,000 to 15,000,000. The Commissioner-General is A. Grodet. Col. Gentil is Commissioner for the Shari protectorate, which includes the northern Congo and Ubangi regions, where military administration is in force. There are 45 schools in the colony, with 2,654 pupils. The expenditure of France in 1902 was 500,000 francs. The local budget of revenue and expenditure in 1900 was 3,834,000 francs. A loan of 2,000,000 francs was raised for roads and telegraphs. The natives cultivate manioc and Europeans raise coffee, vanilla, and cacao. Rubber is collected in the forests. The total value of imports in 1900 was 10,550,000 francs; exports, 7,550,000 francs. The exports of rubber were 3,015,000 francs; of ivory, 2,927,000 francs; of woods, 1,150,000 francs. Minor exports are palm-oil, palm-kernels, cacao, kola-nuts, and piassava. The ports were visited in 1900 by 99 vessels, of 137,698 tons. A railroad from Libreville, the seat of Government, to the Congo is projected. France, Portugal, and Belgium renewed in 1902 the protocol signed at Lisbon in 1892 relative to import duties in the western basin of the Congo. The ad valorem system was temporarily maintained pending the establishment of specific duties, which shall not exceed 10 per cent., and the existing rate of 6 per cent. ad valorem was raised to 10 per cent. The French Government granted in 1893 a territorial concession of 104,000 square kilometers in the Ogowe district to a French company, and in 1899 divided the whole of the French Congo between 40 concessionaire companies domiciled in France though largely controlled by Belgians. English trading companies have hitherto enjoyed the whole trade in these regions. In the Congo basin by the act of Berlin there must be complete freedom of trade; no monopoly or favor of any kind can be granted in matters of trade. The Ogowe district of Gabun is not included in the free-trade zone. The companies that obtained concessions in the French Congo bound themselves to allow every latitude to the trading operations of the foreign firms for two years, and at the end of that period to buy them out. For two years the French companies did nothing, and the English companies still had all the trade. In 1901 the French companies established factories, and informed the natives that they must trade only with them. The English merchants through their native agents had all the produce, consisting of india-rubber, palm-oil, palm-kernels, ebony, and ivory tusks, brought to their factories and induced the natives to have no dealings with the concessionaire companies. Thereby the foreign merchants came into conflict with the French authorities, who told them they could no longer trade with the natives, that these must bring their produce to the concessionaires. When the merchants, nevertheless, continued to carry on trade the French officials seized and threw into the bush their cotton cloth and other trade goods, seized the native produce and delivered it to the concessionaires. The merchants applied to the local courts, and these decided that, all lands vacant and without ownership having been incorporated in the public domain, and the right to the produce of the public domain having been conceded to the companies, these had the sole right to buy produce except the produce of the native reservations. In the native reservations the foreign merchants would enjoy complete freedom of trade. There were, however, no native reservations yet delimited, and to survey and delimit them would be the work of years.

VOL. XLII.—58 A

As in the meantime they could do no business, the French companies could buy them out at any price. They did not abandon the contest, however. They continued to trade even after the companies obtained damages against them for illegal trading and trespass. They influenced the natives to go back into the bush and bring down no produce at all, and demanded of the French authorities full compensation for the business they lost, not only in the Congo basin but in the Ogowe district. Where the local officials had broken into the English factories, seized trade goods in the possession of the merchants, and forcibly closed trade routes, the French Government acknowledged that the merchants had claims for redress, but that they had a right to continue to buy produce from the natives was not acknowledged. The French had to send out punitive expeditions against the natives to prevent them from secretly dealing with the English merchants, whose native agents when caught carrying on the clandestine trade were punished. Two Mohammedan chiefs on the upper Ubangi who sold ivory to the English fell upon a punitive expedition and fatally wounded the French officer in command. Another French officer was assassinated by Pahouins near Libreville. An expedition was attacked by the Pumos on the Sanga river. The manager for one of the concessionaire companies was murdered at his factory at Likelemba, and the neighboring factory at Pembe was pillaged. In Ngounie a punitive expedition destroyed the villages and plantations of the natives, who fought the soldiers fiercely.

French Guinea, lying between Portuguese Guinea and Sierra Leone, has an area of about 95,000 square miles and a population estimated at 2,200,000. The Futa Jallon has been added to the territory, which has been extended so as to include Dinguiray, Sigui, Kurussa, Kankan, Kissidugo, and Beyla. There are 7 Government schools, with 426 pupils. The natives cultivate rice, millet, and earthnuts, and gather gums and rubber. Cattle are raised in Futa Jallon. The local revenue and expenditure in 1901 balanced at 6,895,000 francs. A harbor will be constructed at Konakry and a railroad built to the Niger, a loan of 4,000,000 francs having been authorized for the purpose. French, English, and German steamers call at that port. The number of vessels entered at the ports during 1899 was 5,072, of 312,391 tons; cleared, 5,002, of 308,523 tons. The value of imports in 1900 amounted to 14,275,452 francs; exports, 9,779,772 francs. The exports of rubber were 7,322,000 francs; of cattle, 1,000,500 francs; of palm-kernels, 477,000 francs; imports of cotton cloth, 5,325,000 francs.

The *Ivory Coast*, which has been extended so as to include the Kingdom of Kong, has an area of 125,000 square miles and 2,500,000 inhabitants. The budget of revenue and expenditure in 1901 was 1,908,000 francs. The natives grow corn and rice. White planters raise coffee with success. Coconuts and rubber are gathered by the blacks, and woods are brought down from the forests. The value of imports in 1900 was 9,080,873 francs; exports, 8,074,589 francs. The exports of rubber were 4,725,000 francs; of palm-oil, 1,475,000 francs; of mahogany, 1,200,000 francs. During 1900 the number of vessels entered at Grand Bassam was 871, of 1,140,307 tons; cleared, 865, of 1,126,943 tons. A campaign in the Hinterland resulted in the submission of the natives of Baule in the early part of 1902.

Dahomey, including the added territories of Say and Nebba, has an area of about 60,000

square miles and 1,000,000 inhabitants. Porto Novo, the capital, has a population of 50,000. The natives cultivate corn, manioc, and yams and obtain from the forests palm-kernels, coconuts, etc. The budget of revenue and expenditure in 1901 was 2,974,200 francs. Kotonu, a port having about 15,000 inhabitants, is connected by telegraph with the Niger, and a railroad is being built by a company to Abomey, the capital of the former Kingdom of Dahomey. The king was exiled to the French Congo in 1900. The value of imports in 1900 was 15,221,419 francs; exports, 12,755,894 francs. Liquor, cotton goods, and tobacco are the largest imports. The exports of palm-kernels were 6,595,800 francs in value; of palm-oil, 5,352,225 francs. The ports were visited in 1900 by 415 steamers, of 393,401 tons.

British Possessions.—The *Gold Coast* is a Crown colony. The Governor is Major Matthew Nathan. The colony proper has an area of 40,000 square miles, with 1,473,882 inhabitants. The number of Europeans is about 500. There are 11,000 pupils in the missionary schools. The exports are palm-oil, palm-kernels, rubber, and cabinet woods. Gold-mines have been opened and a railroad is being built to enable mines to be worked in Ashanti, which was conquered and made a British protectorate in 1896. The northern territories of Adansi and Ashanti and the part of the neutral zone which by the Anglo-German agreement of Nov. 14, 1899, falls to the share of Great Britain, which is to be marked out by a joint boundary commission, are under the direction of a Commissioner, Col. A. H. Morris. The revenue of the colony in 1899 was £322,500; expenditure, £309,660; imports, £1,323,220; exports, £1,111,740; tonnage entered and cleared, 1,250,410 tons. The exports of rubber were £555,731; of palm-oil, £183,204; of kernels, £106,156; of gold dust, £51,300; of kola-nuts, £57,020. The northern territories have an area of 50,000 square miles. Many mining concessions have been taken out, and companies have been floated that had no auriferous deposits that can be made profitable. This circumstance and the lack of transportation have militated against the progress of gold-mining. The railroad has been built as far as the Offin river. The inhabitants are good material for soldiers and many are recruited for the British West African regiments. Pabia is a district that both Germany and Great Britain claim, and both had military to watch events until the boundary commission came. The western boundary of the Gold Coast was delimited by an Anglo-French Commission in the fall of 1902.

Lagos, another Crown colony, is administered by a Governor, Sir William McGregor. It has an area of 985 square miles and 85,607 inhabitants. The Government maintains 31 schools, with 3,371 pupils. Palm-oil, palm-kernels, ivory, gum copal, cotton, rubber, cacao, and coffee are exported, and spirits, cotton cloth, tobacco, and hardware are imported. A railroad was built from Lagos to Abeokuta, 60 miles, and the extension to Ibadan, 66 miles, is now completed. The Lagos protectorate has an area of 21,000 square miles and a population of about 3,000,000. It includes all towns belonging to Ibadan and Oyo, Ikirun, and all the Yoruba country. The revenue of the colony in 1899 was £192,790; expenditure, £223,290; imports, £966,600; exports, £915,940; tonnage entered and cleared, 968,828 tons. The exports of palm-oil were £168,458 in value; of palm-kernels, £412,817; of rubber, £160,315.

Gambia is governed by an Administrator, Sir

George C. Denton. The colony has an area of 69 square miles with 13,456 inhabitants, of whom 62 are Europeans. There are 6 schools, with 883 pupils. The main export is earthnuts. Minor exports are hides, beeswax, cotton, corn, rice, and rubber. The protectorate has an area of 2,700 square miles, with about 200,000 inhabitants. The revenue of the colony in 1901 was £43,726; expenditure, £48,518; imports, £252,646; exports, £233,667; tonnage entered and cleared, 284,635 tons. The Gambia protectorate has 90,000. The Jolabs, a wild tribe near the French frontier, murdered two commissioners and some of the police. An expedition was sent to punish them by burning their towns and seizing their grain and cattle. The people of this and other protectorates are rapidly becoming converted to Mohammedanism, even some who had previously embraced Christianity. The spread of Mohammedanism causes a great decline in the spirit trade. The Marabouts, as the native Mohammedans are called, form nearly 75 per cent. of the population.

Sierra Leone has an area of about 4,000 square miles, with 74,835 inhabitants, of whom 224 are Europeans. There are 65 schools, with 5,583 pupils in average attendance. Freetown, the capital, which has 30,033 inhabitants, is a fortified naval station and the headquarters of the British forces in West Africa, consisting of a West India regiment of 800 men and a West African regiment raised in 1898, besides engineers and artillery. There is also an armed constabulary of 600 men for frontier defense. The exports are palm-oil, palm-kernels, benni-seed, earthnuts, kola, rubber, gum copal, and hides. A railroad from Freetown to Rotofunk, 60 miles, is being carried farther to Bo, 80 miles. The revenue of the colony in 1899 was £168,380; expenditure, £145,090; imports, £689,810; exports, £336,010, including palm-kernels for £163,271, rubber for £43,730, and kola-nuts for £61,456; tonnage entered and cleared, 1,181,748 tons. The Sierra Leone protectorate has an extent of about 30,000 square miles, with about 375,000 inhabitants.

Nigeria has an area of about 400,000 square miles and a population estimated at from 25,000,000 to 40,000,000. It comprises Benin, Ilorin, and the coast region formerly called the Oil Rivers protectorate and the regions on the middle Niger and the Benue that were the field of the commercial operations of the Royal Niger Company, founded by Sir George Goldie in 1882, and of the political activity of that company which secured this extensive, populous, and productive country to Great Britain. British protectorates over these regions were proclaimed in 1884 and 1887, and in 1900 the Niger Company surrendered its charter and handed over the administration to the Imperial Government. The territories south of a line drawn from Owo on the Lagos frontier through Idda on the Niger to Ashaku on the frontier of the Cameroons, most of which formed the Niger Coast protectorate that was not controlled by the Royal Niger Company, were added to Nigeria, but are still administered separately from the northern protectorate. A part of the lower Niger region was added to Lagos. The revenues collected from imports and exports in Lagos and Southern Nigeria will be divided with Northern Nigeria, which has no present source of revenue. In 1901 the revenue amounted to £380,984, of which £362,472 came from customs. The expenditure was £304,143. The value of imports was £1,199,690, and of exports £1,166,147. The tonnage entered and cleared was 550,681 tons. Southern Nigeria is thickly inhabited by pagan

tribes. The products are palm-oil, palm-kernels, ivory, rubber, ebony, camwood, indigo, gums, hardwood, and hides. Cotton cloth, spirits, hardware, tobacco, gunpowder, implements, pottery, provisions, and brass and copper rod are the chief imports. A military force of 1,080 native troops is maintained. The number of Europeans in 1900 was 399. Custom-houses are established at the ports of Wari, Burutu, Akassa, Brass, New Calabar, Bony, Opobo, and Old Calabar. The British Government has advanced £43,000 for harbor improvements. The High Commissioner for Southern Nigeria is Sir R. D. R. Moor. The fetish-worshipping Aros were thoroughly subdued early in 1902 by a strong expedition. The majority of the chiefs made their submission without fighting, and markets were established in their towns protected by military posts. Those who resisted fought stubbornly, and inflicted considerable losses on the columns of native soldiery. Aro Chuku, the center of fetish worship for Southern Nigeria, was made a British post. The inhabitants were set to work building roads through the country.

Northern Nigeria embraces the former Fula Empire of Sokoto and the tributary states of Gando, Kano, Katsena, Bautshi, Muri, Zaria, Ilorin, Nupe, Kontagora, and the part of Adamawa not included in the German sphere. In these Mohammedan lands liquor is not allowed to be sold, though on the border there is a neutral zone where it may be stored and dispensed in limited quantities. The Royal Niger Company abolished by proclamation the legal status of slavery, and this law the imperial authorities intend to enforce wherever effective occupation exists. The part of the protectorate that is under military control is divided into the provinces of Borgu, Ilorin, Kontagora, Kabba, Bida, Bassa, Upper Binue, Lower Binue, and Gwari. The High Commissioner is Brig.-Gen. Sir F. J. D. Lugard. Col. J. Morland commands the troops, consisting of 2,500 native infantry, besides engineers and artillery. The natives grow and weave cotton, manufacture leather, raise indigo, gather gum, copal, and other forest products, and obtain ivory for export. Silver, tin, antimony, and lead have been found.

During 1901 the West African frontier force organized by Sir Frederick Lugard established British rule in Kontagora and Bida and in British Adamawa, where the Emir of Yola was deposed and a new one set up in his stead. In 1902 the operations were extended to Lake Chad, into the region where the French had been compelled to enter British territory, when they had the only force in this region, in their campaigns against Rabah and his son. The British expedition under Lieut.-Col. Morland, 1,000 strong, ascended the Benue from Lokoja and marched first against the slave-raiding Emir of Bautshi, who fled to Kano. A new Emir was installed, with a British garrison to protect him. Col. Morland then proceeded with 350 men toward Lake Chad, occupied the town of Gombe, captured Mallam Gibrella, a religious leader whose cavalry charged the column courageously, left a garrison in Gujba, established a post at Mongornu, planted the British flag on the shore of Lake Chad, brought from the French camp established temporarily in German territory Shefogarbai, the rightful Sultan, and set him up as Emir of British Bornu in Mongornu pending the rebuilding of Kuka, which Rabah had destroyed. The people settled down to work under the new rule and cultivated more land than they had for many years. The hamlet that was made the Sultan's residence grew rap-

idly into a town of 25,000 inhabitants. The Sultans of Kano, Gando, and Sokoto still refused to acknowledge British authority. The former made military preparations to resist the invasion of his territory and persuaded the chief of the town of Zaria, which was occupied by the British, to rebuild his defenses and make preparations to expel the garrison, which was therefore strengthened. The Emir of Gando, who rules over a third of the Hausa states, changed his attitude and promised to open his country to trade. An expedition was sent against a Mohammedan chief at Abuja, between the Benue and the Niger, and he was caught and shot for having murdered a native missionary. Zunguru, the new capital of northern Nigeria, was connected with Zaria and Bautshi by telegraph. A railroad is being built between Zunguru and the Niger, a distance of 80 miles. A joint commission set out in November to delimit the frontier between northern Nigeria and the French sphere in accordance with the Anglo-French agreement of 1898 and in continuation of the work begun by the joint commission of 1900. The frontier from the northern boundary of Lagos to the Niger had been delimited. A temporary boundary was fixed by English and German officers between British and German Bornu to stop friction caused by the raids into British territory of the chief of Dikoa and engaging in hostilities with the recently installed Emir of Bornu. In July Baron Lambert, Belgian Minister of State, delivered his decision as arbitrator in the old disputes between France and England concerning the Waima incident and the seizure by the officers of the Royal Niger Company of the French steamboat *Sergeant Malamine* on the Niger in 1894, pursuant to an arbitration convention signed on April 3, 1901. At Waima, which was decided afterward to be in British territory, in the rivalry of territorial occupation French and British native troops came into collision. The seizure of the French steamboat prevented Lieut. Mizon from carrying out a political mission to the Benue and the middle Niger. As the Niger is an international river by treaty the arbitrator decided that the British Government should pay £6,500 to the French Government.

German Possessions.—*Togoland*, lying between the English Gold Coast colony and Dahomey on the Slave Coast, has an area of about 33,000 square miles and a population of 2,500,000. There were 135 Europeans in 1900. The military force consists of 7 Germans and 150 natives. Besides the missionary schools there is a Government school, with 50 pupils. The natives cultivate corn, yams, tapioca, ginger, and bananas, and obtain coconuts, palm-kernels, palm-oil, gum, rubber, and dyewoods from the forests. Coffee has been planted, and there are large plantations of coconut palms. The budget for 1903 amounts to 1,650,000 marks, of which 1,015,000 marks are contributed by the Imperial Government. The imports in 1900 amounted to 3,516,800 marks, and exports to 3,058,900 marks, including palm-kernels of the value of 1,422,800 marks, palm-oil of the value of 1,015,000 marks, and rubber of the value of 521,400 marks. The ports were visited by 95 vessels, of 110,241 tons.

The *Cameroons* protectorate has an area of 191,130 square miles and a population estimated at 3,500,000. There were 528 Europeans in 1900. The military force consists of 95 Germans and 900 natives. The missionary schools have 5,000 pupils. Cacao, coffee, and tobacco have been planted, and cloves, rubber-trees, ginger, vanilla, and pepper are being tried in the Government

experimental station. The natives barter rubber, ivory, and palm-oil. The northwest Cameroons Company has undertaken to develop 34,000 square miles in the interior. The revenue and expenditure for 1903 balance at 4,236,600 marks. The imperial contribution is 2,205,100 marks. The imports in 1899 amounted to 11,133,200 marks; exports to 4,840,800 marks, including rubber for 1,898,000 marks, palm-kernels for 1,266,000 marks, palm-oil for 850,000 marks, ivory for 604,000 marks, and cacao for 192,000 marks. The ports were visited by 66 vessels, of 81,891 tons. The German Government is carrying on experiments in the cultivation of cotton in both East and West Africa, and has engaged American negroes as expert instructors to teach the natives. The traders who bartered European goods for palm-oil, palm-kernels, and rubber used to set an enormous price on the former, and thereby made much money. The planters when they came gave their laborers 8 marks a month and a dwelling. When German money got into circulation the wages would buy little clothing and other European articles, and therefore they established stores to furnish their laborers with what they needed at prices corresponding to those prevailing in Europe. Some of the trading firms established plantations, and through this circumstance there was a degree of accommodation. Still there has been much antagonism between the traders and the planters. The missionaries, who also carry on trade, have revived the attacks on the planters, whose enterprises they think ought to be replaced by independent cultivation by the natives. Wages have risen to 12 or 15 marks a month, but still the lot of the laborers is considered as unsatisfactory and the colonial officials are accused of favoring the owners of the great plantations on the slopes of the Cameroon mountains and countenancing the oppression of the indigenous population. Domestic slavery in Togoland and Cameroons is being gradually abolished, children of slaves being free in the former protectorate and children of half free in the latter, and children of half free persons entirely free, while bondage for debt and the sale or exchange of house slaves are prohibited. The German planters have been most successful in raising cacao. The planters have colonies of negroes settled on their land that they succeed in making work without any further rise in wages by methods described as patriarchal, though the friends of the blacks consider it a kind of slavery. A new region will be opened up by the railroad from Victoria to Lisoka. The Germans in the winter of 1901 undertook an expedition into Adamawa. They encountered the resistance of the inhabitants, and in consequence of this Lieut.-Col. Pavel, commanding the colonial troops, marched against the Bangwa, Bandeng, and Bafut tribes and reduced them to submission. Military stations were established at Buea and Banyo and at Garva on the Benue. In the capture of the Sultan of Banyo Lieut.-Col. Nolte was mortally wounded. From here an exploratory expedition was undertaken to Lake Chad. Hostilities again resulted, and in the end the whole of German Adamawa up to Lake Chad was brought under German rule. A new expedition to promote the commercial development of the country started in the summer from the mouth of the Niger, where the Germans established a base of supplies. The jealousy of German and French enterprises in the interior that the English formerly displayed has disappeared since the boundaries of the different spheres of interest have been sufficiently established, and each nation helps the others in

extending commerce and civilization to Lake Chad. The French defeated and killed Rabah in German territory before German authority was established there, and they crossed German territory to attack Fadullah in British Bornu. A French post was established in the German sphere until the Germans occupied the country.

WEST INDIES. The important islands of the West Indies, now freed from European rule, are described elsewhere (see CUBA, HAYTI, PORTO RICO, SANTO DOMINGO). The British colonies remain intact, but the right of self-government has been curtailed in several of them. Denmark is negotiating for the transfer of the Danish Antilles to the United States. The French colonies have suffered from a volcanic eruption which destroyed the chief town of Martinique.

British Colonies.—The island of *Jamaica* has an area of 4,200 square miles and Turks and Caicos and smaller islands attached to Jamaica have an area of 224 square miles. The population of Jamaica is 745,104, of whom only 14,692 are white. Kingston, the capital, has 46,542 inhabitants. There were 14,656 East Indians in the colony in 1899, of whom 1,683 were under indentures. The number of marriages in 1900 was 3,767; of births, 31,259; of deaths, 16,880. There were 746 Government schools with 98,598 pupils on the rolls in 1900. There were 178,667 acres tilled in 1900 and 379,380 acres in pasture. Sugar-cane covered 25,616 acres; coffee, 24,865 acres; bananas, 27,543 acres; coconut-palms, 12,382 acres; corn, 430 acres; cacao, 1,815 acres; ground provisions, 85,417 acres; guinea-grass, 124,193 acres; plain pasture, 353,588 acres; pasture and pimento, 25,620 acres; pimento, 172 acres. The Governor is Sir Augustus Hemming. The Legislative Council consists of the Governor, 5 official members, 10 nominated members, and 14 members elected for five years. The revenue for the year ending March 31, 1900, was £906,037, and expenditure £917,653. Of the revenue £340,679 came from customs. The principal expenditures were £111,700 for debt charges and £53,720 for police. The regular forces in Jamaica in 1900 numbered 1,739 officers and men. There were 13 ships of the British navy on the North American and West Indian station. The public debt of the colony, including guaranteed debts, amounted in 1900 to £3,824,782. The value of imports in the year ending March 31, 1900, was £1,722,069; exports, £1,797,077. The imports of textiles were £167,302; of flour, £133,936; of rice, £44,745; exports of sugar, £165,941; of rum, £152,144; of coffee, £157,485; of bananas, £618,036; of oranges, £115,473; of spices, £110,602; of woods, £117,099. The tonnage entered and cleared was 1,742,224 tons in 1900. The registered shipping of the colony comprised 142 sailing vessels, of 9,211 tons. There are 9 railroads having a total length of 185 miles; receipts in 1901 were £109,130, and expenses £86,482; the number of passengers carried was 381,408. There are 643 miles of telegraph-lines and 154 miles of telephones. The number of telegrams sent in the year ending March 31, 1901, was 85,052; receipts, £4,715; expenses, £7,426. The post-office transmitted 5,239,083 letters and postal cards.

Previous to 1899 the 14 elected members of the Legislative Council exceeded in number the official and nominated members. Sir David Barbour, who examined into the financial condition of the colony, recommended the appointment of additional members so as to give the Government a majority. When this was done the elected members refused to act, but the Government carried through the measures deemed necessary for restoring the financial equilibrium, and then the additional

members were withdrawn. The Colonial Secretary, in order to avoid having again to resort to such a temporary expedient, directed the Governor to appoint the 4 additional nominated members permanently with a right to vote on any question that the Governor pronounces to be of paramount importance. The representative members, thus stripped of their legislative powers, have ever since protested in the Council and have petitioned the British Government to restore the old Constitution. Mr. Chamberlain declines to sanction any change until existing conditions have had a fair trial and have by common consent been found wanting. No question has yet arisen in the Council on which the elective members have been unanimous in their opposition to the Government necessitating its being declared of paramount importance by the Governor. The change in the Constitution secures government by white men, in which the vast majority of the colored population acquiesce. Householders who pay £1 a year in taxes and rates are alone qualified to vote, and only a part of the qualified do vote. In January, 1902, the elected members sent a petition to Mr. Chamberlain setting forth that the present system is not working satisfactorily, and asking for a return to the system by which the representative members have a normal majority; in this event they would agree to an alteration in the order in Council providing that when the Governor declares a matter to be of paramount importance the elected members shall not vote. The financial difficulties of the Government were acute in the beginning of 1902, and the economic situation was one of extreme depression, although the elements of prosperity were at work. Additional taxes were imposed to avert a deficit. These could not be collected, and the Government drew the conclusion that the limit of taxation had been reached.

An outbreak occurred at Montego, on the north side of the island. A mob overpowered the police and terrorized the town on April 5. On April 6 the police killed a citizen, after which a score of policemen were badly injured and troops were sent for. The withdrawal of constitutional privileges by Mr. Chamberlain and the alteration of the incidence of taxation were the reasons given for the rioting, which was preceded by political meetings and violent speeches. Some of the influential people of the island refused to pay the taxes, after which the Government repealed the obnoxious tax law after prosecuting many persons for non-payment. Lesser riots occurred at Annotta Bay and other places. Previous to and leading up to the outbreak of disaffection the elected members of the Legislative Council proposed reductions in salaries and other expenditures to balance the budget. Acting-Gov. Olivier would not accept any of the proposed reductions, whereupon the elected members, believing their presence in the Council useless, and not wishing to accept any responsibility for the estimates, decided to absent themselves until they were passed.

The Government passed a bill to guarantee loans for the erection of central sugar factories. Of the advance of £250,000 by the British Parliament to enable embarrassed West Indian sugar-planters to continue cultivation and pay wages until the European sugar bounties are abolished in the fall of 1903, only £10,000 were assigned to Jamaica. Thrice this sum was applied for at the prescribed interest rate of 6 per cent. per annum, and the Legislative Council voted to advance the difference out of the island revenues. The fruit season of 1902 was good, and the Government revenues and the trade of the island in the course of

the year showed a remarkable improvement. Instead of a deficit there was a surplus of £23,000 for the fiscal year ending June 30, 1902. The tourists from England and the United States brought much money into the island. There was an increase of 88 per cent. in coffee exports, 39 per cent. in pimento, 36 per cent. in bananas, 54 per cent. in oranges, 47½ per cent. in coconuts, and 19 per cent. in dyewoods. The company which established a direct steamship line from Great Britain changed the distributing port for fruit from Bristol to Manchester, and placed the business in Jamaica in the hands of the American company that raises and exports bananas to the United States, the picking, sorting, and packing of fruit under the supervision of its own agents having been so imperfectly done that the losses on spoiled cargoes and unmarketable shipments reduced the total profits on fruit to nothing. A reciprocity treaty was made between the United States and Jamaica, Turks, and Caicos Islands, and British Guiana.

Turks and Caicos Islands, having an area of 165 square miles, had in 1901 a population of 5,350, of whom 2,464 were males and 2,886 females. About 1,500,000 bushels of salt are exported every year to the United States and Canada. The Commissioner is William Douglas Young. The Cayman Islands in 1901 had 4,322 inhabitants, comprising 1,904 males and 2,418 females. The Morant and Pedro Cays are also dependencies of Jamaica. The imports of the Turks Islands in 1900 were valued at £29,564; exports, £34,584; tonnage entered and cleared, 290,839 tons.

The *Leeward Islands* have a total area of 701 square miles, with 127,434 inhabitants in 1901. There were 114 Government schools in 1900, with 24,974 pupils. Sugar and molasses are still the principal products of the islands, though fruits and other products have been planted on some of them. The Governor is Henry Moore Jackson. The islands are divided administratively into the presidencies of Antigua, with Barbuda and Redonda; St. Kitts, with Nevis and Anguilla; Dominica, Montserrat, and the Virgin Islands. The Legislative Council consists of 8 nominated members and 8 members elected by the non-official members of the local legislative councils of St. Kitts and Nevis, Antigua and Dominica. The elective element in the Legislatures of Antigua and Dominica was abolished in 1898, when the Imperial Government contributed money to aid those islands in their financial difficulties.

Antigua has an area of 108 square miles and Barbuda and Redonda together have an area of 62 square miles. The population of these islands declined from 36,819 in 1891 to 34,971 in 1901. St. John, in Antigua, the capital of the colony, had 9,282 inhabitants in 1901. Sugar and pineapples are the chief products. Steamers run to New York, Canadian ports, and England. The local revenue in 1900 was £42,652; expenditure, £49,435. The receipts from customs were £23,081. The value of imports in 1900 was £125,304; exports, £111,849. The tonnage entered and cleared was 451,592 tons. The debt of the island is £137,071.

The *Virgin Islands* have an area of 58 square miles, with 4,908 inhabitants in 1901, compared with 4,639 in 1891. Sugar and cotton are grown by the colored people, who own their small holdings. The local revenue in 1900 was £2,117; expenditure, £2,197; imports, £3,387; exports, £2,812; tonnage entered and cleared, 12,076.

St. Kitts is 65 square miles in extent, with 29,782 inhabitants in 1901, having declined from 30,876 in 1891. *Nevis*, 50 square miles in extent, declined in population from 13,087 to 12,774. *An-*

gulla, 35 square miles, increased in population from 3,699 to 3,890. Anguilla grows vegetables and produces salt.

The revenue of the presidency in 1900 was £39,904; expenditure, £43,964; debt, £73,950; imports, £136,435; exports, £109,783; tonnage entered and cleared, 523,213 tons.

Dominica has an area of 291 square miles. The population increased from 26,841 in 1891 to 28,894 in 1901. The products are Liberian coffee, fruits, cacao, limes, and sugar. The revenue in 1900 was £28,113; expenditure, £26,780; debt, £70,900; imports, £80,144; exports, £68,452; tonnage entered and cleared, 467,686 tons.

Montserrat has an area of 32 square miles. The population increased from 11,762 in 1891 to 12,215 in 1901. The products are coffee, sugar, cacao, arrowroot, and lime-juice. The revenue in 1900 was £6,664; expenditure, £9,597; debt, £11,400; customs receipts, £4,958; imports, £26,911; exports, £8,115; tonnage entered and cleared, 198,730 tons.

The imports of cotton goods into the Leeward Islands in 1900 were £64,677; of flour, £51,722; of fish, £20,503. The expenditure on public works was £17,225; on police, £10,451; debt charges, £10,451.

Trinidad has an area of 1,754 square miles. The population in 1901 was 253,250. Port of Spain, the capital, has 55,000 inhabitants. The dependent island of Tobago has an area of 114 square miles and 18,750 inhabitants. The people of both islands are mostly of mixed blood. French, Spanish, Corsicans, Venezuelans, Portuguese, and British have settled in Trinidad at different times, and the negro slave population was once large. The present population comprises 89,178 Roman Catholics, 74,549 Anglicans, 29,771 other Christians, and about 78,000 East Indians. The number of marriages in 1900 was 1,081; of births, 10,021; of deaths, 6,841. The area under sugar-cane in 1900 was 51,500 acres; under cacao, 150,800 acres; under coffee, 3,980 acres; under ground provisions, 34,400 acres; under coconut-palms, 11,200 acres; in pasture, 15,000 acres. From the pitch lake in the center of Trinidad 158,750 tons of asphalt were exported in 1900. There are 80 miles of railroad and 690 miles of telegraphs. In Tobago, which is often visited by tourists from the United States and Great Britain, cotton and tobacco are cultivated. Petroleum has recently been discovered. The revenue of Trinidad and Tobago for the year ending June 30, 1900, was £661,874, and expenditure £630,200. The revenue from customs was £318,941. The expenditure on public works was £37,801; on police, £46,706; debt charges, £50,623; amount of public debt, £918,473. The value of imports in 1900 was £2,500,258; exports, £2,584,549. The imports of flour were £152,270; of textile goods, £381,106; of rice, £111,745; of machinery and hardware, £154,744; exports of sugar, £552,206; of cacao, £979,672; of asphalt, £176,079; of hides, £108,151; of rubber, £53,101. The tonnage entered and cleared was 1,178,494 tons. The Governor of Trinidad in 1902 was Sir Cornelius Alfred Moloney. The Legislative Council consists of 9 official and 11 appointed non-official members. Tobago was made a ward of Trinidad on Jan. 1, 1899.

The *Windward Islands* have a common Governor, Sir Robert Baxter Llewelyn, but each island has its Legislative Council, containing official members and nominated non-official members. *Grenada* has an area of 133 square miles, with 65,523 inhabitants. There are 41 schools, with 9,529 pupils. Cacao, spices, cotton, and sugar are the chief products. The island of Carriacou, one

of the Grenadines attached to Grenada, has a population of 6,000.

St. Vincent has an area of 132 square miles and 41,054 inhabitants, of whom 2,445 are whites. Kingstown, the capital, has 4,547 inhabitants. Sugar, rum, arrowroot, and spices are produced and timber is cut in the forests. The northern end of the island was devastated in 1902 by an eruption of La Soufrière and 1,600 people perished, while 5,000 were made destitute.

St. Lucia has an area of 233 square miles, with 49,895 inhabitants. The town of Castries has 7,910. The number of births in 1900 was 1,995; of deaths, 1,087. The main products are sugar, rum, logwood, and cacao.

The revenue of St. Lucia in 1900 was £72,108, of which customs produced £35,980; expenditure, £64,750, of which £7,850 went for public works and £13,219 for debt charges; public debt, £176,680; imports, £403,593, of which £30,291 represent cotton goods; exports, £104,881, of which £53,578 represent sugar and £38,247 cacao; tonnage entered and cleared, 1,841,593 tons.

The revenue of St. Vincent was £27,674, of which customs produced £15,032; expenditure, £36,121, of which £1,432 were spent on public works; debt, £14,470; imports, £98,591; exports, £100,327; tonnage entered and cleared, 289,712 tons.

The revenue of Grenada in 1900 was £70,363, of which £36,584 came from customs; expenditure, £62,718, of which public works took £3,169; public debt, £127,570; imports, £232,790; exports, £311,681, of which £269,931 represent cacao; tonnage entered and cleared, 439,009 tons.

Barbados has an area of 166 square miles and a population estimated at 195,000. The number of births in 1900 was 7,337; of deaths, 4,663. The Governor is Sir Frederic Mitchell Hodgson. There were 169 elementary schools with 13,795 pupils in 1900. There are about 30,000 acres in sugar, yielding 50,571 hogsheads in 1900. The export of glance pitch in 1900 was 1,120 tons, valued at £8,162. About 1,000 men and 250 boats are engaged in fishing, and the annual value of the catch is £17,000. The shipping of the colony in 1900 consisted of 46 sailing vessels and 2 steamers of an aggregate tonnage of 6,768 tons. There are 24 miles of railroad and 635 miles of telephone-line. The revenue in 1900 was £185,475, of which £105,290 were derived from customs; expenditure, £182,866, of which £22,712 were spent on police, £9,677 on public works, and £19,497 on debt charges. The amount of the debt was £416,850. The value of imports in 1900 was £1,045,252, of which £160,987 were for textiles, £67,223 for flour, £84,412 for rice, and £57,677 for fish. The exports were valued at £909,011, of which £509,706 represent sugar and £148,936 molasses. The tonnage entered and cleared was 1,361,466 tons.

The *Bahamas*, consisting of 20 inhabited islands, besides many which are uninhabited, off the southeast coast of Florida, have an area of 5,450 square miles, with a population in 1901 of 53,735. The number of births in 1900 was 2,030; deaths, 1,234. There were 43 Government schools with 5,776 pupils enrolled. Pineapples, oranges, and grapes are grown for export and the cultivation of sisal fiber is increasing, the area planted being 22,341 acres in the beginning of 1901. Sponges, shells, pearls, and ambergris are valuable sea products. The Governor in 1902 was Sir Gilbert T. Carter. The revenue in 1900 amounted to £78,860, of which £67,992 came from customs; expenditure, £82,837, of which £12,111 were for public works, £16,614 for debt, and £5,933 for police. The amount of the debt was £112,226. The value

of imports in 1900 was £335,269, of which £56,528 represent textiles and £28,264 flour; exports, £207,223, of which £104,219 represent sponges, £59,191 pineapples, and £16,246 fiber; tonnage entered and cleared, 1,113,866 tons.

The revenues of all the British West Indian colonies in 1900 amounted to £2,133,965, against £1,993,861 in 1899 and £1,888,259 in 1898; expenditures amounted to £2,117,171, against £1,974,253 in 1899 and £1,904,369 in 1898. The imports of all the islands made the sum of £6,739,567 in 1900, against £6,709,142 in 1899, and £6,323,413 in 1898; exports amounted to £6,360,344, against £6,262,454 in 1899 and £5,657,391 in 1898. The tonnage entered and cleared in all British West Indian ports was 9,910,300 tons in 1900, against 9,155,155 tons in 1899. As a result of the report of the Royal Commission appointed to inquire into the condition of the West Indian sugar-growing colonies, to the effect that the sugar industry was in danger of great reduction, and even of extinction in some islands from the competition of bounty-fed beet-sugar, and that its total or partial extinction would reduce the revenues so that in many cases they would be insufficient to meet the cost of administration, the British Parliament in 1899 authorized advances to the colonial governments from the imperial treasury amounting to £663,000, distributed as follows: Jamaica, £150,000 in aid of revenue and £303,000 for public works and railroads; Trinidad, £110,000 for railroads and public works; Barbados, £50,000 as relief from the effects of the hurricane of 1898; St. Vincent, a hurricane loan of £50,000. Other assistance was given to the islands.

French Colonies.—The colony of *Guadeloupe* with its dependencies has an area of 688 square miles and a population in 1901 of 172,097. The 2 islands divided by a narrow channel which form the colony of Guadeloupe proper have an area of 583 square miles. The dependent islands are Marie Galante, Les Saintes, Désirade, St. Barthélemy, and St. Martin. The population includes 15,276 East Indian coolies. A lyceum with 268 pupils and a female college with 134 pupils are the superior schools, and there are 101 elementary schools with 321 teachers and 10,979 pupils. Pointe à Pitre, the principal town, has 16,506 inhabitants; Basse Terre, the capital, 7,838. The revenue in 1900 was 6,120,581 francs, and expenditure the same. The expenditure of France in 1902 was 1,737,289 francs. The debt is 1,200,000 francs. The garrison consists of 170 French soldiers. The Governor in 1902 was M. Merlin. The members of the Legislative Council are elected by the people. Sugar was grown on 22,740 hectares in 1901, coffee on 5,251 hectares, cacao on 2,935 hectares. The exports of sugar in 1899 were 39,390 tons; of coffee, 1,587,000 pounds; of cacao, 915,530 pounds. Bananas, sweet potatoes, manioc, corn, and vegetables are the food crops, and tobacco is raised for local consumption. The imports in 1899 were valued at 19,155,751 francs, of which 13,286,000 francs were special imports from France; exports at 18,707,558 francs, of which 11,032,000 francs were special exports to France. The imports from France for home consumption in 1900 were only 9,715,000 francs; exports to France, 10,559,000 francs. The number of vessels that visited Pointe à Pitre in 1899 was 438, of 221,303 tons, mostly French and English steamers that make regular trips between European and West Indian ports.

The island of *Martinique* has an area of 380 square miles, with 189,599 inhabitants in 1901. There is an elective Legislative Council. The

Governor in 1902 was L. Mouttet. The population includes 1,307 persons born in France, 4,665 East Indians, 432 Chinese, and 5,371 African immigrants. There is a law school with 86 students, 3 secondary schools with 745 pupils, a normal school, and 152 elementary schools with 11,988 pupils. The military force consists of 1,180 French soldiers. St. Pierre, the chief seaport, had 25,792 inhabitants in 1901; Fort de France, 17,274. Sugar, coffee, cacao, tobacco, and cotton are the chief products. The value of imports in 1900 was 24,929,348 francs, of which 10,760,063 francs came from France, 1,706,338 francs from French colonies, and 12,462,947 francs from foreign countries. The exports were valued at 27,160,890 francs, of which 24,738,693 francs went to France, 996,295 francs to French colonies, and 1,425,952 francs to foreign countries. The tonnage entered in 1899 was 315,509; cleared, 313,840. French, American, and British steamers visit the island regularly. The local revenue in 1900 was 5,729,793 francs; the expenditure of France in 1902 was 3,135,516 francs; debt, 1,460,000 francs and an annual *rente* of 95,000 francs. The eruptions of Mont Pelée in 1902 caused the death of 35,000 persons and left 50,000 homeless and destitute. The relief sent from the United States, France, and other countries enabled the colony to survive the disaster. St. Pierre, which was effaced, was the largest town in the French islands and one of the prettiest in the West Indies. An area of 30 square miles was desolated by the eruption. (See EARTHQUAKES AND VOLCANOES.)

Dutch Colony.—The Netherlands has in the West Indies the colony of *Curaçao*, consisting of the island of that name, Bonaire, Aruba, part of St. Martin, St. Eustache, and Saba. Curaçao, area 210 square miles, had 30,119 inhabitants on Dec. 31, 1899; Bonaire, area 95 square miles, had 4,926; Aruba, area 69 square miles, had 9,591; St. Martin, area 17 square miles, had 3,485; St. Eustache, area 7 square miles, had 1,383; Saba, area 5 square miles, had 2,189. The members of the Colonial Council are appointed. The Governor in 1902 was J. O. de Jong van Beek en Donk. There are 33 schools with 5,400 pupils. The revenue for 1901, derived from import and export duties, excise, land taxation, and indirect taxes, was estimated at 602,000 guilders and expenditure at 700,000 guilders. The Dutch garrison in 1900 consisted of 9 officers and 175 soldiers, the militia of 28 officers and 349 men. The imports in 1899 were valued at 1,922,917 guilders. The chief products are corn, beans, cattle, salt, and lime. The ports were visited in 1899 by 2,455 vessels, of 480,565 tons.

Danish Colony.—The Danish Antilles are the islands of *Santa Cruz*, *St. Thomas*, and *St. John*, having a total area of 138 square miles and 30,504 inhabitants. The Governor in the beginning of 1902 was Col. C. E. von Hedemann. The value of imports in 1900 was 86,000 kroner; exports, 59,000 kroner. Sugar and rum are the chief products.

After long negotiations, a treaty for the sale of the islands to the United States was signed on Jan. 24, 1902. It was ratified by the United States Senate on Feb. 17, 1902. The Danish Landsting rejected the treaty on May 16. The United States proposed a prolongation of the period of ratification, and Denmark assented. Half the members of the Landsting were renewed by election, and the treaty came before the body again and was once more rejected by a small majority on Oct. 22. In November the Government appointed a commission to go to the Danish West Indies in order to study what can be done

for the economic development of the islands. Although they have cost the Danish Government \$200,000 a year, the United States agreed to pay \$5,000,000 for them.

WEST VIRGINIA. (See under UNITED STATES.)

WIRELESS TELEGRAPHY. The continued development and improvement of wireless communication (see Annual for 1898) seemed perhaps to place us little nearer the commercial utilization of this great discovery, until in the latter part of 1901, and again in 1902, Guilielmo Marconi, who since 1897 has been most usually associated in the public mind with the subject, demonstrated by successful experiment the possibility of transatlantic telegraphy without wires.

In December, 1901, Mr. Marconi sailed for Newfoundland in order to conduct his first experiments in transatlantic wireless telegraphy, and set up his temporary station on Signal Hill, at the entrance of St. John's harbor. Previous to leaving England he had arranged with his operators at the Poldhu station, upon receiving instructions, to send out daily, from 3 to 6 P. M. Greenwich time (11.30 A. M. to 2.30 P. M. St. John's time), the letter S of the Morse code (...) as a signal. Upon his arrival he at once sent up balloons and kites to which were attached the aerial electrodes of his receiving apparatus. At the beginning of the experiments his first balloon broke away, and afterward he used only the kites. One of these sent up Dec. 12 to a height of 400 feet remained there four hours. The signals were received from Poldhu and plainly distinguished, repeated at intervals, beginning at 12.30 P. M. and lasting irregularly for three minutes; resuming at 1.10, and renewing at 2.20 for shorter intervals, in all 25 times.

As soon as his success was announced the Anglo-American Cable Company, which holds a monopoly from the Newfoundland Government, declared that it would enforce its rights, and he was compelled to go elsewhere to establish a permanent station. He finally chose Table Head, a bleak promontory east of Glace Bay, Cape Breton Island, and upon the assurance of the cooperation of the Canadian and Nova Scotian governments at once began the erection of a station similar to that at South Wellfleet, Cape Cod, Mass., and later chosen for the plan of the new station at Poldhu. In general they consist of 4 square wooden towers, 28 feet across at the base, 9 to 11 feet across at the top, and 250 feet high. The towers stand at the corners of a square, whose sides are 210 feet long. Each one is cross-braced with steel-wire rope. Then all 4 are connected with each other by diagonal stays. Finally, to render the structure still more rigid and wind-proof, stout cables are run up over the tops of each pair of towers on all sides, and secured to anchorages in the earth. From each of the 4 horizontal bridges which connect the tops of the towers are suspended 50 copper cables. The cables are composed of 7 strands, an eighth of an inch in diameter, tightly twisted together. The reason for using many fine strands instead of a few large rods is to secure a larger amount of surface for a given amount of copper. It will thus be seen that the solitary "vertical wire" of the original Marconi experiments has now been enormously multiplied. Since the length of a Hertz wave is four times the length of the vertical wire, or antenna, waves not far from 860 feet (or a sixth of a mile) long should be developed. This corresponds to a frequency of about 1,100,000 a second. The 50 cables of each of the 4 groups converge a little as they go downward, and also

incline slightly toward the center of the quadruplex edifice. The lower ends, therefore, are arranged along the sides of a square much smaller than that formed by their supports at the top, and terminate in the operating-room of the station.

The distance from St. John's to Poldhu is about 1,800 miles, and as the greatest distance, up to that time, that Marconi had succeeded in overcoming was about 60 miles, much doubt was expressed as to the success of these experiments. But even the most skeptical were convinced, when on Feb. 25, 1902, and the day following, Mr. Marconi, on board the steamship Philadelphia on his way to America, received worded messages, certified by the ship's officers, up to a distance of 1551.5 miles and signals at a distance of 2,099 miles.

During the summer he continued his experiments, his most notable achievements being the exchanging of messages between Poldhu and the Italian cruiser Carlo Alberto, in the harbor of Cronstadt, Russia, in the presence of the Czar and the King of Italy in July, a distance of about 1,400 miles; and a similar exchange between Poldhu and Spezzia, Italy, in September. The King of Italy not only bestowed upon Mr. Marconi many distinguished honors, but late in September granted him for six months, at the expense of the Government, the cruiser Carlo Alberto for making wireless experiments. He arrived at the Cape Breton station, then nearing completion, Oct. 31. The cruiser was in constant communication with Poldhu during the voyage, and continued to receive messages after her arrival in Sydney, Cape Breton, harbor; however, she was unable with her apparatus to send messages farther than a few hundred miles. After installing the machinery and sending and receiving some experimental messages, on Dec. 21 the first official transatlantic wireless telegrams were sent from Table Head. The messages were from Lord Minto, Governor-General of Canada, to King Edward VII of England, and from Mr. Marconi to King Edward and to King Victor Emmanuel of Italy, and from the commander of the Carlo Alberto to the King of Italy, with other minor messages.

Mr. Marconi left Sydney for Cape Cod Jan. 14, 1903, arriving at the South Wellfleet station Jan. 16, and on Jan. 18 sent direct from that station to Poldhu, a distance of 3,000 miles, a message from President Roosevelt to King Edward of England.

In place of the induction coils of his early apparatus, Mr. Marconi used in these experiments a transformer and a 40 horse-power, alternating current dynamo. The transformer raises the voltage from 2,000 to 20,000, and this is further increased by means of condensers to from 50,000 to 70,000 volts. For the coherer he has substituted a "magnetic detector," connected with a telephone receiver, which enables him to increase greatly the speed of receiving, and consequently of sending messages. To insure non-interference he employs the tuning system invented by Prof. Michael I. Pupin, of New York city, whose rights he purchased in 1901. There has been much discussion of the integrity of Marconi's so-called inventions, and litigation is in progress over many of the patents claimed by the various companies interested in developing wireless telegraphy.

Marconi has now 35 or more stations in various parts of the world, or about 70, including those on ships. Of these, 12 land stations and 17 ships are fitted for sending commercial tele-

grams. The Italian Government, which has used the system largely on its war-ships, is so assured of its success that it has granted a subsidy of £40,000 a year, while the English Government pays royalties for the use of the instruments on their war-ships. Companies have been organized in Great Britain, Canada, and the United States for exploiting and controlling the use of the Marconi system.

Germany from the beginning has not favored the Marconi system and has turned to the development of the system that bears the names of Prof. Slaby and Count d'Arco. This it has used with great success in the recent maneuvers of the army and navy. France also has adopted the Slaby-Arco system, and the United States Government has experimented extensively with it. In addition to the Marconi system the United States has also experimented with a system invented by Prof. Reginald A. Fessenden, of Washington, D. C., in which he uses in place of the coherer what he calls a "magnetic wave detector." At 50 miles he was able to receive messages with precision at the rate of 25 words a minute, and he predicts a possible rate of 500 words a minute for this instrument. Gen. A. W. Greely, of the United States Signal-Service, looks with special favor upon the system invented by Dr. Lee De

Forest, of New York city. His system has met many severe tests and was used successfully in the army and navy maneuvers off the eastern end of Long Island in 1902. It has since been installed in several of the forts and at Annapolis, whence test messages have been sent to Washington. De Forest was the first to use the alternating current and "step up" transformer, which is now known to have been used by Marconi in his long-distance work. He receives the messages from the aerial conductor in a "transformer" connected to an ordinary telephone receiver, which work on an altogether different principle, and does away with the slow and delicate coherer of Marconi's earlier experiments. With it he has attained a speed of 40 to 50 words a minute. With the coherer the maximum safe speed is only about 12 words a minute.

The United States Government has committed itself to no particular system, but is investigating all with impartiality. Contracts have been awarded the Marconi and De Forest companies for establishing stations in Alaska, and the army, the navy, and the Weather Bureau have experts detailed to the work of developing its greatest usefulness.

Y

YACHTING IN 1902. The first conspicuous yachting event of the season was unique and of international and diplomatic import. It is well known that the German Emperor long since established a world-wide reputation as a cruising yachtsman—that is, as one who loves to go to sea for the pleasure of it and not merely for the excitement of racing and of being the mere owner of racing machines. For this reason he was naturally attracted to the best type of sea-going craft, and after sundry experiments with cutters as developed under the English builders he seemingly arrived at the conclusion that schooners were best adapted to his purpose, and therefore he became the owner of the famous American yacht Yampa, which had distinguished herself in many deep-water races and proved her sea-going capacity in many extended cruises. But she was not quite large enough and seaworthy enough to meet the Emperor's wishes, and he consulted her designer, A. Cary Smith, of New York, with a view to securing a more suitable craft. Plans were drawn and submitted, and as they received the Emperor's approval the work of construction was begun in 1901 at Shooter's island, near New York.

As the vessel approached completion, or perhaps as the result of previously conceived plans, the Emperor decided to make the occasion of the launching an affair of state, and it was announced that his brother, Prince Henry of Prussia, with the royal yacht Hohenzollern, would be sent over to take part in the ceremonies.

It presently transpired that correspondence of a more personal nature had passed between President Roosevelt and the Emperor, and it was announced that Miss Alice Roosevelt would name the yacht Meteor with the formalities usual on such occasions. The vessel was completed and rigged on time and launched on Feb. 25, under wintry conditions, but without the slightest accident until after she was afloat, when, through the blunder of a tugboat captain, she suffered some slight damage. It was not serious enough,

however, to prevent her from proceeding almost immediately to sea. A crew of English cuttermen with an English sailing-master were brought over to take charge of this Yankee schooner, and she was successfully navigated across the ocean, and her interior fittings were completed under the Emperor's directions by English workmen. Since that time there has been a deal of curiosity and some criticism upon her performance during the races in which she has taken part. Much of this, however, has resulted from a misunderstanding of her design. The order from the Emperor as originally given was by letter in which the words "cruising type" were twice underscored, and this wish on the part of his Majesty was emphasized on every occasion in which he expressed his preferences in regard to the boat. Having been the owner and practically master of an American schooner, he must have acted with full intelligence when he prescribed the "cruising type." The vessel was intended as an improvement upon the Yampa, whose draft was 13 feet and 6 inches, while the Meteor's was 15 feet, though the designers well knew that to make a record in the racing events 20 feet draft should have been given to her. Such a depth, however, would have rendered her useless except in the open sea, and in the opinion of her designer this draft, though necessary for the greatest speed, would have been a detriment to a sea-boat.

The Iroquois, whose sea record is unsurpassed, draws only 9 feet and 6 inches with a load water-line of 80 feet, and her performance in riding out the famous blizzard of 1888 is well remembered, for the ocean was strewn with the wrecks of all kinds of vessels. Her performance last autumn in winning the ocean race from Sandy Hook to Cape May and return goes to establish the American theory that great draft in a sea way is not a prime necessity. She won from modern-built vessels 20, 30, and even 45 feet longer than she on the water-line, and this in a reefing breeze to windward. All this seems to show that,

though fifteen years old, she is not yet on the retired list.

The record of the Meteor is like that of all very large schooners when they are matched against smaller vessels with much larger sail-plans, especially in smooth water and light air. Whenever she has been favored with a strong wind and something of a sea, she has shown what she can do by easily beating Sybarita, and breaking the record over the Queen's course at Cowes in three hours, fifty minutes, twenty-seven seconds. Moreover, letters have been received by the designer from his Majesty's representatives, expressing great satisfaction with the Meteor's performance under all circumstances, but especially when there has been, as sailormen say, a "breeze o' wind."

It is constantly of record in all racing fleets that large schooners are beaten by single-masted vessels in light air. Thus Corona has been beaten in the Goelet races at Newport in the open sea by the Amarita and Elmina; the Corona is 85 feet long, the Amarita 69 feet, and the Elmina 66 feet and 7 inches, load water-line. It must also be remembered that American crews have no equals in the management of sailing schooners. English cutter-men are not at all trained to the situation, and their national conservatism is very much against their success in acquiring the art. With an American captain and crew, it is very probable that the Meteor would have established a different record. When we remember that in the matter of handling the Shamrock was far behind the Columbia, and that the pride of every Englishman is distinctively in cutter sailing, it is easy to see that in the handling of a schooner there must be special training both for the crew and for the sailing-master. Whoever has read about the historic performances of the old America when she won that troublesome cup, and of her subsequent performances when in the hands of an English crew, will readily understand what has been the matter with the Meteor. Under the circumstances, no one need wonder at the record as thus far established, and no American need feel any anxiety as to the reputation or success of American seagoing schooners.

In the Annual Cyclopædia for 1901 a condensed account of the International Cup Races was given, in view of the visit of Sir Thomas Lipton and the retention of the America's cup as the result of the races of that year. Shortly after that event was decided, another challenge was received from Sir Thomas through the Royal Ulster Yacht Club of Cork. This was promptly accepted by the New York Yacht Club, and at this writing both vessels are well advanced for completion early in the coming season. The specified dimensions are 90 feet water-line, and cutter rig. The appointed dates for the races are Aug. 20, 22, and 25, and the following Thursdays, Saturdays, and Tuesdays, if necessary.

For the history of the International Races the reader is referred to the Annual Cyclopædia for 1901.

By common consent the series of races for the Canada cup, between the Royal Canadian Yacht Club of Toronto (defenders) and the Rochester (N. Y.) Yacht Club (challengers) was postponed for one year.

The international races for the Seawanhaka-Corinthian International Cup for small yachts, which trophy has been held by Canada since 1895, was sailed on Lake St. Louis, near Montreal, on Aug. 7, 8, 9, and 11; the Trident of the Royal

St. Lawrence Yacht Club was the defender, and the Tecumseh of the Bridgeport (Conn.) Yacht Club was the challenger. Four races were sailed, the Trident winning three and the Tecumseh one. Another series of races is in prospect for 1903, the challengers being the Manchester (Mass.) Yacht Club. As usual, the winning boat was something of an innovation, though not to such an objectionable degree as aforesaid. She was provided with two light bilge-keels set at such an angle that the leeward one was nearly vertical when the boat heeled to her bearings. This arrangement reduced the draft to 4 feet, and left the middle of the cockpit free for "working ship." The Canadians certainly deserve very high credit first for having won this coveted international trophy from the best amateur sailors of the United States, and secondly for having so successfully defended it during a series of years.

YOUNG MEN'S CHRISTIAN ASSOCIATION. The reports of the Young Men's Christian Association for 1902 enumerate 1,575 associations in the United States and Canada, with 323,224 members, showing an increase for the year of 99 associations and 54,744 members. The property owned by these associations was valued at \$24,101,229. The English Year-Book gives, for the United Kingdom, 1,533 centers with (approximately) 120,550 members and property valued in the total at £731,264; in the Colonies, 296 associations, with 32,941 members; and in foreign countries, 5,698 centers, with 467,230 members, and property valued at £4,824,090; making a total for the world of 7,507 centers with 620,721 members, and property aggregating £5,926,595 in value.

The fifteenth world's conference of the Young Men's Christian Associations met at Christiania, Norway, Aug. 20 to 24. Grants toward paying the expenses of the convention had been made by the Storting and the municipal authorities of the city. Twenty-one hundred delegates were enrolled, of whom 900 were official delegates, representing the United States, Canada, Great Britain, and Ireland, France, Germany, Holland, Belgium, Austria-Hungary, Spain, Portugal, Italy, Denmark, Norway, Sweden, Iceland, Russia, South Africa, Australia, New Zealand, India, China, and Japan. The English, German, French, and Norwegian languages were used in the proceedings. The European general secretaries reported having organized during the past four years 81 new associations and 3 national unions. Many papers were presented to the conference on topics relating to Christian life and the various aspects of the work of the associations. Authority was given to the World's Committee to appoint an additional secretary, for which an increase of appropriations was made, bringing the whole amount up to \$9,000.

The Student Volunteer Missionary Movement.—The Student Volunteer Missionary Movement was begun in 1886 in connection with the work of the Young Men's Christian Association for the purpose of developing the interest and activity of students in institutions of learning in missionary enterprise. In 1902, according to a report made to the convention in Toronto, it had been introduced into 798 institutions, in more than half of which nothing had been done in behalf of foreign missions prior to its inception, and it had greatly stimulated interest in them wherever it existed. An educational department was instituted about 1874 for promoting the special study of missions. While at that time there were about 20 mission-study classes in the colleges and seminaries of North America, the report made to the

convention of 1902 mentioned 325 such classes with 4,797 students. It is intended to hold the general conventions of the Student Volunteers about every four years, so that the terms shall correspond with the ordinary length of a "college generation." A convention held at Chicago in 1891 was attended by 680 delegates, representing 151 institutions, the principal mission bands of North America, and most of the foreign mission fields. At the convention of 1899 in Detroit, Mich., 1,300 delegates from 294 institutions were present, and at the convention of 1898, in Cleveland, Ohio, out of 1,991 delegates, 1,598 were students and 119 professors representing 461 institutions of learning, the others representing mission boards and missions and Young Men's and Young Women's Christian Associations. A convention attended by 1,000 delegates was held at Liverpool, England, in 1896, and more than 1,600 delegates were present at a meeting held in London in 1900. The fourth general convention in America met in Toronto, Ontario, Feb. 26, 1902, and included 2,955 delegates from 22 countries, among whom 357 colleges were represented by 1,616 students and 121 members of faculties, 51 medical schools by 151 students and 26 professors, and 507 theological schools by 478 students and 65 teachers—2,296 students and 212 professors in all. Mr. John R. Mott, chairman of the Executive Committee of the movement, and presiding officer of the convention, who had just returned from an official visit to the foreign mission-fields for the organization of the movement in them, spoke of its activity in Great Britain, Scandinavia, France, and Holland, and stated reasons why the missionary work should be prosecuted with the greatest energy. The addresses, delivered in general and sectional meetings, related to such subjects as the missionary education of the young, the systematic study of missions in Sunday-schools, the place of missionary study in colleges and theological schools, The Printed Page as a Missionary Force, the office of the pastor in promoting interest in missions, etc. Mr. John R. Mott spoke of the need of the foreign evangelization movement in the non-Christian world; Prebendary F. H. Forp, honorary secretary of the Church Missionary Society, of the increasing openings and opportunities for missionary effort as challenging the present generation of Christians; and Mr. Robert S. Spear, of the Presbyterian Board of Foreign Missions, described The Abounding Resources of the Christian World. Nine sectional conferences were held for the consideration of matters relating to different parts of the mission-field, and 27 denominational conferences. About \$15,000 were subscribed for carrying on the work of the movement for the next four years. A report was made that the names were known of 1,953 volunteers who had sailed, up to the present year, to enter the mission service, going out in connection with about 50 different societies and taking posts of labor in all parts of the non-Christian world; and that 60 per cent. more had gone out since the convention of 1898 at Cleveland, Ohio, than during the four years preceding. Of the 46 volunteers who had served as members of the Executive Committee, 27 had sailed and 9 others were under appointment or had applied for appointment.

At a conference of Young Men's Christian Associations of theological seminaries in the West, held in Dayton, Ohio, the preparation of a textbook was proposed for use in voluntary classes among theological students having especially in view qualification for personal Christian work for individuals. The seminaries were urged to despatch evangelistic bands in term time as well as

in vacation, to reach neglected districts within range of the influence of the institution. Faculties and associations in the seminary were asked to devise means for increasing the number of well-qualified volunteers.

World's Student Federation.—At the fifth convention of the World's Student Federation, held at Soroe, Denmark, in August, General Secretary John R. Mott reported that the federation now embraced within the 11 national and international movements of which it is composed 1,540 associations with an aggregate of more than 82,000 members. It was reported two years previously that there were 39 buildings devoted to the student-movement in different lands, and that their combined value was fully \$1,000,000. Since then 11 other buildings had been erected or provided for financially, having a total valuation of \$425,000, of which 6 were in America, 2 in India, 1 in Norway, 1 in Japan, and 1 in China. At the convention in Soroe, 90 college men, representing the students of 27 different countries, took part; Dr. Karl Fries, of Stockholm, presided. The federation had been formed seven years previously at a meeting held in Waldstena Castle, Sweden; and since then it had been effective in creating auxiliary national federations in Australia, South Africa, India, China, and Japan. Of the 6 other national federations, 3 had been helped through times of dangerous crises by the support of the international fellowship. The number of students pursuing the systematic study of the Bible had increased 20 per cent. in the last two years, and now aggregated 30,000 in the whole world. There were more than 500 Student Volunteers in the colleges of India, China, and Egypt. Interest in missionary studies had notably increased in all lands, but nowhere quite so remarkably as in South Africa.

Young Women's Christian Associations.—General conferences of Young Women's Christian Associations in the United States were held during the year at Asheville, N. C.; Capitola, Cal.; Silver Bay, N. Y., and Geneva Lake, Wis. The conference at Geneva Lake, in August, was especially devoted to methods of work for young women in colleges and cities, and was attended by 600 young women from 22 States, representing 165 educational institutions and several cities. Discussions on Bible study, a missionary institution, student conferences, and conferences on spiritual life were special features of the meeting. Besides these general conferences an institute for the instruction of secretaries was held at Milwaukee, Wis. Paid local secretaries for young women's work exclusively had been appointed in 15 colleges.

At the second world's conference of Young Women's Christian Associations, held at Geneva, Switzerland, in August, 17 nationalities were represented and 60 delegates were present from the United States. The chief interest of the meeting centered in the religious activities and possibilities of the association's work rather than in its social, physical, and economic features. The Swedish section reported 12 fields of missionary activity, extending from Paris to Pekin.

YUKON TERRITORY. British Alaska, or the Klondike country, as it is commonly called, is a territory under the control of the Canadian Department of the Interior: area, 198,300 square miles; population about 20,000. Capital, Dawson City.

Government and Politics.—The Commissioner at the beginning of 1902 was the Hon. J. H. Ross, formerly a member of the Government of the Northwest Territories. Toward the close of the year he resigned to contest the new seat in the Dominion Parliament and was elected by a large

majority as a Liberal and supporter of the Laurier Government. Major Z. T. Wood, of the mounted police, acted as Commissioner pending a definite appointment. Meanwhile, the other members of the Council were E. C. Senkler, Gold Commissioner; J. E. Girouard, Registrar; H. H. Newlands, Legal Adviser; C. A. Dugas, Judge; and Messrs. Wilson and Prudhomme elected members. On Jan. 17 the Dominion Government received a petition from the Yukon Council making the following requests: 1, Representation in the Senate; 2, the addition of 5 elected members to the present Yukon Council; 3, the division of the territory into electoral districts and the setting apart of money for election purposes and members' traveling expenses; 4, control of the liquor traffic in the Yukon; 5, the nomination of an inland revenue officer in the Yukon; 6, the right to establish breweries; 7, the setting apart of a fund for the maintenance of schools; 8, the setting apart of a fund to maintain roads; 9, the right for the Yukon Council to adopt all ordinances relative to Yukon matters independently of the Ottawa Government, which, however, should retain the right of veto on Yukon statutes.

Railway and Trade.—The all-important question of railway rates was hastened toward a solution early in 1902. In the previous year the Dominion Government, through its Railway Department, had fixed a tariff on the White Pass and Yukon Railway of about \$18 a ton for fifth-class goods between Skagway and White Horse, but the company refused to accept this or the proposal that no overcharge should be made on the American end of the line to compensate for this Canadian reduction. Finally President S. H. Graves, of the railway, came out from England, met Mr. Tiffin, of the Government Railways, and after negotiations accepted the following arrangement as to rates: Class 1, which at present is \$2.85 per hundredweight, was reduced to \$1.90 per hundredweight; class 2 was reduced from \$2.84 to \$1.66; class 3 from \$2.82 to \$1.42; class 4 from \$2.80 to \$1.19; class 5 from \$2.75 to 95 cents; class 6 from \$2.74 to 90 cents; class 7 from \$2.73 to 75 cents; class 8 from \$2.72 to 73 cents; class 9 from \$2.71 to 73 cents; class 10 from \$2.70 to 70 cents. Gov. Ross said that "about 60 per cent. of the goods going into Dawson was Canadian, and the percentage was steadily growing." In a report to the Canadian Manufacturers' Association, made public in October, 1902, S. Morley Wickett gave the figures of Yukon trade in certain years, ending June 30, as follow:

	Foreign Imports.	Foreign Exports.	Total.
1900.....	\$2,678,121	\$9,095,904	\$11,774,075
1901.....	2,822,623	13,914,676	16,738,309
1902.....	2,019,732	14,083,437	16,103,269

Financial Conditions.—It was expected that the assessment of Dawson for 1902 would fall substantially below that of the past year. The closing of the gambling-halls, the lowering of prices for building materials, and the springing up of several villages in the creeks promised such a result. But the returns finally received and giving the revised assessment figures for 1901 and 1902 showed very little difference. Realty, 1901, was assessed at \$4,154,840; in 1902 at \$4,145,090; personalty in 1901 was assessed at \$6,293,700; in 1902 at \$5,856,800; income in 1901 was assessed at \$1,199,100; in 1902 at \$656,550; the total in 1901 was \$11,647,640; in 1902 it was \$10,658,440.

The lower personalty valuation was accounted for by many shipments arriving in 1902 unusually late and after the assessment had been made.

Further evidence that Dawson was well holding its own was found in the extent of the money-orders. In October, 1902, orders to the value of \$148,807 were sold. The Yukon has not been a charge on the Dominion, and its indirect value to Canada as a nation has been undoubtedly great.

The Federal Government appropriations for 1902 amounted to \$1,092,800, which it was estimated would be met by the revenue. Of this sum, \$178,500 was for roads, \$25,000 for buildings, and \$125,000 for postal service. In 1901 the revenue was \$1,993,983, including \$592,661 royalty in gold; \$125,861 from free miners' certificate; \$225,595 from various mining fees and leases; \$88,297 from the sale of Government reserved claims; \$74,894 from timber dues; \$630,959 from customs duties; \$108,272 from telegraphs. The expenditures were \$1,671,085, including \$30,548 on customs; \$319,761 on salaries, surveys, and contingencies; \$74,788 on justice; \$498,825 on mounted police; \$117,915 on postal service; \$386,064 on public works; \$215,576 on river improvements and maintenances of telegraph-lines and federal buildings.

Mining.—By official figures, the production of gold in the Yukon was \$2,500,000 in 1897; \$10,000,000 in 1898; \$16,000,000 in 1899; \$22,275,000 in 1900; \$18,000,000 in 1901. The total since statistics were kept in the matter was \$70,313,513. In April, 1902, Mr. R. G. McConnell, of the Dominion Geological Survey, published a report of explorations in the preceding summer, which, upon the whole, showed a satisfactory condition in production and resources. George E. Hees, of Toronto, paid the country a visit in the summer of 1902 and published impressions and statements which aroused considerable criticism. In *Industrial Canada* of August he wrote as follows: "Since 1897 hundreds and thousands of prospectors have been exploring and prospecting every creek and mountain in that country, and no new discovery of importance has been made for more than a year. I have permission from Mr. Senkler, Canadian Assistant Gold Commissioner, to use his name as saying the output of gold in the Klondike last year was over \$24,000,000. The production of the coming year, according to the Government's estimate, will not exceed \$14,000,000. The reason for this very large decline is, that the old creeks or finds are being worked up, and no new discoveries have been made for more than a year. The hope of the Klondike now is the discovery of gold-bearing quartz of sufficient richness to pay to work. So far no such quartz has been discovered." Several authorities contradicted this.

In the summer of 1902 Mr. Morley Wickett, of Toronto, was appointed by the Canadian Manufacturers' Association to visit the Yukon and report upon its resources, conditions, and development. Summed up, his elaborate data may be given as follows: The gold-bearing sands are of immense area, and the camp will remain important for many years. While the yields are not so striking as in the early years, the cost of production has fallen fully 50 per cent. since 1899. He pointed out the immense area yet to be prospected, but at the same time sounded the warning that geological investigations do not warrant the belief that another Eldorado will be found, and that public opinion has settled down to the belief that the rest of the country is largely made up of lower-grade gravel. Dawson City is in a state of transition between the old order of things and the new. Credit is no longer given promiscuously, and consolidation is going on. If mining suffered no temporary relapse there should be no change in business conditions in the near future.

ALDERMAN LIBRARY

The return of this book is due on the date
indicated below

~~AUG 15 1898~~

7-15-83

DUE

Usually books are lent out for two weeks, but there are exceptions and the borrower should note carefully the date stamped above. Fines are charged for over-due books at the rate of five cents a day; for reserved books there are special rates and regulations. Books must be presented at the desk if renewal is desired.
